DEPARTMENT OF EDUCATION

SECRETARY OF EDUCATION

WITNESSES

LAURO F. CAVAZOS, SECRETARY

CHARLES E.M. KOLB, DEPUTY UNDER SECRETARY FOR PLANNING, BUDGET, AND EVALUATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICES, OFFICE OF PLANNING, BUDGET AND EVALUATION

Chairman's Opening Remarks

Mr. Natcher. The committee will come to order.

At this time, we take up the budget request for the fiscal year 1991 for the Department of Education.

Mr. Secretary, it is a distinct honor and privilege to have you before the committee. As one member of the committee, I believe that you are making an excellent Secretary. Each year, before we start holding hearings on all of our 13 bills, as Mr. Conte and Mr. Early and the other members of this subcommittee will tell you, we have overview hearings.

We have the full Committee on Appropriations to meet, and we have before the committee the Secretary of the Treasury, the Chairman of the Economic Council, and the Director of OMB. When these three gentlemen appeared before our committee about 10 days ago, when it was my turn to direct some questions to these people, I asked them how much had been expended during the past nine years for education at the Federal level. It figures just a little bit over $199 billion.

During that nine-year period, we have expended, Mr. Secretary, about $2,300 billion for defense. I don't know of anyone in the State of Kentucky or anywhere in the United States that wants to impair the security of our country, but Mr. Secretary, I know thousands of people who believe that if you educate your children and take care of the health of your people, you will continue to live in the greatest country in the world.

For fiscal year 1990, we ended up with about $24 billion for education. Mr. Secretary, you and I know that that is quite a large amount of money, but not near enough. If I had my way—and I speak not only for Mr. Conte, Mr. Early and Mr. Stokes, but for all the members of this subcommittee, we would have considerably more money in this bill for education. Here is where you ought to spend your money, Mr. Secretary. I know that is the way you feel about it.

But I did want to call this to your attention. You know, they say to us from time to time, you are spending a lot of money at the Federal level for education. It figures about 6 to 7 percent of the total. You know the exact figure, Mr. Secretary, and I don't, but about 6 percent of the total expended for education is spent at the Federal level.

The cities, counties and States spend the balance, billions and billions of dollars. I hope this money is well-spent throughout the United States, better spent as we go into the future.

But it is a distinct honor and privilege to have you before the committee. After your testimony, as you know, we will take up with your agency heads and the different members of your staff the items as they come up in the fiscal year 1991 budget request for education.

We have some amounts that are before the committee that we will correct. Mr. Secretary, with your help, we will bring out a good bill for education. You and your staff always help us. You have in your Department a lot of unusually well-qualified people, Mr. Secretary. You know that better than I do.

On behalf of our staff of this subcommittee, we want to thank you for the work that your people do with our people in preparing us so we can hold these hearings.

Mr. Conte, before I call upon the Secretary, would you care to make a general statement?

Mr. CONTE. Thank you, Mr. Chairman.

OPENING REMARKS BY MR. CONTE

Thank you, Mr. Chairman, I agree with everything that you said. It is a distinct pleasure to have the Secretary here, and it is also a pleasure to be able to serve with you, Mr. Chairman. We have produced many good bills in our years together on this committee. While we have not always agreed with the Administration, we have been successful in crafting our own bills, getting them through the Congress and getting them signed by the President.

Mr. Secretary, it is a pleasure to see you once again. If I were to describe a Texan with close ties to New England and Massachusetts, with a great love for a very large extended family, and dedicated to improving education in America, someone would think I was describing the President. But of course, I would also be describing the Secretary of Education.

I welcome you here, and the Assistant Secretary, Mr. Kolb, and of course, Sally Christensen; I don't know what we would do without her. I think we would all be lost.

Thank you, Mr. Chairman.

Mr. NATCHER. Mr. Secretary, we will be pleased to hear from you at this time.

OPENING REMARKS BY SECRETARY LAURO CAVAZOS

Secretary CAVAZOS. Thank you, Mr. Chairman. I have a full statement I would like to submit for the record.

Mr. NATCHER. It will be incorporated in its entirety.

Secretary CAVAZOS. Thank you. I will read an abbreviated statement.

STATEMENT OF SECRETARY OF EDUCATION

Mr. Chairman and members of the committee, I am pleased to appear before you today to discuss the President's 1991 budget for the Department of Education.

This budget has particular significance on two counts. It is the first budget developed fully by President Bush's Administration, and it is the first budget presented to the Congress as we enter a new decade.

EDUCATION SUMMIT CONFERENCE

Last September saw an historic event in education—the convening by the President of the Nation's Governors in Charlottesville for an Education Summit Conference; only the third time in our Nation's history that the President has called a summit with the Governors.

SUMMIT'S STATEMENT ON FEDERAL EDUCATION ROLE

From the summit emerged a statement reconfirming a Federal role that promotes educational opportunity for all our citizens and that provides information and assistance for pursuing excellence in education. Agreement was reached on an agenda for the future: To set national education goals, to seek greater flexibility and accountability in the use of Federal resources, to restructure our education system, and to report annually on the progress in achieving our goals.

Our budget builds upon this national commitment to education. By emphasizing investments in research and education reform, reforms that are sorely needed if we are to remain competitive as a Nation, it is a forward-looking budget as we enter the last decade of the 20th century.

FY 1991 BUDGET PRIORITIES

In allocating resources, we have focused on our highest priorities: fostering excellence in education and rewarding successful performance, reducing the dropout rate, expanding pre-school education, strengthening science and mathematics education, fighting adult illiteracy, and helping to provide a drug-free environment in our schools.

By emphasizing these priorities, we can make significant strides toward improving the achievement of elementary and secondary school children in reading, writing, and other basic skills, and maximize our Federal resources to help States and localities make the Charlottesville commitment a reality.

In postsecondary education, we are continuing our commitment to providing aid to needy college students, as well as expanding access to graduate education for disadvantaged and minority groups.

FY 1991 TOTAL BUDGET REQUEST

Our 1991 budget for the Department totals $24,600,000,000, an increase of more than $500,000,000 over the 1990 level. Within this total, we are proposing an overall increase of 6.2 percent in discretionary programs.

For entitlement programs, the budget includes a 12.6-percent reduction due to projections of decreasing interest rates. Within the budget, we have allocated increases totalling $1,800,000,000 to high-priority areas and new initiatives. These increases are derived from $1,300,000,000 in reductions in guaranteed student loans and lower priority programs, along with the $500,000,000 in additional funds.

About 15 percent of our budget, or $3,900,000,000, will support primarily educational research, the gathering of statistics, and various educational reform and improvement activities. While this is a relatively small portion of the Department's total budget, these activities can potentially influence over $350,000,000,000 in total education spending at the Federal, State and local levels. The remaining 85 percent of our budget—some $20,700,000,000—will assist the disadvantaged, the handicapped, minorities, and needy college students.

I would now like to highlight for you a few examples of how our budget will address our highest priorities.

PROMOTING AND REWARDING EDUCATIONAL EXCELLENCE

Fostering excellence in education and rewarding successful performance are key Federal activities in the Nation's education reform movement, and are a major thrust in our 1991 budget.

RESEARCH, STATISTICS AND ASSESSMENT BUDGET INCREASE

For research, statistics, and assessment activities, a 28-percent increase, to almost $122,000,000, will help us to learn more about the condition of our education system, the achievement of our students, and strategies that work. These activities have never been more important than now, as we pursue our national goals. It is these relatively small investments that can have the greatest impact on education reform in the long run.

EDUCATION SUMMIT FOLLOW-UP

We are seeking $20,000,000 for Education Summit follow-up activities to carry forward the agreements reached at the summit, such as implementing legislation to provide flexibility and enhanced accountability, and developing new measures for assessing progress toward our national goals.

PRESIDENTIAL MERIT SCHOOLS

Presidential Merit Schools, funded at $225,000,000, will encourage and reward schools that improve student performance in basic skills, create a safe and drug-free environment, and reduce the dropout rate.

MAGNET SCHOOLS OF EXCELLENCE

To bring the benefits of magnet schools and enhanced educational choice within the reach of communities whether or not they qualify under the current desegregation-related program, funding for Magnet Schools of Excellence is proposed at $100,000,000.

PERSONNEL TRAINING AND RECOGNITION INITIATIVES

Three new initiatives focus on preparing and rewarding education personnel: $25,000,000 for Alternative Certification programs will help States expand the pool of talent from which they draw teachers and principals; $25,000,000 will support a Principal Training program to improve the preparation of school leaders; and $7,600,000 for Presidential Awards in Education will recognize those teachers who meet the highest standards of excellence.

DROPOUT PREVENTION PROGRAMS AND DEMONSTRATIONS

Reducing the dropout rate is a priority I have repeatedly discussed. Only 71 percent of our high school students graduate with their class and, despite efforts by many States, this has improved very little in recent years. If we are to meet the challenges of the 21st century, many more of our citizens will have to attain at least a high school diploma. Our budget, therefore, provides major funding increases for elementary and secondary programs to help at-risk students complete their schooling.

For instance, Chapter 1 grants to local educational agencies totaling $5,000,000,000, an increase of 8 percent, will provide compensatory educational services for over 6,000,000 disadvantaged children.

We are proposing $45,000,000 for a new, carefully designed and structured program of Dropout Prevention Demonstrations to determine the most effective strategies to reduce school dropouts and to ensure that these strategies are identified for use by other schools around the country. Another $5,000,000 will support research activities, including a national research center, to assist States and localities in their efforts to reduce dropouts.

Under a $175,000,000 bilingual education program, some 295,000 limited English-proficient children, an increase of 41,000, will be taught English so that they can succeed in school and in society.

PRE-SCHOOL EDUCATION

Another area of vital concern to us is pre-school education. All students must enter school ready to learn. Thus, our 1991 budget directs significant resources to programs that provide services to at-risk children at the pre-school level.

EVEN START PROGRAM INCREASE

We are proposing to double Even Start, to $48,000,000, to help the parents of disadvantaged children become full partners in the education of their children. Additionally, we estimate that the request for other Chapter 1 programs will direct about $387,000,000 to almost 500,000 disadvantaged pre-school children.

EDUCATION FOR THE HANDICAPPED

In the area of education for the handicapped, Federal support will increase for 355,000 pre-school children, 4,000 more than in 1990; and assistance will be increased for the statewide systems that coordinate services to all infants, birth through 2 years of age, and their families.

INCREASED BUDGET FOR SCIENCE AND MATHEMATICS

American students consistently fall behind their international peers in science and mathematics achievement. These subjects are key to our Nation's productivity, economic competitiveness, and future prosperity. Our budget, therefore, includes major increases to address this need.

For the Eisenhower Mathematics and Science Education program, a 70-percent increase to $230,000,000 will help States improve the preparation of teachers and raise achievement levels of American students in these subjects.

To encourage scientific achievement among high school students, $5,000,000 will fund the first-year costs of a National Science Scholars program under which graduating seniors will receive college scholarships to pursue science, mathematics and engineering.

Our request of $25,500,000, more than a 60-percent increase, for Graduate Assistance in Areas of National Need will expand support for fellowships in the fields of chemistry, physics, mathematics and engineering.

LITERACY PROGRAMS

As many as one in five American adults may be functionally illiterate, at a time when employers are increasingly requiring workers with more advanced skills. Our budget helps support the national fight against illiteracy by focusing on the Department's adult literacy programs.

For Adult Education Grants to States, a 27-percent increase to $200,000,000 will help States teach basic skills to 2,400,000 illiterate adults and assist another 1,000,000 in attaining high school equivalency.

We are also seeking major increases for Literacy Training for Homeless Adults, Library Literacy Programs, and Adult Education National Programs, including the establishment of a National Adult Literacy Clearinghouse.

DRUG-FREE SCHOOLS AND COMMUNITIES PROGRAMS

A critical first step in our fight against drug abuse is to make our children aware of the devastating effects of drugs on their lives. Thus, the Drug-Free Schools and Communities Act is a key component of the Administration's war on drugs.

For grants to States we are requesting $487,600,000, over an 11-percent increase, for State and local drug education programs.

Emergency grants, one of President Bush's original education initiatives that was enacted in 1989, will target dollars to school districts with the most severe drug problems. Funded at $25,000,000 in each year, the program will be administered under the State grants authority in 1990 and as a national discretionary program in 1991.

Our request of $66,100,000, an 8-percent increase, will support a variety of National programs under the Act, such as education and prevention programs for college students, five regional centers that train school teams and provide technical assistance to schools, and dissemination of audio-visual and other curricular materials to schools.

HIGHER EDUCATION PRIORITIES AND REAUTHORIZATION

In the area of postsecondary education, the Administration will submit its proposals for reauthorization of the Higher Education Act with the 1992 President's budget next year. During the coming months, we will be reviewing public comments and developing our specific recommendations. In the meantime, our 1991 budget continues to emphasize our highest priority in this area: Providing financial aid and special services for needy college students.

Our student aid request will continue to ensure that more than $18,000,000,000 in grants, loans and work-study will be available to some 5,900,000 college students.

For Pell Grants, the 1991 budget includes $371,000,000 to meet expected shortfalls in academic years 1989-1990 and 1990-1991, and restores eligibility for 169,000 less-than-half-time students in academic year 1991-1992.

Significant increases are proposed for endowment grants to historically black colleges and universities and to other developing institutions; for academic counseling and support services for disadvantaged students; and for scholarship and fellowship programs to meet national manpower needs and improve access for disadvantaged populations, including minorities, to graduate education.

PLACING THE FEDERAL EDUCATION BUDGET IN PERSPECTIVE

Before concluding, I would like to take a minute to place our Federal budget in its proper perspective.

We must keep in mind that the Department's programs account for only 6 percent of our total national expenditures for education, and appropriately so, since the primary responsibility for education lies at the State and local levels.

NATIONAL EDUCATION FUNDING IN 1989-90

During the current school year, our Nation will spend from all sources some $353,000,000,000 on education, increases of $23,000,000,000 from last year and over $61,000,000,000, even after inflation, over the past decade.

INTERNATIONAL COMPARISONS OF EDUCATION FUNDING

Let me add a note of caution here. There has been some controversy regarding a recent study challenging some data that we have used to compare education spending in this country with other nations. We stand by our statement that we do spend more per student than most other industrialized countries.

The important point is that such reports, and subsequent technical debates over which numbers are more correct, serve only to deflect us from the real issue: ensuring that our education dollars are well spent. We have successfully changed the focus of the national debate on education from inputs to outputs, from resources to results. Let us not be diverted from this. Let us work together constructively, and let us expend our energies in a positive vein.

SOLVING EDUCATION'S PROBLEMS

Although this is the largest Federal budget ever for education, it will not make everybody happy. I repeat what I have said many times: Money alone will not solve our education problems. Other factors—more basic and more critical—can make a real difference.

For example, high expectations on the part of parents and teachers for their children's and their students' achievement can make a dramatic difference. New governance structures, such as greater parental choice along with school-based management, must be tried where our traditional systems have failed. And accountability procedures must be put into place to ensure that we are getting the most for our investment. We will continue to provide national leadership in urging all partners in the education enterprise to pursue these objectives.

I am sure that working together, we can move ahead. Thank you. I will be happy to respond to your questions.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by the Secretary of Education
on the
FY 1991 U.S. Department of Education Budget

Mr. Chairman and Members of the Committee:

I am pleased to appear before you today to discuss the President's 1991 Budget for the Department of Education.

This budget has particular significance on two counts. It is the first budget developed fully by President Bush's Administration, and it is the first budget presented to the Congress as we enter a new decade.

Last September saw an historic event in education--the convening by the President of the Nation's Governors in Charlottesville for an Education Summit Conference--only the third time in our Nation's history that the President has called a Summit with the Governors. From the Summit emerged a statement reconfirming a Federal role that promotes educational opportunity for all our citizens and that provides information and assistance for pursuing excellence in education. Agreement was reached on an agenda for the future: to set national education goals, to seek greater flexibility and accountability in the use of Federal resources, to restructure our education system, and to report annually on the progress in achieving our goals.

Our budget builds upon this national commitment to education. By emphasizing investments in research and education reform--reforms that are sorely needed if we are to remain competitive as a Nation--it is a forward-looking budget as we enter the last decade of the 20th century.

In allocating resources, we have focused on our highest priorities--fostering excellence in education and rewarding successful performance, reducing the dropout rate, expanding preschool education, strengthening science and mathematics education, fighting adult illiteracy, and helping to provide a drug-free environment in our schools. By emphasizing these priorities, we can make significant strides toward improving the achievement of elementary and secondary school children in reading, writing, and other basic skills, and maximize our Federal resources to help States and localities make the Charlottesville commitment a reality. In postsecondary education, we are continuing our commitment to providing aid to needy college students, as well as expanding access to graduate education for disadvantaged and minority groups.

Our 1991 budget for the Department totals $24.6 billion, an increase of more than $500 million over the 1990 level. Within this total, we are proposing an overall increase of 6.2 percent in discretionary programs. For entitlement programs, the budget includes a 12.6 percent reduction due to projections of decreasing interest rates. Within the budget, we have allocated increases totaling $1.8 billion to high priority areas and new initiatives. These increases are derived from $1.3 billion in reductions in Guaranteed Student Loans and lower priority programs, along with the $500 million in additional funds.

About 15 percent of our budget, or $3.9 billion, will support primarily educational research, the gathering of statistics, and various educational reform and improvement activities. While this is a relatively small portion of the Department's total budget, these activities can potentially influence over $350 billion in total education spending at the Federal, State, and local levels. The remaining 85 percent of our budget--some $20.7 billion--will assist the disadvantaged, the handicapped, minorities, and needy college students.

I would now like to highlight for you a few examples of how our budget will address our highest priorities.

Fostering excellence in education and rewarding successful performance are key Federal activities in the Nation's education reform movement, and are a major thrust in our 1991 budget.

- For research, statistics, and assessment activities, a 28 percent increase--to almost $122 million--will help us to learn more about the condition of our education system, the achievement of our students, and strategies that work. These activities have never been more important than now, as we pursue our national goals. It is these relatively small investments that can have the greatest impact on education reform in the long run.

- We are seeking $20 million for Education Summit Follow-Up activities to carry forward the agreements reached at the Summit, such as implementing legislation to provide flexibility and enhanced accountability, and developing new measures for assessing progress toward our national goals.

- Presidential Merit Schools, funded at $225 million, will encourage and reward schools that improve student performance in basic skills, create a safe and drug-free environment, and reduce the dropout rate.

- To bring the benefits of magnet schools and enhanced educational choice within the reach of communities whether or not they qualify under the current desegregation-related program, funding for Magnet Schools of Excellence is proposed at $100 million.

- Three new initiatives focus on preparing and rewarding education personnel: $25 million for Alternative Certification programs will help States expand the pool of talent from which they draw teachers and principals, $25 million will support a Principal Training program to improve the preparation of school leaders, and $7.6 million for Presidential Awards in Education will recognize those teachers who meet the highest standards of excellence.

Reducing the dropout rate is a priority I have repeatedly discussed. Only 71 percent of our high school students graduate with their class and, despite efforts by many States, this has improved very little in recent years. If we are to meet the challenges of the 21st century, many more of our citizens will have to attain at least a high school diploma. Our budget, therefore, provides major funding increases for elementary and secondary programs to help at-risk students complete their schooling. For instance:

- o Chapter 1 grants to local educational agencies totaling $5 billion, an increase of 8 percent, will provide compensatory educational services for over 6 million disadvantaged children.
- o We are proposing $45 million for a new, carefully designed and structured program of Dropout Prevention Demonstrations to determine the most effective strategies to reduce school dropouts and to ensure that these strategies are identified for use by other schools around the country. Another $5 million will support research activities, including a national research center, to assist States and localities in their efforts to reduce dropouts.
- o Under a $175 million Bilingual Education program, some 295,000 limited English proficient children--an increase of 41,000--will be taught English so that they can succeed in school and in society.

Another area of vital concern to us is preschool education. All students must enter school ready to learn. Thus, our 1991 budget directs significant resources to programs that provide services to at-risk children at the preschool level.

- o We are proposing to double Even Start--to $48 million--to help the parents of disadvantaged children become full partners in the education of their children. Additionally, we estimate that the request for other Chapter 1 programs will direct about $387 million to almost 500,000 disadvantaged preschool children.
- o In the area of education for the handicapped, Federal support will increase for 355,000 preschool children, 4,000 more than in 1990; and assistance will be increased for the statewide systems that coordinate services to all infants, birth through 2 years of age, and their families.

American students consistently fall behind their international peers in science and mathematics achievement. Yet these subjects are key to our Nation's productivity, economic competitiveness, and future prosperity. Our budget, therefore, includes major increases to address this need.

- o For the Eisenhower Mathematics and Science Education program, a 70 percent increase to $230 million will help States improve the preparation of teachers and raise achievement levels of American students in these subjects.

- To encourage scientific achievement among high school students, $5 million will fund the first year costs of a National Science Scholars program under which graduating seniors will receive college scholarships to pursue science, mathematics, and engineering.

- Our request of $25.5 million, more than a 60 percent increase, for Graduate Assistance in Areas of National Need will expand support for fellowships in the fields of chemistry, physics, mathematics, and engineering.

As many as one in five American adults may be functionally illiterate, at a time when employers are increasingly requiring workers with more advanced skills. Our budget helps support the national fight against illiteracy by focusing on the Department's adult literacy programs.

- For Adult Education Grants to States, a 27 percent increase to $200 million will help States teach basic skills to 2.4 million illiterate adults and assist another one million in attaining high school equivalency.

- We are also seeking major increases for Literacy Training for Homeless Adults, Library Literacy Programs, and Adult Education National Programs, including the establishment of a National Adult Literacy Clearinghouse.

A critical first step in our fight against drug abuse is to make our children aware of the devastating effects of drugs on their lives. Thus, the Drug-Free Schools and Communities Act is a key component of the Administration's war on drugs.

- For Grants to States we are requesting $487.6 million, over an 11 percent increase, for State and local drug education programs.

- Emergency Grants, one of President Bush's original education initiatives that was enacted in 1989, will target dollars to school districts with the most severe drug problems. Funded at $25 million in each year, the program will be administered under the State grants authority in 1990 and as a national discretionary program in 1991.

- Our request of $66.1 million, an 8 percent increase, will support a variety of National Programs such as education and prevention programs for college students, five regional centers that train school teams and provide technical assistance to schools, and dissemination of audio-visual and other curricular materials to schools.

In the area of postsecondary education, the Administration will submit its proposals for reauthorization of the Higher Education Act with the 1992 President's Budget next year. During the coming months, we will be reviewing public comments and developing our specific recommendations. In the meantime, our 1991 budget continues to emphasize our highest priority in this area--providing financial aid and special services for needy college students.

- Our student aid request will continue to ensure that more than $18 billion in grants, loans, and work-study will be available to some 5.9 million college students.

- For Pell Grants, the 1991 budget includes $371 million to meet expected shortfalls in academic years 1989-90 and 1990-91, and restores eligibility for 169,000 less-than-half-time students in academic year 1991-92.
- Significant increases are proposed for endowment grants to Historically Black Colleges and Universities and to other developing institutions; for academic counseling and support services for disadvantaged students; and for scholarship and fellowship programs to meet national manpower needs and improve access for disadvantaged populations, including minorities, to graduate education.

Before concluding, I would like to take a minute to place our Federal budget in its proper perspective.

We must keep in mind that the Department's programs account for only 6 percent of our total national expenditures for education--and appropriately so, since the primary responsibility for education lies at the State and local levels. During the current school year, our Nation will spend from all sources some $353 billion on education, increases of $23 billion from last year and over $61 billion, even after inflation, over the past decade.

Let me add a note of caution here. There has been some controversy regarding a recent study challenging some data that we have used to compare education spending in this country with other nations. We stand by our statement that we do spend more per student than most other industrialized countries. The important point is that such reports--and subsequent technical debates over which numbers are more correct--serve only to deflect us from the real issue: ensuring that our education dollars are well spent. We have successfully changed the focus of the national debate on education from inputs to outputs, from resources to results. Let us not be diverted from this. Let us work together constructively, and let us expend our energies in a positive vein.

Although this is the largest Federal budget ever for education, it will not make everybody happy. I repeat what I have said many times: money alone will not solve our education problems. Other factors--more basic and more critical--can make a real difference. For example, high expectations on the part of parents and teachers for their children's and their students' achievement can make a dramatic difference. New governance structures--such as greater parental choice along with school-based management--must be tried where our traditional systems have failed. And accountability procedures must be put into place to ensure that we are getting the most for our investment. We will continue to provide national leadership in urging all partners in the education enterprise to pursue these objectives.

I will be happy to respond to your questions.

Biographical Sketch

NAME : Lauro F. Cavazos

POSITION : U.S. Secretary of Education

BIRTHPLACE AND DATE : King Ranch, Texas, January 4, 1927

EDUCATION : Texas Tech University, 1949, B.A. in Zoology
Texas Tech University, 1951, M.A. in Zoology (Cytology)
Iowa State University, 1954, Ph.D. in Physiology

EXPERIENCE

1988-Present : Secretary, U.S. Department of Education

1980-1988 : President, Texas Tech University and Texas Tech University Health Sciences Center
Professor of Biological Sciences, Texas Tech University
Professor of Anatomy, Texas Tech University Health Sciences Center

1973-1980 : Dean (Acting, 1973-75), Tufts University School of Medicine

1972-1973 : Associate Dean, Tufts University School of Medicine

1964-1972 : Chairman of Anatomy, Tufts University School of Medicine

1964-1980 : Professor of Anatomy, Tufts University School of Medicine

1960-1964 : Associate Professor of Anatomy, Medical College of Virginia

1956-1960 : Assistant Professor of Anatomy, Medical College of Virginia

1954-1956 : Instructor in Anatomy, Medical College of Virginia

1949-1951 : Teaching Assistant, Texas Tech University, Lubbock, Texas

1945-1946: : U.S. Army

Biographical Sketch - Lauro F. Cavazos

RECENT CHAIRMANSHIPS:

- Chairman, Southwest Athletic Conference Council of Presidents, 1987-88.
- Chairman, Education Committee, Texas Science and Technology Council, 1984-85.
- Chairman, Speaker Bill Clayton's Vital Issues Project for Higher Education in Texas, 1982-83.
- Chairman, Governor's Task Force on Undocumented Mexican Workers, 1981-82.
- Chairman, Accreditation Study Committee of the Association of Texas Colleges and Universities, 1981-83.
- Chairman, Governor's Higher Education Effectiveness Council, 1981-82.

HONORS AND AWARDS :

- President's Medal for Distinguished Achievement, City College of New York, 1989.
- Medal of Honor, University of California, Los Angeles, 1989.
- Midby-Byron Distinguished Leader Award, University of Nevada at Reno, 1989.
- Medal of Merit, Pan American University, 1988.
- 1988 LULAC National Hispanic Leadership Award in the field of education.
- Lauro F. Cavazos Award for outstanding service to Texas Tech University designated by Ex-Students Association, October 1987.
- Named as one of "100 Influential Hispanics" by Hispanic Business magazine, August 1987, Vol. 9, No. 8.
- Hispanic Hall of Fame Award, League of United Latin American Citizens, 1987.
- Distinguished Service Medal, Uniformed Services University for the Health Sciences, 1985.
- Outstanding Leadership Award in the Field of Education, presented by President Ronald Reagan, 1985.
- Hispanic Educator of the Year, Texas Chapter of the League of United Latin American Citizens, 1983.
- Education and Teaching Awards--from graduating medical class on five occasions.
- Alumni Achievement Award, Iowa State University, 1979.
- Distinguished Alumnus, Texas Tech University, 1977.
- Honorary Member, Tufts Medical Alumni Association, 1976.

SINGLE MOST CRITICAL EDUCATION PROBLEM

Mr. **Natcher.** Thank you, Mr. Secretary.

Mr. Secretary, what do you consider to be the single most important problem in education today? What would you say?

Secretary **Cavazos.** Well, Mr. Chairman, I think that they come under a large covering. I will lay out one, because it is at the national level, and then I would like to break it down a little bit from that point.

I would say that the biggest problem that we have in this country is the refusal of this Nation to recognize that it has a serious educational problem and our students are not competing, for a host of reasons we know about, both at the elementary and secondary level, as well as at the postsecondary, level although we are doing fairly well in postsecondary education.

I think that continues to be the problem, and we must find ways of getting the Nation to change the deficiencies in that educational system.

PRESIDENT'S EDUCATION GOALS FOR THE YEAR 2000

Mr. **Natcher.** Will you just briefly review for the committee the President's education goals that he outlined in his State of the Union message? What are the President's goals as far as education is concerned as set forth in his State of the Union message?

Secretary **Cavazos.** In his State of the Union message, he touched upon six goals: First, by the year 2000, all children in America will start school ready to learn; second, by the year 2000, we will increase the percentage of students graduating from high school to at least 90 percent. In my testimony, I indicated 71 percent now complete high school.

Third, by the year 2000, American students will leave grades 4, 8 and 12 having demonstrated competency in English, history, science and geography. As you know, we were not doing well in English, writing competency or geography.

Goal four: By the year 2000, U.S. students will be first in the world in science and mathematics achievement. We have submitted a request for a 70-percent increase for the Eisenhower Mathematics and Science Education program. In addition, we will continue to work with the National Science Foundation to coordinate math and science activities.

Fifth, literacy and life-long learning, by the year 2000, every adult American will be literate and will be able to exercise the rights and responsibilities of citizenship. We are requesting a 27-percent increase for adult education and literacy programs.

Finally, every school in America will be free of drugs and offer a disciplined environment conducive to learning. I have mentioned our request for additional drug prevention and education dollars, bringing the Department's budget for Drug-free Schools and Communities programs up to almost $600,000,000 to help the States fight the scourge of drugs.

Those are the major goals of the President.

TOTAL FY 1991 EDUCATION REQUEST

Mr. NATCHER. As you pointed out, the President's budget request for fiscal year 1991 is $24,681,000,000. This, as you know, is only a 2-percent increase over the 1990 fiscal year level, less than half of what is necessary to cover inflation.

BUDGET INCREASES IN RELATION TO EDUCATION GOALS

Now, the amount requested, Mr. Secretary, is that compatible with the goals that you have just stated to the committee?

Secretary CAVAZOS. I think it is. Let's look at the budget in another way, perhaps. You are absolutely correct in saying it is 2.1 percent over 1990, but I would like to look at the budget in two phases: One, discretionary expenditure, as well as in the entitlement area.

If we look at it that way, and look at the fact that we have added $500,000,000 in new budget authority and you take the $1,300,000,000 in guaranteed student loans and lower priority programs, and add that to the $500,000,000, that results in $1,800,000,000 for high priority areas and new initiatives.

If you look at it that way, we are proposing an increase of 6.2 percent, well beyond inflation, for the discretionary programs. Where we take our cut, which is over 12 percent because of the interest rate adjustment, is in the entitlement area. I think it becomes a good budget.

As a matter of fact, that 6.2 percent in discretionary program spending is the highest at the cabinet level in terms of discretionary programs, so I feel very good about that, sir.

FY 1991 BUDGET REQUEST TO OMB

Mr. NATCHER. How much did your Department request of OMB for education for fiscal year 1991, Mr. Secretary?

Secretary CAVAZOS. Actually, we submitted our request, as you recognize, in a variety of ways, because we had to relate to the 1990 Gramm-Rudman base line. For that, we had three options, the freeze level, then at a reduced level from that Gramm-Rudman level, and then a third option that reflects an overall increase that we were predicting would happen.

Those options formed the basis of our discussion there, and we really were adjusting on this thing. Actually, our total request was $26,300,000,000, but that was only a 4-percent overall increase over our predicted appropriation of $25,300,000,000.

As you know, our final appropriation under sequester was $24,100,000,000, so it pulled that 1991 number back down, also. We met and had long, excellent discussions with the Office of Management and Budget. I think that the budget that came forth is one that will permit us to deliver the programs that we need to do, sir.

Mr. NATCHER. Then the overall amount was about $1,600,000,000 over the current amount as now before the committee?

Secretary CAVAZOS. That was the original adjustment, the 4 percent. I think certainly with the $500,000,000 and if we tie to that, of course, the interest rate expectations that we have there, we therefore come forth with, I think, a considerable amount of funding for new programs and new initiatives. Basically what we really need to do and what I have tried to emphasize to our people in the Department is that we almost have to start at the bottom and build this budget, not just add on to the programs, but do some tough evaluations of what we are doing, and redirect those dollars.

From my management viewpoint, that is the responsible way to approach the budget.

PROPOSED ALLOCATION OF ADDITIONAL 1991 APPROPRIATIONS

Mr. **Natcher.** Last year, if you recall, we asked your advice as to where additional money should be used in the field of education if the committee decided to increase the amount. You gave us good advice then. Now, assuming that the committee increases the amount for education over and above the amount that is before the committee at this time, where should this money go, Mr. Secretary?

Secretary **Cavazos.** First, Mr. Chairman, I want to thank the committee for its support last year. We worked together and came forth with a good bill. I think that, not knowing exactly what those dollars are and the direct categories, there really continue to be two major areas where I would like to put emphasis: one is helping out disadvantaged students, Chapter 1, early childhood; and the other area would be Pell Grants.

If you go back and look at what we have done during the time I have been Secretary, every time we have redirected funds, they have either gone to Pell or Chapter 1. I will be consistent with that, because those areas are where we continue to have a lot of need.

Mr. **Natcher.** We would like you to submit to this committee a plan showing how you would recommend that an additional $2 billion be allocated among Department of Education activities if this committee is able to add at least that amount to the President's request. Just assuming that the figure is $2,000,000,000, and if we have our way it will be more than that, Mr. Secretary.

[The information follows:]

The following insert for the record was submitted by Charles E.M. Kolb, Deputy Under Secretary for Planning, Budget and Evaluation.

PROPOSED DISTRIBUTION OF POTENTIAL $2 BILLION IN ADDITION TO THE DEPARTMENT OF EDUCATION'S FY 1991 BUDGET

(BA in Millions)

Priority would be given to those programs that focus on disadvantaged populations and that contribute toward the achievement of the Nation's education goals.

Program	Amount	Explanation 1/
Elementary and Secondary Education		
Chapter 1: Compensatory Education for the Disadvantaged:		
Grants to Local Educational Agencies	+$750	Would enable local education agencies either to enrich existing programs for disadvantaged children, or to expand services to additional disadvantaged children; and would permit greater spending on secondary school children.
Even Start	+100	Would initiate State formula program, and increase the number of new local projects by approximately 504, from 131 to 635.
Chapter 2: Educational Improvement--State Block Grants	+100	Would increase the average State grant by $1.9 million, from $9.1 million to $11.0 million, to help States pursue national education goals.

1/ Estimates reflect changes in addition to those increases over 1990 that are already included in the 1991 President's Budget request.

Eisenhower Mathematics and Science Education:		
State grants.................	+200	Would increase the average local school district grant by $9,000, from $10,500 to $19,500, and provide for increased activity among higher education institutions.
Education for the Handicapped--State Grants..................	+200	Would increase the Federal share from $365 per child to $410, thereby increasing the Federal share of excess costs from about 7 to 8 percent.
Postsecondary Education		
Pell Grants....................	+250	Would increase maximum grant by $100, from current level of $2,300 to $2,400; provide grants to 42,000 additional recipients, from 3,389,000 to 3,431,000; and increase the average award by $56, from $1,443 to $1,499.
Special Programs for Disadvantaged Students (TRIO).	+100	Would provide counseling, tutoring, and other support services to encourage an additional 247,800 students, from 571,200 to 819,000, to enter and complete postsecondary education.
Vocational and Adult Education		
Vocational Education and Department of Labor...........	+100	Would be used to promote activities related to the national education goal on adult literacy and lifelong learning under the newly reauthorized Carl D. Perkins Vocational Education Act and the Job Training Partnership Act at the Department of Labor.

Adult Education State Grants...	+200	Would provide additional basic education and high school equivalency for adults, to carry out the national education goal on adult literacy and lifelong learning.
TOTAL..........	+2,000	

EDUCATIONAL RESTRUCTURING REQUIRED

Mr. NATCHER. It is a pleasure to yield to Mr. Conte, the ranking minority member in this committee and the ranking minority member on the full committee. Education doesn't have a better friend in the country. I yield to Mr. Conte.

Mr. CONTE. Thank you, Mr. Chairman.

A few weeks ago the test results of student achievement, were released. They were most discouraging. Mr. Secretary, you said reading and writing skills of American students remain dreadfully inadequate. Does this indicate that all the efforts at reform over the past decade has produced very little in the way of results?

Secretary CAVAZOS. I agree with you, Mr. Conte. I think part of our problem is that we have not approached reform as an entire Nation. We have gone at it at bits and pieces. Even after inflation across the last decade, in elementary and secondary education, a little over $40,000,000,000 of new money has gone into that area.

But we have not seen the results, as you pointed out. Therefore, I think what we have failed to do is change the system. We have been pushing that in the Department. We have been out in the Nation urging people that what we need to do is change the system itself to make it viable.

IMPORTANCE OF GOAL-SETTING IN REFORM

Mr. CONTE. Why is goal-setting, which the President and the National Association of Governors are now engaged in, the appropriate response to our apparent failure to produce excellence within our education system?

Secretary CAVAZOS. I think it is an important first step for a variety of reasons. First of all, it helps us lay out the issue as a Nation, by determining where we hope to move ahead, and by calling attention to that. But it is very, very important, Mr. Conte, that we also measure those goals.

It is not enough to just set goals because we have to know two, five or 10 years down the road whether we are making progress with this change. This budget has quite a bit of funding which goes to research and measurement. We feel that is an important first step.

The most important area is taking the initiatives, the goals laid out by the President and the Governors, and translating those to the local level. I hope every State in America looks at those goals and then sets its own goals, and I hope every school district does the same thing, and that every parent in America will work with their children and set their own goals to reflect this.

It becomes a national commitment to reach those goals. This is the first time this Nation has ever set those kinds of goals, and I think it is an important first step.

DISCIPLINE AND POSITIVE LEARNING ENVIRONMENT

Mr. CONTE. I don't know if you read the best seller, "Among School Children," by Tracy Kidder.

Secretary CAVAZOS. Yes, I did.

Mr. CONTE. It is about a school in Holyoke in my district, and how difficult it is for a teacher; how much time the teacher spends trying to control the unruly students. What are we doing to address that issue of helping teachers create positive environments for learning within the classroom?

INFLUENCE OF PARENTAL INVOLVEMENT

Secretary **Cavazos**. I think a variety of things that are happening here will create that positive attitude. I think the most important thing that we have to do as a Nation is to get the parents involved even more in terms of that discipline and in terms of working with the school teachers.

I think that is the failure there, that we have not gotten the parents into the classroom. We have been pushing school-based management where the teachers and principals are involved in making the decisions. After you do that, the discipline thing starts to take care of itself.

TRAINING OF PRINCIPALS AND TEACHERS

In terms of dollars in the budget, we have added a new program, $25,000,000 for principal training. We think that is very important. I go to a lot of schools during the year. I always set aside a few moments to visit quietly with the principal in his or her office. In a few minutes, you can determine what kind of principal we have here, because it permeates the entire system. We want to improve principal preparation.

Secondly, we have additional dollars for teacher training in a variety of areas. By doing that, we can start getting back to the kinds of teaching environment we would like to see.

DROPOUT DEMONSTRATION PROGRAMS IN MASSACHUSETTS

Mr. **Conte**. I have offered my suggestions about the underachievement program we started this year to teach students who need extra attention. In Massachusetts, other experiments are under way, such as Boston University running the Chelsea Schools. Now, in Holyoke, Mt. Holyoke College is creating a middle school addressing teenage pregnancy.

The dropout situation among pregnant teenagers is very serious. Aren't these the kinds of far-reaching initiatives that are really required to turn things around? I am very excited about the Mt. Holyoke middle-school project.

I have the distinction of representing the city with the highest teenage pregnancy rate. Up to 4 years ago, Holyoke was the city with the highest infant mortality rate. Now I have the privilege of serving the same city with the highest dropout rate in Massachusetts. I am working to get demonstration programs going which address the problems of Holyoke.

But most programs are just Band-Aids. As in the case of Holyoke, a demonstration program can change the infant mortality rate, from first, to where we are now, about eighth. And with the dropout rate—we did get a demonstration grant to help pregnant mothers who are drug addicts. That demonstration program is going. But neither program is putting your finger on the source.

Frequently these children come from broken homes or unwed mothers. When they leave school they return to an environment that is indescribable, it is so bad. They see terrible things.

How can we expect them to study? To have the initiative to return to school the next morning? When you say it has to start at home, you are right.

That's why the Mt. Holyoke project is so exciting. We're setting it up so the children go to school from 7:30 in the morning to 5:30 in the afternoon. Between 3:00 to 5 or 5:30, the three colleges, University of Massachusetts, Mt. Holyoke and Hampshire, will tutor the students on a one-to-one basis. It is an exciting concept.

We want to get enough money to build dormitories for the children so we can keep them out of the negative conditions they face at home. We are also working with Mr. Herman and Upfield School, where Upward Bound was started, to take some of these children and get them into the prep schools. So, we can get them out of the cycle of poverty and poor education. Mr. Secretary, doesn't that get you excited?

Secretary CAVAZOS. First, I want to compliment your district on an outstanding job. Early on in my administration, having had, of course, practically all of my career in higher education, I met with university presidents and groups in universities throughout the Nation, and they said, well, what should we be doing in terms of education?

I said, I think one of the most important jobs that you should be doing is making sure you involve yourselves in the district and community in which your university is located, participate in the restructuring of the schools, doing exactly the types of things that you pointed out Mt. Holyoke is doing, or that Boston University is doing with Chelsea.

The quality of student that comes to the university will be no better than the student in secondary education today. In the past, higher education has been hesitant to get involved. Now they are starting to do that. Those are good examples of the kinds of things that need to be going on.

In addition, some of the other things you have been doing are consistent with what we have been advocating. One way of restructuring is extending the school day, using that time for the kinds of things we have been talking about. It gives me heart. I am sure people in the past said it is not practical, it is not real, and they gave you 100 reasons why it would not work.

Your district is showing how it can work. It is demonstrations like that which we spread throughout the Nation. Getting the university presidents involved in secondary education, that is a new concept, but I think it might be helpful.

Mr. CONTE. I am pleased with your answer. Down the line, we'll be looking for some help from you.

Mr. NATCHER. I will now yield to Mr. Smith of Iowa. Mr. Smith is the chairman of the subcommittee that appropriates money for the Departments of State, Justice and Commerce. Education is where he started. I will yield to you.

EDUCATION FUNDING BY LEVEL OF EDUCATION

Mr. SMITH of Iowa. The chairman and I have been on this subcommittee for 26 years, I guess. We have seen the education budget increase from virtually nothing to—how many billions of dollars is it now?

Secretary CAVAZOS. $24,100,000,000, sir.

Mr. SMITH of Iowa. I have a general question. About 30 percent of it goes for institutional assistance and aid for college students. Do you think that is the right proportion, or to put it a different way, are we doing enough for K through 12 and those who do not go to college?

Secretary CAVAZOS. At the present time, I think we look at the budget perhaps another way. I mentioned the 15 percent dedicated to research, statistics, and the demonstrations that we need to do. Then the other part, roughly 48 percent, goes to elementary and secondary, and the rest goes to higher education.

So, it is a little over 40 percent. We feel these proportions are about right. We think that is a reasonable ratio. We have been very vigorous in our support of vocational and technical education for those students who don't proceed on to graduate- or baccalaureate-degree level. I think the ratios are pretty good.

The main area the Federal Government has been involved with in postsecondary education has been with the guaranteed student loans and Pell Grants. If I had to split it, I would split the Chapter 1 and Pell Grant.

BUSINESS-SPONSORED REMEDIAL EDUCATION PROGRAMS

Mr. SMITH of Iowa. But you know that far more students don't go to college than do go to college. Are the high schools preparing them for their job? The counseling is not very good, is it?

Secretary CAVAZOS. I think that is one of the biggest problems we face in this country. Let's assume that a person does not go on to higher education or goes into the job market or even those who receive associate or baccalaureate degrees—last year, American businesses spent $25,000,000 on remedial education, that means workers could not read and write at the appropriate level. We have been reporting on the performance of 12th graders on writing and reading skills and geography, and we are not making it there.

We are going to have to do a better job.

IMPORTANCE OF READING SKILLS

Mr. SMITH OF IOWA. No one is self-educated. We get our education from somebody else. But we used to have a lot of people who had five or six grades of school that we called self-educated that became very well educated because they could read, right?

Secretary CAVAZOS. That is correct. In fact, I really believe that if we could just focus on reading, particularly in those first few years, that we would start turning this around. It is the ability to read that makes a difference.

EARLY SKILLS ACQUISITION AND PARENTAL INVOLVEMENT

Mr. SMITH OF IOWA. Do you have any plans along that line?

Secretary CAVAZOS. Chapter 1 funds support very, very strongly those children who have academic deficiencies in order to help them learn to read and compute. We also have special programs, of course, such as bilingual education and the homeless children program to help out. One of the most important of these special programs is Even Start. We have doubled the request for Even Start, a program which not only helps a youngster starting to school but the parents too, if they are illiterate. The parents learn at the same time as their children, and, in addition, are showed how they can be supportive partners in their child's education.

That is an important point that you have brought out there. Students, if given a Head Start or Even Start kind of program, seem to move ahead and do very, very well up to about third or fourth grade, and then they start falling off again.

We have asked the question time and time again, why? Oftentimes it is the inability of the parents to intellectually support their child much beyond the fourth grade. So the child starts losing ground academically. We have to find ways to educate not only the children, but the parents at the same time. I think this budget request covers that.

PROPOSED REDUCTIONS IN EDUCATION BUDGET

Mr. NATCHER. Mr. Secretary, the next Member of the subcommittee I will yield to is Mr. Obey of Wisconsin, who is the chairman of the subcommittee that appropriates the money for foreign aid. I don't know if he will tell you this or not but he is a whole lot more interested in education than he is in foreign aid. He believes we ought to educate our children. I yield to you.

Mr. OBEY. Thank you, Mr. Chairman.

I will not disagree with a word he said. As a matter of fact we did move some money from the foreign aid bill to this bill last year.

Mr. NATCHER. We appreciated it.

Mr. OBEY. First of all, I would simply ask you to provide for the record this information. The administration is pointing to some of the new initiatives it has in its budget. As you know, you are also recommending major reductions in programs like Impact Aid for children, Star Schools, refugee education, and Perkins loans, State Student Incentive Grants, et cetera. I would simply like you to provide for the record a total cost breakdown, a total run down of the reductions that you are recommending from the CBO base line level and from last year's funding levels, with two base lines, first from the Gramm-Rudman levels or the sequestration level, and the level provided originally by this committee before sequestration took place.

Secretary CAVAZOS. We will be pleased to do that. We looked at those areas and we decided to make some decreases for a variety of different reasons.

Mr. OBEY. I will be happy to have any further comments that you want for the record but I have a limited amount of time.

Secretary CAVAZOS. We will be happy to submit a detailed table directly to the subcommittee. In general, however, there are only six accounts that show decreases from any one of these three levels. They are Impact Aid, Rehabilitation Services and Handicapped Research, Guaranteed Student Loans, Howard University, College Housing and Academic Facilities Loans, and Libraries.

[The information follows:]

DEPARTMENT OF EDUCATION 1991 BUDGET PROPOSAL TO THE LABOR-HHS-EDUCATION SUBCOMMITTEE COMPARED TO 1990 APPROPRIATION AND 1991 CBO BASELINE

(in thousands of dollars)

Office, Account, Program and Activity	1991 President's Budget	1990 Initial Appro.	1991 Pr. Bud Compared to Initial Appro.	1990 Post-Seq. Appro.	1991 Pr. Bud Compared to Post-Seq. Appro.	CBO Baseline for 1991	1991 Pr. Bud Compared to CBO Baseline for 1991
OFFICE OF ELEMENTARY AND SECONDARY EDUCATION (OESE)							
Compensatory Education for the Disadvantaged							
1. Grants for the disadvantaged (ESEA I Chapter 1):							
(a) Grants to local educational agencies (Part A):							
(1) Basic grants (section 1005)	4,463,100	4,266,751	196,349	4,212,647	250,453	4,548,000	(84,900)

REGIONAL LABORATORIES AND RURAL INITIATIVE FUNDING

Mr. **Obey**. Secondly, regarding regional labs, your budget justification indicates the budget is increasing for regional laboratories. How much total new budget authority do you have in the budget including base funding and the rural education initiative?

Secretary **Cavazos**. It is about $25,000,000.

Mr. **Obey**. Where do you get $25,000,000?

Mr. **Kolb**. There is $5,000,000 that is carried forward. That is the total.

Mr. **Obey**. New BA is what I am asking?

Mr. **Kolb**. $20,000,000 is new.

Mr. **Obey**. So it is $20,000,000 new BA?

Mr. **Kolb**. But with $20,000,000 available in 1991.

Mr. **Obey**. How much new BA were you provided last year?

Secretary **Cavazos**. About $17,800,000.

Mr. **Obey**. Isn't it $3,500,000 less this year than you were provided last year?

Ms. **Christensen**. No, Mr. Obey, last year our appropriation after the sequester for the labs was $17,543,000. Our request this year is $20,000,000.

Mr. **Obey**. What base are you using for the fiscal year 1990 appropriation?

Ms. **Christensen**. I am sorry. We are using the $17,543,000 as the base. The total appropriation last year was $23,700,000. But that was a doubling up of the appropriation for the rural initiative because we already had funded the rural activity to be carried out in fiscal year 1990 with the 1989 appropriation.

So $5,000,000 is a carry over.

Mr. **Obey**. You are suggesting that you provided an increase. When did the labs get their fiscal 1989 funding for the rural initiative? How far into the fiscal year before they got money?

Ms. **Christensen**. September of this past year.

Mr. **Obey**. Didn't they get that money in the 11th month and third week of the last fiscal year?

Ms. **Christensen**. Yes.

Mr. **Obey**. I think you are using carry over funds in order to imply that more money is going to be there this coming year than in fact is going to be available. I think for the last several years you have been dragging your feet. It helps confuse the situation by implying that you are giving $3,500,000 more than you are giving.

Especially since you are talking about adding a new lab in the Pacific area this year which will squeeze other labs but you will have less money available.

Mr. **Kolb**. This has not been done intentionally to create this type of appearance. We would like to present a statement in the record showing how this was done.

Ms. **Christensen**. The major problem was that there was a doubling of the appropriation provided for the rural initiative. We will explain that in the record.

[The information follows:]

REGIONAL LABORATORIES RURAL FUNDING

The rural education funds appropriated for the laboratories during the last four years have been obligated as separate "add ons" to the basic laboratory contracts. Generally, the laboratories have been funded from one fiscal year's appropriation for rural education work in the following fiscal year, as indicated below.

1987: $3.9 million was appropriated. This was the first year of funding, and the funds were unanticipated. Time was required to issue a work statement and receive proposals from the laboratories. In May 1987, OERI awarded a core of monies ($2.99 million) in equal amounts to the nine laboratories through directed change orders. The remainder was awarded for special projects through a competitive process completed in September 1987. Because the report language accompanying the appropriation indicated the rural initiative was to support a two-year effort, the awards spanned two years (through May 1989).

1988: The rural education earmark for the laboratories was $3.8 million. OERI prepared a scope of work in keeping with the new report language and awarded the monies non-competitively in equal increments to each lab. Awards were issued September 1, 1988 (approximately $425,000 per lab), with performance ending September 30, 1989. Even though awards were not made until September, there was no lapse in service, because the prior year's funds were supporting activity through May 1989.

1989: The rural education earmark for laboratories was $5.2 million. OERI awarded $3.8 million non-competitively, so that each laboratory received core funding ($425,000) equal to the previous year. The remaining $1.3 million was awarded competitively on the basis of external reviewers' judgements of the extent to which the proposals spelled out innovative and promising practices, an emphasis in the report language. Both awards were issued September 30, 1989, for a 12 month period of activity.

1990: The rural education earmark was $5.9 million. The current laboratory base contracts end November 30, 1990, and it is not legally possible to award monies to these contracts for work beyond that date. Therefore, a portion (about one-sixth, or $109,500 per laboratory) will be awarded to incumbent laboratories to continue the rural work begun in 1989 for two months beyond September 20, 1990, until their contracts expire on November 30, 1990. This assures continuous laboratory services in rural education until the new five-year contracts are in place.

The remaining funds (approximately $4.9 million) will be awarded as a portion of the new laboratory contracts to begin December 1, 1990.

1991-1995: In recognition of the importance of the problems facing rural education, OERI has included an emphasis on improving rural education in the RFP for the new laboratory contracts. The five-year awards for labs will total over $24 million per year, with 25 percent designated for rural education. OERI will support this level of work each year of the contracts. Rural education will be a continuing and integral part of the laboratories' work.

Mr. OBEY. But I don't want to be walked into a situation where, because of the situation where the administration has not provided money until the 11th hour and 59th minute, you can say you don't need more money for rural initiatives because we have money carried over when in fact you people have been slow on the trigger to begin with.

Mr. KOLB. That is not our intent.

NATIONAL ASSESSMENT EXPENDITURES

Mr. OBEY. How much money have we spent so far on the national assessment program.

Mr. KOLB. In the last year, a little over $17,000,000.

Mr. OBEY. How much total?

Mr. KOLB. Since it began, we will have to get the total. It is about 20 years old. We will get it for the record.

[The information follows:]

TOTAL NAEP FUNDING

Including the fiscal year 1990 appropriation of $17.1 million, we have provided $113.8 million in funding for the National Assessment of Educational Progress since fiscal year 1970, the first year of the Assessment.

NATIONAL ASSESSMENT VALIDATION STUDY FUNDING

Mr. OBEY. You are asking for validation money this year?

Mr. KOLB. Validation money for what, sir?

Mr. OBEY. To validate the assessments that you are doing.

Ms. CHRISTENSEN. Yes, that is part of our request.

Mr. OBEY. Shouldn't validation money have preceded rather than trailed the program?

Secretary CAVAZOS. No, I don't think it should precede it. I think it is being done the way requested here because of the law. We have one set of data and let's validate what we have. I don't see how you can turn that around the other way. I think that is more effective.

Of course, in total, we have requested an increase of $1,782,000 this year.

Mr. OBEY. As you know, there is some controversy on whether or not that assessment program is actually accurately assessing the kinds of things we are concerned with. I would urge you to consider devoting a greater share of your resources to validating it before you move ahead to spend money on something that we are not sure is measuring the right thing.

Secretary CAVAZOS. I appreciate your comment, sir.

One of the questions we have all had is to that point. That is why we have asked for an increase in statistics and national assessment dollars, because in the past we have not been doing that as a Nation. We just have these qualitative, not quantitative, kinds of indicators as to the progress we are making. That is where we are trying to go.

EPI STUDY: INTERNATIONAL COMPARISON OF EDUCATION FUNDING

Mr. OBEY. I understand. You indicated earlier that you did not think very much of the debate that had been generated by the study done by the Economic Policy Institute about American spending levels on education.

I would simply suggest that before we talk about where we are going, it is nice to know where we are. I would disagree with you. I think that the Economic Policy Institute is in fact focusing attention on an issue which is very important.

I want to see if I can understand your position on this issue. You are suggesting, as you indicated at the education summit that "funding is truly not an issue." You have indicated here today that you think the outputs rather than the inputs are the issue.

BASIS FOR CALCULATING INTERNATIONAL EXPENDITURE COMPARISON

My understanding is that the Economic Policy Institute and you differ in one respect. They say that we are providing a spending level for elementary and secondary education at a lower level than all but two of the 16 countries examined.

The administration position is that if you look at that on a per student basis rather than a percentage of gross national product, that then we come out higher, is that right?

Secretary CAVAZOS. Yes, sir.

Mr. OBEY. Well, let me simply make that point with you: the Economic Policy Institute points out first of all that the administration's numbers usually include higher education. They do that because we have about a two to three times larger percentage of our population in higher education and that warrants the figures.

They said you need to disaggregate to look at only elementary and secondary. They then suggest that the way the administration uses the numbers is that when you use it as a per capita of student instruction, you run into the problem of exchange rates.

Since 1975 was the base year of that study and the dollar was over-valued at about 40 percent, they are suggesting that that artificially inflates the dollars the United States is spending per student. They also suggest that in the manner in which you measure it, you are ignoring what can be purchased in different economies for the same amount of dollars because of pricing anomalies.

They also suggest that even if you do it your way, that is, measure on a per pupil basis, and then adjust for differences in exchange rates and adjust for price anomalies the way the OECD does, they suggest you would still arrive at a per student percentage of per capita income measure which still leaves the United States 14th out of 16 countries examined. How would you differ with that?

Secretary CAVAZOS. I differ quite a bit, if I may, Mr. Obey. First of all, they are using gross national product. We have been using of course a much more accurate——

BASIS FOR CALCULATING INTERNATIONAL EXPENDITURE COMPARISON

Mr. OBEY. We just described it. I am asking how do you differ with the OECD numbers. I am saying let's do it your way and measure on a per capita student basis but adjust it for exchange rates and anomalies in price differentials.

Secretary CAVAZOS. We still come out the same way.

Mr. OBEY. No, you don't. You say measuring it your way we come out second out of the 16, second only to Switzerland, but if you measure it the way OECD measures, adjusting for those two factors, we still wind up 14 out of 16.

Secretary CAVAZOS. I am not sure what you included in terms of the OECD figures. If we just look at elementary and secondary, then there's the question what are we going to do with the "other" expenditures. They have a lot of data relative to early childhood education, child care in other countries that is not related to our numbers in the U.S.

Mr. OBEY. No, we are talking K through 12.

Mr. KOLB. We would be delighted to look at the OECD numbers. This is a fairly complicated area and I guess you can line up economists on both sides of the issue. I don't believe the Department has disputed the numbers of the OECD. We have just said they are not relevant.

Mr. OBEY. All right. So I am throwing out their numbers, but you would grant that you have to take into account fluctuations and exchange rates in determining that; that is what the OECD does.

Mr. KOLB. When we work through the same numbers they used—UNESCO and our own data from the National Center for Education Statistics—we show that the United States comes in second. We would be delighted to look at the OECD calculations. We used their methodology to arrive at the exchange rate adjustment. The issue is not resources. It is results. We stand by our figures.

Mr. OBEY. I would simply suggest, while the Secretary dismissed the debate in his statement this morning, my point is that we should arrive at an estimate that is accurate. If you estimate our education dollars on the basis of OECD calculations we are still about $25,000,000,000 short of meeting the worldwide average on a per pupil average.

That is a considerable difference.

Mr. KOLB. To give you two other examples that complicate this matter, EPI looked at K through 12, and their definition of K is different.

Then there is private spending. Another area that complicates this——

Mr. OBEY. But there is almost no private spending in other countries that you are talking about. OECD, when they do the figures, does include private spending in the United States and in other countries where there is a significant amount.

Mr. KOLB. There is not a one-to-one correlation in what we call K through 12 and what some countries in Europe and OECD would call it.

There are differences in the length of time people stay in elementary and secondary school in this country as opposed to western Europe.

We have received an analysis on this from an economist at Stanford. He has pointed out some of the other methodological flaws in the EPI report.

Mr. OBEY. I recognize there may be some, which is why I am not using their numbers. I am simply suggesting that while they may have methodological flaws you certainly do, too, because you are using certain assumptions based on inclusion of the exchange rates anomalies which I don't think you can do to arrive at a sensible understanding of where we are.

Mr. KOLB. We hope you will support our request for statistics monies so we can improve these comparisons.

Mr. OBEY. Thank you.

Mr. NATCHER. I will yield to Mr. Stokes of Ohio. It would do your heart good if you could be present when we mark up this bill.

PREPARING MINORITY LANGUAGE GROUPS FOR WORKFORCE 2000

Mr. STOKES. Mr. Secretary, at a recent press conference you were quoted as saying frankly, there has been very little educational progress made in the United States. You sharply criticized the reforms of the 1980's. You said, "Today's reading and writing skills remain virtually unchanged and dreadfully inadequate. Recently the executive director of the Education Testing Service told us that 86 percent of the 11th graders could not write an adequate explanation of the differences between food today and the food eaten during the expansion of America's western frontier and 72 percent could not write a persuasive letter urging a Senator to support funding for the space program."

Your statement and reports such as "Workforce 2000," tell us this: In 10 years, by the year 2000, one-third of the new entrants into the work place will be minorities; by the year 2020, 39 percent of the work force will be minorities.

We are told that today in 25 of the largest cities of the United States the school age population is almost a majority of minorities. One of the reports that we have says that in a city in Texas, I think it is Houston, the children speak 70 different languages. In the year 2000, 10 years from now, people in America will be functioning probably in the highest scientific technological society known to mankind. Considering our current situation regarding education, are we seriously preparing for this emergence into the year 2000, particularly considering that we have a shrinking white population and an increasing minority population in the United States?

Are we seriously preparing them for the year 2000?

NEED FOR RESTRUCTURING OF EDUCATION

Secretary CAVAZOS. I appreciate your comments. As a nation we are not preparing. We have gone at it by adding resources. From 1980 to last year, adjusting for inflation, we have had almost a 26 percent increase for elementary and secondary education. Yet as you pointed out in that decade we saw no change; $40,000,000,000 across that period of time. That is not a very persuasive argument when you look at those numbers. The reason I say we are not really preparing ourselves is that because as a nation we have been willing—I hate to say this about my country that I love so deeply—but we have been willing to let almost one-third of our population not be educated.

For the economically disadvantaged people, handicapped, minorities, both in the urban and the rural setting as well, we have failed. So therefore this Department has taken, this administration—and we can work together to bring it about although it probably won't happen in my lifetime—needs to take steps to change the way we are educating people in America today.

You are so accurate when you start predicting what is going to happen to our work force. People have said to me time and time again that we need to prepare our people so that we can enter the 21st century in order to compete against the industrialized nations of the world. I agree with that.

But I also add, Mr. Stokes, that we need to educate everyone in this country to their fullest potential, or the development or of human-kind's potential will not happen; it will go downhill.

This means a total commitment on everyone's part, not just our Department or Congress, but it is teachers, parents, the business community, everybody has to get behind this thing. Basically that is what we have been trying to do. People have not liked the message very frankly. They have not liked what I have said to them.

I have said it over and over again. I am going to keep saying it until they start showing me data and we start turning the numbers up. Until we start competing again, I am not going to back off. That is why we suggested a variety of restructuring reforms.

Mr. STOKES. I want to commend you both for your candor and for the leadership that you are giving in this area, not telling the people what they would like to hear but what they need to hear. All of us love this country but I think we will love it more when they see every individual in this country given an opportunity to flourish and grow in accordance with their native abilities under our Constitution.

DROPOUT PREVENTION PROGRAMS

At last year's appropriations hearings I expressed my concern to you about the proposed elimination of the dropout prevention program. At that time you stated that the Department had sufficient funding for dropout prevention within other programs. Then the authorization expired and funds were not appropriated for 1990.

Now I see that for fiscal year 1991 you are requesting $45,000,000 for "a new carefully designed and structured program of dropout prevention demonstrations and $5,000,000 to support research in this area."

First, how would this program be different from the old program that you recommended eliminating and, secondly, you also told me you were evaluating these dropout prevention programs. Can you tell us what you learned?

Secretary CAVAZOS. In 1988 and 1989, under the previous authorization for dropout prevention demonstrations, we funded a number of local programs to learn what was going on there and what kinds of progress they were achieving in finding ways to keep children from dropping out of school or to get them back into the system. These were rural and urban demonstrations of practices currently being used.

Now we would like to test these ideas that came from that first program, to determine if they were effective and to see if we can find some rigorous ways to address this issue. We really feel that we could start some programs here that would help us turn this issue around.

Again looking at the data, Anglos and Blacks are showing a little progress. We are decreasing the dropout rate. Hispanics continue to just go off the charts. We don't even have good data on Native Americans.

So we have now several new initiatives. The President asked us to report on the deficiencies in Hispanic education and some of the barriers that they have. We will have hearings throughout the country in that area. Secondly, within the next few days I will be announcing a study that I have called "Indian Nations at Risk," because here again dropouts constitute a large part of that population. Basically, if we take these kinds of dollars, this kind of request, we can build on what we have learned, we can identify good models, and then move them out and say that this is the way to turn this thing around.

I would like to say that during the last 18 months or so our Department has focused very much on the dropout issue. We have put a strong emphasis on that and these folks understand what I want done.

Mr. STOKES. Thank you very much, Mr. Secretary. Thank you, Mr. Chairman.

PRESIDENTIAL MERIT SCHOOLS AND MAGNET SCHOOLS

Mr. NATCHER. Mr. Secretary, what is the current status of legislation to enact the President's new initiative including Merit Schools, Magnet Schools of Excellence? What position is the legislation in now that would authorize these additional programs?

Secretary CAVAZOS. Mr. Chairman, the Senate has passed the President's Educational Excellence Act and it includes authorization for Presidential Merit Schools, Magnet Schools of Excellence, National Science Scholars, and other programs.

The Senate passed that February 1. The House held subcommittee hearings on August 2 of last year. It is my understanding that at the present time they are considering the President's Educational Excellence Act.

It is my hope that they will come out soon and they will be able to reconcile if there are any differences and we can move this out as quickly as possible. I would also, Mr. Chairman, like to personally thank you for the contingent appropriation that you put into that for Presidential Merit Schools and Magnet Schools of Excellence.

We deeply appreciate that.

Mr. NATCHER. Mr. Secretary, assuming now that the legislation is not authorized and not approved, what suggestions do you have to make to us concerning these programs at the time we mark up the bill? What should we do?

Secretary CAVAZOS. These are very, very important programs. Basically as far as I am concerned, people have said to me, how is the President going to become the education President? He is the education President as far as I am concerned.

People say how does he want to do it, more funding or what? What he is doing is providing leadership. All these programs are benchmarks we can think about and areas we can move in. I think all of these are important. I want to urge that we bring this about. I am very hopeful that we can move it ahead.

LEGISLATIVE STATUS OF UNAUTHORIZED PROGRAMS

Mr. NATCHER. When you get the transcript back, Mr. Secretary, please have one of your people insert at that point a table showing the unauthorized programs and the status of the bills before the Congress at this time. We would appreciate it.

[The information follows:]

Status of Legislative Action on Programs Lacking Authorization in FY 1991--As of March 12, 1990 (dollars in thousands)

Program	FY 1991 Amount	Status
Educational Excellence Act:		Passed the Senate (S.695) on February 7, 1990; Expected to be marked up in House Subcommittee by late March/early April.
Presidential merit schools	$225,000 1/	
Magnet schools of excellence	100,000 1/	
Alternative certification of teachers and principals	25,000	
Presidential awards for excellence in education	7,600	
HBCU endowment grants	15,000 1/	
National science scholars	5,000	
Vocational education	929,675	Passed the House on May 9, 1989. Reported by Senate Committee (S. 1109) on Nov. 1, 1989. Expected to be taken up by full Senate by late March/early April.
Handicapped--Special purpose funds	181,865	Passed the Senate (S.1824) on Nov. 16, 1989. H.R. 1013 is awaiting House Subcommittee action.
Dropout prevention demonstrations	45,000	Signed by the President on March 6, 1990.
Interlibrary cooperation	20,372	Bill enacted by Congress (H.R. 2742); awaiting President's signature.
Library literacy	8,365	
Pell grants	-218,000	Administration bill proposing amendments expected to be transmitted to Congress shortly.
Guaranteed student loans	-49,470	
	1,295,407	

1/ President's budget assumes enactment of legislation authorizing FY 1990 funding.

AVERAGE INCREASE IN UNDERGRADUATE TUITION

Mr. NATCHER. What was the average increase in college and university tuition this year, and what do you expect as far as next fall is concerned? Can you give us some idea about that?

Secretary CAVAZOS. I don't think I have it at this time. We can provide it for you.

Mr. NATCHER. All right, you may place that in the record.

[The information follows:]

INCREASE IN AVERAGE UNDERGRADUATE TUITION AND FEE COSTS

	Academic year—		Percentage increase
	1989–90	1990–91	
Public:			
2-Year	$753	$842	12
4-Year	1,680	1,865	11
Private:			
2-Year	4,477	4,772	7
4-Year	8,543	9,481	11
Proprietary	3,822	4,073	7
Overall average	2,900	3,198	10

Sources: "Digest of Education Statistics." Percentage increases reported by the College Board in "The Chronicle of Higher Education," August 1989. "1987 National Postsecondary Student Aid Survey."

PELL GRANT COST ESTIMATES AND SUPPLEMENTALS

Mr. NATCHER. The President's 1990 budget proposes to continue for a third year a virtual freeze, as you know, on total federally sponsored student aid. Now in this bill we have a reduction as you well know of $696,000,000 in interest, as far as guaranteed student loans are concerned.

You also recall that last year we had to have a supplemental of almost $900,000,000 placed back in the budget. How sure are you with regard to the $696,000,000 figure now? How do you feel about it, Mr. Secretary?

Secretary CAVAZOS. I think if you go back and look at the last four or five years, I think we have been fairly close on those estimates. I don't think it has averaged more than 2 percent from what those interest rates actually turned out to be.

I think it is fairly close for 1991, but this estimate also assumes an additional reduction of $227,000,000 in 1990 due to interest rates. We will work with you. If we get in trouble with our estimate we will have to come back, obviously, but we expect this is fairly close.

Mr. NATCHER. Last year I believe the exact figure was $892,000,000 for the supplemental, not very close Mr. Secretary.

Mr. KOLB. One of those variations, sir, was attributable to a high influx of independent students eligible for Pell Grants. There are some things like that that can come in and throw off the best estimates. People in GAO who have looked at our track record in this area have been fairly complimentary.

We have done the best we can and, historically, we come up with pretty good estimates.

TRADE AND PROPRIETARY SCHOOLS

Mr. NATCHER. To what degree is your reluctance in increasing student aid related to problems with trade and proprietary schools?

Secretary CAVAZOS. I would like to address that. I am not reluctant to continue to increase student aid, particularly in the area of Pell grants. I have been a very strong advocate of the guaranteed student loans. But, I am deeply concerned about the default rate and we have proposed strong measures to try to turn that around.

The proprietary schools have a higher default rate, 33 percent, roughly, whereas for the rest of higher education it is around 17 percent.

That is the national total comparison. The problem is that I don't want to say that all proprietary schools fail to deliver a good education because some do. There are some fine schools out there. But there are some that are giving us a difficult time. We have tried vigorously to close those down in terms of student loans. We are going to continue to do that.

I don't think that the way to solve the problem is to say simply we are not going to fund or support these institutions. I think it is important to continue to support proprietary schools. We have no reluctance to fund this area, but it is our job to clean it up.

It is also the profession's job to clean it up. They have leadership working in that direction. They have been working with us to try to eliminate those kinds of abuses.

HIGHER EDUCATION ACT REAUTHORIZATION

Mr. NATCHER. Will the Department be recommending significant changes in the Higher Education Act during the 1991 reauthorization cycle?

Secretary CAVAZOS. What we have done here, Mr. Chairman, is last year we started thinking about what the future looked like. As I meet with the people at One Dupont Circle—where the national associations and people in higher education have their offices, I made it clear to them that the Department of Education would take the leadership role on the higher education reauthorization bill.

Obviously, I spent 35 years out there in higher education and it is hard to step away from that. We have already had seven hearings throughout the Nation, the last in Washington, D.C. which I chaired right before Thanksgiving.

We gathered data and heard testimony both from proprietary and other institutions about what we ought to be doing. We have evaluated that testimony and have a task force looking at that. We are working with people at Dupont Circle to bring that bill out.

It is my hope that by this spring or perhaps early summer we will have first drafts and have it ready to go to OMB. The point I am making is that basically I don't have major changes at this time to propose, Mr. Chairman.

I would rather wait until we come up with that budget. But I am watching it very closely. That is one of my own personal concerns that I have kept the Department working on very hard.

PELL GRANTS

Mr. NATCHER. As you well know, Mr. Secretary, the amount for the Pell grant maximum award is $2,300 both in fiscal years 1990 and 1991.

Secretary CAVAZOS. Yes, sir.

Mr. NATCHER. What would the cost be for each $100 increase in the Pell grant maximum award? Do you have some idea—about each $100 increase?

Secretary CAVAZOS. It would be about $230,000,000 to increase that award level by $100. Excuse me, I understand it is $250,000,000 to increase it.

LESS-THAN-HALF-TIME STUDENTS

One more thing I would like to have in the record is our strong support of Pell grants and I would also remind people that we have advocated and pushed for support for less-than-half-time students in terms of Pell grants.

That is an important part as far as I am concerned. Let me explain why. So many of our students don't carry a full course load or even half a load because they have to work. These are often students who need Pell grant funds. I hope as we move ahead, we will keep those people in mind.

Mr. NATCHER. Mr. Secretary, you may remember that about two days before we marked up our bill in subcommittee we got a request from downtown for an additional $700,000,000 for the Pell Grant program. That increase caused enormous problems for the Congress, coming up after the ceilings had been established.

Do you feel pretty good about the figures now before the committee for 1991, generally?

Secretary CAVAZOS. Yes, this is part of the independent student problem we experienced last year. It was hard to predict.

Mr. NATCHER. Mr. Conte.

STUDENT AID BUDGET REQUEST

Mr. CONTE. Thank you, Mr. Chairman. Mr. Secretary, at least in the elementary and secondary education goals there are proposals to increase spending. What happened to postsecondary education? Postsecondary education is also included in goal setting, but your budget request does not fully fund the Pell Grants at $2,300. Plus, it cuts SSIG's and Perkins loans.

It does not increase SEOG, which is a great program, or Work Study for inflation. My question: why is postsecondary education, particularly the student financial assistance account, the orphan in this budget?

Secretary CAVAZOS. I started out by thinking of it in another way. They are the recipients of, as I mentioned, what is coming down that pipeline, postsecondary education. So we have tried to emphasize and bring the change around at the elementary and secondary level.

I would point out that even though you are so accurate in where we have had to make reductions, that we will be able to fund, it is estimated, some 5,940,000 students. There will be no reduction in numbers of students who receive the Pell Grant or those who receive the guaranteed student loan, that is an entitlement.

So I don't look at it really as being left out of there.

You are very correct in your observation about the goals in higher education. It doesn't include that unless you look at some of the subsets. I am sure that will be involved in terms of higher education goal setting. But let me just say that about three weeks ago, or maybe it was a month ago, I gave a major talk to the American Council on Higher Education. At that time I set some goals for higher education, not personally, but suggested some things they ought to start thinking about.

They really dealt with many areas that in a way take their origin in the problem within elementary and secondary. One of the things I said to the higher education people was that it should be one of their goals to increase the number of minority students we have in the university.

That impacts the elementary and secondary levels because they need to do a better job in mathematics and science, in preparation of minority faculty, and a host of other areas. We have had an increase in requests for funding for the historically black colleges and our Title III area. So I think overall this is a balanced budget that helps us achieve that.

We look at it in that totality. I hope that next year as we sit here and we will be talking about the higher education reauthorization, many of these things that you are talking about now, Mr. Conte, we can address.

Mr. Conte. One of the administration's goals is to narrow the gap in completion rates between Black, Hispanic and Anglo students. I don't see how you will narrow the gap if you don't provide the funds. When you factor in inflation, over the last two years the programs I am talking about have been cut by about $1,500,000,000.

One other thing, I am concerned about the new minimum wage bill. What will that do to the SEOG program and Work Study? Are fewer students going to be able to get into the program?

Secretary Cavazos. I have been talking to my colleagues in higher education about the need to do as you point out, to increase graduation rates for Hispanics and for Blacks. Every time I talk with them they say we need to increase Pell grants and guaranteed student loans. We are doing that with the constraints that we have, the budget, et cetera. We have to start thinking about loan packages and budget packages.

I think the universities have to counsel people about how to finance education. Sure there will be Pell grant money or some of the money from guaranteed student loans but there are other resources out there. Many of the States are starting to put in resources at the State level to support these students.

Mr. Conte. That is not the case in Massachusetts! You don't know how bad it is.

Secretary Cavazos. I think one of the other things that we need to do is urge those schools to try to offer their own loan packages as well as more student money. Every time you pick up the Chronicle of Higher Education we have another university with a $1,000,000 financial campaign.

Often if you look at that, it is directed toward student aid. We need to think of it not just as one facet, the Federal Pell grant and guaranteed student loan, but think of getting everyone involved and taking part of the responsibility.

DEPARTMENTAL MANAGEMENT BUDGET REQUEST

Mr. CONTE. We could go on and on, but if things are so tight, why are you requesting a $58,000,000 increase for Departmental Management, taking it from $272,000,000 to $331,000,000? Didn't we give you $23,000,000 this year?

Secretary CAVAZOS. Part of the problem that we are running into is that we now have a lot more programs to administer. We now administer more than 200 programs within the Department. We have done very, very extensive work in the area of guaranteed student loans, default regulations, management. We need to have more people in those areas.

We want to be much more vigorous in terms of audit, civil rights and some of these areas. That accounts for these kinds of growth. I think this is a reasonable level we need to move toward. I think we are very shorthanded in the Department right now.

IMPACT OF SEQUESTRATION

Mr. CONTE. In fiscal year 1990, of the $1,600,000,000 increase we provided to the Department of Education, $265,000,000 was stricken due to the enactment of a four month sequestration. I warned at that time that sequestering would have dire consequences.

Tell me about the consequences of sequestering. Is sequestering a good thing?

Secretary CAVAZOS. I think certainly the problem with sequestering is that it can have these kinds of impacts. But a budget that is completely out of whack is one that is not a good thing, so we have to address it. We have to find ways of doing it. I am not saying it is a good thing but it is a mechanism that we must do. We are fortunate in the Department of Education that most of our programs are forward funded so therefore it did not impact us quite that much.

IMPACT OF SEQUESTRATION ON PELL GRANTS

We did take some impact in terms of Pell grant funding, $67,000,000 in terms of Pell grant funds. We have requested that we be given borrowing authority against our current appropriation to take care of the $106 million shortfall that remains after program funds are reduced by the $67 million sequester.

Mr. CONTE. Are you going to ask for reprogramming?

Mr. KOLB. We have announced there will be a linear reduction in Pell, based on that $67,000,000 attributable to the sequester.

That has been known for some time, since before the beginning of this year.

Mr. CONTE. Am I right in saying it will cause 14,000 students to lose their grants and cut the grants of 1,300,000 students?

Mr. KOLB. By about $50.00, I think that is right.

Mr. CONTE. $50.00 is a lot of money to a student going to school who doesn't have much money. Not everybody can afford to go to Harvard.

Mr. KOLB. This sequester applies all across Department programs. It was enacted by the Congress as well. In a sense there is a joint responsibility for that.

Mr. CONTE. I have used my 10 minutes, Mr. Chairman.

Mr. NATCHER. Mr. Secretary, no Member of Congress works harder for education than the next Member I will introduce, Mr. Hoyer of Maryland.

Mr. HOYER. Thank you, Mr. Chairman. I apologize for my late arrival. We have a number of subcommittee hearings today.

PRESIDENT'S GOALS FOR EDUCATION

The President has placed himself in the leadership of the efforts for excellence in education in our country. I think that is a very positive step that he has taken. In his State of the Union address, which I am sure you helped to fashion, he set forth certain goals. Those goals were also addressed in Charlottesville at the education summit. Is there a plan to attain those goals? If there is, within the time frame set by the President, what are the costs attached to attaining those items that are net attributable to the States? What efforts will we be making at the Federal level to encourage the States to undertake those efforts?

I know that is a broad question, but it is important to have a long term plan. It is essential because we have a crisis in education in America which is going to adversely affect the quality of life in our country and our ability to compete internationally.

Secretary CAVAZOS. I will be glad to address that. That is one of the issues we will be facing between now and the year 2000. Let me get back to the question of what is the grand plan. The National Governors Association is meeting with the Administration in the next month. But we have the President's preamble, the stated goals that are quite good goals, and, we worked as we fashioned those with the National Governors Association.

EDUCATION PROGRAMS SUPPORTING PRESIDENT'S GOALS

Now if you look at those goals, starting out with readiness to start schools, I think that there are a variety of strategies that have already been started at the President's level, such as his request for a $500,000,000 increase for Headstart. In this Department, we asked to double our Even Start program, a variety of pre-school grants that we are working on for handicapped children, and early intervention from birth to age two.

It is our assumption that we will be able to work with the States to make those programs effective. We have to have their support at that level. But if you look at the totality of those goals, they are dealing in part with the percentage of students graduating from school, getting them up to 90 percent from the low 70's where we are at the present time.

Here again, Chapter 1 becomes the key to that, Talent Search is one, expanded dropout research. We have provided budget increases in a number of areas to help us attack the bilingual problem, including the Bilingual Education program.

We could go right through each one of these goals, the next one dealing with competency in history, math, science and geography, and we can see that we have programs that really address every one of the issues that we bring out in these goals.

The President's Educational Excellence Act covers many of these areas as well. For the Eisenhower Science and Mathematics Education program, we have markedly increased our request there, in terms of what we are doing in the Department itself, by 70 percent, up to about $230,000,000. We are also working with the National Science Foundation and some other agencies to try to bring about coordinatin of science and math programs.

For literacy programs, we are asking for an increase to help the schools teach basic skills. Here again, we have asked for increases.

Mr. Hoyer, what I am getting at here is the following. I said to the Department: Look at the budget; what is the message that comes from that budget. The budget should state where you are going with these same kinds of goals.

Basically that comes through in that direction. We will work with the National Governors Association to implement these goals and move them ahead but what is so critical is not just the Governors.

Now we have to think about the State level, and the local level, the superintendents, principals, teachers, the parents, and the business community. All of those are a piece of the component. As I said earlier, I am not going to leave any of those people out. They have a responsibility and I know there is a commitment out there to bring it about. By setting these goals, the President has given that leadership and I believe we can move ahead.

Mr. HOYER. Mr. Secretary, I noticed you were reading from an outline. Would that be an appropriate document to include in the record at this point?

Secretary CAVAZOS. I will be glad to submit it for that. I asked Mr. Kolb, I said, "Let's look at the President's goals and what do you have in the budget to back that up." We will be glad to submit this for the record, Mr. Hoyer.

[The information follows:]

EXAMPLES OF HOW THE DEPARTMENT OF EDUCATION FY 1991 BUDGET ADDRESSES EDUCATION GOALS

The $24.6 billion 1991 budget for the Department of Education will foster excellence in education and provide educational opportunity for the disadvantaged, the handicapped, minorities, and needy college students. Following are examples of how the Department's budget supports the education goals announced by the President.

Readiness for School

GOAL 1: By the year 2000, all children in America will start school ready to learn.

- A major increase in support for the education of disadvantaged children under Chapter 1 would direct over $400 million to nearly 500,000 disadvantaged preschool children, an increase of $30 million and 18,000 children over 1990.
- For the Even Start program, which integrates early childhood and adult education into a unified program aimed at giving educationally disadvantaged parents the literacy skills needed to help their children succeed in school, the 1991 budget includes a $23.8 million increase in order to double the size of the current program to $48 million.
- The Preschool Grants program for handicapped children, three through five years of age, would be expanded by $6.2 million over the 1990 level. The budget would provide $726 per child for an estimated 355,000 children--an increase of $64 per child in the Federal share and 4,000 additional children over the 1990 level.
- Support for early intervention services to handicapped children, birth through two years of age, and their families would be increased by 4 percent or $3.2 million to almost $83 million.
- Under the Bilingual Education special populations activity, preschool projects are expected to increase approximately 10 percent, from $3.9 million to $4.3 million.
- The research budget includes funds for a new research and development center on families, communities, and young children's learning.

High School Completion

GOAL 2: By the year 2000, we will increase the percentage of students graduating from high school to at least ninety percent.

- Chapter 1 grants to local educational agencies will increase by 8 percent--to almost $5 billion--to provide compensatory education to about 6.3 million disadvantaged children, or 225,000 more than are now being served. These services are instrumental in preventing dropouts.

- An increase of $100 million, for a total of $225 million, is included for a Presidential Merit Schools program that will provide cash awards to schools based on school performance criteria, including a reduction in the dropout rate. For 1990, the Congress appropriated $125 million for Presidential Merit Schools, contingent on the enactment of authorizing legislation by March 1, 1990.

- An expanded dropout prevention demonstration program, proposed at $45 million, will test methods of encouraging potential dropouts to remain in school and those who have already dropped out to return to school and complete their education. An enhanced evaluation effort will help ensure that the most effective projects are identified and disseminated for use around the country. An additional $5 million has been requested for a national research center and other research projects to provide information on improving the performance of secondary school students and reducing the number of dropouts.

- An increase of 10 percent for the Drug-Free Schools and Communities program, from $539.2 million to $593.3 million, will provide increased support for drug education and prevention programs with a portion targeted on high-risk youth, including dropouts.

- Other efforts that attack the dropout problem are: (1) an increase of $17 million, or 9 percent, to a total of $206 million, for bilingual and immigrant education programs; including a special focus on districts with major influxes of children with limited English proficiency; (2) over $113 million for magnet schools in desegregating districts; and (3) $7.5 million to address the problems of homeless children and youth--both to help States coordinate their efforts, and to develop and demonstrate exemplary programs that address the needs of homeless students.

- An Administration initiative under the Talent Search program, begun in 1989, will encourage seventh- and eighth-graders to begin to think about pursuing a college education and help them to seek financial aid.

Student Achievement

GOAL 3: By the year 2000, American students will leave grades four, eight, and twelve having demonstrated competency over challenging subject matter, including English, mathematics, science, history and geography.

- The Administration's Educational Excellence Act would establish a Presidential Merit Schools program to provide cash awards to public and private elementary and secondary schools that have made substantial progress in raising student educational achievement, creating a safe and drug-free school environment, and reducing the dropout rate. For 1991, the Administration is requesting an increase to $225 million.

- Funding is also requested for Magnet Schools of Excellence, a component of the Administration's Educational Excellence Act, which received a contingent 1990 appropriation of $50 million. For 1991, the Administration proposes $100 million for this activity, which will be open to all local educational agencies, whether or not they are undergoing desegregation. Research has found that magnet schools, which give parents an opportunity to select the best educational program for their children, foster educational excellence.

- To create an incentive for improved teaching, $7.6 million is included for Presidential awards to elementary and secondary school teachers who meet the highest standards of excellence. This new program is also part of the Educational Excellence Act.

- A major increase is requested for education research and statistics in 1991 in order for the Department of Education to provide more and better information from research, practice, and statistics to help focus the education system on performance and results and help arm the American people with knowledge of what works in education so that they can improve the teaching and learning of American youngsters. Excluding amounts for assessment of student achievement (see below), total funding requested is $103 million, an increase of $25 million, or 32 percent, over the 1990 level.

- Also included is continuing support for the National Assessment of Educational Progress, a primary source of information on changes over time in the educational achievement of students at different grade levels and in various skills and subjects. These data will be useful in tracking progress toward national performance goals related to student achievement, because, beginning in 1990, the program includes representative assessments in participating States. Funding requested is $18.9 million.

Science and Mathematics

GOAL 4: By the year 2000, U.S. students will be first in the world in science and mathematics achievement.

- Support for the Dwight D. Eisenhower Mathematics and Science Education program would be increased by 70 percent--from $136 million in 1990 to $230 million in 1991. The program makes grants to States and local educational agencies and to institutions of higher education to improve the quality of mathematics and science teaching and to increase the access of all students to quality instruction.

- $5 million has been included for the first-year costs of a National Science Scholars program. The program, included in the President's Educational Excellence Act, would encourage achievement in the sciences by providing scholarships to graduating high school students who have excelled in the sciences, mathematics, and engineering.

- A $12.5 million initiative will also be included in the Upward Bound program to fund 50 regional mathematics and science projects for disadvantaged high school students to prepare them for higher education in these areas.

- The research request includes funds for two national research and development centers, one to improve the teaching and learning of mathematics, the other to do the same in science.

- The Graduate Assistance in Areas of National Need program would be funded at $25.5 million, a 61 percent increase over the 1990 level. This program provides fellowships for students of superior ability to pursue graduate-level study in mathematics, physics, chemistry, and engineering.

- The Minority Science Improvement program, which provides grants to minority higher education institutions for improvements in science teaching facilities and equipment, would be funded at $5.6 million, an increase of 4 percent over the 1990 level.

Literacy and Life-Long Learning

GOAL 5: By the year 2000, every adult American will be literate and possess the skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship.

- To help the parents of educationally disadvantaged children become full partners in the education of their children, the budget includes $48 million for Even Start--double the 1990 level.

- The Administration is seeking $200 million under the Adult Education State grant program--a 27 percent increase--to help States teach basic skills to 2.8 million illiterate adults and to help another 1.2 million adults attain high school equivalency.

- A national clearinghouse, funded at $5 million, will be created to help schools, community organizations, and employers use the latest and most effective methods and programs in adult literacy education. An additional $3 million will continue the Department's research and evaluation program in adult education and literacy.

- Other programs will focus on: (1) partnerships involving business, labor, and educational agencies, to demonstrate literacy training methods in the workplace ($19.7 million); (2) literacy training for homeless adults ($10 million); (3) bilingual education projects designed to teach English to limited English proficient adults and out-of-school youth ($5.5 million); (4) encouraging undergraduate students to provide volunteer tutoring to disadvantaged individuals in the community ($5 million); (5) literacy projects conducted in public libraries ($8.4 million); and (6) model demonstration programs in English literacy training ($1 million).

- The research and statistics request includes funds for a national research and development center on adult literacy and for continuation of the national assessment of adult literacy.

- Student aid programs will continue to support opportunities for older as well as traditional college-age students to pursue postsecondary education on a part-time basis. The 1991 budget request will provide Pell Grants to some 169,000 less-than-half-time students in academic year 1991-92.

o For vocational education, $937 million is requested for programs included in the Administration's Perkins Act reauthorization proposal.

Safe, Disciplined, and Drug-Free Schools

GOAL 6: By the year 2000, every school in America will be free of drugs and violence and offer a disciplined environment conducive to learning.

o The Drug-Free Schools and Communities Act is a vital component of the war on drugs. At the urging of the Administration, the Congress recently amended the program to:

-- require school districts and higher education institutions to carry out drug and alcohol abuse prevention programs or risk losing their Federal dollars; and

-- create an "Emergency Grants" program to help school districts in communities most affected by drug use and trafficking.

o The budget includes over $593 million for State Grants and other programs under the Act, an increase of $54 million, or 10 percent, over the 1990 level.

COST TO ATTAIN PRESIDENT'S GOALS

Mr. HOYER. In addition, please include for the record a long-term plan, if the Department has projected the costs of attaining those goals. The President and the Governors are correct, it is not sufficient to just throw more money at the problem. We must decide what the goals should be and then apply the resources necessary to attain those goals.

Obviously, I perceive one of your major responsibilities, and objectives, is to establish a plan to meet those goals. I think it would be important for the committee to see it.

HEAD START PROGRAM

The Head Start program, while it is not in your Department, is critically important to meeting those goals. We know unhealthy children do not learn. Birth to age two and a half may be as important as any stage of life for children going into the educational system.

As I understand it, we have proposed $1,900,000,000 for the Head Start program, $1,866,000,000 to be exact. If you take 1980 and apply nothing but cost-of-living increases to those figures, you come up with $1,886,000,000. My point is that though I am pleased that the Administration is increasing Head Start by $500,000,000, I think that it is essential that we do more.

The proposed increase is for services for 60 percent of four year olds only. It does not necessarily impact the five year olds. Most of the five year olds are in kindergarten. In Maryland and most States we have public kindergarten. But I think it is very critical for the committee, the Congress, the President, and the country to better understand what we need to do on a continuing basis.

EDUCATION GOALS AS REFLECTED IN FY 1991 BUDGET

I think we need to provide more than an inflation adjustment, just as we did on defense. I look forward to seeing that plan and working with you to implement it.

Secretary CAVAZOS. I will be glad to.

[The information follows:]

EDUCATION GOALS AS REFLECTED IN FY 1991 PRESIDENT'S BUDGET FOR DEPARTMENT OF EDUCATION

(In thousands of dollars)

	1990	1991	Change Amount	Change Percent
Goals:				
1. Readiness for School....	$749,873	$813,300	+$63,427	+8%

COORDINATING FEDERAL EDUCATION PROGRAMS

Secretary **Cavazos**. Although we are a little over $24,000,000,000 in the Department, there is probably about that amount in other departments at the cabinet level which you could say are truly education, Head Start, Agriculture, Defense, Health and Human Services, Interior, all of these have an educational component. I have been a strong advocate of this and I pushed very hard for it, not that I want their funding, but I want to make sure we work together, that we don't duplicate and that we get the most for our dollars. When I put together what you asked for, let's use some of these other ideas.

I went to the President a while back and said, we need something on education coming through the cabinet level because we have so many cabinet parts that are affected.

So we formed this committee. I chair that committee. We are trying to do exactly what you are saying, trying to get the most we can for those dollars.

Mr. **Hoyer**. I think that is a very useful effort. Do you expect to have some sort of report out or at least an explanation of the combined efforts that we are making not only out of your Department but out of the other departments?

Secretary **Cavazos**. I cannot commit for the other areas but certainly for the kind of leadership, for example, we are working on literacy across all the departments, the strategies we need to put that much in place. I cannot say what they will spend because I don't have that authority but I work very closely, particularly with Labor, and Health and Human Services, with Secretary Dole and Secretary Sullivan.

Mr. **Hoyer**. You have a $122,000,000 increase for research, statistics and assessment activities. Will that cover all the programs in your Department, including Chapter 1, which is a critically important program under your Department as well as Head Start?

Secretary **Cavazos**. No, it will not.

Mr. **Hoyer**. I asked Secretary Sullivan about an assessment of Head Start. We all agree that Head Start works but I think it can work better than it does. I hope there is coordination between Secretary Sullivan and yourself, because it is a critical intervention for a group that is at highest risk in our society and it helps us manage the most difficult problems the educational system confronts.

Secretary **Cavazos**. I agree the most critical time is probably that period from birth to two and a half years of age. That is when they learn self esteem, motivation starts, and then you can lay the foundation to prevent the drug problems. We are trying to coordinate Head Start, Even Start, and Chapter 1. Secretary Sullivan and his people and my Department are working to see what we can do with it.

We are committed to doing exactly what you are talking about.

Mr. **Hoyer**. Thank you.

Mr. **Natcher**. Mr. Early.

RESTRUCTURING THE EDUCATIONAL SYSTEM

Mr. **Early**. Secretary Cavazos, it is a pleasure to see you. I was concerned about your comment to Mr. Natcher. You suggested that in this country we spent $363,000,000,000 on education and 6.2 percent is the Federal share. You said that education is a local and State problem. Don't you think, as one of the finest educators I ever met, that it is time we had a renaissance in education. States and cities and towns cannot afford to keep up with quality education at the elementary and secondary level.

Secretary **Cavazos**. Thank you, very much, for your kind words, Mr. Early.

I really believe, to state it again, that the problem is not that the States or the Federal or the local level is not doing their part. The dollars are coming in. The problem is how we are using those dollars. People say what do you mean by that.

One, you change the system itself. I have talked about the restructuring we need to put in place, getting more people involved in these decisions, the variety of strategies we can do, early childhood education, alternative certification, looking at flexible school days. How much do we spend on administration as a Nation and how much do we spend on teaching.

What I have been doing, Mr. Early, and I have to be quite frank, it has not been appreciated through this Nation, is saying that you have to change the system. We know good and well, Mr. Early, and we have known for a decade that what you have to do is to change the system.

Mr. **Early**. You don't think we need to do studies, do you?

Secretary **Cavazos**. No, sir.

Mr. **Early**. Why do you keep asking for money for studies, that is a camouflage for not doing anything.

Secretary **Cavazos**. The dollars have been pouring in, the test scores go down and the youngsters drop out. You have to change the system. There has been an absolute refusal by people to initiate change in the system.

Mr. **Early**. That is the question. I think there is a little bureaucracy in your answer. We have to change the system in elementary and secondary education. We are staying at 6.2 percent. Mr. Conte told me earlier one of his biggest worries is that he has a local school district that is threatening to shut down the schools in April because there is no State money.

The Feds are supposed to recognize that. We are not supposed to do just what has to be done to get re-elected. There must be change.

Secretary **Cavazos**. It is not just educational dollars. You have to add people committed to changing the system because the quality is not coming out.

FUNDING AT STATE AND LOCAL LEVEL

Mr. **Early**. When you say that, you say problems are not related to money. I don't want to throw buckets of money to solve the problems, that is what the Democrats did in the sixties. But we need more monies in the cities and towns to increase the salaries we pay teachers. It is ludicrous to suggest that you send people through four years of college, and when they graduate you offer them $15,000 a year to teach.

I don't care how many studies say the size of the classroom doesn't make a difference. If you are teaching 30 or 40 students, you notice the difference. We talk about the dropouts. You talked about the 71 percent, and the President's goals of increasing the high school completion rate to 90 percent. That costs the cities and towns money.

In the City of Boston, they don't do anything with a truant until after 35 days. If a student skips school for a week or two, that student is not going back. That is because the cities and towns just don't have the money, especially in non-English-speaking areas.

Secretary Cavazos, you know how much I respect you, but we need a renaissance in how we approach education. We can't just focus on higher education. I recognize the practical problems of putting money into the system, and we give it back to higher education.

We changed the reimbursement formula, and I am sure the cities and towns will supplement current operations. But I am concerned that we are going down the same road with this budget. Here we have a budget that appeases ourselves, not a budget that will change anything.

Secretary CAVAZOS. Mr. Early, I really believe that this is a good budget and it addresses the issues. The issue needs to be addressed at the local and State level. It is not being addressed right there. That is where we find ourselves in situations where we are failing. The parents and the local communities have not been involved. Everybody says it is the Federal Government's job to be involved. We have proposed strategies for reform and we have proposed a budget which will help the States and local educational systems, but the States and localities must initiate the change.

Mr. EARLY. If that is the answer on the local and State level, what is the answer when the local and State levels don't have any money?

FEDERAL ROLE IN EDUCATION

Secretary CAVAZOS. Then they will have to make a decision on how they are going to spend their money, just as you and I do. The Department of Education is going to be 10 years old. As a Department, we are going to have a decade of great problems in education. What is our job? People say, Mr. Cavazos, you have been in this job 18 months and you have not changed the system and you are not going to get your job done.

We have zero authority to change the system. I cannot mandate a national curriculum, nor should I. I cannot mandate parental involvement or alternative certification. All I can do is what I am doing, and that is to provide the leadership that is there.

We were structured to do research, to measure; we have our civil rights responsibilities; and leadership. That is our responsibility. They keep saying, "give us more Federal dollars," and I will say, "No, you have to change the system."

Mr. EARLY. You say what you cannot do legally, but you also say we are putting all this money in elementary and secondary education. However, if the dropout rate does not decrease, the system is not working. If you don't pay teachers $20,000 or $25,000, you may not be getting the best teachers. We are not helping to solve the problem. We are putting a Band-Aid on it. I guess we have been studied-out. I wish there was not a dime in here for any more studies, because that would mean we would have to implement what we have studied at least 23 times.

NATIONAL DIFFUSION NETWORK

You proposed $12,000,000 for the National Diffusion Network. This has proven itself to be an outstanding vehicle for implementing many successful educational programs around the country that were developed at local levels. Do you believe that?

Secretary CAVAZOS. Yes.

Mr. EARLY. Shouldn't we be spending more money on this program, so we could stop studying and implement?

Secretary CAVAZOS. We have demonstrated how these things work. Why couldn't the State or local level pick it up? We have demonstrated that it works.

Mr. EARLY. They are getting the same message out there. Read my lips. You cannot sell a tax package in my State.

Secretary CAVAZOS. I have not advocated raising taxes.

REFORMS NEEDED IN EDUCATION

Mr. EARLY. I am not trying to get you to say that. I think education needs a total renaissance. For this member, I would agree to take all the money out of higher education and send that money back to the States for elementary and secondary education, if I believed that it would help improve the quality of elementary and secondary education. I don't think it will be popular, but what we are currently doing for elementary and secondary education is not working.

I have sat on this committee 16 years, and I don't think I have seen the quality of education improve. I think the Federal role is to pick up when the cities and States can't do it.

Secretary CAVAZOS. I want to be sure none of our colleagues in Dupont Circle misunderstand me. I think it is vital that we continue to support postsecondary education for a host of reasons. We need to have that component. But, when you say over the decade, we see no improvement and the Congress has continued to put dollars in this area, I say it is not just the responsibility of the Congress, the Department, or our President to improve education. We have to get people back at the local level involved in what needs to be done, and have the school boards and superintendents and others face up to the fundamental issue of change.

TEACHER SALARIES

Mr. EARLY. Don't we have to pay teachers?

Secretary CAVAZOS. I strongly support paying teachers. At the same time, you have to reallocate your dollars.

Mr. EARLY. Higher education pays their professors between $50,000 and $60,000 per year, and sometimes they don't teach a full day of classes. On the other hand, we don't give any financial incentives to elementary and secondary teachers. Whether it is a local, State or Federal problem, we all should address it.

Secretary CAVAZOS. Mr. Early, you and I have worked together before. We may not always agree, but we will certainly sit and talk about it.

Mr. EARLY. As long as we don't study anything. Thank you, Mr. Chairman.

Mr. NATCHER. Mr. Smith?

ROLE OF EDUCATION DEPARTMENT IN DRUG PREVENTION

Mr. SMITH OF IOWA. Mr. Secretary, we are finding an amazingly large percentage of drug addicts who first experimented as casual users while they were at some level of school, maybe all the way from third grade to college. What are you going to do to become involved in a more meaningful way in the drug program?

Secretary CAVAZOS. Let me address that issue, because I think it is one of the most fundamental problems that we are facing. I know that there has been some discussion that perhaps education is not the way to solve these issues.

I believe we have to do a better job in terms of drug education through our schools. We have increased our request for funding. Let me tell you what we are doing in the Department, specifically about what I think are some rather innovative programs.

DRUG PREVENTION CURRICULUM MODEL

I said before, we could not mandate a drug prevention curriculum, and rightly so. But we do have a curriculum model developed by experts for the Department. A few months ago, I said we needed a curriculum model that starts in Kindergarten and goes through 12th grade addressing what they, the schools, should consider teaching about drugs at each stage, from Kindergarten to high school. It is at the printer now. It will go out to the school districts any time now. I think that it will be an important part of the Federal contribution.

DRUG PREVENTION VIDEOS

We have also been working in a variety of other areas. For example, we have produced a number of videos. We have distributed these videos to every school district in this Nation. The videos apply to grade school, middle school, the high school level. We have some produced in Spanish. We have some directly related to urban settings and some of the problems that we have there.

DRUG PREVENTION HANDBOOKS

We have distributed over 3,000,000 copies of our "Schools Without Drugs" handbook. We have translated that into Spanish as well. We have a new handbook I asked for, a drug prevention handbook designed especially for parents.

OTHER DRUG PREVENTION ACTIVITIES

We also are working with the National Commission on Drug-Free Schools. I co-chair that Commission with Director Bennett.

We have also been involved in the education of our teachers of what they need to teach about drugs. We have worked with universities and colleges in developing standards for developing a network of drug-free colleges and universities.

So, we are approaching it at every level. I strongly support interdiction, tough policies, and all the other things that we have to do. But I think that we really must focus upon education as a vital component of our strategy against drugs. When I talk about drugs, I also include alcohol, because it is an illegal drug for those under 21 years of age.

I would like to see our efforts go in the direction of getting everyone involved. If we could just educate those youngsters, maybe they wouldn't use drugs. You could say a lot of those youngsters will drop out. We need to keep them off drugs to keep them from dropping out. It is not just those who are at risk of dropping out who have a drug problem.

Mr. SMITH of Iowa. As you indicated, we need all approaches. All of them have something to do with demand, not just education, nor rehabilitation, or law enforcement, which also has to do with demand. I hear people talk about winning the war on drugs. We are not winning the war. We are talking about reducing the damage that is done if you do not have to fight the war. Are we making some progress?

DROP IN DRUG USE BY SECONDARY STUDENTS

Secretary CAVAZOS. I think we are seeing some progress at the high school level. We have seen a decrease in use of hard drugs among high schoolers and junior high. But we see an increase in alcohol use. So, we have to continue to be relentless.

DRUG PREVENTION BUDGET

Mr. SMITH of Iowa. How much of an increase did you get in fiscal year 1990 for this purpose?

Secretary CAVAZOS. About a 50-percent increase is what we requested on this one.

Mr. SMITH of Iowa. What do you figure is the total amount in your budget now?

Secretary CAVAZOS. It is about $538,000,000.

Mr. SMITH of Iowa. The programs that you outlined don't require anything like $538,000,000?

DRUG PREVENTION STATE GRANT PROGRAM

Secretary CAVAZOS. Most of the $538,000,000 goes into the State grants for their use. In fact, for 1990, about $487,000,000 of that goes to the States for use in their programs.

Mr. SMITH of Iowa. You did not mention that before. That is the bulk of where you are spending your money.

Secretary CAVAZOS. Yes, sir.

Mr. SMITH of Iowa. Now, that is given to them. Is there any measurement? How do you measure how much you give one State compared to another?

Secretary CAVAZOS. Actually, it is a formula grant that goes out to the States. They use these funds for teachers training, curriculum development, outreach programs. While there is considerable discretion in exactly how school districts spend their funds, the law specifies certain requirements which must be met by State and local school systems. We leave it pretty much up to the States and local school districts as to how they use funds, however, they furnish us with a plan in their application for funds.

Mr. SMITH of Iowa. Some States do nothing with that, isn't that right?

Secretary CAVAZOS. It is spotty.

Mr. SMITH of Iowa. And some do a great job.

Secretary CAVAZOS. Yes.

Mr. SMITH of Iowa. What can you do?

Secretary CAVAZOS. Keep the pressure up on them. In terms of program effectiveness, we have to get them to submit those plans. Right now, we are evaluating, trying to see how they are doing. We are going to gather that information and tell them if they are not doing a good job.

DRUG PREVENTION TEACHER TRAINING PROGRAMS

Mr. SMITH of Iowa. How about making direct grants for programs for continuing education? In other words, I don't know if it is a four-week or six-week course, so teachers are supposed to be involved and would go to the university and take the course?

Secretary CAVAZOS. We have a program for teacher training. It is not of a specific length.

Mr. SMITH of Iowa. What length is it?

Secretary CAVAZOS. I am informed it can be almost any length, depending on the project.

Mr. KOLB. We fund these particular projects through the teacher training programs.

Secretary CAVAZOS. That is not all at the State level.

Mr. SMITH of Iowa. That is my question. I am advised that a substantial share of the grants that you are making, and practically all the money is going for that purpose, a substantial share of it is not being used for that purpose. Wouldn't it be better for you to do some direct granting to programs that will have results like teacher training programs?

Mr. KOLB. That is something we have looked at. We do have programs that get at your concerns, Mr. Smith. We are making direct grants for teacher training in addition to State formula grants, which may be used for teacher training at the discretion of State and local school officials. On the issue of effectiveness of programs, we have evaluations going on right now. The States that receive the money are required to do an evaluation. Of the three or four years the money has been going out, we have been looking at these programs, and if we are not satisfied, we will be back before you to suggest possible changes in the focus of the authorizing language. As it currently exists, it requires us to get the money out that way.

DRUG PREVENTION STATE GRANT PROGRAM

Mr. SMITH of Iowa. I understand that. That bothers me, too, because once a State incorporates into their education system a certain amount of grant money that is not being used for this purpose, they don't want to take it away from whatever it is being used for.

So, any year that goes by where they got more money, and did not use it for the drug purpose is a year lost with that State, isn't it?

Secretary CAVAZOS. It could be sir; although, we have no indication that this is happening with these funds.

Mr. SMITH of Iowa. We ran into that with the National Institutes of Health way back when Mr. Natcher and I first came on to this committee. NIH got $73,000,000. We gave them money faster than they could use it. So, it became locked into the overhead at certain universities. You cannot take it away from them once it is locked in. You are getting into the same trouble with drugs, aren't you?

Secretary CAVAZOS. Not necessarily. We are being careful, but you are right in raising the concern.

Mr. SMITH of Iowa. Speed is important. Get some programs that really limit the grants to ways that they will be used, or better yet, maybe you need to be making some more grant programs where you know you will get better results.

Secretary CAVAZOS. If we don't find they are making progress, we will have to look at different strategies. I think we made it very clear to the folks out there—the applicants—that they have to convince us the money will be well spent. We are not going to just put money into programs without having results come out of it.

Mr. SMITH OF IOWA. What is the timetable?

Mr. KOLB. We have an interim study of the State grant program that is just about finished. By fall, the final report should be finished.

Mr. SMITH of Iowa. It will be another school year then?

Mr. KOLB. Yes, sir.

Mr. SMITH of Iowa. Thank you, Mr. Chairman.

Mr. NATCHER. Mr. Obey, I yield to you.

PELL GRANT COST ESTIMATION

Mr. OBEY. Mr. Secretary, the Chairman earlier pointed out that last year, the Administration caused quite a problem because just two days before our mark-up on the education bill, the Administration suddenly decided they underestimated the cost of Pell Grants and came to us and suggested we needed to provide $900,000,000 more than was suggested in your budget, in order to meet the same funding levels for the program that you thought you had met earlier.

The problem is that the timing of that request cost education about $900,000,000, because of the way the budget process works. The Administration came up here and said, whoops, we were wrong, it is going to cost almost $1,000,000,000 more. You did not suggest where we should have taken that money from. So you were able to pose for holy pictures while we had to do the dirty work.

Under the budget process and under Gramm-Rudman, which I did not support, once we are given our 302 allocation under the budget, if you then came in and said we had an accounting mistake, even if it was a whopper, this subcommittee could not adjust upwards the amount for education.

So, in essence, we simply had to take that $1,000,000,000 out of someplace else. We had to stick it to education, stick it to health, stick it to job programs in order to try to meet the need.

Can we be assured that we are not going to have a surprise this year from you on this or any other program?

Mr. KOLB. I think the best we can say is yes. What happened last year in connection with that, and I admit the timing was not optimal, was the large variation in the number due to the huge increase in the number of independent students applying for Pell Grants. This was not an accounting mistake. It was a situation driven by people seeking access to the programs.

To a certain extent, you have wedded to the budget process the funding process for Pell Grants. I think we do a good job at estimating Pell Grant costs and GAO seems to concur. We have to project at least two years ahead of time family contributions, and the number of students. Given the fact that we do it two years ahead I think we do a good job.

Mr. OBEY. I understand that, but the problem is after we made the decisions, the Administration kicked the hell out of us in the press and said, look at these guys on the Hill, they cut so-and-so. The process was blessed by the Administration and the Congress had no choice. We were the infantrymen while everybody was posing for holy pictures. We did not appreciate that on the subcommittee.

GUARANTEED STUDENT LOAN COST ESTIMATES

I raise that because while it does not have a budget program, you have a similar problem with guaranteed student loans in that the Administration is assuming a T-bill rate of 5.4 percent. In contrast to CBO's, which is 7.2 percent. So, in terms of leveling with the country about what the cost of that program will be, we could be considerably off if CBO is correct and you are wrong.

Can you tell me how much more the guaranteed student loans program would cost if the CBO 7.2 estimate for T-bill rates is correct?

Mr. KOLB. I have it at 7.9 percent. The delta would be $1,300,000,000 over the 1991 request.

Ms. CHRISTENSEN. I think we should point out that over the last year the T-bill rate as projected by OMB has had a very good record. For the first quarter of 1990, OMB accurately projected the current T-bill rate.

GUARANTEED STUDENT LOAN SUPPLEMENTAL

Mr. OBEY. In fiscal year 1989, we provided a supplemental, including $892,000,000 for GSL because the estimates on the part of the Administration at the same time were woefully overly-optimistic.

Mr. KOLB. The first round of projections by the Bush Administration was absolutely accurate for the past year. We were more accurate than all 52 forecasters regularly used by the Blue-Chip indicators. Also, the economic forecast is conditional on adopting the President's program.

Mr. OBEY. We understand that, but the fact is that—well, I am not going to get into it today.

STUDENT LOAN DEFAULTS

What percentage of the student aid program loans are in default?

Secretary CAVAZOS. About 37 percent.

Mr. OBEY. I thought you said 37 percent?

Secretary CAVAZOS. That is the default rate, 37 percent.

Mr. OBEY. What percentage of the overall defaults which take place are defaults by students going to proprietary schools?

Secretary CAVAZOS. That is over 40 percent.

Mr. OBEY. I just want to urge you to take a look at the whole question of proprietary school eligibility for some of these programs. I recognize that some of these do good jobs, but I see a lot of turkeys advertising on T.V. programs, they get the kids in the program through the TV commercial and then the Federal Government is stuck with the bill. We have to come down much harder on proprietaries than we have to date or Uncle Sam is going to make the taxpayers Uncle Sucker.

Secretary CAVAZOS. I agree this is an area for vigilance. We had about $1,800,000,000 in defaults last year. It is almost $8,300,000,000 in total.

Mr. OBEY. If you divide public, private and proprietary, proprietary is the one segment of the universe that is going up. So, it seems to me that program will get bigger not smaller, unless you come down harder.

Secretary CAVAZOS. I agree. I have met with the leadership of proprietary schools. There are some very fine schools out there, but some terrible ones. We are going to try to close them down.

PELL GRANTS—INCOME ELIGIBILITY

Mr. OBEY. Regarding Pell Grants, given family size and all of that, roughly, families are not going to—unless they are in unusual circumstances—be eligible for Pell Grants if they had income above $35,000?

Secretary CAVAZOS. Yes, sir. For a typical family of four the maximum income for grant eligibility would be $34,150.

Mr. OBEY. For a family making $25,000 to $35,000, they get an average of $875 for Pell Grants.

Secretary CAVAZOS. We will have to check that. According to the Pell model, for family incomes between $25,000 and $30,000, the average student award would be $893; for incomes above $30,000, the average award would be $734.

PURCHASING POWER OF PELL GRANTS VERSUS RISING TUITION

Mr. OBEY. What I am leading to is this: In 1980, I understand the Pell Grant met approximately 50 percent of an education in a four-year institution. Today, it has dropped to 35 percent. Even for the average grant, that dropped by approximately 15 percent as a percentage of costs met by Pell Grants.

That leads me to two conclusions: One, we are not providing kids with as much help as we used to; and secondly, you have some universities that are raising costs far beyond what they ought to be raising costs.

Have you ever given any consideration to simply saying that Pell Grants are simply not going to be made available for use at institutions if they exceed the average cost by, say, 50 percent for a similar category institution, and if that institution's costs are rising at a rate faster than the national average?

Secretary CAVAZOS. We have not proposed that.

Mr. OBEY. Shouldn't we give consideration to that?

Secretary CAVAZOS. We are looking at higher education reauthorization coming up. I am not going to advocate that we do that, but we have to find ways to really get the universities to control their costs.

I am not sure that is the only mechanism or the best mechanism, but we will take a look at that. We will talk about that one next year.

Mr. OBEY. I wonder if we can continue to allow some of the Cadillac elite institutions in this country to increase costs 12 to 14 percent as they have done and continue to be eligible? That is awfully hard to justify.

FEDERAL, STATE AND LOCAL SHARE IN EDUCATION

One other question, going back to Mr. Early's point, you indicate that you think it is the State and local governments who are not doing the job on education. I will grant you that money will not solve our education problems alone. We need to have improvement in school performance, family involvement, improvement in reduction of bureaucracy and increasing the number of teachers in terms of a ratio of teachers to bureaucracy.

But since 1980, the Federal Government has shifted a significant portion of education back to the State and local government. That is not deniable. We are spending more per pupil now than we did in 1989.

The Federal share has gone down and the local share has gone up. The State and local units are meeting their responsibilities to a greater extent than ever before. Now, my town has a school bond issue. They will vote on it in about three weeks.

I think that is going to go down, the same as I have seen a lot of school bond issues go down because local taxpayers are getting squeezed on the property tax. The reason is we doubled military spending in the eighties and borrowed from the domestic side of the budget.

If the Federal Government was meeting its same share of costs, the Feds would be providing $10,000,000,000 more to State and locals than they are now. What would be wrong with taking, two years from now, $10,000,000,000 out of the military budget now that it is going to be coming down, and assuming that you win the argument and we are not going to be able to increase direct Federal support for education, although I think we ought to, but say you win the argument and we cannot do that, what would be wrong with taking $10,000,000,000 of that and sending it back to the States, telling them they can use it only for property tax relief or education purposes, provided the States have on the books a process by which they evaluate their own improvement in school performance. What is wrong with that?

Secretary CAVAZOS. I think that, first of all, what is wrong with it is that that is direct support of education, basically. You said I was going to win the argument, but in the same way, you are saying $10,000,000,000 will be going into tax relief. Let me point out one other thing.

EDUCATION VERSUS DEFENSE EXPENDITURES

I think that the expenditure across this past decade for defense was about $2,600,000,000,000. But we actually spent more than that, $2,800,000,000,000, on education. If you look at how much we are spending this year, we are projecting $350,000,000,000. The Defense Department is going to be spending probably in the ball park of $285,000,000,000.

What has happened is that we have grown faster in terms of education spending as compared to defense spending.

FEDERAL, STATE AND LOCAL SHARE IN EDUCATION

Mr. OBEY. So you are against us increasing the Administration's education support level at the Federal level, and you are also against us providing help to State and local governments so they can continue to carry their share.

Secretary CAVAZOS. I think the State and local governments need to look at it. I think the debate this decade is how are we going to be funding and getting equity into the system.

Mr. OBEY. I certainly would suggest that an increase in reliance on the property taxes, which is the least equitable, is not an equitable way.

Secretary CAVAZOS. I did not advocate one or the other. I think you have to look at all ways so that it becomes equitable. There are a number of States already that are looking at that very issue in terms of how they are going to be funding education. Some of the States have been found not in compliance in terms of the way they have done it. It will be the naughty issue for this decade.

Mr. OBEY. Thank you.

Mr. NATCHER. Mr. Stokes?

HIGHER EDUCATION ACT REAUTHORIZATION

Mr. STOKES. Mr. Secretary, this past fall, your Department conducted some hearings on reauthorization of the Higher Education Act. One of the questions posed at that time was whether or not Howard University should be included under the Act.

I would like to know, firstly, what the purpose or reason for posing this particular question was, and, secondly, what type of responses did you get?

Mr. KOLB. Mr. Stokes, we put that question in because we wanted to make it clear that for purposes of reauthorization, every institution affected by the Higher Education Act would be on the table subject to review. We received over 1,200 comments that we have gone through. I will have to check if any related to Howard University.

According to Bob Davidson of my staff, we did not receive any comments on that issue.

[CLERK'S NOTE.—After the hearing the Department corrected this statement indicating that a few comments related to Howard were received.]

Mr. STOKES. You did not receive many comments on this issue?

Mr. KOLB. That is correct.

HOWARD UNIVERSITY ENDOWMENT PROGRAM

Mr. STOKES. Can you tell us why Howard is not recommended in the budget for any type of inflationary increase? The only increase in your budget for them would be for the endowment program. Can you tell us why?

Mr. KOLB. We have had a long-term view with respect to Howard that the institution should over time improve its long-term financial strength and become self-supporting. We have focused our increasing attention on the endowment program, matching program.

TRIO PROGRAM BUDGET INCREASE

Mr. STOKES. I was pleased to see that you recommended a 12-percent increase for the TRIO program. Can you tell us how many additional students you will be able to serve?

Ms. CHRISTENSEN. A little over 61,100 additional students will be served.

Mr. STOKES. What would it cost to double the number of students served by the TRIO program?

Ms. CHRISTENSEN. We can provide that for the record.

[The information follows:]

COST TO DOUBLE THE NUMBER OF TRIO STUDENTS

Based on the program emphases used in preparing the FY 1991 Budget, it would cost approximately $453 million to serve double the number of students as were served in FY 1990 by the TRIO programs (Special Programs for the Disadvantaged). This is $183 million more than the Administration's request and $211 million more than the FY 1990 appropriation.

Ms. CHRISTENSEN. We have three very exciting initiatives for the TRIO program—one to reach 7th and 8th grade students, one in the science and mathematics area, and one to encourage students in two-year schools to continue their higher education. We also have additional funds for a new competition in Talent Search, and we have built in continuation costs in all the existing projects in the TRIO program.

TRIO PROGRAM EVALUATION

Mr. STOKES. Can you give us the status of the evaluation of the TRIO program?

Ms. CHRISTENSEN. We have $1,437,000, appropriated last year. We are beginning now to evaluate a lot of the existing projects and to attempt to identify the most exemplary of those. The $1,000,000 increase in our budget will continue that same effort so that we can not only identify the most promising practices, but also disseminate them to the existing TRIO projects, as well as other colleges and universities in the country, so we can make the most of what we have gotten out of that program.

We know we can never serve all the students through this program that need those services, but, we think that this is the best, most cost-effective way of trying to do that.

Secretary CAVAZOS. Certainly, TRIO is one of the most important programs that we have, because it does focus on those youngsters in the very, very early, seventh and eighth grades. We see this as one of a number of strategies we can put in place to address the drop out issue.

We mentioned building the endowment, I think until historically black universities build those endowments, they are not going to be able to do this. If you look at the budget, it includes efforts in the area of minority science improvement programs, and the Literacy Corps. Of course, the financial aid systems must be a part of that, and an important one. We are trying to bring all the strategies here to address that issue of the one-third that are dropping out.

I would hope, basically, and this gets back to the other discussions we had earlier, that by having model programs such as TRIO, the States would step in to that part. If it works, if the evaluation looks pretty good, let's see if we cannot work in a partnership to turn this around, because we are dropping out too many youngsters.

TRIO BUDGET INCREASES

Mr. STOKES. TRIO got a 10.3-percent increase for fiscal year 1990. One of my concerns is whether the grant awards currently reflect this increase. It is my understanding that Talent Search projects generally have been given increases less than 4.2 percent, the amount needed to maintain current services. Some are receiving only increases of 2.9 percent. Is this information correct?

Secretary CAVAZOS. Let me check on those percentages and see if we can be sure we give you the accurate data.

Ms. CHRISTENSEN. During the current year, those inflationary costs have been built into the projects. We will provide that for the record.

[The information follows:]

DISTRIBUTION OF FY 1990 TRIO APPROPRIATION

Your understanding that some projects are receiving increases of less than 4.2 percent, CBO's estimate of fiscal year 1990 inflation, to maintain current services is correct. In preparing the fiscal year 1990 estimates of continuation costs for the TRIO programs, as reflected in the 1991 President's Budget Request, we used the standard, 4.0 percent "deflator" for fiscal year 1990 mandated by the Office of Management and Budget for use Government-wide in the President's Budget Request for 1991. This deflator established the average, program-wide increase for continuation costs. However, in determining the rate of increase for a particular project, we apply the standard rate to its justified continuation costs. This means that some projects receive less than the average increase because of unique circumstances of each project needs, such as the degree to which it is actually serving the number of students it was initially funded to serve and the degree to which its expenses of the previous year were of a one-time nature (e.g. equipment expenses). Likewise, the specific circumstances of some projects may warrant increases in excess of the standard rate. Such factors may include: location of the project, fringe benefit rates, and participant travel expenses. Thus, while the overall amount budgeted for these continuation costs was 4 percent over the previous year's total, some projects will receive less and some more.

While TRIO, overall, received a 10.3 percent increase in appropriations for FY 1990, each of the TRIO programs was budgeted for least a 4 percent increase in the amount available for grant awards for FY 1990. The distribution of the appropriation among the six TRIO programs was based on several factors, including: 1) the necessity to reflect any congressional mandates, such as those stipulated in the House appropriations committee report (funding an additional 25 Upward Bound projects and increasing by a substantial number the number of new awards under the Ronald McNair Post-Baccalaureate Achievement program) and the mandated Upward Bound evaluation; 2) the implementation and/or expansion of the Secretarial initiatives under the Student Support Services, Upward Bound, and Talent Search programs; and 3) new award funding for programs at the end of their 3-year funding cycle which require a new competition. As a result of these varying factors, the projected distribution among TRIO Programs of the FY 1990 appropriation increases ranged from 4 percent to 102 percent and the average grant award increases ranged from 4 percent to 9 percent, as detailed in the workload data below:

SPECIAL PROGRAMS FOR THE DISADVANTAGED

MATHEMATICS AND SCIENCE EDUCATION

Mr. STOKES. Thank you very much.

Thank you, Mr. Chairman.

Mr. NATCHER. Mr. Early?

Mr. EARLY. Mr. Secretary, I have heard from many teachers and administrators who wish they had more money for math and science programs. The Administration is requesting $220,800,000 for the Eisenhower Mathematics and Science Education program. I think you recognized the problem, and are trying to correct it. Do you believe the $220,800,000 request is sufficient to bring about a significant change? The change this country needs is to make our students scientifically literate, in order to compete in the high-tech world of the future.

Secretary CAVAZOS. It is a start. I have a personal interest in terms of science and math. The 70-percent increase is a good first step. We have also seen marked increases in the Administration request for the National Science Foundation, and also for Energy in terms of how much we are going to spend on math and science education.

I think what we are going to have to do is, in addition to providing the kind of funding we are requesting, and that which the States provide, we will have to look at what the curriculum looks like. It is kind of like the early childhood issue, we are not introducing them into solid mathematics and science in grade school, early grade school.

So, what we have to have is additional funding from the three different levels of government—State, local and Federal—and we will have to look at what we have in the way of math and science curriculum for the early years.

Mr. EARLY. That big increase shows that you are addressing the important challenges we are facing which I think is right.

SUPPLEMENTAL OPPORTUNITY AND WORK STUDY GRANTS

There are three different Larry Cavazoses, former President of Texas Tech, former Dean of the Tufts University Medical School, and Secretary of Education.

But now, the Administration is proposing level funding for both Supplemental and Work Study grants. I think those programs assist most of the private colleges. What impact will this have on students currently participating in the program?

First of all, as Secretary Cavazos.

Secretary CAVAZOS. I think certainly where we have shifted the emphasis on that, we have shifted it to Pell, and we have shifted it over to the guaranteed student loans. The Perkins loan fund has been built up and there are sufficient dollars out there. Work Study, I think that here, as Secretary, I will say we are going to have to ask the universities to address that in a more fundamental way.

Mr. EARLY. Is that what you said when you were President of Texas Tech?

Secretary CAVAZOS. As Dean there, and in the Tufts University system, I had to find all the ways I could to hold down costs. We made some tough, tough decisions. Those buildings on Harrison Avenue were not Taj Mahals. My goal was to make education accessible. We had over 17 percent in the medical school that were minority.

What I am getting at, is that as a President, I went out and started a capital campaign, earmarked a large part of that toward student support, and I said to my colleagues, we have to make some decisions about our role and scope and what we are like and hold down every one of these costs.

Basically, what we are getting to, regardless of what hat I am wearing, I think it is a partnership. We cannot just say, Federal Government, you fund it. We have to meet that portion going up. On the education grants, SEOG grants, the actual numbers are going up because of the match, when you get down to the number of students we can support there.

SUPPLEMENTAL EDUCATIONAL OPPORTUNITY GRANTS

Mr. EARLY. But your funding is not going up in SEOG, is it?

Secretary CAVAZOS. No, because of the match.

RESTRUCTURING IN EDUCATION

Mr. EARLY. Should we look at the schools that charge less, and give them more? Harvard has all sorts of endowments whereas Tufts University is a different story. Mr. Cavazos, the budget does show a lot of improvement. I just wish there were changes in certain areas.

Secretary CAVAZOS. I think this budget is headed in the right direction.

Mr. EARLY. We are going in the right direction, but——

Secretary CAVAZOS. When I talk about restructuring, I am talking about it not only at the local level, but what the Federal Government should be doing and the kind of budget they need to prepare. These people here get no rest from me, because we know the Federal Government's role.

Mr. EARLY. We jump in at the eighth and ninth inning with higher education. I think we should make a commitment in the first inning. We have the Pells and the SEOGs for higher education, but the real problem is the lack of funding for the first, second and third inning. I know it must change with the States, cities and towns.

Secretary CAVAZOS. Forty-eight percent of this budget is directed toward that first part. I am optimistic.

Mr. **Early**. Mr. Chairman, when we have college presidents or deans in front of this Committee, they talk dollars; when they are Secretaries, they talk percentages.

Secretary **Cavazos**. If you don't mind, Mr. Chairman, I wouldn't touch that comment.

Mr. **Natcher**. Mr. Hoyer, I yield to you.

CHAPTER 1 PROGRAM PARTICIPANTS

Mr. **Hoyer**. Maybe this question has been asked, but what percentage of eligible children will be served under the Chapter 1 program by the increase?

Secretary **Cavazos**. Almost between 40 and 60 percent will be eligible; these are those who score at the 35th percentile who will be eligible.

Mr. **Kolb**. The reasoning for that variance is attributable to the way the eligibility decisions are made at the local level.

Secretary **Cavazos**. It is ball park between 40 and 60 percent.

Mr. **Hoyer**. The total eligible are what?

Ms. **Christensen**. Somewhere around 10,000,000, we serve about 5,000,000.

Secretary **Cavazos**. We have over $5,000,000,000 in the program for 1990.

Mr. **Hoyer**. Under the President's goal will we serve all eligible children, both in Chapter 1 and Head Start?

Secretary **Cavazos**. The proposal is to fully fund Head Start, not Chapter 1.

Mr. **Hoyer**. Why has the Administration not also expressed as a goal 100 percent inclusion of Chapter 1-eligible students if we have identified them as students at greater educational risk?

Secretary **Cavazos**. Looking at this budget, there are a lot of factors that impact the children at risk in addition to Chapter 1; the bilingual education piece of it is just as much a part of it, drug education, right on down the line.

Mr. **Hoyer**. If I can interrupt, I certainly understand that, but wouldn't that mean that 50 percent of the eligible children are presumably getting bilingual challenges, and 50 percent are not?

Do you see my point?

CHAPTER 1 BUDGET INCREASE

Secretary **Cavazos**. I see your point. If you look at my tenure in this Department, we have had that as a high priority and have brought up the funding in Chapter 1. It is my intention to move it ahead as quickly as we can.

Mr. **Hoyer**. Is it a 4.1-percent increase?

Secretary **Cavazos**. It is 8 percent.

Mr. **Hoyer**. What does that include?

Ms. **Christensen**. That is an eight percent increase for grants to local educational agencies. Your basic question, though, if you look at the numbers in Chapter 1, Chapter 1 is meant to be complementary to State and local efforts. States and locals have been increasing their dollars in this area for disadvantaged children over the last few years, and more dramatically each year.

The second point is that——

FEDERAL VERSUS STATE SUPPORT LEVELS FOR CHAPTER 1

Mr. HOYER. Is your point that the States are making greater efforts and therefore the Feds don't have to?

Ms. CHRISTENSEN. Right.

Mr. HOYER. I would like the following: What is the growing challenge, the need, if you will, and what is the State level of support and therefore the concomitant Federal response?

[The information follows:]

COMPARISON OF STATE AND FEDERAL LEVELS OF SUPPORT FOR COMPENSATORY EDUCATION PROGRAMS

	State funds supporting compensatory education programs	Federal compensatory education funds
1978	$489,358,713	$2,018,803,180
1987	[1] 1,100,000,000	3,414,587,994
Percent increase 1978 to 1987	125	69

[1] Estimate based on the results of a telephone survey conducted in 1987.

CHAPTER 1 CONCENTRATION GRANTS

Ms. CHRISTENSEN. Right. A second point that is important is that we have proposed and we are doing this, and this is the result of congressional action over the past few years, we are targeting or concentrating these funds in the areas where there are the highest concentrations of low-income children who have the greatest need.

I think that is really important as far as the focus of this program. You could spend more, but it would be spread so thinly across all the other areas.

Secretary CAVAZOS. One of the other things, last year we had about a 50-percent increase in our concentration grants to address the issue that she is talking about. It gets down to trying to target resources to do the best job that we can.

CHAPTER 1 LONGITUDINAL STUDY

Mr. HOYER. Will part of the $122,000,000 increase in your studies that Mr. Early is so enthusiastic about look at the effectiveness of what we are doing in Chapter 1?

Mr. KOLB. Yes. We have a major longitudinal study on Chapter 1, but we won't share it with Mr. Early. [Laughter.] The reason was for the changes. We have to coordinate the Chapter 1 program with Even Start and Head Start. We hope this will help us understand better.

EDUCATION SPENDING—ELEMENTARY/SECONDARY PRIORITY

Mr. HOYER. Let me reiterate what Mr. Early said. I think you know how most of us feel. If I had to choose between spending on higher education and elementary and secondary, there is no doubt in my mind I would choose elementary and secondary. The last four Secretaries have been out of higher education. I suppose that is understandable from the point of view of you and Secretary Bennett, Secretary Bell and Judge Shirley Hufstedler, and our focus to a large degree has historically been on higher education.

However, if we believe that we have a crisis in education in this country, whether it is in Mississippi or Maryland or Colorado or Florida, Massachusetts and Michigan—what they do impacts on all of us. It is a national problem. We are losing so many children the dropout rate is in much more of a crisis than our defense budget.

From some of what I've heard, I think the objectives are sometimes inappropriate. Ms. Christensen may be correct about State, local and Federal funding, but John Murphy, our Superintendent in Prince Georges County, will say the States and locals are making a greater effort, and the Federal assistance part of our education budget is not as great as it was 10 or 15 years ago.

We are not winning the battle that we cannot afford to lose.

Secretary Cavazos. Mr. Hoyer, if I may comment on a couple of points that you raised there. Looking at the goals there, the President's emphasis has been on elementary and secondary education. That is very, very clear. I have had the question from the higher education people, why are you spending all your time over there, you need to be addressing us?

Basically, I have made it very clear that this will be emphasized, but that does not mean that we will step away from our traditional and very important commitment to the level of higher education.

After all the products coming from the elementary and secondary, you have to have a first-rate higher education system. One of my concerns, and I will share this with the committee, was that at one time, we had the finest elementary and secondary systems in the world. Other nations judged their programs against the United States.

But we have the problems we all know about now. Today we have the finest higher education system in the world, I think that is well acknowledged.

Mr. Hoyer. I agree.

BALANCING FUNDING AT ALL LEVELS

Secretary Cavazos. But there are some weaknesses that higher education had better start addressing, or they are going to find themselves in great trouble. We have this balance that we have to work with. Although the balance shifted in this budget to elementary and secondary, that doesn't mean we can step away from what we have to do in higher education.

If we address it, the very problems will spill over to secondary and higher education. I think it is the Administration's responsibility to keep a better focus on both elements.

Mr. Hoyer. To back up on either element would be a disgrace. I will tell you, Mr. Secretary, the Administration which preceded you, of which the President was a part, sounded retreat in seven out of eight budgets submitted to this committee.

Thank you.

Secretary Cavazos. Thank you.

HEAD START AND CHAPTER 1 FUNDING POLICIES

Mr. Natcher. Mr. Secretary, President Bush has announced a policy of serving all eligible four-year-olds under the Head Start program. Would the Administration support a similar policy of supporting all similar Chapter 1-eligible students?

Secretary CAVAZOS. I think we are going to try to do the best job that we can with the resources that we have, not just in Chapter 1, but for the variety of other issues as well, in order to help these children who are basically at risk.

We are going to have to work with the States because they are doing more and more in this area of educating disadvantaged youngsters, and see if we cannot extend that funding. I would tie Chapter 1 to Head Start, Even Start. We have good State programs for special education. We are going to keep on pushing on that, Mr. Chairman.

As we review your request earlier on about what will we do with extra funding, should that come up, I can guarantee you that Chapter 1 will be right up there in front.

CLOSING REMARKS

Mr. NATCHER. Mr. Secretary, this has been a good hearing. It is a good start on the budget request. I and the other Members have some additional questions to be answered for the record.

The committee will recess until 2:00.

[The following questions were submitted to be answered for the record:]

EDUCATION SPENDING COMPARED WITH THAT OF OTHER NATIONS

Mr. Natcher: Mr. Secretary, there have been conflicting reports about how much this country spends on elementary and secondary education compared to other nations. You discuss this issue in your statement. What can you tell us about both per student expenditures and expenditures as a percent of our gross national product?

Secretary Cavazos: The United States spends more on education as a whole than almost any other country, using any measure. We also spend more per pupil for elementary and secondary education than any industrialized nation except Switzerland, as the accompanying table illustrates.

PER PUPIL EXPENDITURES AS BASIS FOR COMPARING EDUCATION SPENDING

Per pupil expenditures are the best measure of what a country is spending to educate its citizens. Expenditures as a percent of gross national product, on the other hand, tell us nothing about what level of educational resources we are providing to our students. A simple example illustrates this point.

Over the past decade, we have increased expenditures for elementary and secondary education from $165 billion in 1980-81 to $209 billion in 1988-89 after accounting for inflation. That is, our education spending is about $44 billion more today in real terms than in 1980. Spending per pupil is also up.

Nevertheless, because our economic growth overall has also been impressive, the ratio of education expenditures over total national income has stayed roughly the same, at about 4.1 percent of GNP. As the numerator in the equation has grown, so has the denominator. For this reason, percent of national income is not a very meaningful measure of education spending.

I would also like to observe that research consistently shows little or no direct relationship between increased spending and improved outcomes like better test scores or lower dropout rates. Internationally, even countries which spend less than the United States by either spending measure outperform us on international achievement tests. Neither spending measure, then, can tell us how to restructure our schools so that our students can perform better in comparison to students abroad and have greater success in school and the workplace. Reaching this goal should be our major concern.

INTERNATIONAL COMPARISONS OF PER STUDENT EXPENDITURES
Pre-K through Secondary School

Current Expenditures Per Student(1)

	Year	Constant 1985 Dollars	Rank
Switzerland	1985	$3683	1
United States	1985	$3310	2
Sweden	1985	$3214	3
Canada	1985	$3192	4
Denmark	1986	$3089	5
Norway	1985	$2900	6
Luxembourg	1983	$2596	7

---

(1) Per student expenditures in foreign currencies are expressed in dollar values using the 1985 Purchasing Power Parities (PPP) Index supplied by the Organization for Economic Cooperation and Development (OECD) to adjust for differing price levels. Data sources: Digest of Education Statistics 1989; UNESCO Statistical Yearbook 1988.

PELL GRANTS

Mr. Natcher: Would you explain for the Subcommittee how the 1990 sequestration will impact on payments for Pell grants this Fall?

Secretary Cavazos: The fiscal year 1990 Pell Grant appropriation of $4.804 billion reflects a sequester of $66.5 million, 1.4 percent of the appropriation pursuant to P.L. 99-177. Therefore, the 1990 full-funding estimate of $4.846 billion was reduced by the $66.5 million sequester to result in a funding level of $4.779 billion.

Only $4.673 billion of the fiscal year 1990 appropriation is available for awards in the 1990-91 award year because $131 million of the 1990 appropriation is designated for unfinanced costs in the 1989-90 award year. Therefore, the Department has requested an additional $106 million in its fiscal year 1991 Budget Request to fund the difference between the available appropriation and the estimated program cost at the post-sequester level of $4.779 billion.

The $66.5 million reduction in funding is estimated to result in the elimination of awards to 14,000 students (with awards averaging $200) and the reduction of the awards of approximately 1.3 million additional students by an average of $50. Overall, 3,214,000 students will receive average awards of $1,482 in the 1990-91 award year.

Mr. Natcher: Has any consideration been given to requesting a 1990 supplemental in order to avoid the linear reduction for Pell grants?

Secretary Cavazos: Administration and the Congress have agreed on the necessity to reduce the deficit by meeting yearly deficit reduction targets. To meet the 1990 target, a small Gramm-Rudman across-the-board sequestration of discretionary programs was enacted. As with all other such programs, the Department will not seek a supplemental Pell Grant appropriation for the 1990 fiscal year for the purpose of "restoring" the 1990 sequester amount because to do so would violate the spirit of this year's reconciliation act.

However, the Department is minimizing the negative impact of the reduced funding level for the 1990-91 award year by requesting, in the fiscal year 1991 budget, those additional funds needed to pay students at the Pell Grant program full-funding cost estimate minus the sequester of $66.5 million. Only $4.673 billion of the fiscal year 1990 appropriation is available for awards in the 1990-91 award year because $131 million of the 1990 appropriation is designated for unfinanced costs in the 1989-90 award year. The requested for additional $106 million will fund the difference between the available appropriation and the estimated program cost at the post-sequester level of $4.779 billion.

PELL GRANT SUPPLEMENTAL BILL LANGUAGE

Mr. Natcher: At what point do you need to have your Pell grant borrowing language enacted into law? Could this wait until the 1991 bill rather than being put into a supplemental?

Secretary Cavazos: Proposed supplemental bill language would permit the Secretary to use fiscal year 1990 appropriations to fund award year 1989-90 Pell Grant program costs that exceed the current appropriation availability (which already includes $131 million authorized in 1990 appropriations language). Use of the fiscal year 1990 funds is necessary because available funds are estimated to be about $265 million short of 1989-90 award year costs.

The fiscal year 1989 shortfall may begin to affect program operations as early as late April. This date may be extended until early June depending on how rapidly we recover excess allocations--Pell funds which have been committed to, but are not needed at certain institutions. Institutions requesting Pell funds after late April and before early June can expect a delay as we collect any excess allocations.

This does not mean students will not necessarily be able to enroll or stay in school. It does mean that, after our funds run out, until authority to use FY 1990 funds for prior year costs is enacted, the Department will be unable to meet institutional requests for student payments. To avoid these delays and allow use of FY 1990 funds for the current award year as soon as they are needed, immediate action on this supplemental bill language is necessary.

DRUG-FREE SCHOOLS AND COMMUNITIES

Mr. Natcher: Dr. Cavazos, would you review for the Committee your 1991 request for Drug-Free Schools and tell us how this compares to 1989 and 1990?

Secretary Cavazos: Our overall request for 1991 is $593.3 million, a $54.1 million (10%) increase over the 1990 level of $539.2 million and a $184.8 million (67.4%) increase over the 1989 level of $345.5 million. Almost all ($49.7 million) of the requested increase for 1991 is for the State grant program, for which funding is proposed at $487.6 million, compared to $437.9 million in 1990 and $287.7 million in 1989. School personnel training would be funded at $14.6 million, the same as the 1990 level and $7 million more than in 1989. A $5 million increase is proposed for National programs to support the numerous projects and activities funded under the Federal activities set-aside, bringing the request for National programs to $66.2 milion, compared to $61.2 million in 1990 and $59.8 million in 1989. Funding for the new Emergency Grants program is requested at its fully authorized level of $25 million, an increase of $.3 million over the 1990 level of $24.7 million. We think each of these programs, especially the President's new Emergency Grants program, will greatly help achieve the President's and Governors' national goal of freeing all schools fromt the scourge of drugs and violence by the year 2000. Emergency grants were not funded in 1989. Finally, no funds are requested for the National Commission on Drug-Free Schools, which was funded at $1 million in 1990, because it will cease operations before fiscal year 1991 begins. The following table summarizes these amounts:

DRUG-FREE SCHOOLS AND COMMUNITIES PROGRAMS

Budget Authority (millions)	1989 Actual	1990 Actual	1991 Request
State grants	$287.7	$437.9	$487.6
School personnel training	7.0	14.6	14.6
National programs	59.8	61.1	66.1
Emergency grants	---	24.7	25.0
National Commission on Drug-Free Schools	---	1.0	---
Total	354.5	539.2	593.3

Mr. Natcher: Both Director Darman and Drug Czar Bennett have expressed doubts about the effectiveness of these drug education programs. They both endorsed the budget request but they were skeptical about whether it would make much of an impact.
Mr. Secretary, $593 million is a lot of money. What do you expect to achieve with this program? What specific outcomes will be used to measure these achievements?

Secretary Cavazos: I expect this program to contribute to a reduction in the use of illegal drugs by our Nation's youth and to an increase in the number of youth who disapprove of illegal drug use. This can be measured, overall, through surveys such as the National Household Survey on Drug Abuse and the National High School Senior Drug Abuse Survey, both sponsored annually by the National Institute on Drug Abuse. However, it is not possible, methodologically, to attribute these survey results directly to the Drug-Free Schools and Communities program. It is not possible to isolate the impact of these funds because young people are not isolated from changing societal attitudes toward drugs. I believe the Drug-Free Schools and Communities program makes an important --perhaps critical -- contribution to the war against drugs; but parents, churches, synagogues, youth groups, community and private sector organizations, and the media are all significantly affecting young peoples' knowledge, attitudes, and behavior towards drugs.

Therefore, in attempting to examine the impact of the Drug-Free Schools and Communities program, the Department plans to: (1) survey the alcohol and other drug use knowledge, attitudes, and behavior of a sample of 6th-9th graders who have been exposed to comprehensive prevention programs; (2) conduct site visits to identify successful comprehensive programs; and (3) examine the extent to which State prevention programs have changed in response to increases in funding, and in response to 1989 amendments to the Drug-Free Schools and Communities Act that (a) require school districts to certify that they have adopted and implemented alcohol and drug prevention programs, and (b) strengthen monitoring, evaluation, and reporting activities.

MATHEMATICS AND SCIENCE EDUCATION

Mr. Natcher: The 1991 request includes a $94 million increase for math and science grants - up to a total of $230 million. As you know, this Committee has not been enthused about this program partially because the average school district gets such a small amount of money. What can you tell us to address these concerns?

Secretary Cavazos: If we assume a 100 percent LEA participation rate, our request would increase the estimated average LEA grant to nearly $9,400. Our contacts with State and local participants through conferences, site visits, and other program monitoring efforts indicate that this amount of funding can be used effectively to address math and science teacher training needs. Many LEAs conduct or participate in workshops, seminars, and other activities designed to increase teachers' knowledge and skills and improve instruction in math and science. In addition, the Department encourages small districts to form consortia, which can combine small grants into amounts adequate to carry out viable projects. Many school districts supplement State and local funding earmarked for teacher training with Eisenhower funds. This partnership between the Federal State, and local governments in mathematics and science education will do much to help achieve the National Goal of making American first in mathematics and science achievement by the year 2000.

INCREASED DEMAND FOR PH.D. FACULTY

Mr. Natcher: Mr. Secretary, the Committee has received several studies projecting a critical shortage of Ph.D. faculty in the next decade. What is the Department's view of these studies?

Secretary Cavazos: The studies you speak of have led me to be concerned about a possible shortage of faculty in higher education. If present trends continue, within several years there will be an imbalance between the number of Ph.D.s produced and the number demanded.

The downturn in the output of new Ph.D.s has been largely a result of the dismal employment prospects for new academics since the early 1970s. The projections have shown that the outlook for college faculty is now very good. I expect, therefore, that the increased demand for faculty will be answered by renewed interest in academic careers, particularly in the humanities and the social sciences where shortages are projected to be the worst. I think that improved prospects will lead many who were formerly discouraged to enter academia and, that the projected shortages will not fully come about. I am still concerned, however, that students and institutions will not respond as fast as they will need to, particularly in fields that are already suffering shortages.

NEED FOR NATIONAL TESTS

Mr. Natcher: Mr. Secretary, your Department has a major initiative to raise the high school completion rate. We also have to make sure that students who get a diploma have learned certain things. Do we need national tests or standards to guarantee that a High School diploma means that a student has mastered certain basic skills?

Secretary Cavazos: President Bush, along with the Nation's Governors, has developed a set of national goals to be met by the year 2000. As a result of these goals, there has been a great deal of discussion about developing national tests. I do not believe that national standards should be developed that every State must adopt as a requirement for high school graduation. Since States and local communities have the lead role in determining such requirements, I believe that the setting of standards should be left to them. However, I do believe that the Federal Government has a responsibility for tracking the progress of the Nation in achieving these goals. In this context, I believe that a national test to measure achievement is useful. Whether such a test is to be used by Governors to set standards is up to the individual States.

NATIONAL BOARD FOR PROFESSIONAL TEACHING STANDARDS

Mr. Natcher: Mr. Secretary, I am afraid this Committee may get in the middle of a dispute about funding for the National Board for Professional Teacher Standards. Tell us how this board is organized and why you are opposed to Federal support for this effort?

Secretary Cavazos: We are not opposed to the Board's mission. We fully support its efforts to delineate high standards for teaching and to recognize teachers who meet those standards.

The Board was established in 1987. Its central mission is to create a system for certification of experienced teachers. This national certification will be voluntary and will confer distinction by the profession on teachers who meet high and rigorous standards. This is in contrast to State licensure/certification, which is mandatory and which regulates entry to practice for beginning teachers through minimum competency standards that vary by State. The Board's chairman is James B. Hunt. The president is James A. Kelly. The majority of the 64-member board are teachers. Other members include: James Comer, Mary Futrell, Thomas H. Kean, David T. Kearns, Ruth E. Randall, Albert Shanker, and Adam Urbanski. The first set of assessments is expected to be completed in 1993.

We do not believe there should be Federal involvement in setting standards for the profession. The Board has requested funds for research activities that would form the basis for its professional assessments. We believe it would be highly inappropriate to support the Board's funding. The Board, as it is presently constituted, is a private organization that operates with total independence from the Federal government. We believe that is the way it should remain. We have three major concerns about Federal funding for the Board. First, the Department, as a rule, opposes sole source contracts, particularly when the recipient of Federal dollars does not have an established track record and the money is to be used for unspecified research and development activities. Second, the proposal under consideration lacks accountability to the Secretary of Education. Third, the funds requested by the Board ($25 million) are excessive and the research would likely duplicate research activities that are currently under way or that are planned by the Department.

MIGRANT EDUCATION COMMISSION

Mr. Natcher: Mr. Secretary, we know that you are concerned about migrant education issues. When do you expect the National Commission on Migrant Education to complete its review and issue its recommendations?

Secretary Cavazos: The authorizing statute requires that the Commission complete its review of the Migrant Education program and issue recommendations within two years after its first meeting. The Commission first met in September 1989, so we expect to see its final report and recommendations for the program by September 1991.

GAO INQUIRIES

Mr. Natcher: In December 1989, the Department of Education initiated certain procedures to be followed by Department officials in responding to information requests from GAO. Tell us why this was done and what "critical separation of powers issues" made the Department's General Counsel initiate a uniform approach in responding to information requests from GAO staff?

Secretary Cavazos: These procedures are designed to ensure that Department employees respond promptly and appropriately to GAO requests for information, taking into account the GAO oversight responsibility and balancing any issue relating to separation of powers and other legal concerns.

These procedures are designed not to inhibit or delay GAO inquiries. We have discussed with GAO representatives our willingness to work informally with them to avoid delays. GAO representatives understood and acknowledged the purpose of the procedures. In addition, we expect that there will be very few occasions when the Department would find it necessary to withhold information.

The statute that requires Executive Branch agencies to provide documents to GAO expressly recognizes that there are proper bases for the agencies to withhold information from GAO and, in this regard, establishes a process for the resolution of any disputes. The Department's recently adopted procedures are designed to implement this law. They also reflect concerns expressed by President Bush and the Attorney General that the Office of the Presidency be strengthened in this Administration.

Mr. Natcher: On what legal basis could documentation and/or statistical data requested by GAO staff as part of an ongoing congressionally requested assignment be denied?

Secretary Cavazos: In almost all cases we would expect to provide GAO access to documents that it requests, and would not anticipate any objection to GAO's request for information.

Grounds for properly withholding information from GAO include:

- **Requests that exceed GAO's statutory investigative authority; for example, requests that are directed toward the exercise of constitutional powers entrusted to the President.**

- Requests that intrude into the deliberative process within the Executive Branch and that fall within the Executive Privilege.

- Under 31 U.S.C. 716, documents may be withheld initially from GAO if they are withholdable from public disclosure under 5 U.S.C. 552(b)(5) (documents involving inter-agency or intra-agency deliberations) or 552(b)(7) (records compiled for law enforcement purposes). 31 U.S.C. 716 bars the Comptroller General from instituting a civil action or issuing a subpoena for a record if the President or the Director of the Office of Management and Budget certifies that the record falls within these exceptions and its "disclosure reasonably could be expected to impair substantially" Government operations.

Again, these grounds would not lightly be asserted to withhold information from GAO.

ACCESSING NCES NATIONAL DATA TAPES

Mr. Natcher: What is the legal basis for denying GAO staff access to National Center for Education Statistics national data tapes?

Secretary Cavazos: The National Center for Education Statistics (NCES) may disclose personally identifiable data to GAO for certain purposes, subject to limitations contained in section 406 of the General Education Provisions Act (GEPA). The Hawkins-Stafford Act amended section 406 of GEPA by adding strict confidentiality provisions for data collected by the Center. Under these provisions, NCES may disclose individually identifiable information for the statistical purposes for which the data were collected only to persons who take an oath required under the section. Any person who takes the oath and violates the restrictions on confidentiality under the oath is subject to a criminal fine of $250,000 and imprisonment of not more than five years.

Provided the research requested by GAO is consistent with the purposes for which the NCES data are collected, we do not see a legal bar at this time for disclosure to GAO. However, we do believe disclosure of individually identifiable information to GAO for other purposes would be barred and would be immune from legal process under the statute.

Incidentally, I understand that GAO during 1987 did request access to individually identifiable information contained in the 1985 Public School Survey teacher file. At that time, the Hawkins-Stafford Act had not yet been passed. Thus, the Center maintained confidentiality of information through strict provisions in its contracts with the organizations that conducted research for the Department. Under those contracts, not even the Department could gain access to the national data tapes. Thus, ED could not force the contractor to disclose data to GAO. The problem was solved at that time by preparing a special contract order to have the contractor prepare the analysis for GAO.

FY 1990 GRAMM-RUDMAN REDUCTIONS

Mr. Natcher: Insert in the record at this point a list by account of the reductions which result from the fiscal year 1990 sequestration.

Secretary Cavazos: The fiscal year 1990 reductions due to sequester were as follows:

REDUCTIONS DUE TO SEQUESTER, FISCAL YEAR 1990

(in thousands of dollars) Department of Education Account	1990 Sequester
Compensatory Education for the Disadvantaged	$66,416
Impact Aid	0
School Improvement Programs	17,653
Indian Education	1,038
Bilingual, Immigrant, and Refugee Education	0
Education for the Handicapped	28,521
Rehabilitation Services and Handicapped Research	24,658
Special Institutions for the Handicapped	1,517
Vocational and Adult Education:	
(a) Annual appropriation	15,570
(b) Permanent appropriation (Smith-Hughes Act)	100
Total	15,670
Student Financial Assistance	84,331
Guaranteed Student Loans	12,482
Higher Education	8,205
Howard University	0
Higher Education Facilities Loans	0
College Housing and Academic Facilities Loans	0
College Housing Loans	0
Education Research and Statistics	1,134
Libraries	0
Program Administration	3,643
Office for Civil Rights	606
Office of the Inspector General	271
Total, Department of Education Sequester	266,145

DEPARTMENT OF EDUCATION FUNDING--FY 1981-90

Mr. Natcher: Insert a 10-year funding history for the Department as a whole, showing 1) the amount requested versus the amount appropriated, and 2) of the amount appropriated, how much was for mandatory and how much for discretionary activities.

Secretary Cavazos: The table comparing Department requests with appropriations follows:

DEPARTMENT OF EDUCATION, REQUESTS VERSUS APPROPRIATIONS

(dollars in thousands)

Fiscal Year	Request	Appropriation		
		Mandatory	Discretionary	Total
1981	$13,450,554	$3,430,142	$11,364,237	$14,794,379
1982	12,497,763	4,005,317	10,709,100	14,714,417
1983	9,922,671	4,083,801	11,310,618	15,394,419
1984	13,104,065	3,342,223	12,076,375	15,418,598
1985	15,465,980	4,945,961	14,113,684	19,059,645
1986	15,484,759	4,418,311	13,453,804	17,872,115
1987	15,137,826	3,989,085	15,618,344	19,607,429
1988	13,967,422	3,917,759	16,315,757	20,233,516
1989	21,102,019	5,507,590	17,230,960	22,738,550
1990	23,568,582	5,355,930	18,755,030	24,110,960

EDUCATION FUNDING BY ACCOUNT AND LEVEL--FY 1981-90

Mr. Natcher: Also insert a 10-year table of appropriations by account with a summary of elementary and secondary education versus higher education.

Secretary Cavazos: The requested information is provided in two tables which follow:

EDUCATION DEPARTMENT BUDGET HISTORY BY ACCOUNT AND LEVEL

(dollars in thousands) Account	1981 Appropriation	1982 Appropriation	1983 Appropriation	1984 Appropriation	1985 Appropriation	1986 Appropriation	1987 Appropriation	1988 Appropriation	1989 Appropriation	1990 Appropriation
Compensatory Education for the Disadvantaged....................	$3,111,620	$3,040,980	$3,207,094	$3,408,250	$3,595,663	$3,536,749	$3,951,683	$4,336,543	$4,579,138	$5,318,381

Note: Detail may not add to totals due to rounding.

Elementary and Secondary level includes Compensatory Education for the Disadvantaged, Impact Aid, School Improvement Programs, Chicago Litigation Settlement, Indian Education, Bilingual and Immigrant Education, Education for the Handicapped, Vocational and Adult Education.

Postsecondary level includes Special Institutions for the Handicapped, Student Financial Assistance, Guaranteed Student Loans, Higher Education, Howard University, Higher Education Facilities Loans, College Housing and Academic Facilities Loans, College Housing Loans, College Construction Loan Insurance, Receipts.

Other includes Rehabilitation Services and Handicapped Research, Research, Statistics and Improvement of Practice, Libraries, Program Administration, Civil Rights, Inspector General, Education and Research Overseas.

RESEARCH, DEVELOPMENT AND EVALUATION FUNDING--FY 1989-91

Mr. Natcher: Insert in the record at this point a consolidated table by account showing all spending for research, development, and evaluation for fiscal years 1989 to 1991.

Secretary Cavazos: The following table shows, by appropriation account, the amount of funding devoted to research, development, and evaluation activities for fiscal years 1989 through 1991.

Account	1989	1990	1991
Compensatory Education for the Disadvantaged........	$4,900,000	$5,800,000	$9,400,000
School Improvement Programs.................	3,900,000	6,000,000	6,700,000
Bilingual and Immigrant Education................	2,600,000	2,600,000	2,600,000
Education for the Handicapped..............	26,900,000	27,900,000	27,900,000
Rehabilitation Services and Handicapped Research.	54,500,000	58,100,000	56,600,000
Special Institutions for the Handicapped..........	4,600,000	5,100,000	5,800,000
Vocational and Adult Education................	15,400,000	16,400,000	9,100,000
Higher Education..........	1,900,000	2,400,000	2,500,000
Howard University.........	2,900,000	2,900,000	2,900,000
Research, Statistics and Improvement of Practice..	27,700,000	32,700,000	39,100,000
Libraries.................	300,000	300,000	300,000
Program Administration....	22,500,000	29,800,000	38,200,000
TOTAL	168,100,000	190,000,000	201,100,000

DEPARTMENT OF EDUCATION FUNDING--FY 1990-91

Mr. Natcher: Insert in the record at this time a table showing by account, 1990 funding, your original request to OMB for 1991 and the President's budget for 1991.

Secretary Cavazos: The requested information on fiscal year 1990 funding and the 1991 request is provided below.

DEPARTMENT OF EDUCATION ORIGINAL REQUEST TO OMB

(dollars in thousands) Account	1990 Appropriation	1991 Original Request to OMB	1991 President's Budget
Compensatory Education for the Disadvantaged	$5,318,361	$6,683,075	$5,838,939
Impact Aid	732,352	764,640	660,854
School Improvement Programs	1,446,741	1,635,501	1,704,916
Indian Education	73,620	78,884	75,762
Bilingual and Immigrant Education	188,674	222,733	205,537
Education for the Handicapped	2,055,255	2,275,769	2,137,421
Rehabilitation Services and Handicapped Research	1,780,212	1,882,563	1,839,073
Special Institutions for the Handicapped	109,376	118,137	117,979
Vocational and Adult Education	1,130,506	1,227,716	1,176,537
Student Financial Assistance	6,090,766	6,835,997	6,352,415
Guaranteed Student Loans	3,856,344	2,993,586	3,107,957
Higher Education	623,544	707,404	657,648
Howard University	182,446	207,907	185,446
Higher Education Facilities Loans and College Housing Loans	0	0	0
College Housing and Academic Facilities Loans	35,129	8,453	13,449
Receipts	(85,238)	(76,110)	(76,110)
Research, Statistics, and Improvement of Practice	95,241	130,226	174,726
Libraries	136,646	136,646	39,062
Program Administration	273,303	346,309	331,000
Civil Rights	44,572	51,402	49,900
Inspector General	23,110	27,348	25,800
Total, Budget Authority	24,110,960	26,258,186	24,618,311

EDUCATION CATEGORICAL FUNDING

Mr. Natcher: Roughly, how many categorical programs have been eliminated over the last decade and how many new ones have been created - excluding one-time type grants?

Secretary Cavazos: In 1980, there were about 150 categorical programs in the Department of Education. After a major consolidation, this number decreased to a low of 120 in 1982. However, since that time, the number has increased to 208 in 1990.

HIGH SCHOOL COMPLETION RATES

Mr. Natcher: Would you tell us what the high school completion rate is in this country today, how this is measured, and in general how this compares to other industrial nations?

Secretary Cavazos: Nationally, almost three-quarters of all 18 and 19 year olds have earned a high school diploma, completion certificate, or a General Educational Development certificate (GED). The proportion of high school completers increases to 84 percent for 20-24 year olds, indicating that many dropouts return to the classroom for their diploma or GED certificate.

Information on years of school completed are derived from two questions on the Current Population Survey (CPS) instrument. Formal reports entitled Educational Attainment in the United States are produced by the Census Bureau using March CPS results. These surveys ask a sample of respondents about the number of years of schooling completed--including GED completion--by household members. The survey findings are representative of the civilian noninstitutional population in the United States.

As in all sample surveys, the data are subject to sampling and non-sampling errors. In addition, some data indicate that respondents tend to overestimate the educational level of household members. This inaccuracy results from the respondent's lack of knowledge and their hesitancy to acknowledge anything less than a high school diploma.

Alternatively, the graduation rate figures compiled by the Department and released in the annual State Education Performance Charts, also known as the "Wall Charts," indicate that during the 1980's fewer than three-quarters of our ninth graders received a regular high school diploma within four years.

Since the educational systems of other industrialized nations are organized differently than that of the United States, the available data do not permit direct comparisons of graduation or completion rates. For example, the Organization for Economic Cooperation and Development (OECD) and the United Nations Educational, Scientific, and Cultural Organization (UNESCO) provide estimates of enrollments at various levels of schooling, but not completions, for other industrialized nations. However, even the available enrollment estimates are not directly comparable across countries.

ADULT LITERACY

Mr. Natcher: Would you tell us how many people in this country are truly "illiterate" in the way most citizens define that term and tell us who these people are? Also, if you will, tell us how many people you believe are "functionally" illiterate and how you define this term?

Secretary Cavazos: The most recent evidence on adult illiteracy in the U.S. comes from the 1982 English Language Proficiency Study. Findings from this study indicate that between 17 and 21 million adults, 13 percent of the U.S. adult population, are illiterate at a basic level.

The increase in the technological and information needs of our nation has resulted in a change in the traditional definition of illiteracy. Today's complex society demands skills above a basic level to function successfully as a member of the U.S. labor force. Although there is no precise definition of functional literacy, the working definition of functional literacy are those skills and knowledge needed to perform the reading, writing, and analytical tasks that workers in the U.S. economy are required to handle. There are no exact estimates of the number of functional illiterates. However, some experts have put the figure at 20-30 million, or even close to 40 million.

The Department is currently embarking on the National Assessment of Adult Literacy, mandated by P.L. 100-297, which will use a survey to estimate the number and describe the characteristics of illiterate adults in the United States. We think this study will help us learn more abour how to achieve the National Goal of having all adult Americans literate by the year 2000. Initial data from this survey will be available in 1993.

BILINGUAL EDUCATION

Mr. Roybal: For FY 1991, the President has requested $175.4 million for programs authorized under the Bilingual Education Act. Taking inflation into account, this is less than half the amount appropriated in FY 1980. Given the growth of the limited-English-proficient student population, why is the Administration's budget request for Title VII so low? In light of the President's Initiative on Hispanic Education, why hasn't the Administration sought a substantial increase in Title VII funding?

Secretary Cavazos: The Bilingual Education program is designed to assist local school districts in implementing programs to serve limited English proficient students, but not to provide long-term assistance for operating such programs. Section 7021(c)(2)(I) requires applicants to describe, in their applications, the activities they will undertake to "expand the capacity of the applicant to operate programs such as those assisted under this Act when Federal assistance under this section is no longer available." Since 1969, a total of $2.4 billion has been appropriated under the Bilingual Education Act, assisting hundreds of school districts to develop the capacity to operate such programs. The 1991 request represents a 10.6 percent increase over the 1990 appropriation, which is well above the inflation rate of the past year. Given the urgent need to reduce the size of the Federal deficit, I consider the 10.6 percent increase to be substantial.

BILINGUAL EDUCATION PERSONNEL

Mr. Roybal: School districts across the Nation report a critical shortage of bilingual educational personnel. In Los Angeles alone, there is a current shortage of more than 2,000 bilingual teachers. The shortage of bilingual education personnel hampers school effectiveness and harms language-minority students. Given this serious national problem, why has the President asked for level-funding for the Training programs authorized under Part C of the Bilingual Education Act?

Secretary Cavazos: As you know, local school districts funded under Part A may use grants to provide in-service training to educational personnel as well as to provide direct services to students. In 1989, successful applicants for new and continuation Part A grants estimated that they would spend 10 percent of their grant for training. Consequently, the Department's budget allocates the entire $16.9 million increase to Part A where funds can be used both for needed inservice training and direct provision of services to students.

The Department is currently reviewing the five activities funded under Part C to determine how they can be made more effective. In January 1990, OBEMLA hosted a forum on personnel needs attended by key superintendents from around the country as well as school district personnel directors and deans of schools of education. The purpose of this forum was to obtain the advice of these individuals on how we can improve training services under the Bilingual Education Act. Before we consider increasing the Part C request, I feel we should first review these training programs and attempt to make them more effective in meeting local needs for such staff. The Department has already begun to make changes in these programs in response to advice from forum participants.

DEVELOPMENTAL BILINGUAL EDUCATION

Roybal: Last year, the House-Senate Conference Committee on the Labor-HHS-Education appropriations bill earmarked $5 million for programs of developmental bilingual education. Why did the Department commit only $3 million of FY 1990 appropriations for this important program? Why does the Department propose to limit FY 1991 funding for developmental bilingual education programs to $3 million?

Secretary Cavazos: As you know, the primary purpose of the Bilingual Education program is to assist limited English proficient students to learn English and to meet grade promotion and graduation standards. In developmental projects, half the students are intended to be English speaking students learning the native language of the limited English proficient students. Consequently, the Department believes that such programs are not as central to the primary purpose of the Bilingual Education Act as are transitional bilingual education and special alternative instruction programs. Nonetheless, the Department believes that developmental bilingual education programs should be funded at a level sufficient to give this alternative a real test. The estimated 17 projects to be funded in 1990 and continued in 1991 will be closely monitored so that we can learn more about their effectiveness in assisting limited English proficient students.

Mr. Roybal: The budget justification for the International Education and Foreign Language Studies states that "The economic well-being and national security of the United States depends largely on our ability to understand and communicate with other nations and peoples," and "The United States remains one of the few countries where students may graduate from a university without studying a foreign language throughout their formal education." At the same time, the Department continues to emphasize transitional bilingual programs over developmental programs which expose native speakers of English to a foreign language. How can you rationalize these two obviously contradictory positions in your budget?

Secretary Cavazos: As I have said on a number of occasions, I strongly believe that all students should learn a foreign language. However, the purpose of the Bilingual Education Act is to teach English to limited English proficient students and help them meet grade promotion and graduation standards. If we complicate the mission of programs under the Bilingual Education Act to also address teaching foreign languages, we risk making them less effective in accomplishing their primary purpose.

BILINGUAL FELLOWSHIPS

Mr. Roybal: The law authorizing Title VII calls for the funding of at least 500 graduate study fellowships in bilingual education each year. How many fellowships were awarded last year?

Secretary Cavazos: Fiscal year 1989 appropriations language barred the Department from making any fellowship awards. Appropriations language for 1990 directs the Department to fund no more than 200 fellowships.

Mr. Roybal: How many fellowships would be awarded under the FY 1991 budget request?

Secretary Cavazos: The Department has requested funds for 300 fellowships in fiscal year 1991.

Mr. Roybal: What would be required for the Department to fund at least 500 graduate fellowships?

Secretary Cavazos: The authorizing statute requires the Department to make 500 fellowship awards, unless the appropriations language specifies a different number of fellowship awards to be made in 1991.

BILINGUAL EDUCATION: SPECIAL COMPETITION

Mr. Roybal: In the past, the Federal Government has provided help to school districts enrolling newcomers to our society through the Immigrant and Refugee Education programs. The Administration's budget request seeks no additional funding for Immigration education; nor does it seek to reinstate the Refugee education program. The Department's budget request for Title VII notes that $12 million would be set aside for "a special competition limited to school districts experiencing a recent, major influx of limited English proficient children." I presume that these children would be classified as either immigrant or refugee students, would they not?

Secretary Cavazos: The Department intends to publish a priority notice for this competition limiting participants to local school districts experiencing a recent, major influx of limited English proficient students. We do not intend to mention immigration status in that notice. Nonetheless, we expect many school districts to qualify on the basis of recently arrived immigrant and refugee students.

Mr. Roybal: Has the Department chosen to use Title VII which was designed for both foreign and native-born students as the vehicle for helping these school districts rather than Immigrant or Refugee programs?

Secretary Cavazos: The Refugee Act, which authorized the Refugee Education program, has expired. Consequently, the Congress made no appropriation for this program in 1990. The Emergency Immigrant Education program, authorized through 1993, allows school districts to use grants as general aid and does not require any specific instructional program. Consequently, the Department believes that requesting these funds under the Bilingual Education Act is more likely to benefit students educationally.

Mr. Roybal: How many school districts would be eligible for this competition, how many limited English proficient children are involved, and how did the Department arrive at the $12 million figure?

Secretary Cavazos: The Department has just begun to consider criteria to be included in the priority notice and cannot yet estimate the number of school districts or students that would be involved. In requesting $12 million for this special competition, the Department intended to set aside a sum large enough to provide significant assistance to heavily affected school districts, but not so much as to divert funds from other high priority educational programs within the Department.

IMPACT OF FY 1991 PROPOSALS FOR THE SSIG AND PERKINS LOAN PROGRAMS

Mr. Roybal: The Administration's budget proposes to eliminate the State Student Incentive Grant (SSIG) program and Federal capital contributions for the Perkins Loan program. How many fewer students will be able to participate in each of these programs because of the budget proposal?

Secretary Cavazos: Our proposals to zero-fund the SSIG program and Federal capital contributions for the Perkins Loan program would result in 306,000 fewer awards to students under these programs in fiscal year 1991 than in fiscal year 1990: a reduction of 197,000 under SSIG and 109,000 under the Perkins Loan program. However, since State support of need-based financial assistance to students has increased significantly in recent years regardless of the level of Federal support, we estimate that most of the 197,000 students currently being supported under SSIG would continue to receive assistance under the same State programs through which SSIG funds have been provided in the past.

Mr. Roybal: How do you plan to address the financial needs of the financially needy students?

Secretary Cavazos: Our 1991 proposal for the Title IV student aid programs would provide some $18 billion in financial assistance for approximately 5.9 million students--about the same as this year. These figures do not reflect the assistance that students will continue to receive from the State need-based grant programs through which Federal and State SSIG funds are currently provided. These State-level programs provided over $1.5 billion in grant aid in 1988-89, and they have continued to increase their support of needy students each year regardless of Federal SSIG appropriation levels. Our student aid budget proposal for fiscal year 1991 maintains postsecondary access for needy students through a combination of programs and includes Pell Grant assistance to 175,000 more students in 1991 than in 1990.

STATE SUPPORT OF STATE STUDENT INCENTIVE GRANTS

Mr. Roybal: As Federal participation has declined, how many States have had to increase their participation in the State Student Incentive Grant program to meet increasing demand or to assist those students already in the program?

Secretary Cavazos: During the last 5 years, 41 States have increased their support for needy students through a variety of need-based student grant programs, a number of which are not considered part of the Federal SSIG effort. States have increased their support for needy students each year regardless of Federal SSIG appropriation levels.

During these 5 years, Federal appropriations for the SSIG program declined just 4 percent, from $76.0 million to $72.8 million. Yet, State expenditures for need-based student grants increased 33 percent, from $1.095 billion in 1984-85 to $1.461 billion in 1988-89. As the following chart illustrates, State decisions to increase their expenditures for these grants to needy students do not seem to be related to changes in Federal SSIG appropriations.

	Annual Percentage Changes in Expenditures	
Academic Year	Federal SSIG Funding	State Expenditures for Need-based Student Grants
1985-86	level funding	+8%
1986-87	-4%	+14%
1987-88	-4%	+4%
1988-89	-4%	+8%

Mr. Roybal: Please provide a list of the participating States showing the number of students served by the SSIG program for the past 5 years.

Secretary Cavazos: The following table shows the number of students served by SSIG programs in 55 eligible jurisdictions for the last 3 years. (Earlier data are not readily available.) The numbers of recipients shown represent less than 20 percent of the total number of grants awarded under State need-based student aid programs.

REDUCTIONS IN STUDENT AID

Mr. Roybal: It is now accepted fact that if we are to meet the labor demands of this country in the years to come, we need to invest heavily in education programs to train minorities, specifically Blacks and Hispanics, who are also among the most financially needy students. The Administration's budget proposes further cut backs in student financial aid effectively closing the door to a college education to many of these high-ability students. On what basis can you justify this reduction in student financial aid?

Secretary Cavazos: While the fiscal year 1991 Budget Request seeks a student aid funding level which is less than the fiscal year 1990 appropriation, this is due largely to the estimated decreased costs of the Guaranteed Student Loan program. Costs in this program are closely tied to interest rates which are projected to decline. The amount of student loan guarantees is projected to increase, however.

AID AVAILABILITY UNDER THE FY 1991 REQUEST

The Department of Education must share in the Nation's effort to reduce annual Federal budget deficits, and yet the Department's requested 6 percent increase for discretionary programs is a larger increase than that requested by any other Federal agency. In the fiscal year 1991 Budget, certain postsecondary programs which are targeted on the neediest students and on minorities, such as the TRIO programs and endowment grants for Historically Black Colleges and Universities, have been proposed for significant increases. Also, the request for the Pell Grant program fully funds the shortfalls from 1989 and 1990 and restores eligibility and Pell grant aid for part-time students. Overall, the aid made available to students through the fiscal year 1991 Budget Request would be about equal to the aid available in 1990.

Mr. Roybal: What advice would you give to parents of these students when they are not able to get a college education due to a lack of financial support?

Secretary Cavazos: I do not believe that any student will be unable to receive a college education due to a lack of Federal financial support. However, I realize that students and parents have a difficult time affording a college education. The Department will provide over $18 billion in support for the neediest students in fiscal year 1991. I would hope that schools would join the Department in its goal of removing financial barriers to postsecondary education for needy students through a variety of measures, such as constraining their annual tuition increases.

Mr. Roybal: As the Secretary of Education to the President who says he is the "Education President," what advice would you give him as to the role of the Federal Government in addressing the higher education needs of high-ability financially needy students?

Secretary Cavazos: I have told him that we must focus our efforts especially on needy students and that we must emphasize excellence in academic performance. We must do what we can to graduate minority students from high school, provide them access to postsecondary education and help them complete that education. While President Bush knows, and I know, that these problems will not be solved solely by money, our budget request does address these issues in a number of ways (for example, through increased funding for the Graduate Assistance in Areas of National Needs program) as does the President's proposed Excellence in Education Act (for example, through creation of a National Science Scholars program).

RATIONALE FOR ZERO-FUNDING CERTAIN HIGHER EDUCATION PROGRAMS

Mr. Roybal: The budget proposal has eliminated a number of programs within the higher education account on the sole basis that these programs duplicated the goals of other programs. In those instances where you have eliminated a program such as the Innovative Projects for Community Services because it is duplicated in the Work-Study and Perkins Loans programs, why have you not increased the budget of the duplicated programs accordingly, since the students in the eliminated programs would now have to apply and be served by those programs?

Secretary Cavazos: The Administration has requested no funds for a variety of higher education account programs for a number of reasons. Innovative Projects for Community Services is not a student aid program. It provides Administrative funds to demonstration projects to determine the feasibility of encouraging student participation in community service projects in exchange for educational services or financial assistance in order to reduce debt burden. We are requesting no funds for Innovative Projects because this concept is already adequately demonstrated by Perkins Loans and Work-Study. We are not requesting increased funding for these latter programs as a result of zero-funding Innovative Projects since the level of student aid is not reduced by our zero-funding request.

Cooperative Education and Law School Clinical Experience are also demonstration projects. The concepts of both cooperative education and clinical experience have been demonstrated successfully and accepted by institutions, many of whom now use institutional and/or private sector funds to support these activities. As in the case of Innovative Services, zero-funding of these two programs would not result in decreased student aid or in the activities supported by the two programs.

We are requesting no funds for Veterans' Education Outreach since this program has outlived its original purpose of assisting higher education tutoring and counseling programs that respond to the special educational needs of large numbers of enrolled Vietnam-era veterans. The number of enrolled veterans has dropped significantly. Moreover the needs of these student veterans can be met by other existing Federal programs including Upward Bound Student Support Services, and other TRIO programs, as well as numerous activities supported by the Department of Veteran Affairs. While we also argue that the decreased number of student veterans can be supported by other existing Federal programs, we see no need to increase such programs to reflect a decrease in Veterans' Education Outreach since this program actually provides very limited support--less than $5,300 per institution served.

INTERNATIONAL COMPARISON OF ELEMENTARY/SECONDARY FUNDING

Mr. Roybal: You have stated in the past that more money is not needed to resolve the education crisis this country is facing. The United States presently ranks 14th in spending for grades K-12 among 16 industrialized nations. The FY 1991 budget request for elementary, secondary, and vocational education reflects only a 2 percent increase which is half of the expected rate of inflation, which in fact means a 2 percent reduction. Given the level of investment in our elementary and secondary education, how we are going to prepare our students for the competition we are sure to face from other industrialized countries?

Secretary Cavazos: First, I must correct your premise that the United States ranks 14th in spending for elementary and secondary education. This "finding" was reported recently by the Economic Policy Institute (EPI), and I am very concerned because the controversy over the EPI report is deflecting us from important debate on how to ensure that our education dollars are well spent.

ECONOMIC POLICY INSTITUTE FUNDING STUDY

There are some serious methodological problems with the EPI report. The measure used by EPI, education expenditures divided by gross domestic product, is not appropriate for comparing education expenditures across nations. A better measure is to take each country's expenditures on education per pupil and compare them using a price adjustment index. While it is generally agreed that exchange rates are not a good index, an appropriate alternative is purchasing power parities, used by European nations and by the Organization for Economic Cooperation and Development in comparing a variety of economic data. When we use that index to equate expenditures, we find that the U.S. ranks near the top among advanced nations in the amount we spend per pupil in elementary and secondary schools.

RELATIONSHIP OF FUNDING TO RESULTS

To address the second and more important part of your question, the point I have repeatedly made since becoming Secretary is that we will never improve education in this country unless we pay at least as much attention to how we are spending our resources as we do to how much we are spending.

Research consistently shows no relationship between education spending and student achievement. In fact, as aggregate elementary and secondary education spending in the U.S. rose by 27 percent (after adjusting for inflation) from 1980 to 1988, scores on national reading and writing tests remained virtually unchanged.

STEPS TO REFORM AND RESTRUCTURING OF EDUCATION

Research and the experience of educators, parents, and students point us in the right direction of educational reform and restructuring. We will improve American education by:

- -- setting goals that focus on outcomes, not inputs like the level of funding;
- -- allowing schools flexibility in implementing strategies that work best with their particular school populations;
- -- breaking through rigid requirements that limit the ability of schools to hire the teachers they need, such as elaborate teacher credentialing or requiring standard wages for all teachers no matter what the specialty;
- -- providing choice among schools for parents -- especially poor parents who cannot afford to move to a different neighborhood to find the right school for their children;
- -- conducting research and evaluation and collecting statistics that will provide guidance on what works in education and help measure progress toward meeting our goals.

BUDGET INCREASE FOR ELEMENTARY/SECONDARY EDUCATION

The Department's 1991 budget requests a total of $24.6 billion, with well over half going to elementary and secondary education programs. In point of fact the proposed increase for elementary and secondary (including bilingual) programs is 9.4 percent. Within the budget, increases totalling about $1.8 billion have been allocated to high-priority areas and new initiatives, including increases for research, evaluation, and educational improvement. Funds are included to support the agreements reached at the Education Summit; programs to help reduce dropout rates and provide preschool education for children in disadvantaged families; math and science education improvement; drug education programs; and adult education--all of which will help us achieve the national goals recently set by the President and the governors.

I am proud of the changes reflected in this budget. The debate stimulated by EPI over international expenditures only serves to distract all of us who are concerned about education from the real issue -- education reform that improves student outcomes.

BILINGUAL VOCATIONAL EDUCATION REAUTHORIZATION

Mr. Roybal: The FY 1991 budget request does not include funds for bilingual vocational education. Do you plan to ask for a supplemental after the authorizing legislation is enacted? If not, how do you plan to fund the program year which begins July 1, 1991?

Secretary Cavazos: The reauthorization of the Carl D. Perkins Vocational Education Act, which authorizes bilingual vocational education, will likely not be completed until sometime this spring. Because the final shape of the new legislation is still uncertain, the Administration has not specified amounts to be requested for individual vocational education activities. As soon as reauthorization of the Perkins Act is completed, we will transmit a request for specific vocational education programs, including bilingual vocational education.

ENROLLMENT TRENDS FOR BLACKS AND HISPANICS

Mr. Roybal: Recent data has shown that enrollment by Blacks and Hispanics in college has actually declined. How does your budget address this problem?

Secretary Cavazos: Census data for the past 10 years (1978 to 1988) reveal much cause for concern regarding recent trends in college enrollment for Black and Hispanic students.

- o Black enrollment declined slightly between 1978 and 1988, from 29.5 percent to 28.1 percent. It remains substantially below the college participation rate for white students (38.1 percent). Although enrollment rates for Black females increased slightly (from 28.2 percent to 30.5 percent), the participation rate for Black males dropped sharply, from 31.9 in 1978 to 25.0 in 1988.

- o College participation rates for Hispanic students increased slightly between 1978 and 1988 (from 27.2 percent to 30.9 percent) but continue to lag behind the enrollment rate for white students (38.1 percent).

Increasing the number of minority and disadvantaged students enrolling in postsecondary education--and improving their chances for success once they are enrolled--is one of the Administration's most important educational goals. The 1991 budget reflects this priority by providing funding for the continuum of programs from preschool through graduate education that provide support for minority and disadvantaged students. For example:

- o Major increases in programs like Chapter 1 and Even Start are designed to ensure that minority and disadvantaged children enter the education "pipeline" fully prepared and equipped to succeed.

- o Because minority students (especially Hispanics) are at risk of dropping out before completing high school, the 1991 budget provides increased funding at the elementary and secondary levels for a wide variety of programs to attack the dropout problem.

All these support programs at the preschool, elementary, and secondary levels have one main goal--to produce a large, well-prepared pool of minority applicants ready to enroll in (and succeed in) college.

The 1991 budget requests significant increases for all postsecondary education programs servicing disadvantaged populations. This is expected to have a positive effect on minority enrollments in institutions at both the baccalaureate and post-baccalaureate levels.

Undergraduate--Increased funds are requested for Historically Black Colleges and Universities (HBCUs) (Title III), Special Programs for the Disadvantaged (TRIO), and the Minority Science Improvement Program (MSIP).

- The requested increase for Endowments under Title III of the Higher Education Act reflects the President's continuing commitment to HBCUs, by including a $15 million set-aside for these schools, a $10 million increase over 1990. The request would encourage HBCUs and other institutions serving large numbers of disadvantaged students to build their endowment funds and thereby achieve financial stability and self-sufficiency.

- The 10-percent increase in TRIO funding would support projects designed to promote access to and persistence in postsecondary education for individuals from disadvantaged backgrounds.

- The President is also requesting an increase in funding for the Minority Science Improvement Program (MSIP), which provides grants to strengthen science and mathematics instruction at institutions enrolling large numbers of minority students.

- The Student Literacy Corps and School, College and University Partnership (SCUP) programs, are maintained at their 1990 levels. The Student Literacy Corps program supports literacy tutoring services at public community agencies serving educationally or economically disadvantaged individuals. SCUP helps low-income students enhance their postsecondary education or employment opportunities by improving their academic skills.

- The 1991 student financial aid request will generate over $18 billion in aid to students--approximately the same level as in 1990. Almost 9.9 million awards will be made to almost 5.9 million needy students, many of whom are minorities. In particular, the aid available to Pell Grants, the largest and most need-targeted Federal student aid program, would be increased by $126 million, excluding funds requested to meet prior year shortfalls. The Pell Grant program is the major source of grant aid for minorities and forms the foundation of all aid for economically disadvantaged students.

Graduate--To improve access to graduate education for minority and disadvantaged students, the President is requesting increased funding for three graduate programs.

- One of these--the Patricia Roberts Harris Graduate Fellowships program--assists needy minority students and individuals from traditionally underrepresented groups to pursue advanced degrees. We are requesting an 11-percent increase for this program.

- A substantial 72 percent increase is requested for the Minority Participation in Graduate Education program. This program provides important need-based financial support for talented minority students to assist them in preparing for graduate study. It helps increase graduate school enrollment of minority students.

- Finally, funding for Graduate Assistance in Areas of National Need, which assists students in preparing for careers in areas of national need, would be increased by 61 percent. Fellowship recipients must be from traditionally underrepresented background.

HISPANIC EDUCATION TASK FORCE

Hispanic Education--In early December, the President directed me to form a Task Force on Hispanic Education to focus on the particular problems of Hispanic students. The Task force is composed of representatives from the Departments of Education, Defense, Interior, Labor, Health and Human Services, and Agriculture as well as Cabinet Affairs and the Office of Management and Budget. The Task Force met for the first time on January 18, 1990 and will report to the President through the Domestic Policy Council and its Education Working Group.

The Task Force will assess the participation of Hispanics in Federal education programs, will identify barriers that may limit Hispanic participation in education programs and suggest remedies, and will recommend goals and strategies for the education of Hispanics.

DROPOUT INITIATIVE

Mr. Roybal: Hispanics have a higher dropout rate than any other group in our educational system. How will your dropout initiative specifically address the Hispanic dropout rate?

Secretary Cavazos: We hope to fund a number of programs that will specifically address the severe dropout problems being experienced by school districts that enroll large numbers of Hispanic children. Grants will be awarded on a competitive basis to applicants proposing the most promising approaches to dealing with these problems. A survey of our current (1988-1989) dropout prevention projects shows that of the 75 grantees reporting, Hispanic students account for 19 percent of all the participants being served. Increasing the high school graduation rate to 90% and eliminating the gap between the graduation rates of minority and non-minority students is one of the most crucial objectives set by the President and the Governors.

PRESIDENT'S EDUCATIONAL GOALS

Mr. Roybal: The President has outlined a series of educational goals to be attained by the year 2000. What specific and concrete initiatives are you proposing to address each of these goals? What is the timeline for each of these initiatives?

Secretary Cavazos: We have identified those parts of our budget that will help achieve the President's six goals, announced in his State of the Union message, and have included an analysis for the record of the goals and the supporting Department's programs. The six goals address: 1) Readiness for School; 2) High School Completion; 3) Student Achievement; 4) Science and Mathematics; 5) Literacy and Life-Long Learning; and 6) Safe, Disciplined and Drug-Free Schools. The amounts and activities identified in our analysis are illustrative of the commitment in our Department's budget toward achieving these national goals. For example, our budget includes approximately $7.8 billion that is supportive of the High School Completion goal and over $450 million that is supportive of the Student Achievement goal.

In addition, we will be assessing periodically the Nation's progress in reaching the goals. Also, we expect that the States will be developing their own strategies. An important element in all of this will be allowing greater flexibility in the use of Federal and State education monies -- in exchange for greater accountability. Greater flexibility, choice, and restructuring of the way we educate our children -- all of these will be important ingredients in helping us make better use of our education dollars and in achieving the goals the President has set.

HEAD START

Mr. Roybal: What coordinated effort does your Department have or plan with the Department of Health and Human Services to implement the Head Start program? How much money in your budget is directed towards this effort, and in what areas?

Secretary Cavazos: The Department of Education does not participate in the implementation of the Head Start program. However, we are conducting several studies on child care and early childhood education, and in all cases we are closely coordinating our efforts with the Department of Health and Human Services. In one case this coordination involves an interagency agreement and transfer of $100,000 to HHS for analysis of supply and demand data on the provision of child care services being collected by both Departments. The Department of Education's activities, totalling about $4 million, include studies on: "A Profile of Child Care Settings," "Retaining the Benefits of Preschool for Disadvantaged Children," "Before and After School Care Programs," and "Observations of Preschool Education and Care for Disadvantaged Children." In addition, our Even Start program has involved Head Start staff from HHS in such activities as reviewing regulations and evaluating applications. Working closely with the Department of Health and Human Services, we at Education are determined to do all we can to achieve the national goal of having all children ready to learn when they enter school in the year 2000.

TEACHER EDUCATION

Mr. Roybal: It is estimated that by the year 2000, 38 percent of the children under 18 years will be minorities while the minority teaching force in the elementary and secondary schools will be reduced to less than 5 percent. How does your budget address the issue of training more minority teachers?

Mr. Cavazos: Our 199 budget request includes funding for several programs that address the issue of training more minority teachers. The Eisenhower Mathematics and Science Education State Grants program, includes a specific authorization for school districts to use funds available for elementary and secondary programs to recruit or retrain minority teachers to become science and math teachers. For 1991, the Department is requesting a $94 million (74 percent) increase in the Eisenhower program.

An estimated $45 million will be spent in 1991 for training programs under the Bilingual Education Act. While no data are collected on the race and ethnicity of participants, the majority are believed to be from language minority groups.

The Department is requesting $49 million, an increase of almost $14 million, for programs to improve accessability and encourage minority participation in graduate programs through Harris Graduate Fellowships, Minority Participation in Graduate Education, and Graduate Assistance in Areas of National Need.

The Education for Handicapped Personnel Development program has supported a priority to train personnel to serve minorities and other special populations. While the reauthorization for this program is still pending, it is expected that the reauthorizing legislation will place additional emphasis on training personnel to serve minorities, and on the training of minority personnel.

Further, projects to increase the number and quality of minority teachers are specifically authorized under the Fund for the Improvement and Reform of Schools and Teaching.

In addition, the Department is currently reviewing Title V of the Higher Education Act, "Educator Recruitment, Retention, and Development," so that we can offer timely and substantive guidance during the reauthorization of that Act.

Mr. Roybal: I am aware that several institutions for higher education have signed a Memorandum of Understanding to create a consortium for minorities in teaching careers. These institutions include two and four year colleges, a research institution, historically Black colleges and institutions serving large numbers of Black and Hispanic students: The consortium has pledged to: a) expand the pool of minority students entering teaching career in all fields through precollege identification and university-based enrichment programs; b) enhance the number and preparations of minority students in education majors in college and the number of minority students pursuing graduate studies in Education, through broad programs to: 1) improve curricula at schools of Education; 2) create new graduate opportunities; 3) increase articulation between two and four year colleges, and; 4) develop model enrichment programs and projects for education majors; c) improve the preparation of in-service minority teachers through formal and informal education programs involving strong college/school collaborations. This alliance of universities appears to be a fresh idea to solving a difficult problem. Are you aware of this Consortium for minorities in teaching careers?

Secretary Cavazos: Yes, the Department is aware of this consortium for minorities in teaching careers.

Mr. Roybal: Is this type of initiative which the Department can include in its efforts to increase minority teachers?

Secretary Cavazos: The Department is in the process of reviewing various issues, problems, and policy options affecting teacher recruitment, retention, and development, including the issue of increasing the number of qualified minority teachers. This review will form the basis for the Department's reauthorization proposal for Title V of the Higher Education Act. We believe that efforts like the Consortium warrant consideration in the reauthorization process.

SUMMIT FOLLOW-UP

Mr. Stokes: You are seeking $20 million to follow-up on the agreements reached at last year's education summit with the governors. Could you tell us specifically what you would do with $20 million?

Secretary Cavazos: The role of the Office of Educational Research and Improvement in the Nation's efforts to attain the education goals is:

- To provide and report data that can assist those who will monitor progress toward achieving the education goals; and
- To inform educators, policymakers and the public about effective policies and practices in achieving the education goals.

The Education Summit Follow-Up funds will support activities to gauge progress. Where existing surveys are relevant to the goals, they will be used as is, modified, or redirected (e.g., the National Assessment of Educational Progress). In many of the goal areas, however, OERI will need to design new, quality data collection systems (e.g., in the area of measuring school readiness). For these goal areas, activities that precede actual data collection include:

- Assessing the strengths and weaknesses of measures based on the present state of knowledge in the relevant fields;
- Developing alternative measurement techniques and metrics; and
- Pretesting survey instruments, procedures, and methodologies.

The Education Summit Follow-Up funds will also support activities to assist in achievement of the education goals, such as:

- Conducting and supporting research and development work on how to achieve the goals;
- Informing educators, policymakers, and the public about the results of research and practice that can contribute to achieving the goals; and
- Providing technical assistance to States and localities as they develop and implement policies and practices to achieve the national goals.

At this stage in our planning, we estimate that as much as three-quarters of the funds could be used to support various research and data collection activities connected to measurement and monitoring of progress toward the national education goals. The remaining funds would be used to support other aspects of Summit follow-up related to school restructuring and enhanced regulatory flexibility.

OERI is in the process of holding discussions with the Departments of Labor, Health and Human Services, Commerce, and Agriculture to incorporate their pertinent, ongoing and planned activities into monitoring progress on the goals. Also, the President and the Governors have agreed on the need for a bipartisan group to oversee the process of determining and developing appropriate measurements and reporting on the progress toward meeting the goals. We will need to consult with that group and the Governors to determine what data are needed.

Upon completion of a detailed plan for activities related to the Summit agreement, more detailed information will be made available to members of this Committee.

FUNDING FOR TITLE III, PART B

Mr. Stokes: Your budget request provides $83.9 million for Title III, Part B--Strengthening Historically Black Colleges and Universities. This amount is the same as the amount appropriated in the FY 1990 budget. Why didn't you request an increase for inflation? Why is this program an exception to your budget summary narrative, which states that the Department is including significant increases for programs providing assistance and services to those most in need--the disadvantaged, the handicapped, minorities, and needy college students?

Secretary Cavazos: The 1991 funding request for historically black college and universities under Title III is $110 million. This is a $10 million increase over the 1990 level for HBCUs and represents over 50 percent of the total Title III request. Because of the demonstrated long-term benefits to HBCUs of endowment building, 1991 increases in Title III HBCU funding were focused on Part C, Endowment Grants, rather than on the Part B, Strengthening Historically Black Colleges and Universities formula grant program.

PART C, ENDOWMENT GRANTS INITIATIVE

The 1991 request includes a major new initiative to strengthen the endowment funds of HBCUs. The amounts of $5 million in FY 1990, $15 million in FY 1991, and $20 million in FY 1992 would be reserved for HBCUs under the Part C Endowment Grants program. In this program, the contribution of an HBCU to its endowment fund would be matched dollar for dollar by the Federal Government.

I would like to highlight several advantages of our endowment-building approach:

- Many of the HBCUs have very low endowments, and are thus financially weaker than comparable institutions.

- Endowment building is an effective way to create financial strength and long-term financial security for HBCUs.

- Many HBCUs are able to use their endowment income as they would Part B funds, to improve academic programs as well as administrative management.

- The Endowment Grant program is designed to stimulate HBCUs to launch new fundraising campaigns. For years, HBCUs have sought, and demonstrated that they could utilize, more Federal funds than have been available.

Mr. Stokes: You are requesting $15 million to implement the Endowment Grant set-aside program for HBCUs. This is the only increase for HBCUs in the President's budget. However, the legislation needed to authorize the funding of this program, "The Excellence in Education Act" (S-693), is still pending before Congress. Therefore, there would be no increase for HBCU's unless the legislation is passed. Isn't this correct?

Secretary Cavazos: S. 695 has already been passed by the Senate. The Department is confident that the House will pass the legislation shortly.

However, should S. 695 not be enacted promptly into law, the proposed $15 million HBCU set-aside would be added to the general 1991 Endowment appropriation, bringing the total up to $33 million. These funds would be available on a competitive basis to all Title III eligible institutions, including HBCUs.

Mr. Stokes: The HBCU endowment program, as envisioned by the administration, would be located in Part C of Title III, which authorizes endowment grants, although not specifically to HBCU's. Part B of this title specifically relates to HBCU's. Part B of this title specifically relates to HBCU's. Why did the administration request funding for this program in Part C and not Part B?

Secretary Cavazos: The Department located the new HBCU Endowment Grant set-aside in Part C rather than in Part B of Title III because Part C contains the necessary statutory and regulatory provisions. Title III, Part B is a formula grant program for HBCUs, designed to help them improve their programs and management and thus enhance educational opportunities for their students. Neither the Part B statute nor the regulations contains the selection procedures, matching provisions, and other requirements necessary to administer an Endowment Grant program such as that proposed in the 1991 budget.

Title III, Part C--Endowment Grants, has such provisions already in place. All current Title III, Part C provisions, except the eligibility requirements, would apply to the new HBCU set-aside.

NATIONAL ASSESSMENT

Mr. Stokes: The assessment line item in your research and statistics account will double from the FY 1989 level, if the President's budget is appropriated. This reflects the growth of the National Assessment of Educational Progress (NAEP) which seeks to assess achievement of students at grades 4, 8, and 12 in various skills and subjects. Recently this committee agreed to reprogram an additional $2.3 million from the National Center for Education Statistics into NAEP for fiscal year 1990. I have some concerns about NAEP. Is this standardized test an accurate measure of educational performance, especially for minorities? How are disadvantaged students helped by this type of testing? Has there been an evaluation of NAEP? Isn't NAEP telling us what we already know? Why should we keep expanding this measurement of outcome? Wouldn't it be better to focus resources on interventions to prevent these outcomes?

Secretary Cavazos: Your questions are interrelated, and I'd like to provide a single response. NAEP has most recently been evaluated in 1987-88 by a Technical Review Panel of testing experts convened by the Department of Education. They were asked to examine the 1986 reading anomaly, the accuracy of NAEP trends, and issues related to providing State-level NAEP comparisons. In their report, the Technical Review Panel concluded that "...NAEP was established to serve as the most accurate barometer of achievement for America's young people. Despite its imperfections, we believe that it has and will continue to serve this function better than college entrance examination scores."

There were other evaluations of NAEP in 1972, 1974, 1975, 1982 and 1987, as well as continuing technical advice sought from experts. While these have dealt with various topics -- some emphasizing policy questions and others predominantly addressing technical matters -- the central advice has been consistent with that of the Technical Review Panel.

With regard to your question about the utility of NAEP for helping disadvantaged students, I should point out that, over the years, NAEP has been able to track the sizable gap in performance between white and minority students. Over the past few assessments, particularly in reading, this gap has been narrowing. In other words, minority students have made significant gains in reading. By focusing attention on the relative performance of different student groups, including minorities and other disadvantaged students, NAEP provides an impetus for educational policymakers to make decisions about how to reduce the gap.

The purpose of a survey like NAEP is to measure scientifically the differences in performance among groups and to focus accurately on the subject areas in which gaps exist and on the subject areas in which progress is being made. Without a national, scientific measure of student performance, we have isolated bits of information, which do not provide a "national" picture of what our students know and can do. NAEP allows us to focus on where the problems are and wisely allocate resources to improve outcomes.

Mr. Stokes: Two programs that lost funds to NAEP in FY 1990 are the Adult Literacy Study and the National Educational Longitudinal Study. Are funds included in the FY 1991 request to make up for this reprogramming?

Secretary Cavazos: Funds are included in the 1991 request for this purpose.

EDUCATION THAT WORKS: AN ACTION PLAN FOR THE EDUCATION OF MINORITIES

Mr. Stokes: Are you familiar with the recent report, "Education that Works: An Action Plan for the Education of Minorities?" It was issued this past January by the Quality Education for Minorities Project. Can you comment generally on its findings and recommendations? Will the Department explore ways to implement its recommendations to the Federal Government?

Secretary Cavazos: It was with much interest that I read the Quality Education for Minorities Project's recent report, "Education that Works: An Action Plan for the Education of Minorities." The overarching objective of this report is to improve minority education, and to this end, its authors have set forth six goals they view as cornerstones to improving education for minority students. These include:

- Students should start school prepared to learn;
- Upon graduation from high school, minority students should be able to enter the workforce and college fully prepared to be successful and not in need of remediation;
- Increase the participation of minority students in higher education, with a special emphasis on the study of mathematics, science, and engineering;
- Strengthen and increase the number of teachers of minority students;
- Strengthen the school-to-work transition; and
- Provide quality out-of-school education experiences.

PROGRAMS SUPPORTING MINORITY AND DISADVANTAGED STUDENTS EDUCATION

I am very pleased that many of these goals are strikingly similar to the challenges embraced by President Bush. As the "Education President", President Bush is committed to ensuring that all of our nation's children receive a quality education. And while much of the agenda must be implemented at the State and local levels, the Federal Government can act as a catalyst for excellence in education.

Many of President Bush's ideas and initiatives focus on improving education for disadvantaged students, who often are also minority students. The President has spoken out forcefully on the need to improve educational opportunities for these students. The Department of Education supports a long list of activities and programs, some which have been in existence for many years and others which have been implemented under President Bush's Administration, which address many of the concerns raised in "Education That Works." Departmental activities which support improved education for minority and disadvantaged students include:

- The Department's Bilingual Education Program which supports instructional programs for students with limited English proficiency and provides training and technical assistance to bilingual education service providers.
- The Department's support of services to Indian children and adults through the Indian Education Act Grants Program, with proposed funding of approximately $75 million in 1991.
- Chapter 1 Basic and State-administered programs, totalling nearly $5 billion in 1991, a proposed increase of almost $4 million over the FY 1990 level. Minority children comprise the largest enrollment within Chapter 1 programs.

- o Initiation of the national longitudinal study of the impact of Chapter 1 compensatory education program on school progress and later lives of program participants. This multi-year national study will examine how Chapter 1 contributes to improved school performance and social outcomes for disadvantaged students.
- o Approximately $24 million in 1990 grant awards provided under the Even Start program. Even Start is designed to improve educational opportunities for children and adults through integrating early childhood and adult education for parents. In FY 1991, the Department is proposing to double the budget for Even Start to $48 million.
- o The national evaluation of the elementary-secondary Dropout Prevention and Reentry Program to determine which strategies are most effective and to disseminate this information to the field. For the FY 1991 budget, the Department is proposing to fund this program at $45 million.
- o Providing additional funds to historically Black colleges and universities to increase their financial strength and long-term financial security.
- o The Department's Pell Grant program which provides grants to low-income students to pursue undergraduate postsecondary education.
- o The evaluation of Special Programs for Disadvantaged Students which are designed to provide help to economically disadvantaged students to achieve success at the postsecondary level.

JOB OPPORTUNITIES - BASIC SKILLS INTERAGENCY AGREEMENT

While the President's 1991 budget called for an increase in educational spending, we know that money is not the entire answer to education; innovative and workable ideas are. For example, the Department has signed an interagency agreement with the Secretaries of Health and Human Services and Labor to help States and localities implement programs under the Job Opportunities - Basic Skills (JOBS) program, the cornerstone of the Welfare Reform Act. This agreement would ensure that literacy and basic skills training are offered as an integral part of any JOBS program, thus, furthering progress toward the national goal that all adult Americans will be literate by the year 2000 and have the skills to be able to function effectively in a modern economy.

MATHEMATICS AND SCIENCE EDUCATION CONFERENCE

The Department also hosted a major conference in November 1989 for the Dwight D. Eisenhower Mathematics and Science program which focused attention on the Nation's efforts to increase critical skills achievement in mathematics and science. This was the first joint national conference between State Title II program coordinators and project leadership teams, and other participants, from over 50 national discretionary math, science and technology programs. Among other accomplishments, the Conference allowed the sharing of program successes and the laying of future plans and networks for improving instruction of these skill areas to all students in order to further progress toward the national goal that American students be first in mathematics and science achievement by the year 2000.

DEPARTMENT PUBLICATIONS ON MINORITY EDUCATION

The Department recently released a report, "Better Schooling for the Children of Poverty: Alternative to Conventional Wisdom," which challenges traditional approaches to remedial education. This report underscored the obsolete nature of conventional wisdom involving the education of disadvantaged children, and stressed the strength of an instructional approach that recognizes cultural diversity, and "respects" and builds on children's backgrounds.

The Department also has published several handbooks which address a broad range of issues that impact the educational experience of minority and disadvantaged students. These include:

- o "No Gift Wasted," which highlights special science and mathematics programs for highly able disadvantaged students.
- o "Educating Our Children: Parents and Schools Together," a report which describes how parents can get more involved in their children's education.

Overall, I think that many of the ideas expressed in "Education That Works" complement many of the recent efforts of this Administration to restructure and reshape the teaching and learning taking place within American schools.

EVEN START BUDGET INCREASE

Mr. Early: Mr. Secretary, I am happy to see that your budget contains an increase of $23.8 million for Even Start, almost double the 1990 appropriation. As you know, this program is one which combines early childhood education with adult education. However, children who participate in this type of early childhood program tend to be unable to sustain their progress as they continue their education, and sometimes become the dropouts we are trying to prevent. Has the Department of Education ever considered any specific programs that would track these high risk students through their educational careers, not just for statistical purposes, but to enact Federal follow-up programs that would reinforce the gains these children may have made with programs such as Even Start?

Secretary Cavazos: The Chapter 1 LEA grants program should be providing the follow-up services needed by disadvantaged children who have participated in preschool programs. The Department is in the process of conducting a longitudinal study of Chapter 1 that is designed to examine the effects of Chapter 1 programs over time on students' achievement as well as other behavioral outcomes such as reduced delinquency, truancy, and drop-out rates; employment and earnings; and enrollment in postsecondary education. We will be using the findings from this long-term study to guide us in recommending legislative changes that would improve the effectiveness of Chapter 1.

PRESIDENTIAL MERIT SCHOOLS

Mr. Early: President Bush is strongly pushing for legislation that would enact the Presidential Merit Schools program and is requesting $225 million, a $100 million increase over last year's estimated amount. This program would provide cash awards to public and private elementary and secondary schools that have made substantial progress in raising student educational achievement, creating a safe and drug-free school environment, and reducing the dropout rate. One criteria for this award would be the improvement of students' educational performance, most likely based on some type of standardized test. Has the President determined what form this standardized test will take, and how it will be administered? What steps will be taken to see that abuses do not occur in the test program to ensure that results are accurate and not reflective of intensive "coaching?"

Secretary Cavazos: Under our proposal schools would be selected within each State by a special State review panel using State and local criteria. These criteria would focus on the items mentioned in your question. Standardized testing would not be the sole, or even necessarily a major criterion, by which students' educational performance is assessed. State panels could take into account other factors such as a reduction in the dropout rate or increased attendance rate as indicators of improved academic performance. To the extent that standardized testing is used, the State would determine the form and content of those tests. Our primary interest in this area would be to ensure that if standardized tests are used, they yield valid results.

FUND FOR INNOVATION IN EDUCATION

Mr. Early: The same problem of too many studies and not enough implementation occurs with the Fund for Innovation for Education, another program which tries to find and implement innovative educational approaches to education. The Administration asks for the same budget request for FY 1991 ($18,939,000) as was appropriated for FY 1990. Again, I ask, Mr. Secretary, shouldn't we spend more money on a program that will improve educational programs in a bold innovative way?

Secretary Cavazos: We agree that we need to seek out more innovative practices and find ways to demonstrate their effectiveness, and plan to do so. However, the Fund for Innovation in Education includes authorities for five distinct programs for which the Congress has earmarked specific amounts recommended by the conferees for fiscal year 1990, even though the House had not initially done so. This has severely constrained our discretion in inviting applications. For 1991, we estimate that about 15 new awards could be made. We would have maximum flexibility to fund projects that have the most potential for improving education if funds were not earmarked for specific program authorities in 1991.

MATHEMATICS AND SCIENCE NATIONAL PROGRAMS

Mr. Early: The Administration states that the improvement of science and math is one of its highest priorities. Yet you decrease the number of new awards for the Eisenhower Mathematics and Science Education National Programs by 31 for FY 1991. Why is that?

Secretary Cavazos: We are requesting an increase of more than 70 percent for the Eisenhower program, clear evidence of our commitment to mathematics and science education. The President also has asked for a substantial increase for the National Science Foundation.

The amount requested for the Eisenhower Mathematics and Science National Programs is the amount specified in the authorizing legislation, 4 percent of the total amount appropriated, and represents a slight increase over 1990. The number of new projects for 1991 is an estimate based on the number and likely cost in 1991 of multi-year awards made in 1989 and 1990. We expect the number of multi-year awards in 1990 to be greater than in 1989, and thus estimate that the amount available for new awards in 1991, while still substantial, will be less than in 1990. The total number of projects, new and continuing, will increase in 1991.

EDUCATION FOR HOMELESS CHILDREN AND YOUTH

Mr. Early: One of the biggest tragedies in this country is the failure of our Government to help educate homeless children. Not just children whose entire family is homeless, but also those who are termed throw-away kids -- children from broken or abusive homes who wander city streets such as New York or Los Angeles. Will the Administration's request of $5 million for Education for Homeless Children and Youth Grants for State Activities be used to help these children and, if so, is this amount sufficient to have any significant impact to find these kids and educate them so they can get off the streets?

Secretary Cavazos: The $5 million State grant program for Education for Homeless Children and Youth does not provide direct educational services for these children. However, every State educational agency receives funds from this program to gather data on the number and location of homeless children in the State, document problems these children are having with access to public education services and facilities, mediate jurisdictional disputes among local school districts, and implement their State plans to remove barriers and ensure that homeless children have full access to public education. We believe this program provides a needed service for homeless children and youth.

The new program of Grants for Exemplary Programs, first funded in 1990, will provide direct benefits for these children through programs funded at the school district level and dissemination activities that will inform State and local agencies about successful practices.

I would also like to point out that the $5 million requested for State grants and the $2.5 million requested for exemplary programs represent full funding for the elementary and secondary programs authorized by the Stewart B. McKinney Homeless Assistance Act.

CRACK BABIES

Mr. Early: The drug epidemic which is sweeping this country is cause for great concern. One of the terrible by-products of this epidemic are crack babies. I would like to know, Mr. Secretary, if any type of preparation is being made in the Department of Education to handle the special needs these children will have when they enter the classroom?

Secretary Cavazos: We do not yet know the extent to which children that were prenatally exposed to drugs, including children exposed to crack, will require special education programs. However, it is likely to be significant, and the Department is conducting research and developing models that will help States deal with the special needs of these children as they enter the school system. We are focusing our present efforts in this area on issues related to children, aged birth through eight years, who are handicapped or at risk of developmental delay, and especially on issues related to preschool children, furthering the President's and Governors' goal that all enter school ready to learn.

In 1990, the Department is supporting five model demonstration and outreach projects under the Early Childhood Education program (EHA) specifically dealing with issues related to drug-exposed children, including children exposed to crack. In 1991, we will provide support for a new multi-year institute that will research, develop, and field test interventions for children, from birth through age five, who were prenatally exposed to street drugs such as crack cocaine, and children born with Fetal Alcohol Syndrome. We expect this institute to provide us with important new information about the needs of these children and the interventions that can best meet those needs.

For 1991, language in the EHA Early Childhood Education priorities will invite applications for projects to develop and disseminate model programs for drug-exposed children. In 1992, language in the EHA Early Childhood Education model demonstration priority will focus on the development of programs for drug-exposed children who are three through five years of age. We are considering other activities that we may develop for 1992.

PELL GRANTS

Mr. Early: The Administration's Budget Request for Pell Grants for FY 1991 is $5,277,000,000, an increase of $472,522,000. This includes the $371 million to cover shortfalls from prior years. However, it is still $218 million less than the estimated program cost. What specific proposals is the Administration proposing to offset this expected shortfall?

Secretary Cavazos: The Administration's 1991 Budget Request for the Pell Grant program includes three measures designed to protect students and reduce program waste and abuse. The Department proposes to eliminate aid officer discretion to alter student awards, to implement a pro rata refund policy at institutions with GSL default rates in excess of 30 percent, and to require students admitted on the basis of an "ability to benefit" to pass an independently administered test (prior to enrollment) that measures the student's ability to complete the course. The Department has estimated the savings to be achieved by implementing these changes during fiscal year 1991 at a total of $218 million--$37 million for discretion, $67 million for pro rata refunds, and $113 million for tightening the ability-to-benefit criterion. Without these changes, Pell Grant program costs for the 1991-92 school year would increase by $218 million over the requested level of $5,277 million.

Mr. Early: It has been suggested that time and money could be saved on the administrative end of Pell Grants if the delivery system eliminated central processing and allowed the schools to process Pell Grants as they already do with SEOG and Perkins. How much of a savings (if any) would there be of time and money if the distribution of Pell Grants were campus based.

If there is a savings, couldn't part of that money be used to improve training and certification of the institutional financial aid administrators who administer the Pell Grant program?

Secretary Cavazos: Your question is a difficult one to answer because the student aid application processing system provides important and timely services for all the campus-based programs and as well as for the Pell Grant program. It is not a system solely for the purpose of processing Pell Grant applications. The central processor provides the computer support for the calculation of the statutory formula used to determine Pell Grant eligibility as well as the calculation of the statutory need analysis used for the other need-based aid programs.

Eliminating the central processor function would eliminate numerous services that students and institutions depend on, not the least of which would be the free Federal student aid application form and the calculation of the Pell Grant and other need analysis formulas. The increased burden at the institutional level would be tremendous, such that most institutions would probably not support such a proposal unless institutional administrative allowances are substantially increased--which would definitely offset any savings. Students could also have a greater burden if they have to apply to individual schools, instead of going through one application need analysis process.

The Department estimates that the central processing component of the delivery system will cost $5.7 million in fiscal year 1991 . This compares with $23.8 million for the "Multiple Data Entry" (MDE) Services, which your question does not address.

The Department already expends significant resources on the training of financial aid administrators. For fiscal year 1991 we are estimating $183,000 in contract costs for institutional training. In addition, there is a training component in the MDE contracts. Moreover, the Department sends it own staff into the field for training purposes. For example, 53 training sessions for 4,625 trainees (financial aid administrators) were held in the last three months of 1989.

PERKINS LOANS

Mr. Early: The administration plans to end capital contributions for the Perkins Loan Program charging that it provides "heavy and unnecessary federal interest subsidies," although the subsidy cost are lower than in the Stafford Loan program. Ending capital contributions would eliminate 109,000 awards. How would these students makeup the difference for this lost loan money?

Secretary Cavazos: Collections on prior loans under the Perkins Loan program will be sufficient to continue the program. Without additional Federal capital contributions, we estimate that such funds would provide approximately $744 million in new loans to about 695,000 students in 1991-92. Students affected by the elimination of Federal capital contributions for Perkins Loan can seek additional loan assistance under the Stafford, PLUS, or SLS Loan programs, all of which provide loans to students at a lower Federal subsidy. Since the Perkins Loan borrower pays only 5 percent interest throughout the repayment period (and zero interest during in-school, grace, and deferment periods) as compared with 8 percent changing to 10 percent after three years under the Stafford Loan program, the Perkins Loans interest subsidization is higher than for Stafford Loans.

STAFFORD LOANS

Mr. Early: The administration is expecting a reduction in the cost of the Stafford Loan program of $460 million due to lower projected interest costs. If the administration's projection is incorrect, and interest rates continue to rise as they are now, what actions will be taken by the administration to rectify the shortfall in the Stafford Loan program?

Mr. Cavazos: The Department is projecting a decrease of $731 million between fiscal year 1990 and 1991 in the Guaranteed Student Loan program due to a projected decline in the 91-day Treasury bill rates. Over the course of fiscal year 1989, we have seen a decline, not an increase, in 91-day Treasury bill rates. We expect this trend to continue. However, should interest rates rise and appropriations fall short of covering the full costs of the GSL program, the Department is authorized to incur obligations through contract authority. Contract authority exists because of the entitlement nature of the subsidies related to these loans. The Department has two options for securing the appropriation needed to liquidate unfunded obligations: (1) request a supplemental appropriation, or (2) request the additional cash in the subsequent fiscal year's budget. For 1990, the Administration has indicated that no supplemental appropriation will be requested.

REDUCED FUNDING FOR HIGHER EDUCATION

Mr. Early: The Administration's Request for Higher Education falls $88 million short of the final sequestered reduced education budget for fiscal year 1990, not counting the funds requested for prior year Pell Grant shortfalls and Stafford Loans. How can President Bush be considered the Education President if he is short-changing higher education?

Secretary Cavazos: I believe that one of the major problems with higher education can be found in the education of our elementary and secondary school students. We simply do not graduate enough students from high school, especially minority students, and those that do graduate are often unprepared to perform the quality work required by postsecondary training. Please do not misunderstand me. Both the President and I strongly support higher education. This year's budget will provide over $18 billion in student financial aid to needy students, and we are giving other programs that support the disadvantaged considerable increases, such as the 12 percent increase in the TRIO programs. However, my emphasis this year has been on improving the quality of elementary and secondary education and reducing the dropout rate, thereby supporting the President's goals of raising both student achievement and the number of students completing high school.

EDUCATION FOR THE HANDICAPPED - SPECIAL PURPOSE FUNDS

Mr. Dwyer: Secretary Cavazos, the President's fiscal year 1991 budget proposes an increase of $507 million overall for the Department of Education. The bulk of this increase, $377.6 million, is allocated to fund his "education initiatives" -- six never authorized programs. Despite funding requests for these unauthorized programs, the administration has requested only an overall level, $181.9 million, for Special Purpose Funds under Education for the Handicapped. While these programs currently are awaiting reauthorization and as the Department has an overall budget figure in mind, does the Department have tentative funding levels for each of these accounts?

Secretary Cavazos: The Department does not have tentative funding levels for the activities within the Special Purpose Funds area. As soon as reauthorizing legislation is enacted, a budget request will be submitted to Congress with specific amounts for each of these programs.

DROPOUT PREVENTION

Mr. Dwyer: Mr. Secretary, your budget requests $45 million for the dropout prevention and reentry demonstrations program. As you know, $21.7 million was provided in fiscal year 1989 for dropout prevention activities. As this program was not authorized, no funding was provided in fiscal year 1990. In addition, testimony last year by you and Ms. Sally Christensen gave the impression that the Department's support for continued funding for this program was tepid, and that efforts to address dropout issues would be undertaken by programs under Chapter 1, migrant education, bilingual education, immigrant and refugee education, and Magnet Schools of Excellence. Why the change of heart in fiscal year 1991?

Secretary Cavazos: The programs you mention all support activities that can help prevent at-risk students from dropping out of school. In addition, under the dropout prevention program funded in 1988 and 1989, the Department supported a number of promising local programs. Although this initial effort will provide a basis for determining the range of dropout prevention and reentry projects currently in existence, it does not focus on funding comprehensive programs that provide basic skills instruction, counseling, employment preparation, parental involvement, and adult mentors. Research has suggested that comprehensive programs, involving several components, are most effective in preventing students from dropping out of school. The majority of projects funded for 1988 and 1989 involve fewer than 10 hours per week of student contact.

For 1991, the Department is requesting $50 million for dropout prevention demonstrations, program evaluations, and research. The new funding will be used to test and demonstrate effective approaches to dropout prevention and reentry and will involve rigorous evaluations similar to those used for demonstration programs funded by the

Department of Labor. Projects begun in 1991 will be funded for up to 4 years. There will be two types of evaluation activities: (1) technical assistance to local projects in collecting data to validate individual programs, along with a national summary of findings; and (2) a national evaluation of selected projects to identify what approaches work best. Up to $2 million each year will be used for the evaluation activities, and $5 million will support research activities, including a national research and development center on dropout prevention.

While continued efforts are needed to reduce the dropout rate, it is also essential to gain hard evidence of programs that work. The extension of the dropout demonstration program, along with added rigor for local evaluations, designation of priorities and models based on research findings, and a national evaluation of selected projects, will assist in providing that evidence.

Mr. Dwyer: How can you justify a $45 million request for dropout demonstrations plus an additional $5 million for evaluations for currently unauthorized programs?

Secretary Cavazos: All of the activities that we propose to support through our $50 million request are currently authorized. The Dropout Prevention Demonstration program, under Title VI of the Elementary and Secondary Education Act, was recently reauthorized by the Congress through fiscal year 1991. Of the total amount requested, $45 million would be used to support and evaluate programs under this authority. The remaining $5 million would be used for research and development activities under the authority of Section 405 of the General Education Provisions Act.

Mr. Dwyer: In addition, has there been an evaluation done of the dropout programs in Chapter 1, migrant education, etc.?

Secretary Cavazos: Although evaluations have shown that Chapter 1 has had some success in improving the basic skills of students participating in the program, no data have yet been produced to suggest the program's effect on the dropout rates of participating children. We hope that the Chapter 1 longitudinal study, begun in 1989, will yield helpful information in this regard.

IMPACT OF STUDENT AID PROPOSALS

Mr. Dwyer: Mr. Secretary, despite a decade of decline in the percentage of high-ability, low-income high school graduates attending college, the President's budget underfunds or seeks to eliminate several major student aid programs. It is my understanding that the President's proposal will be $216 million less than estimated costs for Pell Grants, and that he proposes to eliminate State Student Incentive Grants and Perkins Loans, and to cut $758 million in the Guaranteed Student Loan program. How are these budget numbers reflective of the President's commitment to expanding opportunity for higher education?

Secretary Cavazos: The President's 1991 Budget Request strongly supports a continuation of the Federal commitment to helping ensure educational opportunities for needy students. While it does propose reductions in specific programs, it proposes increases in other programs that we feel will make more effective use of limited Federal resources. Under our proposals for student aid, over $18 billion would be provided to students in 1991, roughly the same amount available in 1990. The Pell Grant program alone, which is the most need-targeted student aid program, would provide for a $126 million increase in aid available in 1991 over the 1990 level.

None of our proposed funding reductions in programs reflect lack of commitment to needy students. Our SSIG request reflects the fact that the program has accomplished its goal of encouraging States to develop need-based student grant programs. All States now support need-based aid programs, and State expenditures for grant aid have continued to expand in recent years as Federal funding has decreased or remained level.

Although the 1991 Guaranteed Student Loan budget request is approximately $450 million less than the 1990 appropriation, the amount of loans available to students is expected to increase. The reduction in program costs is due primarily to the projected 1.7 percent decline in 91-day Treasury bill rates. This projected decline would reduce the interest subsidies the Department of Education must provide to lenders, but it would not affect the amount of loans available to students. In fact, we project an increase of $54 million in the amount of Guaranteed Student Loans available to students in 1991.

The Administration's 1991 Budget Request for the Pell Grant program proposes an increase of $473 million over the 1990 level and expands eligibility to an additional 175,000 students, including those attending on a less-than-half-time basis. Additionally, the Department proposes to eliminate aid officer discretion to alter student awards, to implement a pro rata refund policy at institutions with GSL default rates in excess of 30 percent, and to require students admitted on the basis of an "ability to benefit" to pass an independently administered test (prior to enrollment) that measures the student's ability to complete the course. These measures are designed to protect students and reduce program waste and abuse. The Department has estimated the savings to be achieved by implementing these changes during fiscal year 1991 at a total of $218 million--$37 million for discretion, $67 million for pro rata refunds, and $113 million for tightening the ability-to-benefit criterion. Without these changes, Pell Grant program costs for the 1991-92 school year would increase by $218 million over the requested level of $5,277 million.

JACOB K. JAVITS FELLOWSHIPS PROGRAM

Mr. Dwyer: Your budget requests $5.424 million in fiscal year 1991 for the Jacob Javits Fellowships program, a $2.472 million cut. The Jacob Javits Fellowships is the only federal program primarily supporting the arts, humanities, and social sciences. As you know, Mr. Secretary, the number of Ph.D. is these areas are declining and many fear shortages in college faculty in the arts and humanities in coming years. In light of the future scarcity of Ph.D.'s in these areas, how can you justify phasing out this important fellowship program?

Secretary Cavazos: Our priorities in the area of graduate education are to assist disadvantaged persons and to support studies in academic areas of national need, such as mathematics and the sciences. The Jacob K. Javits Fellowships program does not meet either of these criteria. In addition, there are a variety of other Federal and non-Federal sources of financial support which may be used fo graduate and professional study in the arts, humanities and social sciences.

INNOVATIVE SCHOOL ACCREDITATION PLAN

Mr. Hoyer: Mr. Secretary, there are several education initiatives mentioned in the President's budget document, including an innovative school accreditation plan proposed by the Governor of Maryland, William Donald Schaeffer. The plan includes an evaluation of each of the State's 1,200 public elementary and secondary schools based on student achievement; the development of new curriculum-based student achievement tests; financial rewards for schools that do well; and tighter State control of schools that do poorly.

How is the Department aiding these efforts on the State level which appear to follow your emphasis on accountability and "outcomes"?

Secretary Cavazos: Our proposal for Presidential Merit Schools closely parallels the Maryland accreditation system plans. Presidential Merit Schools would be a State-operated program to reward both public and private schools selected by a State Review Panel using Federal and State criteria. Schools would be selected that have made substantial progress in raising student educational achievement, creating a safe and drug-free school environment, and reducing the drop-out rate. We see this initiative as complementary and reinforcing efforts by States, such as Maryland, that are already taking steps to measure school progress and reward success.

I'd like to make a few additional points about support for restructuring, however. First, it appears that the primary requirement for the kind of restructuring that is beginning to sweep across education is not a massive infusion of new Federal money but better information for schools and communities to use in setting goals and expectations, and better tools for getting feedback on results. Finding ways to do more with available resources--and get better results from them--is the primary thrust of restructuring, as I see it.

Second, I think it is important to be realistic and acknowledge that restructuring does have costs--it is not free. For example, it requires the development of new ideas of leadership in States, districts, schools, and communities, and it requires substantial time for everyone involved to learn new ways and unlearn old ones, to reflect anew on the mission of their schools, to hammer out new goals, to decide upon and implement new approaches, to check the results and make necessary adjustments.

FEDERAL SUPPORT FOR STATE REFORM EFFORTS

I'd like to emphasize that in addition to supporting research, OERI is providing a wide range of other types of assistance and support for restructuring. Many of the schools and districts across the country that are pioneering in educational restructuring contribute to and also receive help from our programs such as the regional laboratories, the research centers, the Leadership in Educational Administration Development Program (LEAD), ERIC, the National Diffusion Network (NDN), and others. A number of the State LEAD Center directors are collaborating to outline the kinds of special training and staff development that are needed by principals in schools undertaking local restructuring initiatives. That activity, supported also by the Institute for Educational Leadership and a grant from the Kraft corporation, is producing a practical handbook that will be made available in all States through the LEAD centers and its associated National Leadership Network. The regional laboratories also have identified restructuring as an area for collaborative work, and the North Central Regional Laboratory, working with Public Broadcasting Corporation, is now providing an eight-program broadcast on restructuring for educators and policymakers nationwide. In the critical area of accountability, we are working with leaders from a number of States to examine appropriate and workable ways of assessing results where restructuring is occurring.

As we work with these OERI-sponsored programs, we will be looking for other sound ways that Federal resources can be used to strengthen State and local restructuring efforts, perhaps in ways similar to those now used under Chapters 1 and 2. We will encourage and strengthen local efforts to implement programs based on the effective schools research that was sponsored by OERI and its predecessors over the past two decades.

Good research and information isn't all it will take for schools across the United States to succeed in restructuring. But it isn't a bad place to start, to ensure that the other kinds of help we and others provide will in fact enable schools to do a better job--to achieve better results--with the resources they have at their disposal already.

FEDERAL SUPPORT FOR STATE REFORM EFFORTS

Mr. Hoyer: How much of an increase in assistance to States in this area of school reform has the Department proposed for FY 91?

Secretary Cavazos: We are requesting an increase of $100 million for Presidential Merit Schools, for a total of $225 million in 1991. We are also requesting a four percent increase for Chapter 2 State Grants. Chapter 2, particularly the State portion of the block grant, is an important vehicle for implementing State reform efforts.

Mr. Hoyer: How much of this assistance is in the area of research and data collection compared to honest to goodness technical assistance in planning and implementing reform proposals?

Secretary Cavazos: **The funds requested for Merit Schools and Chapter 2 could be used for planning and implementing reform proposals. But the Department is also committed to assisting reform with research and evaluation, without which we will not be able to tell which efforts are likely to succeed or the conditions for their successful implementation.**

REGIONAL EDUCATIONAL LABORATORIES

In addition, OERI provides a great deal of technical assistance to States and localities to implement reforms, particularly through its Programs for the Improvement of Practice. This program administers the most intense federally funded technical assistance effort for implementing such reforms--the Regional Educational Laboratory Program. In fiscal year 1989, the laboratories provided assistance in the use of research and development-based knowledge for improving schools to all of the States and territories. All nine laboratories have been contributing to State and local policies related to school reform, and all are supporting school-based improvement models. A recent GAO study (September 1989) found that over 1,500 school districts that have implemented effective schools programs received help from a regional laboratory in developing their programs.

The regionally representative governing boards of the laboratories, with the active involvement of the chief State school officers, identify significant regional priorities, which are then addressed by the laboratories in their technical assistance efforts. Such priorities include rural and urban education, early childhood education, issues of choice, school restructuring, higher order thinking skills, teacher preparation, applications of technology, and problems of students at-risk of dropping out of school.

NATIONAL DIFFUSION NETWORK

OERI'S National Diffusion Network also provides technical assistance to local schools, both public and private, interested in solving problems and improving student performance. The programs are proven and cost-effective. The support necessary for the implementation of these validated programs is made available through a State facilitator located in each State, the District of Columbia, and the territories. The duty of the State facilitator is to provide the link between local school districts and the resources available in the NDN. Validated programs are funded as Developer Demonstrators to provide training and materials necessary for local schools to implement their programs. Continuing support and follow up is also provided.

NDN programs are rigorously examined for their ability to prove effectiveness and their ability to be replicated. The credibility of NDN programs to accomplish what they say they will do is and has been a cornerstone of the network's success. In 1988-89 over 29,000 public and private schools in all 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands adopted NDN programs providing inservice training to 82,600 educators and benefiting 4.1 million students.

CHAPTER 2 SCHOOL IMPROVEMENT PROGRAMS

Mr. Hoyer: Which of the Department's currently funded programs could be appropriately used to support this type of reform effort?

Secretary Cavazos: Chapter 2 funds could be used to implement such efforts. The Chapter 2 statute, as revised by the Hawkins-Stafford amendments, focuses on key areas of reform and improvement, such as implementation of "effective schools" programs. States and localities have wide latitute in using Chapter 2 funds in ways that meet their educational improvement needs, but funds cannot be spent merely to supplant local efforts or subsidize the on-going program.

CRACK BABIES

Mr. Hoyer: The Federal programs established under the Handicapped Act were designed to help States provide appropriate education for children. The Department's budget provides about $350.00 per handicapped child, or less than 10 percent of excess costs. Prince George's County spends almost 15% of its education budget for the 9% of its students served in this program. My superintendent tells me that some jurisdictions are predicting that as much as 20-30 percent of children entering kindergarten could be affected by the crack baby problem.

Does the Department have any estimates on the size and scope of this problem?

Secretary Cavazos: Estimates of the prevalence of children prenatally exposed to drugs, including crack, vary substantially. Probably the best national estimate comes from a 1988 study conducted by Dr. Ira Chasnoff of Northwestern University Medical School. Based on a survey of 36 hospitals across the country, Dr. Chasnoff estimated that about 11 percent of infants born each year, or about 375,000 infants, are born to women who are drug abusers, including women who use crack.

Based on a two-year follow-up study of 263 children who have been evaluated at a Chicago-based treatment clinic for substance abusing pregnant women, Dr. Chasnoff found that drug-exposed children scored within the normal range for cognitive development and are not brain damaged. However, many drug-exposed two-year-olds scored poorest on developmental tests that measure abilities to concentrate, interact with others in groups, and cope with an unstructured environment. He concluded that, given the chaotic and transient nature of the drug environment, many drug-exposed children are at great risk of development impairment, particularly children whose mothers are not involved in a treatment program. Therefore, although we do not yet know the extent of potential special education needs for drug-exposed children, including children exposed to crack, we think these needs are likely to be significant.

Mr. Hoyer: How is the Department preparing to respond to this problem programmatically?

Secretary Cavazos: We are and will be supporting activities that can help States meet the needs of these children, particularly as they enter the school system. The Early Childhood Education program under Education for the Handicapped is currently supporting five model demonstration and outreach projects specifically dealing with the needs of drug-exposed children. For 1991, the program has included language in its priorities that invites applications for projects that will develop and disseminate model programs for drug-exposed children. In 1991, the program will also support a new multi-year institute that will conduct research on and develop and field test interventions for children, from birth through age five, who were prenatally exposed to street drugs, such as crack cocaine, and children born with Fetal

Alcohol Syndrome. In 1992, the program is planning to include language in its model demonstration priority that invites applications for the development of programs for drug-exposed children who are three through five years of age.

Mr. Hoyer: Does the Department's fiscal year 1991 request deal with this problem specifically?

Secretary Cavazos: No. Activities dealing with issues related to drug-exposed children, including crack babies, would be funded under specific priorities published in the Federal Register for one or more of the EHA Special Purpose Funds programs. In addition, because reauthorizing legislation for the Special Purpose Funds programs has not been enacted, we have not yet requested 1991 funds for specific activities under any Special Purpose Funds programs. We will make our request as soon as this legislation has been enacted.

COMPREHENSIVE SCHOOL HEALTH EDUCATION

Mr. Conte: In the FY 1990 appropriations bill, along with the appropriation for comprehensive school health education, we reiterated our intention that the Department establish a separate Office of Comprehensive School Health Education. Has this Office been set up?

Secretary Cavazos: The Comprehensive School Health program is administered in OERI along with the other programs authorized under the Fund for Innovation in Education. We believe that a separate office is not necessary to administer the program effectively. OERI has been able to provide the necessary leadership and coordination with other agencies. In addition, its placement in OERI ensures this program is coordinated with other Department school improvement and reform efforts. A separate office would require additional staffing as well as administrative and support services that are currently being provided by OERI. For all of these reasons, we do not plan to establish a separate office.

Mr. Conte: In response to a letter I sent you last May, you said that the Department was capable of coordinating its school health activities with those of other Federal agencies without establishing an Office. What have you done in that regard?

Secretary Cavazos: We've made a strong effort to coordinate with other agencies. Representatives of a variety of Federal agencies, including the Centers for Disease Control, National Institutes of Health, National Institute on Drug Abuse, the Department of Agriculture and others attended the first national meeting of the 1989 Comprehensive School Health Education program grantees in December of 1989. The primary purpose of the meeting was to ensure that agency representatives and project personnel were aware of related efforts, and to encourage coordination. In preparation for the meeting, Department staff prepared a handbook providing an abstract of each project and a list of key contacts in six Federal agencies and twenty-five non-federal organizations, which has been distributed not only to participants, but to other interested parties as well. The Department will co-chair an interagency working group, the Ad Hoc Committee on Health Promotion Through the Schools. Program staff have met with other agencies on a number of specific issues, including NIH on asthma, NIDA on the distribution of their materials on smoking, and EPA on environmental hazards. Experts from other Federal agencies served on our application review panels for the 1989 competition, and we will ask them to serve in the future. We plan to continue to actively promote coordination.

Mr. Conte: Is there currently an individual with experience in health education running the school health grants program?

Secretary Cavazos: The Director of the FIRST unit in OERI, where the Comprehensive School Health program is administered, has broad experience in administering health and health eduction programs for children. He was a post-doctoral fellow at the UCLA Medical Research Center just prior to becoming County Superintendent of Schools in a district with a large and diverse school population. As County Superintendent, he developed a program for integrating health and educational programs that became a model for the State of California.

The team leader in the FIRST unit assigned responsibility for the Comprehensive School Health Education program within the FIRST office in OERI has a strong background in the sciences and broad experience in administering Federal discretionary grant programs, especially those involving teacher training and curriculum reform. He has served on several health education advisory panels for the Centers for Disease Control and HHS, and worked with a number of non-federal groups concerned with health education issues. He has served on the Ad Hoc Committee on Health Promotion Through the Schools, an interagency working group, since 1985.

A third staff member brings extensive experience in working with community health issues, especially those that relate to the family, to the program.

HISPANIC TASK FORCE

Mr. Conte: The President has asked you to form a Task Force within the Domestic Policy Council to focus on Hispanic education. Tell us a little about your plans for this task force and what you expect it to address.

Secretary Cavazos: The President was quite specific in his charge to the Task Force. He asked that we look at the participation of Hispanics in Federal education programs, that we identify any barriers to participation, and that we suggest alternatives to enhance Hispanic participation in those programs.

I have asked representatives from across the Administration to participate in developing a response to the President's charge. We will report to the Domestic Policy Council later this year. Prior to that, the Department will conduct a series of five regional hearings around the country to solicit public input on issues facing Hispanic education. I will personally chair three of these hearings.

EDUCATION NEEDS OF MINORITIES

Mr. Conte: How in general does the budget proposal address the education needs of minorities?

Secretary Cavazos: Over 85 percent of the Department's $24.6 billion budget request is for programs that serve the disadvantaged. These programs include Chapter 1 of the Elementary and Secondary Education Act, Pell Grants, Bilingual Education, Indian Education, Adult Education, and other programs whose target population include significant numbers of minorities. In addition, there are a number of programs -- such as the Minority Science Improvement Program and the Minority Participation in Graduate Education program -- that serve minorities exclusively.

Providing increased support to programs that serve minorities is a major priority of the Department's 1991 budget. In fact, most of the $1.8 billion in gross increases for 1991 is for programs serving target populations in which there is significant minority representation.

MATHEMATICS AND SCIENCE EDUCATION

Mr. Conte: The President has set an ambitious goal of making the U.S. first in the world in math and science by the year 2000. How does the Eisenhower math and science program, even if it is increased to $230 million, make any substantial contribution -- don't you really need billions for a goal like this?

Secretary Cavazos: Our Nation's students are performing poorly in mathematics and science -- subjects that are critical to strengthening our economic competitiveness and national security. Improving student achievement in mathematics and science is one of the President's and Governors' top priorities. We believe that the Eisenhower Mathematics and Science Education program, which is designed to improve the skills of teachers and the quality of instruction in mathematics and science, is an effective means of addressing this problem. We firmly believe that an increase to $230 million for the Eisenhower program, a 70 percent increase, would improve the quality of instruction in these subject areas. Improved instruction should lead to increased access to math/science education and higher achievement levels for all students.

NATIONAL SCIENCE SCHOLARS PROGRAM

Mr. Conte: Under the postsecondary account, there is a proposal for a $5 million postsecondary scholars program. How many scientists and mathematicians should we be graduating annually, and how many will we get from this new program?

Secretary Cavazos: Colleges and universities are producing fewer students with undergraduate and graduate degrees in the sciences and mathematics. Notwithstanding significant increases in undergraduate enrollment, data from the Department of Education's Center for Statistics indicate that the number of degrees awarded in mathematics and the sciences has dropped from prior year peaks. Only 38,524 bachelors degrees were conferred in 1985-86 in the life sciences compared with the peak number of 54,275 in 1975-75. About 16,300 degrees in mathematics were awarded in 1985-86 compared with the peak number of 42,801 in 1970-71 and less than 22,000 degrees in the physical sciences were conferred in 1985-86 compared with a peak of 24,052 in 1981-82.

The precise number of science graduates who are needed each year can not be determined, nor should such a number be established by the Government. The marketplace should play the primary role in determining the need for and number of such scholars. However, it is clear the Nation is facing a problem in the production of scientists. A Ph.D. shortage takes years to rectify since it reflects not only a shortage of math and science graduate students, but also the limited number of undergraduate math and science students and, ultimately, a dearth of high school students who are interested in math and science.

A prestigious National Science Scholars program would provide an incentive to high school students to excel in science and mathematics by recognizing their achievement. It would also provide 570 scholars, selected by the President each year after considering recommendations from an Advisory Board and from Senators and Members of the House of Representatives, with significant financial resources (up to $10,000 per year) if they continue their studies in these fields at an undergraduate level. Given their superior academic caliber, many of these students would undoubtedly continue their studies at the graduate level.

The Department is also addressing the Nation's need for more scientists and mathematicians by requesting significant increases in 1991 for the Patricia Roberts Harris Graduate Fellowships program and for the Graduate Assistance in Areas of National Need. The request for Patricia Roberts Harris Fellowships, which grants approximately 53 percent of its awards to those studying mathematics, science or engineering, is $17.8 million -- an 1[illegible] percent increase over 1990. Our 1991 request for Graduate Assistance in Areas of National Need, which makes awards to students studying mathematics, physics, chemistry or engineering, is $25.5 million -- a 61 percent increase over 1990.

We recognize that these efforts, in and of themselves, will not fully address the problem of a shortage of math and science graduates. Other actions, such as increasing faculty wages, must also be taken. However, programs such as the National Science Scholars program will help address the critical education goal of increasing math and science achievement among America's students and scholars. The high visibility, prestigious nature, and significant financial reward of our scholarships and fellowships will help attract the attention of students, educators and the American public to the importance of science and mathematics education. This as much as anything else, will help prevent a shortage of math and science graduates.

TEACHER TRAINING

Mr. Conte: What about teaching? How much of a priority does your budget place on teacher training?

Secretary Cavazos: The requested 1991 budget for the National Educational Research and Development Centers will support several research efforts directly related to teacher training. The Center on Learning to Teach, $1 million per year, will be exploring the fundamental knowledge that teachers require and how they obtain it. The Teacher Performance Evaluation Center, $1 million per year, will study how teachers should be evaluated, including how evaluations can authentically reflect teaching behaviors. In addition, all of the subject specific centers (e.g., mathematics, science, literature, and writing) have components that address how that content can best be taught. The funding for these centers totals over $2.9 million. The Center on Learning and the Center on Assessment will also have projects dealing with teaching. Funding for these two centers totals $2.9 million.

For actual support of teacher training, the 1991 request provides $109.5 million (37 percent) more than the 1990 appropriation for teacher training activities. In addition, States are free to use their Chapter 2 Block Grant funds -- as well as other general authorities, such as Vocational Education Basic Grants and Drug-Free Schools and Communities State grants -- for teacher training if they choose to do so. The table below details this support.

	Appropriation	Request
Eisenhower Mathematics and Science Education................	$135.6	$230.5
Education for the Handicapped:		
Special Purpose Funds.............	71.0	71.0 1/
Bilingual Education Training Grants	31.9	31.9
Drug-Free Schools and Communities:		
Training by IHEs.................	9.0	--- 2/
School personnel training.........	14.6	14.6
Fund for Innovation in Education:		
Computer-Based Education..........	4.0	4.0
Fund for the Improvement and Reform of Schools and Teaching...........	4.0	4.0
Territorial Teacher Training.......	1.8	1.8
Christa McAuliffe Fellowships......	1.9	2.0
Mid-Career Teacher Training........	1.0	1.0
Douglas Teacher Scholarships.......	14.9	14.9
Alternative Teacher and Principal Certification 3/.................	---	25.0
Total....................	289.70	400.2

1/ Estimate. The authorization for these programs expires at the end of fiscal year 1990. Amounts for specific activities will be determined after new legislation is enacted.

2/ Program is no longer authorized.

3/ Proposed legislation.

RESEARCH AND STATISTICS INCREASE

Mr. Conte: Why are you requesting such substantial increases for research, statistics and summit follow-up, and can you define with any more precision what this $20 million for summit follow-up will be used for?

Secretary Cavazos: Decisionmakers across the country want more and better information on education than ever before. They see such information as critical to bringing about the changes in education needed to help keep America strong and competitive.

Although collecting, disseminating, and encouraging the use of good information on education has been a primary responsibility of the Federal government for more than ten years, today it is more important than ever. The President's historic Education Summit with the Governors has been followed by a groundswell of bipartisan support for refocusing American education on performance and results. Today, for the first time in history, we have national educational goals--goals that focus on our performance as a Nation.

As the President and Governors point out, a fundamental financial role of the Federal government is to "provide research and development for programs that work; good information on the real performance of students, schools and States; and assistance in replicating successful State and local initiatives."

To provide the research, information, and assistance that are required, various yardsticks for measuring educational progress must be updated and augmented. Questions about how to restructure our schools and school systems must be addressed. We must produce more and better information than ever from assessment, research, and statistics, and we must do a far better job of disseminating it. State-of-the-art information must be made available immediately to practitioners and others; in many cases, technical assistance must be provided to educators, parents, policymakers, and others who want to use new information to improve performance in their schools, communities, and homes.

In short, we need to work closely with the 50 States to build a repository of the latest, best information on where we are in relation to the goals, what progress is being made toward them, and how that progress can be accelerated. Sharing successes and failures along the way will be vital to reaching the goals.

The $79 million increase we seek is an investment in improving American education for all Americans. Although large in terms of percentages, the investment is small when compared to the $350 billion being spent this year on education in the United States. It is a small investment for building the foundation for a long-range plan that can make American education the envy of the world in ten years and that will lead to unmatched opportunity and productivity for all our people.

More specifically with regard to use of the Education Summit Follow-Up funds, the role of the Office of Educational Research and Improvement in the Nation's efforts to attain the education goals is:

- To provide and report data that can assist those who will monitor progress toward achieving the education goals; and
- To inform educators, policymakers and the public about effective policies and practices in achieving the education goals.

The Education Summit Follow-Up funds will support activities to gauge progress. Where existing surveys are relevant to the goals, they will be used as is, modified, or redirected (e.g., the National Assessment of Educational Progress). In many of the goal areas, however, OERI will need to design new, quality data collection systems (e.g., in the area of measuring school readiness). For these goal areas, activities that precede actual data collection include:

- Assessing the strengths and weaknesses of measures based on the present state of knowledge in the relevant fields;

- Developing alternative measurement techniques and metrics; and

- Pretesting survey instruments, procedures, and methodologies.

The Education Summit Follow-Up funds will also support activities to assist in achievement of the education goals, such as:

- Conducting and supporting research and development work on how to achieve the goals;

- Informing educators, policymakers and the public about the results of research and practice that can contribute to achieving the goals; and

- Providing technical assistance to States and localities as they develop and implement policies and practices to achieve the national goals.

At this stage in our planning, we estimate that as much as three-quarters of the funds could be used to support various research and data collection activities connected to measurement and monitoring of progress toward the national education goals. The reamining funds would be used to support other aspects of Summit follow-up related to school restructuring and enhanced regulatory flexibility.

OERI is in the process of holding discussions with the Departments of Labor, Health and Human Services, Commerce, and Agriculture to incorporate their pertinent, ongoing and planned activities into monitoring progress on the goals. Also, the President and the Governors have agreed on the need for a bipartisan group to oversee the process of determining and developing appropriate measurements and reporting on the progress toward meeting the goals. We will need to consult with that group and the Governors to determine what data are needed.

Upon completion of a detailed plan for activities related to the Summit agreement, more detailed information will be made available to members of this Committee.

EDUCATION SAVINGS ACCOUNTS

Mr. Conte: Given that the budget doesn't provide much in the way of increases for college costs, would you favor the type of legislation that I and others have introduced to make education savings accounts of up to $1,500 per year tax-deductible?

Secretary Cavazos: I share your concerns about the escalating costs of postsecondary education and am interested in proposals to encourage family savings for financing higher education expenses.

I have established a Task Force and thirteen Work Groups to thoroughly review the Higher Education Act programs for the 1992 congressional reauthorization. One of these Work Groups is reviewing the savings incentives issue to determine if our Higher Education Act programs should be modified to increase incentives for family and student savings for postsecondary education. We are looking at this issue from a broad perspective and not limiting our focus to tax incentives. The Administration plans to submit its proposals to Congress in this area early in 1991.

While your proposal to revise the tax code certainly merits consideration, we defer to the Department of the Treasury in commenting on such specific proposals.

MONITORING AND ACCOUNTABILITY

Mr. Conte: Recently, the Office of Management and Budget released a list of programs at high risk for fraud and mismanagement. That list recommended that the Education Department develop stronger monitoring and accountability plans for the programs and grants it administers. Do you agree with that assessment, and if so, what steps are you undertaking to increase monitoring and accountability?

Secretary Cavazos: We agree with the assessment in the sense that as a Department we should be continually examining our monitoring and accountability procedures to ensure that Federal funds are properly used and that the programs and grantees are achieving the intended results. We have increased our salaries and expenses budget by $65 million because of the high priority the President places on providing efficiency and integrity in service delivery.

Enhanced accountability in education is one of the President's principles for reforming American education. At the Federal level, we have developed a program accountability initiative which stipulates fiscal year 1990 plans for improving program accountability in more than a dozen programs. For example, new program regulations for Migrant and Adult Education will require State education agencies to use the results of evaluations to improve service delivery and to identify projects not meeting specific educational goals. The Department's program offices are required to monitor the States' performance under this requirement. Another example of improved accountability will occur in the Upward Bound program where we will make greater efforts to analyze grantee performance reports to determine successful techniques.

To improve program monitoring, we have increased our travel budget by 20 percent in 1990 and 35 percent in 1991 specifically to provide more funds for onsite monitoring and technical assistance. We cannot rely on regulations and phone calls to ensure that funds are being used properly or that schools understand how our programs work.

Our automatic data processing (ADP) budget requests a $30 million increase. This is directly related to the OMB report and the need for improved accountability. For example, $12 million more is required for processing Pell Grant applications, including $7 million to provide a free application form to students, and also to improve documentation and quality control to reduce errors.

Other examples of ADP budget increases include the Guaranteed Student Loans/Perkins contract to track more data on loans to support the default reduction initiative; in quality control to measure billing and payment errors at guaranty agencies; development of accounting subsystems to enhance internal control; and a document management system which will reduce current hard copy storage space and provide better management control and improve productivity. There are increases also in the central ADP Service to fund a minicomputer upgrade project which has been determined necessary by a study conducted in 1989. The minicomputers support the Primary Accounting System, the Grants and Contracts Management Systems, the Budget Allotment and Planning System, and other system basic to the Department's operations. These are areas cited by OMB on their list as vulnerable to abuse.

To support the above and additional improvements in monitoring and accountability, we have also requested an increase of 100 full-time equivalent employees.

ED AND DoD COOPERATION ON BASE CLOSURES

Mr. Porter: Mr. Secretary, the Department of Defense is moving ahead with a plan to close several military bases in the United States. These closures have serious implications for federally impacted schools and the Impact Aid program. What efforts have you made to coordinate with DoD on the complicated process of shifting thousands of personnel and their children around the country?

Secretary Cavazos: The Department is working closely with the Department of Defense to coordinate activities related to the base closure process. Staff of the two departments are in frequent contact to keep each other informed of the latest developments in this area.

Mr. Porter: What efforts have you made to avoid mid-year transitions of students?

Secretary Cavazos: Scheduling the relocation of military personnel is, of course, the responsibility of the Department of Defense. With regard to minimizing disruption for schools and school children, the Office of Economic Adjustment of the Department of Defense has informed us that the military services are being encouraged to transfer families during the summer months so that children do not have to change schools during the school year.

SECTION 3(e) FUNDING FOR DISTRICTS AFFECTED BY BASE CLOSURES

Mr. Porter: Section 3(e) of the Impact Aid statute provides for transition payments to school districts affected by military base closures. Last year I asked you about funding under this section for school districts affected by military base closures. At that time you told me that you needed to review DoD schedules for the individual base closures before making a request for Section 3(e) funding. The process of closing bases begins during the period between now and September 1991. Have you developed estimates of the amount of funding that will be needed for Section 3(e) to cover the effects of the base closing legislation?

Secretary Cavazos: Based on information this Department has received from the Department of Defense, the effects of military base closings on the Impact Aid program in fiscal year 1991 will be minimal. According to a preliminary schedule from DoD, only one base involving the transfer of children--Pease Air Force Base in Portsmouth, New Hampshire -- is currently scheduled to close during fiscal year 1991. Families will be transferred gradually over the next year. Because only one installation is involved and the affected school districts will have had ample time to plan and prepare for reductions in enrollment, the Department is not requesting funding for Section 3(e) for fiscal year 1991.

Mr. Porter: Will you request a supplemental for those schools which will be affected during the FY 1991 appropriations cycle?

Secretary Cavazos: The Department does not plan to request a supplemental appropriation for Section 3(e) for FY 1991.

TITLE X OF S. 695

Mr. Porter: Recently the Senate Labor and Human Resources Committee reported out the President's education initiative, S. 695. Unfortunately, the Committee added a new Title X to the bill. This legislation would authorize a sole source grant to create a voluntary teacher certification program. Many people are concerned that such a program could ultimately restrict home schooling. I am more concerned that the philosophy behind an additional, voluntary layer of certification is quite contrary to the philosophy of alternate certification which is embodied in the President's original plan. Would you comment on Title X, both with respect to home schooling and with respect to alternate certification?

Secretary Cavazos: We believe it would be highly inappropriate to support the Board's funding. The Board, as it is presently constituted, is a private organization that operates with total independence from the Federal government. We believe that is the way it should remain. We have three major concerns about Federal funding for the Board. First, the Department, as a rule, opposes sole source contracts, particularly when the recipient of Federal dollars does not have an established track record and the money is to be used for unspecified research and development activities. Second, the proposal under consideration lacks accountability to the Secretary of Education. Third, the funds requested by the Board ($25 million) are excessive, and the research would likely duplicate research activities that are currently under way or that are planned by the Department.

I am also concerned that the Board could establish prerequisites to its voluntary certification that could negatively affect other efforts to bring into the teaching profession those talented individuals who have demonstrated expertise in their subject areas but lack traditional teacher education training.

CHICAGO PUBLIC SCHOOLS

Mr. Porter: Last year the Chicago school system made radical changes in its administration. This year schools are governed by local, elected school boards with real power to effect the administration of individual schools. What is your early assessment of the new school system? What are its long-term chances for success?

Secretary Cavazos: The Chicago schools are a system in crisis, faced with severe problems. About one half of its students are dropping out and those who remain all too often are not getting the kind of quality education they need to lead a productive life. We are encouraged that everyone involved with the schools, including local businesses, recognize the severity of the problem and are committed to doing something about it. These reforms are a bold and ambitious step in the right direction. They embody some of the initiatives we feel are necessary to successfully restructure the schools.

The local school councils are a means of empowering parents and getting them more involved in their children's educations. Additional improvements will be realized from the implementation of reforms scheduled to go into effect in the future -- genuine school-based management with budgetary authority at the building level and further empowerment of parents through choice of the schools their children attend. The Chicago schools remain deeply troubled, but if administrators, principals, teachers, parents, students, businesses and political leaders are willing to commit to and support a long process of change, there is reason to believe that the Chicago schools can succeed in reversing their current condition.

EARLY EDUCATION

Mr. Porter: Mr. Secretary, it looks as though the Congress may pass a child care bill this year, and I am encouraged that the President has proposed a large increase in funding for Head Start. But last year we discussed learning care and you expressed a strong commitment to getting beyond simple child care to early education. Do you expect the President to support learning care as a component of a Federal child care initiative?

Secretary Cavazos: The President and the Governors have jointly endorsed the national goal of getting all children ready to attend school. National visibility for this goal will encourage parents and educators to provide what we have called "learning care" --early education that is designed to foster the cognitive, social, emotional, and physical development of young children.

In addition to the Administration's support for a major funding increase for Head Start and for refundable tax credits for low-income families, the Department of Education has requested that the FY 1991 budget for the Even Start program be doubled in size, to $48 million. Even Start helps educationally disadvantaged parents of children below age 7 become full partners in the education of their children by integrating early childhood education and adult education for parents into a unified program. We can make no more important contribution to preparing children for school than by showing parents the critical role they play in educating their children, beginning in the earliest years.

FOSTERING LEARNING CARE IN PUBLIC SCHOOLS

Mr. Porter: What efforts are you making to encourage learning care through use of public school facilities, and through public/private partnerships?

Secretary Cavazos: Department programs such as Chapter 1, bilingual education, and special education provide resources for prekindergarten programs in the schools. In addition, several Department studies will provide new information on the variety of public and private programs serving young children. These studies and the type of data they will produce are:

- The Profile of Child Care Settings, which will describe the extent and nature of licensed or regulated family day care homes and child care centers, including those based in the schools. We have just finished collecting data from some 2,600 providers across the Nation. By late fall, we will have detailed information on early education and care including such topics as enrollment, fees, goals and activities, and staffing.
- A follow-up study to the Profile of Child Care Settings, which will allow us to observe children and their teachers in a variety of preschool programs to learn more about children's experiences in care. In the study, we will emphasize the school-based preschools that receive funding from Chapter 1 and chart the development of a sample of children in these programs over an 18-month period.
- A study of Before and After School Care Programs for children between the ages of 5 and 13. This study will survey a nationally representative sample of public and private schools, child care centers, and other providers to learn about the prevalence and characteristics of such programs. We will emphasize programs in public schools and those serving disadvantaged children.

STUDENT LOAN REPORTING REQUIREMENTS--COMMUNITY COLLEGES

Mr. Porter: Please respond to the concerns raised by Oakton Community College in a letter dated February 13, 1990 to my office (copy attached for the record) regarding the student loan reporting requirements for community colleges.

Secretary Cavazos: We appreciate Mr. TenHoeve's concern regarding the additional burdens placed on schools by the Department's default reduction regulations. However, the default problem is so critical that every participant in the student loan programs has been called upon to help resolve the problem.

All institutions have been required to implement placement and completion data measures because default costs are a serious problem in every sector of postsecondary education and because students in all sectors need to be protected through these "consumer disclosure" provisions.

Oakton Community College

Office of the President

1600 East Golf Road
Des Plaines, IL 60016-1268

FAX (312) 635-1987

February 13, 1990

The Honorable John Porter
1501 Longworth House Office Building
Washington, D.C. 20515

Dear Congressman Porter:

Recently, I wrote to you expressing my deep concern, and that of all the other 50 Illinois community college presidents, regarding the U.S. Department of Education's new Guaranteed Student Loan Program regulations.

The Illinois Council of Public Community College Presidents have communicated in writing their unanimous opposition to this unfair action by the DOE, and have sent representatives in person to voice our position that these new regulations do more harm than good.

The earlier extensive comments to the DOE on these issues by the higher education community were never seriously recognized. Now, in response to our recent efforts, as the enclosed letter typifies, it is "business as usual" by the Washington bureaucracy--they are going to do what they want, broader over regulating, and inappropriate procedures and calculations without fully understanding or accepting what is reality in the field.

The official response by DOE to the Illinois Community College President's Council is pitiful. An issue of this magnitude and scope didn't even warrant the response of anyone in the U.S. DOE higher than an Acting Division Director.

Generally speaking, the community colleges are not the major culprits in the loan default problem; yet we are being forced into high cost, extensive paper work procedures. The efforts to control the default rate are not focused on those proprietary institutions which have abused this financial vehicle and the financial institutions which issue the loans. The lending institutions control all their other acts of business, why do they bear no responsibility in monitoring these loans?

The community colleges are fiscally accountable. We have an outstanding "track record" of enabling large numbers of American citizens the opportunity to further their education and career goals, and of fostering the development of productive, responsible taxpayers. The actions by the Department of Education on this matter are more hinderance to community colleges than value in helping us achieve those goals.

Certainly the default rate and integrity of the program need to be rectified. However, I urge you to please convey your displeasure to the executive branch on how the issue is being addressed. The solution needs to come through actions applied to the offenders--not via blanket regulations, and by making originating lenders more responsible.

Please call me if you have any questions that I can answer for you on this matter.

Sincerely yours,

Thomas TenHoeve
President

Enc.

UNITED STATES DEPARTMENT OF EDUCATION
WASHINGTON, D.C. 20202

ASSISTANT SECRETARY
FOR POSTSECONDARY EDUCATION
OFFICE OF STUDENT FINANCIAL ASSISTANCE

DEC 28 1989

Mr. Raymond D. Woods
President
Kaskaskia College
Shattuc Road
Centralia, Illinois 62801-9285

Dear Mr. Woods:

Secretary Cavazos has asked me to respond to your recent letter on behalf of the Illinois Council of Public Community College Presidents in which you express concerns regarding the implementation of the Department's default reduction regulations that were published on June 5, 1989. Specifically, you requested that the Department exempt community colleges from the consumer disclosure provisions of 34 CFR 668.44 of the regulations. I appreciate the time I was able to spend with you and Mr. Robert Keys recently. During our discussion you certainly reinforced many of the concerns being expressed by other schools across the country. I hope that our discussion also provided you with a better understanding of the goal we are trying to achieve, i.e., creating competition based upon quality.

The Department appreciates the effort that schools are making to implement various provisions of the default reduction regulations. In order for a prospective student to make an informed decision about the probability of success in a particular program, we believe a school must provide the student with information concerning its track record in that area. The Department believes that if all schools offering nonbaccalaureate vocational programs provide comparable disclosures of their former students' success rates, the schools that are successful in delivering a quality education will enjoy a competitive advantage in attracting students. Moreover, we believe these disclosures are critical to the integrity and viability of the Title IV programs, through which the Department will provide more than $19 billion during FY 1990 to assist students in pursuing their educational goals.

The Secretary expects schools to make a diligent, good faith effort to provide the required disclosures to all regular students enrolling in covered programs for periods of enrollment beginning on or after December 1, 1989. To assist schools in complying with this provision, the Department recently prepared the enclosed Dear Colleague letter to address the various technical issues related to the consumer disclosures raised by you and other program participants. We believe that the information contained therein will serve to ease the administrative burden associated with this regulatory requirement.

In your letter, you also indicate that some community colleges are considering terminating their participation in the Guaranteed Student Loan (GSL) programs in order to relieve themselves of the requirements of the default regulation, particularly the consumer disclosure provisions of 34 CFR 668.44. Should a school take this action, it would not be subject to the default reduction requirements in the GSL sections of the regulations, or to §§668.15(b) and (e) of the general provisions regulations that require schools at certain levels of default to submit for the Secretary's approval a default management plan and to take other specified reasonable and appropriate measures to reduce defaults. However, a school is still expected to comply with the consumer disclosure requirements of §668.44 of the general provisions regulations and must also provide GSL borrowers still enrolled in the school with the exit counseling required under 485(b) of the statute.

The Secretary believes that all parties responsible for the administration of the programs--the Department, lenders, schools, and guarantee agencies--are enlisted through various aspects of the default reduction initiative, in the effort to reduce defaults and ensure the future viability of these programs. As we discussed during our recent visit the "default reduction initiative" began many years ago. In 1986 we published final regulations specifying, for the first time, step by step procedures lenders and guarantee agencies must follow in trying to prevent borrowers from defaulting on their student loans and collecting from those that do. Federal payments are contingent upon compliance with these requirements.

We believe that taken together, the final regulation issued on June 5, the NPRM also published on that date, legislative proposals sent to Congress, and other administrative steps taken by the Department constitute a forceful, comprehensive, and equitable approach to the default issue.

Again, I appreciate having the opportunity to discuss this and other issues with you and Mr. Keys in our recent meeting. If you have additional questions or concerns, please contact me at area code 202-732-5217.

Sincerely,

Larry Oxendine

Larry Oxendine
Acting Director, Division of
Policy and Program Development

Enclosure

The Department recently studied a random sample of 7,392 Stafford loan borrowers who took out their last loan in 1983 and who had entered repayment by the end of 1987. The following default rates for that cohort were calculated for each educational sector:

Type of School	Default Rate
Proprietary	37.3%
Public 4-year	10.7%
Public 2-year	26.6%
Private 4-year	10.4%
Private 2-year	20.9%
All Schools	20.1%

As Mr. TenHoeve infers in his letter, the highest default rate is found in the proprietary sector. Note, however, that public 2-year schools have the second highest default rate, two-and-one-half times that of the 4-year sector. It is obvious from these data that there is much that schools in all sectors can do to help reduce the incidence of defaults. The default reduction regulations were promulgated for just this reason.

In November 1988, I published a Notice in the Federal Register requesting comments on a broad range of default-related issues. As a result, the Department received over 1,200 comments from schools, lenders, guarantee agencies, educational associations, and the public. Each comment received was carefully reviewed and seriously considered as input to the final regulations published on June 5, 1989.

In addition to these regulations, the Department is working on legislative and administrative initiatives that focus on all participants in the student loan programs -- borrowers, schools, lenders, guarantee agencies, and the Department itself. The school's role in the student loan programs includes providing quality education, disseminating information to students regarding the schools' programs and student financial aid, and counseling students concerning loans and debt management. Many of the provisions in the June 5 regulation were included to ensure that schools adequately perform this role.

The lender's role in the student loan programs is to provide capital for student loans, and to follow due diligence in the making, servicing, and collecting of these loans. The Department and guarantee agencies have increased their monitoring and enforcement of lender due diligence as rigorously and thoroughly as the Department has implemented the school default reduction requirements. Moreover, several of the Department's legislative proposals would put additional requirements on lenders and guarantee agencies.

CHAPTER 1 FLEXIBILITY

Mr. Porter: Mr. Secretary, my local school districts tell me that the process of disbursing and accounting for Chapter 1 funds is a real nightmare. As I understand it, a school must show that each Chapter 1 dollar received was spent directly on a Chapter 1 eligible student. The money cannot be used for a program generically targeted at lower-income students if a few of them are not Chapter 1 eligible.

I understand the need to make sure that Chapter 1 monies go for their intended purpose, but is there any way to make this process less burdensome or more flexible? Do you have any proposals concerning this?

Secretary Cavazos: As a result of the education summit held with the Nation's Governors last fall in Charlottesville, Virginia, the President and the National Governors' Association are examining legal and structural impediments that exist to providing States and localities with more flexibility in the use of Federal education funds. Based on this examination we will consider legislative, regulatory, and administrative initiatives that would add flexibility to the way Chapter 1 and other Department programs operate at the State and local levels.

TARGETING OF CHAPTER 1 FUNDS AT THE LOCAL LEVEL

Mr. Weber: Recently, a problem involving Chapter 1 funding in my district has come to my attention. As you know, some school districts include more affluent schools which do not qualify for Chapter 1 funding. However, if the school that does not qualify for Chapter 1 attempts to set up an equivalent program with local funding, Minnesota's interpretation of Federal guidelines states that the district must provide the same funds to "target" schools already receiving Chapter 1 funding. Do present guidelines offer any flexibility on this matter? I hope that your office will look into this problem soon. A change would not require any extra Federal spending, and it would not result in inequities, as target schools are already receiving Federal funding for these programs under Chapter 1.

Secretary Cavazos: The statute currently provides school districts with flexibility in this area. Section 1018(c) of Chapter 1 requires that schools receiving Chapter 1 services receive the same or comparable services from State and local sources as non-Chapter 1 schools. Section 1018(d), however, allows a local educational agency (LEA) to exclude local funds spent for compensatory education programs in determining whether services for non-Chapter 1 and Chapter 1 schools are comparable, provided that the local compensatory education program is similar to the Federal Chapter 1 program. Section 1018(d) further specifies that the State educational agency (SEA) determines whether a local compensatory education program is similar to Chapter 1. Thus, a local school district may operate a local compensatory education program in a non-Chapter 1 school and would not be required to provide that same program in a Chapter 1 school so long as the local compensatory education program is similar to Chapter 1.

COMPARISON OF STATE AND FEDERAL LEVELS OF SUPPORT FOR COMPENSATORY EDUCATION PROGRAMS

	State Funds Supporting Compensatory Education Programs	Federal Compensatory Education Funds
1978	$489,358,713	$2,018,803,180
1987	1,100,000,000*	3,414,587,994
Percent Increase 1978-1987	125%	69%

DEPARTMENT OF EDUCATION

Education Activities Requiring New or Modified Legislation for the Fiscal Year 1991 Budget Request

I. Requests in the 1991 budget for which legislative authority has expired or is due to expire on September 30, 1990.

	Fiscal Year 1991 Estimate
Adult Education	
Literacy training for Homeless Adults (Stewart B. McKinney Homeless Assistance Act, Title VII, Part A) 1/	$10,000,000
Libraries	
Interlibrary cooperation (LSCA, Title III) 3/	20,372,000
Library literacy programs (LSCA, Title VI) 3/	8,365,000

1/ The GEPA extension applies through September 30, 1991.

2/ Specific amounts for Special Purpose Fund programs will be determined after enactment of reauthorizing legislation.

3/ The GEPA extension expires September 30, 1990; new authorized legislation is pending.

4/ Specific requests for vocational education programs will be determined after enactment of reauthorizing legislation.

5/ The GEPA extension expires September 30, 1990; new authorizing legislation is pending.

DEPARTMENT OF EDUCATION

Education Activities Requiring New or Modified Legislation for the Fiscal Year 1991 Budget Request

II. Requests in the 1991 budget for which new authorizing legislation is required: i.e. no authorizing legislation currently exists.

	Fiscal Year 1991 Estimate
Compensatory Education for the Disadvantaged	
Presidential Merit Schools 1/	$225,000,000
School Improvement Programs	
Alternative Certification of Teachers and Principals 1/	25,000,000
Presidential Awards for Excellence in Education 1/	7,600,000
Magnet Schools of Excellence 1/	100,000,000
Higher Education	
National Science Scholars 1/	5,000,000
HBCU Endowment grants 1/	15,000,000

1/ Legislation authorizing these programs is included in the Educational Excellence Act of 1989 now pending before the Congress.

DEPARTMENT OF EDUCATION

Education Activities Requiring New or Modified Legislation for the Fiscal Year 1991 Budget Request

III. Requests in the budget for which modifications or substitutions to the existing legislation are proposed.

	Fiscal Year 1991 Estimate
Elementary and Secondary Education	
Impact Aid	
Payments for "b" children	$25,000,000
Construction	27,000,000

Proposed amendments would (1) limit payments under Section 3(b) to children connected with federally subsidized, low-rent housing; (2) eliminate from all Section 3 eligibility and calculations all Section 3(b) children who do not live on our have parents who are employed on federally subsidized, low-rent housing; and (3) extend the availability of funds for construction activities and modify the formula for the distribution of construction funds.

School Improvement	
Leadership in Educational Administration (LEAD) program	4,215,000
Fund for the Improvement and Reform of Schools and Teaching (FIRST)	8,358,000
Drug-Free Schools and Communities	593,300,000

Proposed amendments would (1) extend the availability of funds to cover the final year of funding for the LEAD program; and (2) override percentage allocations in authorizing legislation for FIRST and Drug-Free Schools and Communities programs.

Bilingual Education	175,393,000

Proposed amendments would (1) override statutory allocation and fellowships requirements; and (2) reserve funds for a special competition limited to school districts with large numbers of recently arrived limited English proficient students.

Education for the Handicapped	2,137,421,000

Proposed amendments would extend the period of availability for States to obligate 1989 funds.

DEPARTMENT OF EDUCATION

Education Activities Requiring New or Modified Legislation for the Fiscal Year 1991 Budget Request

III. Requests in the budget for which modifications or substitutions to the existing legislation are proposed.

	Fiscal Year 1991 Estimate
Postsecondary Education	
Student Financial Assistance	$6,352,415,000

Proposed amendments would (1) make Pell Grant funds available for three fiscal years; (2) override authorizing language and establish a $2,300 maximum Pell Grant award; (3) permit the Secretary to prescribe special circumstances under which the definition of "annual adjusted family income" may be modified; and (4) requires evidence of students' ability to compete in order to establish eligibility student financial assistance.

Other	
Special Institutions for the Handicapped	117,979,000

Proposed amendments would merge the separate accounts for the American Printing House for the Blind, the National Technical Institute for the Deaf, and Gallaudet University into one account with separate, specific earmarks for each institution.

Research, Statistics, and Improvement of Practice	25,000,000

Proposed amendments would set aside funds for a new program to improve the training and skills of school principals.

DEPARTMENT OF EDUCATION

New Programs in the Fiscal Year 1991 Budget

Account and Program	FY 1991 Estimate
Compensatory Education for the Disadvantaged:	
Presidential merit schools	$125,000,000
Impact Aid:	
Facilities for unhoused children	7,000,000
School Improvement Programs:	
Alternative certification of teachers and principals	25,000,000
Presidential awards for excellence in education	7,600,000
Magnet schools of excellence	100,000,000
Dropout prevential demonstrations	45,000,000
Special Institutions for the Handicapped:	
Gallaudet University construction	2,500,000
Evaluation studies	500,000
Higher Education:	
National science scholars	5,000,000
Research, Statistics, and Improvement of Practice:	
Evaluation of reform	3,000,000
Dropout prevention	5,000,000
Principal training	25,000,000
Education summit follow-up	20,000,000
Total	370,600,000

DEPARTMENT OF EDUCATION
FISCAL YEAR 1991
PROPOSED LEGISLATIVE PROGRAM

CROSS-CUTTING LEGISLATION

1. Educational Excellence Act

The Department continues to support and seek enactment of the Educational Excellence Act of 1989 (H.R. 1675/S. 695), which the President submitted to Congress on April 5, 1989. This bill includes the following major education initiatives:

- Presidential Merit Schools, to provide cash awards to schools based on criteria related to improved student performance in basic skills, creation of a safe and drug-free environment, and a reduction in the dropout rate.
- Magnet Schools of Excellence, to extend the benefits of magnet school programs and parental choice to more communities, including those that are not eligible under the current Magnet Schools Assistance program.
- Alternative Certification of Teachers and Principals, to assist States in expanding the pool of talent from which they draw teachers and principals.
- Presidential Awards for Excellence in Education, to reward teachers in every State who meet the highest standards of excellence.
- National Science Scholars, to assist students who have demonstrated outstanding achievement to study mathematics, science, and engineering at the undergraduate level.
- Drug-Free Schools Urban Emergency Grants, to provide one-time grants to school districts located in urban areas with the most severe drug problems. (NOTE: This proposal was enacted as "Emergency Grants" under P.L. 101-226.)
- Historically Black Colleges and Universities grants, to provide additional endowment matching funds to those institutions.

2. Educational Improvement through Flexibility Act

As part of the Summit follow-up, the Department intends to work with the Governors and others to develop legislation that would hold schools accountable for results in exchange for waiving certain statutory and regulatory requirements that may impede the effective use of Federal and other resources.

3. General Education Provisions Act Technical Amendments

The Department will propose legislation to conform GEPA to other laws governing ED, including the Department of Education Organization Act, and repeal GEPA provisions that are duplicative of other laws, have outlived their puposes, have proved unworkable, or are inconsistent with Administration policy. The Department's bill has been submitted to the Office of Management and Budget for clearance. It will be transmitted to the Congress when final agreement has been reached.

4. Section 213 of the Department of Education Organization Act (Intergovernmental Advisory Council on Education)

The Department will continue to seek repeal of Sec. 213 of the Department of Education Organization Act, authorizing the Intergovernmental Advisory Council on Education. (NOTE: This amendment has been included in S. 1109, the Senate Committee-passed vocational education reauthorization bill.)

ELEMENTARY, SECONDARY, AND VOCATIONAL EDUCATION

5. Vocational Education Excellence Act

The Department continues its strong support of the Vocational Education Excellence Act (H.R. 2329/S. 1133), the Administration's proposal for reauthorization of the Carl D. Perkins Vocational Education Act, submitted to Congress on April 10, 1989. This legislation would improve the operation of the Federal vocational education program in the following key areas:

- Accountability — The bill would require States to develop and apply performance standards related to students' improvement in basic skills, their acquisition of occupational competencies, and their success in the labor market.

- Program simplification and enhanced flexibility — The bill would eliminate most of the funding set-aside and separate categorical programs in current law.

- Program improvement — The bill would focus Perkins Act program improvement funds on educational personnel development, acquisition of equipment, and curriculum development and would improve the Perkins Act national programs.

- Economic development — The bill would strengthen the link between vocational programs and the labor market and would enhance coordination with Job Training Partnership Act programs.

6. Immigrant Education

The Department continues to support legislation, submitted to Congress March 29, 1989, to improve the Emergency Immigrant Education program (Title IV, Part D of the Elementary and Secondary Act of 1965). As the program currently operates, grants for general assistance are made to school districts with a substantial concentration (500 students or 3 percent of enrollment, whichever is less) of immigrant children. The bill would make the program a more effective vehicle for meeting the educational needs of immigrant children by:

(1) permitting funds to be used only for supplementary educational services, and not for "associated costs" (which has been interpreted to include almost any LEA expenditures);

(2) adding a "supplement, not supplant" provision to the legislation:

7. Amendments to Chapter 1 Programs

- Authority for States to reserve Even Start funds for administration — Current law does not permit any funds to be used for administrative expenses, even though each State must establish a panel to review applications and must meet other administrative requirements. The Department proposes permitting States to set aside 1 percent of their Even Start allocations for administration.

- Minimum State allocation under the Secondary School program — Current law requires that each State receive at least one-quarter percent of the amount allocated by formula. "State" is defined (in ESEA Section 1471(22)) to include the 50 States, D.C., Puerto Rico, and each of the Outlying Areas. If the law is not amended, each of the Outlying Areas would receive a windfall allocation. The Department proposes limiting the small-State minimum to the 50 States, the District of Columbia, and Puerto Rico.

- Transition language for the Even Start program — Amendments are needed to provide that the costs of continuation grants are taken into consideration in determining when Even Start becomes a formula program and in determining minimum State grants. Parallel language may be needed in other ED programs that have authority to shift from discretionary to formula grants.

8. Elementary and Secondary Education Technical Amendments

The Department will submit legislation to correct technical errors in P.L. 100-247, the Hawkins-Stafford Elementary and Secondary School Improvement Amendments. A draft bill was sent to OMB on August 11, 1989.

POSTSECONDARY EDUCATION

9. Student Loan Default Reduction Amendments of 1989

On June 30, Secretary Cavazos submitted the Student Loan Default Reduction Amendments of 1989 to the Congress. Provisions of the Amendments (the Secretary's emergency suspension authority and rules regarding recertification of schools losing accreditation) have been incorporated into the recently enacted Omnibus Budget Reconciliation Act of 1990. The Administration plan would, in addition:

- require all Federal student aid applicants without a high school diploma or GED to pass a test, designed and administered by a third party determined by the Secretary to be truly independent of the school, before enrollment;
- establish a *pro rata* tuition refund requirement for all Federal student aid recipients at schools with default rates above 30 percent;
- prohibit the use of commissioned recruiters and admissions personnel in enrolling students in schools that accept Federal student aid funds;
- require lenders to offer optional graduated loan repayment schedules to all student loan borrowers;
- authorize guarantee agencies to garnish the wages of defaulters, up to 10 percent of disposable earnings;

10. Higher Education Act

The proposals for 1991 will be limited to amendments that are necessary for implementation of 1991 budget policy, together with policies earlier contained in the "Student Loan Default Reduction Amendments of 1989" which were submitted to Congress last year. These amendments will primarily affect student aid.

The Department's major 1991 proposals to modify the Higher Education Act are described below in the order of the related current titles of the Act. (Titles and programs not mentioned below would not be amended.)

- Title IV, Part A, Subpart 1: Pell Grant Program

  Proposed legislation would continue emphasis on improving program equity and integrity while promoting educational opportunity and access by eliminating aid officer discretion to adjust the expected family contribution and cost of education on an individual basis (see Part F, below).

- Title IV, Part B: Guarantee Student Loans (GSL) Programs

  Our GSL proposals will continue the following 1990 policies aimed at reducing Federal default costs.

(1) Guarantee agency cost-sharing would be introduced by establishing a reinsurance rate at 90 percent for all guarantee agencies and establishing a flat reinsurance fee rate at 0.5 percent.

(2) Other default reduction reforms include:

  (a) Delaying the disbursement of loans for borrowers for 30 days from the student's first day of classes. (The Reconciliation Act applied the 30-day delay to SLS only.)

  (b) Requiring credit checks on all borrowers over age 21, and requiring co-signers for those applicants with a poor credit rating. (Also applies to Perkins Loans and ICLs.)

  (c) Requiring students to provide their driver's license numbers and other locator information to lenders at the time of application. (Also applies to Perkins Loans and ICLs.)

o Title IV, Part D: Income-Contingent Loans

The proposed legislation would expand and, in some operational respects, modify the limited demonstration program of Income-Contingent Loans (ICLs). Specifically, the amendments would alter the program in the following ways:

(1) The current limit on the number of participating institutions would be repealed. (The exact number of participant institutions would be determined administratively, in view of available Federal capital.) Also, consortia of institutions would be eligible.

(2) In addition to undergraduate borrowing, graduate borrowing would be authorized. Graduate borrowing would be limited to $10,000 per year, with a $50,000 aggregate limit.

o Title VII, Parts F and H: Construction, Reconstruction, and Renovation of Academic Facilities

Our facilities proposals will continue policies designed to reduce Federal expenditures for non-essential purposes and eliminate unnecessary restrictions on the Secretary's ability to pursue the Government's best financial interest. Proposed legislation would delete the prohibition on loan sales in fiscal year 1991 and beyond. This will enable the Secretary to pursue the Government's best financial interests by selling the final and remaining loans in the portfolio and thus eliminating an administrative inefficiency.

- Higher Education Amendments of 1986

  The Department will continue to seek repeal of the following sections of the 1986 Amendments: Study on Establishing a National Endowment for International Studies (Sec. 1302); an Evaluation of Continuing Education (Sec. 1304); the Alien Youth Education Opportunity Panel and its required report (Sec. 1361); and requirements for a special student aid report (Sec. 483 (f)).

- Howard University (20 U.S.C. 130aa-5)

  Proposed legislation would reauthorize the Howard University Endowment Act of 1984 (P.L. 98-480) in order to provide specifically for Federal matching funds for the Howard University endowment for fiscal years 1991 through 1995. The Department would continue to seek an increase in the rate of Federal matching (two-to-one matching for non-Federal contributions over $1 million, and three-to-one matching for such contributions in excess of $2 million each year).

SPECIAL EDUCATION, REHABILITATION, AND RESEARCH

11. Education Research

The Department proposes to submit a bill later this year to reauthorize section 405 of the General Education Provisions Act.

12. Education of the Handicapped Act Amendments of 1989

The Department is awaiting the enactment of reauthorization legislation. The Senate passed a reauthorization bill on November 16, 1989. No action has been taken by the House. The Senate bill reauthorizing the Education of the Handicapped Act emphasizes improving services for minorities, early intervention services, and knowledge dissemination. It also includes a new authority for projects for severely emotionally disturbed children, expands the types of transitions addressed by the transitional services program, shifts responsibility for evaluating the implementation of the Act from the Special Studies program to the Innovation and Development program, and removes authority to support severely handicapped projects under the deaf-blind authority.

DEPARTMENT OF EDUCATION

Appropriations Language Provisions and Earmarks which Modify or Go Beyond Authorizing Legislation
Fiscal Year 1991

The following appropriation accounts have language which modifies or goes beyond authorizing legislation:

Compensatory Education for the Disadvantaged
Impact Aid
School Improvement Programs
Bilingual and Immigrant Education
Education for the Handicapped
Rehabilitation Services and Handicapped Research
Special Institutions for the Handicapped
Vocational and Adult Education
Student Financial Assistance
Higher Education
Howard University
Higher Education Facilities Loans
College Housing and Academic Facilities Loans
College Housing Loans
Research, Statistics, and Improvement of Practice
Libraries
Program Administration

Fiscal year 1991 appropriations language and language analysis for these accounts follow.

Background

Illiteracy is one of the most pressing educational problems facing the Nation, with social and economic implications that may reach well into the next century. Analysts currently disagree on a precise definition of literacy, partly because the level of skills necessary to function at an acceptable level vary from one situation to another. For example, an individual may be able to read and write at a minimal level, but may lack literacy skills to perform a moderately complex job. The lack of a definition of literacy has lead to disagreement on estimates of the precise number of illiterate adults in the United States. Some experts currently estimate that between 20 and 30 million adults are functionally illiterate -- 13 to 20 percent of the adult population. More work on this question is needed. In spite of this uncertainty, there is widespread agreement that illiteracy is an increasingly serious problem for our society and our economy.

The problem of illiteracy has many dimensions. For example many immigrants and other non-native English speakers are in need of English-as-a-second-language training. Data from the Census Bureau's 1982 English Language Proficiency Survey revealed that one-third of illiterate adults were born abroad and nearly all of those individuals spoke a non-English language at home. There is a different, but equally serious, illiteracy problem among native English-speaking adults, as well, particularly among school dropouts. The 1986 NAEP Young Adult Literacy Survey found that many young adults, while not "illiterate," were not fully "literate" for a technological advanced society. Only a small percentage of the young adults surveyed could perform more complex and challenging literacy-related tasks. This aspect of illiteracy has significant implications for productivity and employment of the workforce. Yet another dimension of the problem is that educational levels tend to be linked intergenerationally. Children of parents with low skill levels are at far greater risk of failing to achieve in school, compounding the educational and economic cost in the future.

In recognition of the seriousness of this problem, the President established, in his State of the Union address, a national goal that "by the year 2000, every adult American will be literate and possess the knowledge and skills necessary to compete in a global economy and exercise the rights and responsibilities of citizenship." Substantial effort and resources are already being focused to meet this goal, through literacy and adult education programs throughout the Department.

Adult Education State Programs

The Adult Education Act authorizes grants to the States and Outlying Areas to support programs that assist educationally disadvantaged adults in developing basic skills, including literacy, and in achieving certification of high school equivalency. This program is the cornerstone of Federal efforts to combat adult illiteracy and represents the bulk of Federal funds for literacy education.

State performance reports indicate that about 3 million persons received services under the Adult Education Act basic State programs grant in 1987-88. About 65 percent of these participants received instruction in basic skills or English as a second language. The remaining 35 percent received instruction leading to high school equivalency. Of the participants, 30 percent were limited English proficient and 7 percent were institutionalized adults. According to fiscal year 1988 annual reports received from States, over 22,000 participants left the welfare roles in 1987-88, over 114,000 participants obtained jobs, and another 69,000 participants received job promotions that they attributed to their additional education. Nearly 70,000 participants obtained a high school diploma or equivalency certificate.

Over the last fifteen years, State and local, as well as private sector, support for adult education has increased dramatically. The proportion of funding attributable to non-Federal sources rose from an estimated 26 percent in 1969-70 to 76 percent in 1986-87, according to State financial reports. Because the reauthorized Adult Education Act requires States to increase the match for Federal funds to 25 percent by 1992, non-Federal support for adult education is expected to increase even more rapidly.

Services are now provided not only through the public schools but through community-based organizations, community colleges, private businesses, churches, and labor unions. In recent years, business involvement has increased as well, as employers have begun to see tangible benefits for productivity in adult education programs. Hundreds of businesses now support adult literacy activities.

Adult Education National Programs

National efforts to advance the literacy education enterprise include research, evaluation, and development activities to assist the States and adult educators in improving programs.

Funds for National research and evaluation programs were appropriated in 1988 for the first time in many years. The availability of funds for this purpose has enabled the Department to embark on an ambitious program of activities including:

- The National Assessment of Adult Literacy, mandated by P.L. 100-297, that is using a survey methodology to produce estimates of the literacy of the adult population based on a nationally representative sample of adults. Adult Education Act funds were used to launch this new data series; beginning in 1990, funds are provided from the Research Statistics, and Improvement of Practice account. The first data from the survey will be produced in 1993;
- A multi-year study of a nationally representative sample of adult education programs, that will investigate seasonal and geographic patterns of participation, client characteristics, causes of client attrition, learning gains, and costs and outcomes, to be completed in 1992;
- Secondary analysis of existing data bases created by past studies, including the NAEP Young Adult Literacy Survey, to gain greater understanding of the information available in these data bases;
- Case studies of promising adult education programs to gather information on how programs work and identify effective approaches;

- A study of adult education curriculum materials and instructional strategies;
- A mandated study of federally supported programs that provide adult education services, funded and administered jointly with the Departments of Labor and Health and Human Services, to be completed late in 1990;
- A project to develop a resource base available to adult education teachers and administrators planning programs for migrant farmworkers;
- An Adult Basic Education (ABE)/English as a Second Language (ESL) teacher training project to review current practice in ABE and ESL instructor training, including volunteer training, and to identify and disseminate information on promising inservice and preservice training programs;
- Two field-initiated projects to develop technology that will assist adult education;
- A project, jointly supported with the Departments of Labor and Health and Human Services, to provide technical assistance to the States in administering the new JOBS program, authorized by the Family Support Act of 1988;
- A review of the Workplace Literacy program, to collect and assess data available from funded projects that may yield information on effective workplace literacy approaches, to be completed in 1991;
- An Adult Education Program Effectiveness Literature review and design study, to lay the groundwork for a large-scale, multi-year study of the effectiveness of programs supported under the Adult Education Act, and to provide recommendations for program improvements to inform the next reauthorization; and

In 1991, the Department plans to initiate a National Adult Education Clearinghouse, authorized by Section 384 of the Adult Education Act. This project will go beyond the traditional clearinghouse activities of collecting and disseminating information by providing leadership and support for an integrated program of research and development, identification and dissemination of best practices in adult education, and technical assistance and training to the adult education field. This clearinghouse will be a comprehensive resource center for information that can be used by Federal State and local agencies, national organizations, policymakers, researchers, and practitioners to establish, improve, or expand adult literacy programs. The center will be administered, by the Department, in consultation with the Department of Labor and other Federal agencies, and will be guided by an advisory group of literacy experts. A national center of this type will provide, for the first time, a focal point for research and information on adult education and literacy programs and will represent a major new Federal commitment to literacy education.

Literacy Training for Homeless Adults

Funds for this pogrom, which was initiated in 1987, are used for discretionary grants to States to provide literacy services to the homeless. States use the funds primarily for contracts with local educational agencies and homeless shelter operators to provide literacy programs in homeless shelters. This type of service can be especially beneficially for homeless individuals who may otherwise be unable to pursue adult education opportunities because of the many other problems they face.

Workplace Literacy Partnerships

This program provides discretionary grants for demonstrations to provide literacy training to meet workplace needs. These demonstration projects must be designed and operated by partnerships between business, industry, labor organizations, or private industry councils and SEAs, LEAs, IHEs, or schools. Employment and training agencies and community-based organizations are also eligible for grants. Services provided may include: adult secondary education; literacy training for limited English proficient adults; updating basic skills to meet the changing needs of the workplace; improving the competency of adult workers in speaking, listening, reading, and problem-solving; and educational counseling, transportation, and child-care services.

Since funds for this program first became available in 1987, the number of applications for grants has exceeded available resources, demonstrating widespread interest in providing literacy and basic skills education for adults through the workplace. Workplace literacy projects are generally of two types. Some projects provide basic skills training for workers who must master new technology in order to retain their jobs. Other projects provide English-as-a-second-language training for limited English proficient workers.

The Department has been active in providing leadership and promoting workplace literacy models as an avenue for the business community to become involved in the literacy movement. In November 1989, the Department jointly sponsored, with the Department of Labor and several business, industry, and labor organizations, a conference to promote workplace literacy programs.

English Literacy Grants

This new program provides formula grants to States to establish, operate, and improve English literacy programs for individuals of limited English proficiency. Funds may be used to provide services to program participants, including child care and transportation. Each State must use at least 50 percent of its grant to fund programs operated by community-based organizations with demonstrated capability to administer English proficiency programs.

Up to 10 percent of available funds may be used by the Secretary to carry out a national demonstration program consisting of: (1) the development of innovative approaches and methods of literacy education utilizing new instructional methods and technologies for individuals of limited English proficiency, and (2) a national clearinghouse on literacy education for the limited English proficient to collect and disseminate information concerning effective approaches and methods.

The first awards for this program were made in the fall of 1989, for activities in 1990. To fulfill the mandate for a clearinghouse, an award was made for an adjunct ERIC Clearinghouse on Literacy Education for the Limited English Proficient. As specified in the authorizing legislation, the clearinghouse is being operated by the Center for Applied Linguistics, in Washington, D.C. Remaining funds for the national demonstration program are being used for a project to develop a handbook of effective practices in literacy education for limited English proficient adults.

Library Literacy Grants

The Library Literacy program provides funds for competitive grants to local public libraries and to State library administrative agencies to promote literacy training programs in the Nation's public libraries to combat the problem of illiteracy among adults. Grants, which by law may not exceed $25,000, are used by State library literacy programs for coordinating and planning library literacy programs and making arrangements for training librarians and volunteers to carry out such programs. Grants to local public libraries are for: (1) promoting the use of the voluntary services of individuals, agencies, and organizations in providing literacy programs; (2) acquisition of materials for literacy programs; and (3) using library facilities for such programs. Pending legislation would increase the maximum grant award size to $35,000.

In fiscal year 1989, this program provided for tutoring or other literacy services for about 25,000 adults. Also, about 15,000 volunteers were trained as tutors to provide literacy instruction, and about 5,000 librarians received training to provide library services to adult new readers. In well over half of the projects funded by this program, the library is the community's primary provider of literacy services. In these projects, the library either established a literacy program where none existed or served as the primary contact for seeing that literacy services, information, and referrals were provided to the public. Many projects also help libraries to acquire the basic reading materials and the tutor support materials necessary for literacy instruction programs.

Student Literacy Corps

The Student Literacy Corps program promotes the development of literacy corps programs at institutions of higher education. Institutions that have participated in community service activities may receive competitive discretionary grants that total no more than $50,000 over the two-year grant period. Under literacy corps programs, undergraduate students in fields such as social science, economics, and education receive academic credit for courses in which there is a practicum that requires the student to tutor a minimum of six hours per week. Tutoring services are uncompensated and performed in public community agencies serving educationally or economically disadvantaged individuals.

Funds appropriated for this program may be used by the institution to cover the administrative costs of the program and to pay stipends for student coordinators. Funds may also be used by the Secretary to provide technical assistance to grantees, to collect and disseminate information about student literacy corps programs, and to evaluate and report on such programs.

Fiscal year 1989 was the first year in which funds were appropriated for this program. A total of 105 institutions received $4.858 million in awards averaging $46,000. It is too early to tell how many hours of tutoring will be generated by this program. However, the statute provides that available program appropriations may be used to evaluate and issue reports on projects funded under this program. The Secretary intends to conduct such evaluations once a sufficient number of projects have been completed.

Even Start

The Even Start program grants funds to eligible school districts to operate projects that provide educational services to parents of children under 7 years of age who live in Chapter 1-eligible school attendance areas. Parents must be eligible for services under the Adult Education Act. The purpose of the program is to help parents who lack a high school education become full partners in the education of their children and assist children to reach their full potential as learners by integrating early childhood education and adult education for parents into a unified program.

Researchers have found that parents play a pivotal role in laying the foundation for their children's acquisition of basic skills -- a parent is a child's first tutor. However, when parents themselves lack the literacy skills to help their children learn, it becomes impossible for them either to provide their children with early learning skills or to reinforce the skills children learn in preschool programs.

Even Start addresses this problem by integrating early childhood education and adult education programs. Parents not only receive basic skills instruction themselves but also receive help in becoming partners in their children's education.

Fiscal year 1989 marked the first year of funding for this program. The Department awarded 73 grants to LEAs, in 44 States and the District of Columbia, In addition, three Migrant Education Even Start projects were funded. Because projects are in their first year of operation, program evaluation data are not yet available. However, the Department has initiated a comprehensive evaluation of the Even Start program.

Family English Literacy

The intergenerational aspect of illiteracy is also addressed through bilingual education programs. Under the Bilingual Education Act, funds are provided for Family English Literacy projects that are designed to teach English to limited English proficient adults (primarily parents of children in bilingual projects) and out-of-school youth. In 1989, 34 such projects were funded, serving a total of 10,049 students. The primary goal of these projects is to assist parents in learning English and participating in the education of their children.

Indian Adult Education

The Indian Education Act supports programs to enable Indian adults to acquire basic literacy, complete secondary school, and secure the education necessary for them to benefit from vocational training. Many projects also offer consumer education and other special services such as academic and career counseling, aptitude and vocational testing, and job referral. Grants are awarded on a competitive basis to Indian tribes, organizations, and institutions.

A 1985 study of the program found that generally the services delivered are those that seem to be the most needed by Indian adults. They concentrate on providing adult basic education and preparation for the high school equivalency examination. The study also found little duplication of services between these projects and those funded by other Federal programs, such as the Adult Education Act or adult education activities funded by the Bureau of Indian Affairs.

There has been some improvement in the educational status of Indian adults. Between 1960 and 1980 the percentage of Indians age 25 and older with less than a 5th-grade education decreased from 22 percent to 8 percent. During the same period, the percentage with a high school diploma increased from 18 percent to 56 percent. There is still a great need for improvement, however. More than 44 percent of Indian adults aged 25 and older have not graduated from high school.

In fiscal year 1989, the Department awarded 32 grants to projects serving approximately 7,200 Indian adults. These awards went to 12 tribes, 14 Indian organizations, and 6 tribal community colleges. Eleven of the awards were in urban areas and 21 in rural or reservation settings. The grants ranged from $28,468 to $307,414.

Adult Literacy Research Center

In the fall of 1990, the Department, through the Office of Educational Research and Improvement, will make awards for several new research and development centers, one of which will be devoted to the problem of adult literacy. This new center will undertake research needed to understand better and help solve the problem of adult illiteracy. This center is expected to coordinate closely with other existing literacy programs and the proposed new clearinghouse on adult education and literacy.

National Assessment of Adult Literacy

The Department began work in 1989 on a major multi-year project to define and measure literacy in the adult population. A panel of experts is currently working on a definition of literacy, in response to the mandate included in Section 383(b) of the Adult Education Act. The work of this panel will be reported to Congress this year and will form the basis for a survey that will be used to estimate the level of literacy in the United States. A final report from this project is scheduled for 1993.

The Department of Education funded a number of promising dropout prevention programs in 1988 and 1989. Although this initial effort will provide a basis for determining the range of dropout prevention and reentry projects currently in existence, it did not focus funding on comprehensive programs that provide basic skills instruction, counseling, employment preparation, parental involvement, and adult mentors. Research has suggested that comprehensive programs, involving several components, are most effective in preventing students from dropping out of school. The majority of projects funded for 1988 and 1989 involve fewer than 10 hours per week of student contact.

For 1991, the Department is requesting $50 million specifically for dropout prevention demonstrations, program evaluations, and research. Of this amount, $45 million of the new funding will be used to test and demonstrate effective approaches to dropout prevention and reentry and will involve rigorous evaluations similar to those used for demonstration programs funded by the Department of Labor. Projects begun in 1991 will be funded for up to 4 years. There will be two types of evaluation activities: (1) technical assistance to local projects in collecting data to validate individual programs, along with a national summary of findings; and (2) a national evaluation of selected projects to identify approaches that work best. Up to $2 million each year will be used for the evaluation activities.

The remaining $5 million will be used by the Department's Office of Educational Research and Improvement to complement the demonstration effort by supporting research and development activities designed to provide useful information about how to improve the academic performance of secondary school students and reduce the number of dropouts. A national research and development center would be established to investigate alterable conditions impinging on student achievement and retention, and its work would be supplemented by a variety of other research and development projects. This initiative will investigate such issues as the effects of instruction, school organization, and school-community relations, to identify effective strategies and approaches to helping disadvantaged students successfully complete high school.

While continued efforts are needed to reduce the dropout rate, it is also essential to gain hard evidence of programs that work. The extension of the dropout demonstration assistance program, along with added rigor for local evaluations, designation of priorities and models based on research findings, and a national evaluation of selected projects, will assist in providing that evidence.

In addition to the proposed $50 million for dropout prevention demonstrations and research, the Department's budget for 1991 contains a number of programs that can have an effect on the dropout problem. In fact, a major share of Federal elementary and secondary education dollars support programs that focus on disadvantaged populations and thus directly attack the dropout problem. Among these:

- Chapter 1 grants to local educational agencies will increase by 4 percent -- to almost $5 billion -- to provide compensatory education to about 6.1 million disadvantaged children.

- An administration initiative under the Talent Search program, begun in 1989, will encourage seventh- and eighth-graders to begin to think about pursuing a college education and help them to seek financial aid.

- Within the $918 million appropriated for vocational education in 1989, $4.6 million was used for 10 dropout demonstration projects. The Department is using $500,000 each year from 1988 and 1989 funds available for this program to evaluate effectiveness of the dropout prevention and reentry techniques demonstrated through these projects so that the most successful models can be disseminated to other communities. The evaluation will use random assignment of a matched-pairs design to generate conclusions about the effectiveness of various treatments used in the dropout prevention models. The first interim report of this evaluation is due in December 1990, with the final report following in February 1991.

- The National Center for Education Statistics is required by law to conduct an annual national survey of dropout and retention rates. NCES issued its first annual report, "Dropout Rates in the United States: 1988" in September 1989.

- Other efforts that attack the dropout problem are: (1) an increase of $17 million, or 11 percent, to a total of $175 million for bilingual education programs, including a special focus on districts with major influxes of children -- primarily refugees and immigrants -- with limited English proficiency; (2) $213 million for magnet schools; and (3) $7.5 million to address the problems of homeless children and youth.

GUARANTEED STUDENT LOAN PROGRAMS:

REPORT ON STUDENT LOAN DEFAULTS

The Department of Education supports two major student loan programs -- Guaranteed Student Loans (GSLs) and Perkins Loans. Defaults in both programs are increasing, although the costs associated with defaults are treated differently for the two programs in the budget. GSL defaults are reimbursements to participating lenders. They are direct entitlement obligations of the Federal Government, thus default costs are displayed as on-budget line items in the GSL account. Perkins Loan defaults represent a loss of income to participating postsecondary institutions' revolving funds rather than direct Federal obligations. The Department is pursuing a variety of measures to reduce the incidence of student loan defaults in both programs.

Guaranteed Student Loan Defaults

The Education Department projects that GSL defaults will cost taxpayers about $2 billion in fiscal year (FY) 1990, and will represent about 44 percent of program expenditures. Although the Department has increased collections on defaulted loans from $65 million in FY 1981 to an estimated $637 million in FY 1990, an estimated $7.8 billion of defaulted GSLs will be outstanding in FY 1990.

These increases in defaults are due to a number of factors, including increases in the volume of new loans made to students. In FY 1990, an estimated $11 billion will be loaned to over 4 million recipients in the GSL programs, compared to $7.4 billion loaned to 3.4 million recipients in FY 1981. As of 1989, approximately $93 billion had been provided to students since the inception of the GSL programs, of which approximately $48.5 billion are still outstanding.

Department analyses indicate that defaults are concentrated at relatively few schools. Using the FY 1987 cohort default rate, nearly 2 percent, or 85 schools, had default rates above 60 percent. In contrast, 3,570 schools had default rates below 20 percent, accounting for 66 percent of the schools.

FY 1987 cohort default rate by institutional type and control were as follows:

Type and Control	1987 Cohort Default Rate
Proprietary	33%
Public 2-year	18%
Private 2-year	14%
Public 4-year	7%
Private 4-year	7%
All Schools	17%

NOTE: The FY 1987 cohort default rate is defined as the percentage of borrowers that entered repayment status in FY 1987 that defaulted in FY 1987 or FY 1988. These figures exclude those postsecondary schools with fewer than 30 borrowers entering repayment status.

The Department is pursuing a four-pronged default reduction strategy:

(1) Final regulations which encompass a graduated approach -- increasing sanctions based on a series of default rate thresholds — to encourage default prevention by participating schools.

(2) A Notice of Proposed Rulemaking which would require that all private vocational schools establish a "teach-out" agreement with another school in case of school closure.

(3) Legislative proposals to reduce defaults, eliminate program abuses, and improve collections.

(4) Increased administrative activities by the Department to improve default prevention, enforcement, and collection efforts.

Following is a brief summary of the Department's regulatory, legislative, and administrative initiatives.

EDUCATION DEPARTMENT REGULATORY INITIATIVES: FINAL REGULATIONS PUBLISHED JUNE 1989

PROVISION	STATUS
SCHOOLS WITH DEFAULT RATES OVER 20%	
Authorize the Secretary to impose individual default management plans that address causes of default at a particular school. (1,803 schools affected)*	Effective 8/22/89. As of 1/22/90, 100% of the schools with default rates over 20 percent had submitted default management plans, and 419 of the plans had been approved. All schools are expected to have approved plans by May 1990.
SCHOOLS WITH DEFAULT RATES OVER 30%	
Require schools to delay for 30 days loan disbursement for first-time borrowers. (1,040 schools affected)	Effective 10/1/89.
Require schools to use a pro-rata tuition refund policy. (1,040 schools affected)	Effective 10/1/89 (regulatory effective date of 6/5/90 superseded by the 1990 Appropriation Act).
SCHOOLS WITH DEFAULT RATES OVER 40%/OVER 60%	
Authorize the Secretary to initiate Limitation/Suspension/Termination (LST) proceedings if a school with a default rate above 40% does not reduce its rate by 5 percentage points per year, until the rate decreases to below 40%. (456 schools affected)	Effective 1/1/91.
Authorize the Secretary to initiate LST proceedings if a school's default rate is above 60%. (101 schools affected)	
ALL SCHOOLS/OTHER PROVISIONS	
Require all schools to provide entrance counseling to first-time borrowers.	Effective 8/22/89.
Require all schools that offer an undergraduate nonbaccalaureate vocational training program to compile and disclose consumer information, *including* program completion and job placement data, to all prospective students.	Effective 12/1/89 (for loans certified for periods of enrollment beginning on or after 12/1/89).
Require increased guarantee agency program reviews of schools.	Effective 7/20/89.
Require lenders to keep schools informed of borrowers' delinquent status.	Effective 12/5/89.

---

*Based on the FY 1987 cohort default data for schools with 30 or more borrowers.

EDUCATION DEPARTMENT LEGISLATIVE INITIATIVES

The following default reduction legislative proposals were included in the Department's FY 1991 budget. Most are included in S.202 sponsored by Senator Gramm. Several proposals (marked by *) are included in S.1778 sponsored by Senator Harkin; and others (marked by **) are included in the Education Excellence Act (S.695). Total estimated savings for 1991-1995 are indicated for each proposal.

* o Delay loan disbursement: Disbursements of loans to first-time borrowers would be delayed for 30 days from the student's first day of classes. This would help reduce the inordinately high rate of default by students who withdraw within the first few weeks of class. (The similar 1989 Reconciliation Act provision applies only to SLS borrowers. ED's current regulations delay disbursement to schools with default rates above 30%.) ($449.2 million savings)

o Increase risk-sharing with guarantee agencies: In order to stimulate greater default aversion efforts by guarantee agencies and reduce the Federal Government's reimbursement costs, the Federal reinsurance of default claims paid by guarantee agencies would be reduced to a flat 90% rate (from the current 100/90/80% sliding scale), and the reinsurance fee rate would be a flat 0.5%. ($324.7 million savings)

* o Modify ability-to-benefit provision: This proposal would require applicants for all title IV student aid programs who receive aid under the "ability-to-benefit" criteria to pass a test, prior to enrollment, formulated and administered by an independent organization. ($159 million savings)

* o Require lenders to perform credit checks: To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, lenders would be required to check the credit histories of all GSL applicants age 21 or older. Applicants with poor credit would be required to obtain a credit-worthy co-signer. ($129.9 million savings)

o Authorize guarantee agencies to garnish defaulters's wages: This proposal would authorize guarantee agencies to garnish a defaulter's wages, up to 10% of disposable pay, after the defaulter is provided notice and an opportunity for a hearing. ($35 million savings)

** o Prohibit schools from employing commissioned sales representatives for recruiting and admissions activities: To reduce the exploitation of unqualified students, this proposal would prohibit schools from employing anyone other than salaried employees or volunteers to conduct recruiting or admitting activities. ($34.6 million savings)

o Require lenders to provide graduated repayment options to borrowers: This proposal would require lenders to offer optional graduated repayment schedules to all Stafford and SLS borrowers prior to commencement of repayment. ($22.4 million savings)

** o Require students to provide license numbers and other skip-tracing information: To make it easier to locate delinquent borrowers, the Department proposes to require schools to obtain the borrower's driver's license number and expected address after graduation, and the name and address of the borrower's closest relative and expected employer after graduation. ($2.5 million savings)

EDUCATION DEPARTMENT ADMINISTRATIVE INITIATIVES

I. IMPROVING DEFAULT PREVENTION

- Publish an annual default report including schools' default rates and default dollars. The FY 1987 cohort default report was published in August 1989. The FY 1988 report will be published in March 1990.

- Compile and disseminate job placement, graduation rate, and other consumer information for undergraduate nonbaccalaureate vocational training programs. Schools began to submit data to ED in December 1989; the first report will be published in FY 1991.

- Publicize ED's toll-free consumer service hotline. A brochure for all high schools and postsecondary schools will be published shortly.

- Provide default management and prevention training to schools. The Department's FY 1991 request includes four additional positions for default-related training.

- Publicize innovative and exemplary default prevention practices by lenders, school, and guarantors. "What Works in Default Prevention" booklet will be published in March 1990.

II. ENFORCING PROGRAM RULES

- Increase ED program compliance reviews of lenders, schools and guarantee agencies, from a low of 627 total reviews in 1987, to 1,268 reviews completed in 1989, to a projected 1,754 reviews in 1990 and 2,033 reviews in 1991.

- Direct 75% OIG audit and investigation resources (after mandated audit work) to the default problem.

- Continue enforcement of tough due diligence collection requirements for lenders and guarantee agencies.

- Facilitate fraud detection by expanding the Inspector General's fraud and abuse toll-free hotline. The Department's FY 1991 request includes additional FTE support for the hotline.

III. MAXIMIZING COLLECTION EFFORTS

- Federal Employee Match. Since 1982, more than 60,000 Federal employees have been identified and sent notices to repay defaulted student loans. Cumulative collections resulting from the Federal salary offset program total over $54 million. An additional $12 million in collections is projected for 1990.

- IRS Offsets. The IRS offset of defaulters' Federal tax refunds has resulted in over $637 million in collections from fiscal year 1986 through fiscal year 1989 on approximately 1.2 million accounts. An additional $192 million in collections is projected for 1990.

- Referrals to Justice. ED continues to refer student loan defaults to the Justice Department for litigation. Cumulative collections on these accounts total an estimated $41 million. An additional $11 million in collections is projected for 1990.

PERKINS LOAN PROGRAM:

Perkins Loan Defaults

Unacceptably high default rates have persisted within the Perkins Loan Program since its inception. If institutions were not permitted to assign defaulted loans to the Department for collection, default rates would be even higher. However, as reflected in the above table, some progress has been made in reducing defaults over the past several years. This improvement has been due largely to improved school-level collection efforts, including the growing use of private servicing and collector agencies.

This improvement can be attributed in part to statutory penalties, which built on earlier regulatory penalties, related to institutional default rates. A 1986 statutory amendment provides that no institution can receive Federal capital if its institutional default rate exceeds 20 percent (1988-90); or 15 percent in 1991 and beyond. In addition, Federal capital allocations are reduced at institutions with default rates at or above 7.5 percent. Schools with high default rates can work toward retaining their full allocations by assigning a portion of their defaulted loans to the Department and by improving their collection rates.

The 1986 amendments also require institutions to report defaulted Perkins Loan accounts to a credit bureau; unless specifically prohibited from doing so by State law.

Since changes to the Perkins Loan program mandated by the 1986 amendments to the Higher Education Act have gone into effect, defaults have declined and collection rates at schools have increased.

However, further Perkins Loan default improvements can be made. The Department has proposed several additional statutory changes that are designed to further reduce defaults and improve collection efforts.

The following default reduction legislative proposals, affecting both Perkins and Guaranteed Student Loans, were included in the Department's FY 1991 budget.

- Requiring credit checks. To prevent defaults by individuals who have already demonstrated a lack of credit-worthiness, institutions would be required to check the credit histories of all Perkins Loan borrowers ages 21 and over. Borrowers with poor credit histories would be required to obtain a credit-worthy co-signer. Perkins Loan access would not be affected for the vast majority of students who have little or no credit history.

- Requiring students to provide driver's license numbers and other skip-tracing information. In order to facilitate collection of Perkins Loans, borrowers would be required to provide their driver's license numbers to institutions when they apply for a loan. Also, during the school's exit interview, students would have to provide the address of their next-of-kin, expected address after graduation and the name and address of their expected employer.

- Reform the "ability-to-benefit" provision. The "ability-to-benefit" student eligibility provision would be amended to require any student who is admitted without having a high school diploma, or its recognized equivalent, to pass a test administered by an independent organization.

- Pro rata refunds. Institutional eligibility provisions would be amended to require participating institutions with default rates in excess of 30 percent to implement, for Title IV recipients who withdraw near the beginning of their enrollment periods, a refund policy under which the institution would be required to refund a portion of the amount charged the student. This refund amount must be at least equal to the charges associated with the remaining portion of the enrollment period.

- Prohibit Recruitment by Commissioned Salesmen. Schools would be prohibited from employing commissioned sales representatives for recruiting and admissions activities.

Increased efforts will continue to be made to reduce defaults in the Perkins Loan program by strengthening institutional collection requirements and by intensifying Federal collection activities. Enhanced institutional collection efforts should result in lower default rates and more funds becoming available for new loans. Approximately $744 million from collections received by institutions will be available for new loans in school year 1990-91. These resources, from institutional revolving funds, will be available without the need for any additional allocations of Federal capital.

Student Aid Participation and Expenditures, 1981-1991

The charts below provide information about financial aid received by students under Title IV of the Higher Education Act of 1965. They show appropriation levels, the total amount of student aid generated by those appropriations, and the total numbers of students receiving assistance. They cover a period of time, 1981 to 1991, during which Federal aid to students under Title IV will have increased by over 50 percent. During these years, State and institutionally awarded aid to students will have increased even more significantly than Federal aid. From academic year 1981-82 to academic year 1988-89, while the total amount of Federal aid to students (including specifically directed aid to students from such Federal sources as the Veteran's Administration) increased 33 percent, the total amount of State grant aid to students increased 78 percent; and the amount of aid awarded by institutions of higher education increased 129 percent.

During this same period, disposable personal (per capita) income also increased significantly--by 52 percent. However, in general, educational costs to students and their families increased even more rapidly than their financial resources. Increases in the average cost of attendance for all categories of colleges and universities have outstripped general inflationary increases--from an increase of 51 percent in public 2-year colleges to an increase of 93 percent in private universities. College costs have continued to increase in recent years, and the Department of Education anticipates that they will continue to increase. An average 10 percent increase in tuition and fee charges, over current costs, is expected for 1990-91.

National Postsecondary Student Aid Studies

The relationship between the resources available to families and increasing college costs is one of many issues that has prompted the Department to undertake a nationwide study of postsecondary student financial aid. The 1987 National Postsecondary Student Aid Study (NPSAS) was the first of what will be a series of surveys to inform policy makers and other interested parties about a myriad of policy and research issues regarding the distribution of financial aid, the nature of aid packages (the combination of assistance from a variety of sources that help a student meet college costs), the profiles of aid recipients, patterns of financing postsecondary education, and the impact of financial aid program changes on students, their families, and postsecondary institutions. The 1987 NPSAS was based on data collected from students and postsecondary institutions in the fall of 1986. Data collection for a 1990 study began last fall.

Who Receives Financial Aid?

According to the 1987 NPSAS, 46 percent of all undergraduates enrolled in the fall of 1986 received some form of student financial aid; and 76 percent of these aided undergraduates received Federal student aid. While only 38 percent of the undergraduates at public institutions received aid, 65 percent of the undergraduates at not-for-profit private institutions and 85 percent of students at for-profit private institutions received aid.

Trend data on the distribution of Pell Grant funds lends perspective to the above "snap shot" picture of the participation of students in financial assistance programs. From academic year 1981-82 to academic year 1987-88, the percentage of Pell Grant aid received by students at public institutions dropped slightly--from 60 percent to 57 percent, while the percentage of this aid going to students at not-for-profit private institutions dropped from 26 percent to 18 percent. During this period, the percentage of Pell aid going to students enrolled in for-profit institutions increased from 14 percent to 25 percent. Because of the increase in the total Pell Grant aid available during those years, the change in the proportion of Pell aid going to students at for-profit institutions amounts to nearly a 3-fold increase, from approximately $320 million in 1981-82 to $940 million in 1987-88.

What Type of Financial Aid Do Students Receive?

In recent years the ratio of loan aid to grant and work-study aid received by students has been an issue of concern to many. The 1987 NPSAS data show that, in the fall of 1986, the average amount of aid received by full-time, full-year students was approximately $3,800. The average Federal loan aid received was $2,400, and the average Federal grant aid was $1,600. However, the trend seen in the following information on the Title IV programs is that reliance on loans vs. grant and work-study aid will have decreased slightly from 1981 to 1991, from 2.17:1 to 1.97:1. During those years, the average Stafford Loan will have increased 17 percent (from $2,280 to $2,673), while the average Pell Grant award will have increased 75 percent (from $826 to $1,443).

1/ Due to a technical error in the 1988 appropriations language that omitted reference to the ICL program, the FY 1988 appropriation could not be used. Funds appropriated for the ICL program in FY 1989 ($4,940,000) were used to finance award year 1988-89 program costs at a level of $4,308,000. The Department's reappropriation request for the FY 1988 amount was denied.

2/ The FY 1990 appropriation will be used to support two award years, 1989-90 and 1990-91.

3/ The FY 1991 appropriation would support awards in award year 1991-92.

DEPARTMENT OF EDUCATION

Drug Prevention, Education, and Rehabilitation

Background

Surveys of public opinion over the past several years have consistently shown that both children and adults view drug use as our most pressing domestic problem. In 1987, 54 percent of teens cited drugs as their greatest concern -- up from 27 percent only 10 years earlier. Adults share this concern, ranking student drug use ahead of discipline and educational quality among problems confronting schools. A July 1989 Gallup poll found that 27 percent of adults view the drug crisis as the most important problem facing the Nation -- marking the first time in the 50-year history of the poll that a social issue has topped the list of public concerns.

Since the Nation's crack epidemic began in 1986, an extraordinary amount of media, governmental, and public attention has focused on drug use. Funding for drug prevention and education programs in the Department of Education alone has grown from $3 million in 1986 to over $541 million in 1990. Nearly all States now require substance abuse education within their school systems, and local educational agencies are beginning to mandate drug education throughout the full 12 years of schooling.

The evidence indicates this massive campaign of public education has had an impact on drug use among young people. Results of the annual survey of high school seniors funded by the National Institute on Drug Abuse in 1989 show significant decreases in the use of nearly all types of illicit drugs. For example, the number of seniors reporting that they had ever used marijuana declined from 60.4 percent in 1979 to 43.7 percent in 1989. The number of seniors who had ever used cocaine declined from 17.3 percent in 1985 to 10.3 percent last year. In addition, perceptions among seniors of the harmful effects of drugs are becoming more negative. In 1978, only 68 percent of seniors thought there was "great risk" in using cocaine regularly compared with 90 percent in 1989.

These downward trends are occurring despite the continued widespread availability of drugs. In 1977, 33.8 percent of seniors said it would be "fairly easily" or "very easy" for them to obtain cocaine. In 1989, 58.7 percent said cocaine is "fairly easy" or "very easy" to acquire. These figures suggest that drug use is declining mainly because the demand for drugs is lessening.

But despite this good news, it is much too early to declare victory in our national war on drugs. Slightly more than half of our high school seniors have used an illegal drug by the time they graduate, and use rates among school dropouts appear to be even higher. Further, although the National Household Survey on Drug Abuse indicates that fewer Americans are currently using drugs, those who continue to be drug-involved appear to be using more drugs more heavily. Hospital and emergency room admissions related to drug use continue to rise.

We have also not made much headway in curbing the illegal use of alcohol by young people. More than 90 percent of high school seniors in 1989 had used alcohol, and 33 percent had consumed five or more drinks in a row in the two weeks prior to the survey. The impact of this widespread, and frequently heavy, drinking by young people is evident in statistics showing that alcohol-related highway accidents are the principal cause of death among young people ages 15 through 24. Furthermore, about half of all youthful deaths in drowning, fires, suicide, and homicide are alcohol-related. While these statistics are disturbing, fortunately there is much that can be done to improve them in the future.

Overview of the Department's Programs

The Department of Education supports education and prevention activities as a means of reducing the demand for illicit drugs. While State and local communities play the most critical role in developing and implementing drug use prevention education programs, the Department supports this role in three significant ways: (1) by providing leadership; (2) by disseminating information; and (3) by providing technical and financial assistance. In addition, the Department Vocational Rehabilitation program supports rehabilitation services for clients who are disabled as a result of drug dependency.

At the center of the Department's efforts are the programs authorized by the Drug-Free Schools and Communities Act (DFSCA) of 1986, as amended. These programs include State Grants, School Personnel Training, a number of National Programs, a new Emergency Grants program, and recently enacted Drug-Free School and Campus Certification requirements. The Department also supports the National Commission on Drug-Free Schools authorized by the Anti-Drug Abuse Act of 1988, and Innovative Alcohol Abuse Education programs authorized by the Fund for Innovation in Education under the Elementary and Secondary Education Act of 1965. Following is a brief discussion of each of these programs. (The Alcohol and Drug Abuse Education program previously authorized by the Education Consolidation and Improvement Act was last funded in 1987 and has been superseded by the DFSCA.)

State grants. Under what is by far the largest of the Department's drug-related programs, between 80 and 90 percent of the Nation's school districts currently receive funds on the basis of a formula that takes into consideration school-aged population, school enrollment, and Chapter 1 funding. All districts are eligible if they meet certain requirements. However, not all apply. Districts have considerable flexibility in using the funds to design programs to meet local needs. Funded activities include teacher and parent training; curriculum development, acquisition, and implementation; outreach programs; peer leadership and counseling programs; early intervention strategies; and prevention efforts in conjunction with State and local law enforcement agencies. The Governor of each State also receives a portion of State grants funds and is required to use them for local and community-based programs, including programs designed for "high-risk" youth.

School Personnel Training. Training of teachers and other school personnel in drug prevention education is authorized under the State grant program. However, Congress added this categorical program in 1988 amendments to the DFSCA out of concern that a lack of trained personnel might be a weak link in drug education. Competitive grants are awarded for projects to establish, expand, or enhance programs and activities for training in drug and alcohol abuse education and prevention for teachers, administrators, guidance counselors, and other school personnel. In 1989, the Department awarded 56 grants averaging $125,000 for these projects.

Grants to Institutions of Higher Education. Under the DFSCA, funds are set aside for grants to institutions of higher education (IHEs) for: (1) model demonstration programs coordinated with local elementary and secondary schools; and (2) programs of drug abuse education and prevention for students enrolled in IHEs. In fiscal years 1987-1989 funds under this set-aside also were used for teacher training programs; however, the DFSCA amendments of 1989 consolidated this teacher training program with the school personnel training program discussed above.

At least half of the funds reserved under this set-aside must be used to develop, implement, operate, and improve programs of drug abuse education and prevention for students enrolled in IHEs. The Department awards these funds annually through one or more grant competitions. Approximately 335 IHEs have received grants under this set-aside during the first three years (1987-1989) of the program. Several hundred more have participated indirectly in consortia with these grantees. In 1990 approximately $5 million of the IHE funds will also be used for demonstration projects coordinated with local elementary and secondary schools for the development of quality drug abuse education curricula and programs through the practical application of the findings of educational research and evaluation.

Federal Activities. The Federal Activities authority is the most flexible and responsive of the National Programs activities. These funds support a variety of programs and projects to get drugs out of schools, colleges, and communities, including: communicating to students the dangers of alcohol and drug abuse; developing and disseminating curriculum materials; providing technical assistance to State, local, and intermediate educational agencies in selecting and implementing curricula, approaches, and programs; and evaluating programs funded under the Act.

Each year the Department conducts one or more grant competitions to address identified needs in drug prevention education. For example, 1990 grants will support drug and alcohol abuse education and prevention activities for students in grades four through eight, in recognition of the fact that drug use often begins during these critical early adolescent years. Applicants for these grants were particularly urged to submit proposals that deal with problems experienced by children of substance abusers. Funds also will support a small number of demonstration projects for "alternative schools" programs to help children who have become involved with drugs re-enter the traditional school environment.

A great deal of drug prevention education information has been, and continues to be, disseminated nationally with Federal Activities funds. The Department's drug prevention handbook, Schools Without Drugs, has proved so popular that over 3 million copies have been distributed to date, including copies in Spanish. The Department has also produced and distributed drug prevention videotapes for every school district in the country; a guide to assist school officials in selecting and implementing commercially available drug prevention curricula; a curriculum model to assist school officials in developing or adapting curricula to best meet their own needs; a bimonthly newsletter, The Challenge; and, most recently, a new handbook for parents entitled Growing Up Drug Free: A Parent's Guide to Prevention. The Department also transfers funds each year to the Department of Health and Human Services to support the National Clearinghouse for Alcohol and Drug Information.

The Department has also initiated a number of special projects with Federal Activities funds. In 1987 the Department created the Network of Colleges and Universities Committed to the Elimination of Drug and Alcohol Abuse, to provide a support structure for IHEs as they endeavor to eliminate substance abuse on their campuses. This Network disseminates knowledge about successful drug prevention education programs, facilitates collaborative prevention and education efforts among IHEs, and identifies areas and problems for further research. As part of its mission, the Network has developed a set of standards for IHEs to adopt in their local efforts to build comprehensive programs and policies against drug and alcohol use. To date, over 1,200 IHEs have joined the Network.

Also in 1987, the Department created the Drug-Free School Recognition Program to identify and give special recognition to public and private elementary and secondary schools that: (1) have implemented a comprehensive drug-prevention and intervention program that has prevented, or substantially reduced, alcohol, tobacco, and other drug use among the student population; and (2) have an ongoing plan to remain or become drug-free. The goals of this program are to: (1) focus national attention on drug-free schools in America; (2) demonstrate, by example, that drug-free schools can be achieved and maintained by communities that strive for them; and (3) offer to school systems models of success in creating and maintaining drug-free schools that others may emulate. Recognized schools are honored each year at a White House ceremony and "showcased" through conferences and written materials. A total of 77 schools from around the Nation have been recognized by the program to date.

Another Federal Activities-funded project entails the development of drug abuse education and prevention curricula, programs, and training materials for use in early childhood education. Under this project the Department will support contracts to develop prevention materials for young children and their parents and caregivers. Once developed, these materials will be widely disseminated.

Federal Activities funds also support a number of evaluation efforts related to Drug-Free Schools. These include a descriptive study of how State and local DFSCA programs are planned, implemented, administered, and evaluated (due for completion in early 1991); a study to determine the extent to which these programs help to reduce and prevent student drug abuse (due to begin in Fall 1990); a study to determine whether substance use education and prevention programs supported with Federal Activities grants or honored in the Department's Drug-Free School Recognition Program have led to changes in students' knowledge, attitudes, and behaviors (due in mid-1992); a study of school personnel training programs funded under the DFSCA (due in early 1992); an evaluation handbook for administrators of school- and community-based prevention programs (due in late 1990); and the development of model reporting forms to assist program administrators to collect standard data on their activities and participants, and thereby improve the dissemination of information on effective prevention programs to educators, researchers, and parent and community organizations (due in Fall 1990).

Finally, the Department uses Federal Activities funds to support a number of drug prevention projects in coordination with other Federal agencies. In addition to co-sponsoring the National Clearinghouse for Alcohol and Drug Information in the Department of Health and Human Services, Education has worked with the National Institute on Drug Abuse to expand the sample size of 12- to 17-year-olds in the National Household Survey on Drug Abuse; entered into memoranda of agreement in support of the National Institute of Justice's Safe School Project, which provides management and training assistance to schools in the areas of student discipline and drug prevention, and with the Office of Juvenile Justice and Delinquency Prevention, to support student-centered drug prevention programs in the District of Columbia public schools; participated in the Surgeon General's Workshop on Drunk Driving; and developed, with the Food and Drug Administration, an information campaign focusing on the dangers of steroids.

Programs for Indian Youth. A small percentage of funds is reserved under the DFSCA for programs that support alcohol and drug abuse education and prevention for Indian children on reservations served by the Department of the Interior. The Bureau of Indian Affairs has operated this program since 1987, guided by a memorandum of understanding between the Departments of Education and Interior. These funds support a variety of activities, including curriculum implementation, inservice and preservice workshops, training of students and school teams, and drug education conferences.

Programs for Hawaiian Natives. A small percentage of funds is also reserved under the DFSCA for alcohol and drug abuse education programs for the benefit of Hawaiian Natives. To be considered for funding under this program, applicants must be recognized by the Governor of Hawaii. In 1987, a three-year award was granted to the Kamehameha Schools/Bernice Pauahi Bishop Estate to operate this program; a new competition will be held in 1990. Funds have been used primarily to develop a community-based substance abuse prevention demonstration program to teach parents culturally appropriate ways to identify and address substance abuse issues in their families.

Regional Centers. Under this program, awards are made to five regional centers to: (1) train school teams to assess alcohol- and drug-related problems confronting their schools and mobilize communities in response to those problems; (2) help local educational agencies and institutions of higher education develop drug prevention training programs for teachers and school personnel; (3) evaluate anti-drug programs and strategies for effectiveness and disseminate information about successful programs; and (4) assist State educational agencies in coordinating and strengthening alcohol and drug abuse prevention policies and programs in schools. On average, the centers have spent about half their time providing training and assistance to school teams, about a quarter of their time evaluating and disseminating information on programs and strategies, and about a quarter of their time providing assistance to State and local educational agencies and institutions of higher education. A new regional centers competition will be held during 1990.

Emergency Grants. This program, a component of the President's educational excellence initiative, was established by the Drug-Free Schools and Communities Act Amendments of 1989 to provide funds to school districts that demonstrate a significant need for additional assistance in combatting drug and alcohol use. The program will be administered under the DFSCA State grants authority in 1990 and as a Federal discretionary program beginning in 1991. In 1991, districts will compete for funding to support a comprehensive range of services, including educational programs, counseling programs, enhancement of school security, after-school programs, programs for parents and other community outreach efforts, and alternative programs for students with a history of drug abuse or others who are difficult to reach in the regular school setting. Grants will range from $100,000 to $1,000,000.

Drug-Free Certification Requirements. At the urging of the Administration, the Congress recently amended the DFSCA to require institutions of higher education and local school systems to adopt and implement drug and alcohol abuse prevention programs for their students and employees or risk losing Federal financial assistance. The Department is currently drafting regulations to implement and enforce this requirement, which will take effect October 1, 1990. No Federal funds are authorized under this new provision; however, IHEs and school districts may use DFSCA funds to implement the required programs for students.

National Commission on Drug-Free Schools. The Anti-Drug Abuse Act of 1988 authorized creation of a 26-member National Commission on Drug-Free Schools to advise the President and the Congress on strategies and criteria for achieving drug-free schools. The Commission is co-chaired by the Secretary of Education and the Director of the Office of National Drug-Control Policy. Funds to operate the Commission were appropriated in 1990 to the Department of Education, where the Commission is administered. The Commission has been holding meetings around the country to solicit testimony and discuss the wide range of issues related to its mission, and will submit a report of its findings and recommendations in September 1990.

Innovative Alcohol Abuse Education. This program, authorized by the Anti-Drug Abuse Act of 1988 as an amendment to the Fund for Innovation in Education under Title IV of the Elementary and Secondary Education Act of 1965, was funded for the first time in 1990. The Department will use these funds to develop materials for programs of alcohol abuse education, particularly to benefit children in grades 5 through 8 who are children of alcoholics. In future years funds for this program will support grants to train educators about the special problems such children may have and to use the materials developed from the first year of funding.

Vocational Rehabilitation (VR) State Grants. This program provides funding for activities to rehabilitate disabled individuals. Funds are allocated to States and Territories on the basis of their population and per capita income. While drug rehabilitation is by no means the major focus of this program, persons who are considered drug dependent can qualify for VR services if their disability constitutes a substantial handicap to employment. Amounts shown on the preceding funding table reflect 1.5 percent of the total for the VR State grant program, a percentage corresponding to the cost of providing services to the estimated number of clients served whose drug dependency is considered a primary or secondary disability.

Summary. The Department of Education strives, through the kinds of leadership, information sharing, and technical and financial assistance described above, to reach into every community, every family, and every school to bring an awareness of the drug problem to everyone and to motivate each citizen to participate in the fight against drugs. In the broadest sense this means encouraging non-users to remain drug-free and motivating current users to stop drug use. The Department encourages development of creative responses, especially at the local level, to meet each community's needs, while national initiatives are geared to raising awareness of illegal drug use, mobilizing citizen action, and creating an environment in which illegal drug use is acceptable. Ultimately, the purpose of the Department's programs is to bring the Nation significantly closer to the goal of a drug-free society. Consistent with this goal is the objective of drug-free schools, families, and youth. A drug-free environment provides children with the best chance of learning, and of establishing healthy attitudes and habits that will affect their entire lives.

While the role and policies of the Department are largely limited to education and prevention, these strategies alone cannot solve the Nation's drug problem. Our efforts are undertaken in partnership with other Federal and non-Federal efforts to reduce the demand for and supply of drugs, prosecute and incarcerate those who distribute illegal drugs, and treat and rehabilitate those already addicted.

EDUCATION RESEARCH AND DEVELOPMENT
(budget authority in thousands)

	1989	1990	1991
Compensatory Education for the Disadvantaged.........	$4,900	$5,800	$9,400

Department of Labor.........	--- 1/	--- 1/	--- 1/
Total	157,600	172,800	177,900

1/ The Department of Labor reported that less than $1 million of the amounts reported for research and development each year was education related.

COMPENSATORY EDUCATION FOR THE DISADVANTAGED

Evaluation and Technical Assistance

The applied research activities funded under Chapter 1: Evaluation and Technical Assistance will support program evaluations needed to provide the Administration and Congress with information and data for use in formulating legislative and budget policy for 1991 and beyond. The primary focus of this activity will be the continuation of the mandated Chapter 1 Longitudinal Study begun in 1989. This study is expected to continue through 1997.

Even Start

The applied research activities funded under Even Start will support the independent annual evaluation of the program required by section 1058 of the Elementary and Secondary Education Act of 1965 (P.L. 100-297).

SCHOOL IMPROVEMENT

Drug-Free Schools and Communities National Programs

Funds provide for a study of the implementation of the Drug-Free Schools and Communities Act, as well as plans to examine program effectiveness.

Mathematics and Science National Programs

Funds awarded in 1989 and 1990 support a science center. The third and final year of support planned for the center is 1990.

Fund for Innovation in Education

In 1989, funds provide for studies of early childhood education and studies of viewer responses to children's television episodes funded under this program. These will be continued and supplemented by studies of open enrollment programs for public schools and studies of innovative educational reforms.

Jacob K. Javits Gifted and Talented Student Education

The Gifted and Talented Students Education Research Center conducts research on methods and techniques for identifying and teaching gifted and talented students, and conducts program evaluations and surveys of gifted and talented programs.

BILINGUAL AND IMMIGRANT EDUCATION

Three general objectives guide the bilingual education research program -- assessing the extent of need for educational services authorized by the Bilingual Education Act, increasing the effectiveness of services for limited English proficient students, and improving program management and operations. Two studies, begun in 1987 to assess the demand for new bilingual classroom teachers, should produce initial findings in late 1989. One of these, "Recent

College Graduates," examines what happens to individuals who graduate with a teaching certificate in bilingual education or English-as-a-second language. The other, "Schools and Staffing Survey," evaluates the unmet demand for new bilingual education or English-as-a-second language teachers. A 1988 project to determine the demand for the Bilingual Fellowship program should be completed in 1990. A study of innovative approaches for educating limited English proficient students which was initiated in 1987 should produce findings in 1990 relating to: literacy, mathematics and science instruction, school dropout prevention, and education for exceptional children.

Studies funded in 1989 include a study of effective strategies for teaching English to limited English proficient secondary school students and adults, a study of capacity building at the State and local levels, an evaluation of the educational personnel training program, and a descriptive study of the immigrant and refugee education programs. At least one major new project is planned for 1990 - a national descriptive study of instructional services for language minority, limited English proficient students. The descriptive study would likely constitute the first phase of a new longitudinal impact study to be completed in the mid 1990s. Much of the 1991 research budget will cover continuation costs for this study.

EDUCATION FOR THE HANDICAPPED

The Special Purpose Funds programs provide support for a variety of activities related to improving early intervention and educational services for handicapped children, aged birth through 21. Special Purpose Funds also support evaluation studies dealing with the management of these programs and assessment of progress in the implementation of the Education of the Handicapped Act.

The authorizations for Special Purpose Funds programs expire at the end of fiscal year 1990. Funding for these activities is proposed for later transmittal based on proposed legislation. Since this legislation is not yet enacted the estimates for research and development funding in fiscal year 1991 must be considered very approximate. Research and development funds will be used to support a variety of activities, including projects dealing with early intervention services, early childhood education, severely handicapped children, technology, secondary and transitional services, and other areas.

REHABILITATION SERVICES AND HANDICAPPED RESEARCH

In 1989, two programs in the Rehabilitation Services and Handicapped Research account provided support for research and development: the National Institute on Disability and Rehabilitation Research (NIDRR), and Evaluation. In 1990 and 1991, three programs will provide support for research and development: NIDRR, Evaluation, and Technology Assistance.

NIDRR supports research and dissemination activities, including rehabilitation research and training centers, rehabilitaion engineering centers, and other research and demonstration activities.

Under the Evaluation program, the Rehabilitation Services Administration conducts studies on the impact and effectiveness of activities authorized by the Rehabilitation Act of 1973. Studies are designed to provide information for policy decisions related to program management and improvement.

The Technology Assistance program provides grants to States to develop and implement statewide systems of technology-related assistance. In 1990, funds will be used to support the following mandated activities: a national evaluation of the grants to States program, a study on financing assistance technology devices and services, and a study to determine the feasibility of creating a national information and program referral network. A portion of these funds will also be used to support some model projects.

SPECIAL INSTITUTIONS FOR THE HANDICAPPED

Gallaudet University

The University maintains a research institute which conducts research within a wide range of disciplines, including genetics, linguistics, statistics, audiology, psychology, demography, and other areas which have an impact on the field of deafness. The work of the institute is organized into five major research programs: The Center for Assessment and Demographic Studies collects educationally relevant information on hearing impaired students, conducts demographic analyses on characteristics of disabled populations, and does research on assessment instruments for use with deaf people. The Center for Studies in Education and Human Development carries out programs of research on teaching, learning, development, and mental health in relation to deafness. The Center for Auditory and Speech Sciences conducts research on auditory perception by deaf persons and technological means for improving communication. The Genetic Services Center focuses on the hereditary causes of deafness. The Technology Assessment Program conducts studies on the use of technology by and for hearing-impaired individuals.

American Printing House for the Blind

Projects include the development of materials for braille reading, language development, spelling, low vision, and the multihandicapped. Efforts in 1991 will focus on the development of educational tests and measures, braille materials, educational software and peripheral hardware for microcomputer applications, and specialized materials for blind children below the age of three.

National Technical Institute for the Deaf

The Institute conducts applied research relating to deafness in three primary areas. These are communications, assessment, and training; education and training; and graduate accommodation. Research projects focus on issues related to persons who are deaf such as economic and occupational assimilation, academic and technical skills, communication skills, personal/social skills, effective instruction, and institutional planning, evaluation and change. The Institute also evaluates the success of its programs in preparing deaf students for employment and the changing characteristics of deaf students and the national job market in terms of technical education needs and the Institute's programs.

Special Institutions for the Handicapped Evaluation Studies

The Education of the Deaf Act of 1986 greatly increased the monitoring and evaluation responsibilities of the Secretary for Gallaudet University. The Department has been engaged in a variety of evaluation activities including several small studies funded through salary and expense account activities. In 1991, funds would be used to conduct a baseline study of higher education opportunities for persons who are deaf, the characteristics of deaf students making the transition to postsecondary education, and the role of federally-supported programs in providing postsecondary education and training for this population. This request is based on a small planning study begun in 1988. The purpose of the study was to advise the Department on priorities and appropriate research questions for studies related to the Special Institutions for the Handicapped that serve persons who are deaf.

VOCATIONAL AND ADULT EDUCATION

The research and development program for vocational education is designed to improve the practice of vocational education through a variety of activities, including the National Center for Research in Vocational Education, a network of six vocational education curriculum coordination centers, discretionary research and evaluation projects, and the National Occupational Information Coordinating Committee, which assists States in developing and adapting occupational information systems.

Adult Education activities are designed to address the need for research on the effectiveness of Federal adult education programs; provide new information on the target population and participants in adult education, the characteristics of programs, and emerging issues in the field; and identify effective approaches and practices for dissemination to State and local programs.

HIGHER EDUCATION

International Education and Foreign Language Studies

This activity supports research and development efforts that contribute to strengthening the capability, performance, and overall excellence of American education with respect to foreign language and area studies and international studies. These research and development efforts are designed to accomplish such objectives as determining the national need for increased or improved fellowships and international studies instruction; increasing and improving understanding of foreign language skills acquisition and proficiency and its measurement; increasing and improving understanding of effective foreign languages and more appropriate testing and measurement procedures and materials; and investigating the use of computers and other educational technology in improving foreign language teaching and learning.

Fund for the Improvement of Postsecondary Education

FIPSE stimulates improvements in education beyond high school by supporting exemplary, locally-developed projects that encourage innovative reform and improvement of postsecondary education and equal educational opportunity for all. In the past, approximately three percent of the funds available have been used to finance research and development activities.

HOWARD UNIVERSITY

Federal funding for research activities was first provided in 1985 as a supplement to improve Howard's capacity to compete for and acquire research grants. The research activity currently funds post-doctoral fellowships and laboratory equipment, primarily in scientific disciplines. The appropriation for Howard's research activity has been level-funded at its present amount since fiscal year 1989.

RESEARCH, STATISTICS, AND IMPROVEMENT OF PRACTICE

These funds are used to support general education research and development designed to advance public knowledge about, and understanding of, educational practice; and to solve, alleviate, or illuminate educational problems. In 1991, funds will support a major network of national centers to carry out research and development activities in the following areas: education technology; effective schooling for the disadvantaged; reading education; teaching in the school context; school leadership; learning and teaching elementary subjects; dissemination and knowledge utilization in education; assessment, evaluation, and testing; families, communities, and children's learning; education in the inner cities; cultural diversity and second language learning; writing and literacy; student learning; learning to teach; postsecondary learning, teaching, and assessment; teacher performance evaluation and accountability; education policies and student learning; adult literacy; education quality of the workforce; organization and restructuring of schools; mathematics teaching and learning; science teaching and learning; education finance and productivity; and literature teaching and learning. Funds will also support applied research and development activities to be carried out by ten regional educational laboratories according to needs in the regions and priorities of their governing boards. Finally, funds will support field-initiated research studies, research grant competitions on priority topics yet to be identified, and research and development on how to achieve the national goals in education.

LIBRARY PROGRAMS

This program supports projects designed to improve services in all types of libraries. Projects to be funded will concern such areas as access to information, information needs and users, library funding and economics, and libraries as they relate to the education establishment.

EDUCATION IN THE UNITED STATES: BASIC STATISTICAL MEASURES

1. Participation in Education

- Over 25 percent of the people in the United States are students or are employed by the schools or colleges.

Education Participants	1988-89 (Estimated, in millions)
Number of students	
Elementary and secondary	45.4
Postsecondary	12.8
Teaching staff	3.4
Nonteaching staff	3.5
Total participants	65.2
Total population	245.8

2. Number of Schools

- About 15,600 school districts operated over 83,000 public elementary and secondary schools in 1987-88.

- There were almost 3,600 colleges and universities and 8,500 other postsecondary institutions in 1987-88.

- There were over 26,000 privately operated elementary and secondary schools in 1985-86.

Elementary and secondary	Public 1987-88	Private 1985-86
Elementary	59,311	15,303
Secondary	20,758	2,438
Combined	2,179	4,949
Other schools*	1,000	2,926
Total	83,248	25,616

*Includes special education, alternative, and others not reported by grade span.

Colleges and universities	1987-88		
	Total	Public	Private
4-year colleges	2,135	599	1,536
2-year colleges	1,452	992	460
Total	3,587	1,591	1,996

3. Enrollment

- After years of decline, public elementary and secondary (el/sec) enrollment began rising in 1985.
- Higher education enrollment has increased during the past two decades despite a drop in the traditional college-age population beginning in the early 1980s.
- Since 1980, private school enrollment has remained relatively stable.
- The rise in higher education enrollment is due partly to a substantial increase in the number of women, of older, and of part-time students.

Enrollment in public elementary and secondary schools and higher education institutions.

	Enrollment in fall (students, in millions)				
	1975	1980	1985	1990*	1995*
Elementary (K-8)					
Public	30.5	27.7	27.0	29.4	30.8

*Projected.

4. Teachers

- In the fall of 1988, there were approximately 2.6 million elementary and secondary school teachers in public and private schools.

- Over the past 20 years, the number of teachers has risen steadily despite a general decline in enrollment.

Number of elementary and secondary teachers

Fall of Year	Total	Public	Private
	(teachers in thousands)		
1960	1,600	1,408	192*
1965	1,933	1,710	233

Other	---	3.6	1.2	0.7	3.4

---Not available.

5. Revenues

- In 1979, an historic shift occurred when the State share of revenues rose above the local share for the first time. The Federal share for elementary and secondary schools has always been relatively small.

Revenues for public elementary and secondary schools

School year ending	Total revenues $ billions	% Distribution		
		Federal	State	Local
1920	$1.0	0.3	16.5	83.2
1930	2.1	0.4	16.9	82.7
1940	2.3	1.8	30.3	68.0
1950	5.4	2.9	39.8	57.3
1960	14.7	4.4	39.1	56.5
1970	40.3	8.0	39.9	52.1
1975	64.4	9.0	42.2	48.8
1979	88.0	9.8	45.6	44.6
1980	96.9	9.8	46.8	43.4
1981	105.9	9.2	47.4	43.4
1982	110.2	7.4	47.6	45.0
1983	117.5	7.1	47.9	45.0
1984	126.1	6.8	47.8	45.4
1985	137.3	6.6	48.9	44.4
1986	149.1	6.7	49.4	43.9
1987	158.8	6.4	49.8	43.9

- Despite dramatic tuition increases in recent years, tuition accounted for only about 15 percent of all revenues in public institutions of higher education in 1986 and about 39 percent in private ones.

Higher education revenues, school year ending 1986

	% Distribution				
	Tuition	Federal	State	Local	Other
Public	14.5	10.5	45.0	3.6	26.4
Private	38.6	16.5	1.9	0.6	42.4

6. Expenditures

- Beginning in 1982, current-fund per student in public elementary/secondary schools began rising again, reaching a record high of $3,987 in 1989 in constant 1987-88 dollars.

Expenditures per student in constant 1987-88 dollars

School year ending	Current-fund expenditures per student 1/		
	Public el/sec	Higher education	
		Public	Private
1970	$2,300	---	---
1975	2,813	$8,837	$13,906
1978	3,101	8,883	13,967
1980	3,117	8,816	13,639
1982	3,104	8,390	13,295
1985	3,521	9,552	15,342
1987	3,832	10,083 2/	16,168 2/
1988	3,911 3/	---	---
1989	3,987 3/	---	---

1/ Current-fund expenditures are monies spent to meet current operating costs. They exclude capital expenditures, interest on school debts, loans, and investments. Constant 1987-88 dollars.

2/ 1985-86 data (latest avaiable).

3/ Preliminary.

- Total expenditures on education account for about 7 percent of our gross national product (GNP).
- After rising rapidly between 1959 and 1969, the proportion of GNP spent on education declined slightly as enrollment in elementary and secondary schools declined.

GNP, total education expenditures, and expenditures as % of GNP

Calendar year	GNP $ in billions	School year ending	Expenditures	
			In billions	As % GNP
1939	$91.3	1940	$3.3	3.6
1949	260.4	1950	8.9	3.5
1959	495.8	1960	23.9	4.8
1969	963.9	1970	68.5	7.1
1979	2,508.2	1980	165.6	6.6

1/ Projected.
2/ Includes expenditures of all Federal agencies.
NOTE: Federally support student aid that goes to higher education institutions through students' tuition payments is shown under "All Other" rather than "Federal." Such payments would add substantial amounts and several percentage points to the Federal share.

7. Educational achievement

- The proportion of 17-year olds who graduated from high school rose markedly through the 1960s, but there has been little change since then.

- At its highest point in 1970, there were about 77 graduates for every 100 persons 17 years of age--the highest percentaged in U.S. history. This percentage generally declined throughout the 1970s, falling to a low point of 71 percent in 1979-80. Since then the proportion has risen slightly.

High school graduates compared with population 17 years of age

School year ending	Total 17-year-olds (in thousands)	High school graduates 1/ (in thousands)	Graduates as % 17-year-olds
1870	815	16	2.0
1910	1,786	156	8.8
1920	1,855	311	16.8
1930	2,296	667	29.0
1940	2,403	1,221	50.8
1950	2,034	1,200	59.0
1960	2,672	1,858	69.5
1970	3,757	2,889	76.9
1975	4,256	3,133	73.6
1980	4,262	3,043	71.4
1985	3,658	2,677	73.2
1986	3,621	2,642	73.0
1987	3,696	2,698	73.0
1988 2/	3,779	2,793	73.9
1989 2/	3,761	2,781	74.0

1/ Includes graduates of public and private schools. For most years, private school data have been estimated.

2/ Estimated.

NOTE: Includes graduates of regular day school programs. Excludes graduates of other programs, when separated reported, and recipients of high school equivalency certificates.

- More and more people who did not complete high school by age 17 or 18 are returning to school or receiving high school equivalency certificates after passing tests such as the General Educational Development (GED) test, thus boosting the high school completion rate for older Americans.

- The number of people taking the GED exam increased more than tenfold from 1958 to 1987. Over three and a half million people passed the test from 1980 through 1987.

- The education level of the U.S. adult population has been increasing since 1940. However, the increase among young adults (ages 25-29) has slowed substantially since 1980.

Level of school completed, by age

	Level of school completed			
	% Ages 25 and over		% Ages 25 to 29	
Year	4 years of high school* or more	4 years of college or more	4 years of high school* or more	4 years of college or more
1940	24.5	4.6	38.1	5.9
1950	34.3	6.2	52.8	7.7
1960	41.1	7.7	60.7	11.0
1970	55.2	11.0	75.4	16.4
1980	68.6	17.0	85.4	22.5
1986	74.7	19.4	86.1	22.4
1987	75.6	19.9	86.0	22.0
1988	76.2	20.3	85.9	22.7

*Includes recipients of high school equivalency certificates.

- The U.S. Department of Education estimated that during the 1987-88 academic year more than 1.8 million college degrees were awarded.

College degrees awarded

School year ending	AA/AS	BA/BS	MA/MS	Ph.D	First Profes-sional
1971	252,610	839,730	230,509	32,107	37,946

DEPARTMENT OF EDUCATION

Student Achievement

The six national education goals that resulted from the historic education summit in Charlottesville are a challenge that must be met if our nation is to be internationally competitive in the next century. Goal Number Three sets objectives for student achievement and citizenship, and is concerned with improving "demonstrated competency over challenging subject matter" among students from all races, income levels, and educational backgrounds.

Academic performance as measured by standardized tests shows that students cannot perform many ordinary tasks. Only a small portion of 17-year-olds perform at the highest proficiency levels. Available trend data show that overall performance of U.S. students is not changing significantly. The gap between white and black and Hispanic students has been reduced, but is still serious. The percentage of all 18- and 19- year olds who have completed high school seems to have stabilized at around 75 percent. Performance levels are changing very slowly despite increases in teacher salaries and relatively stable enrollments.

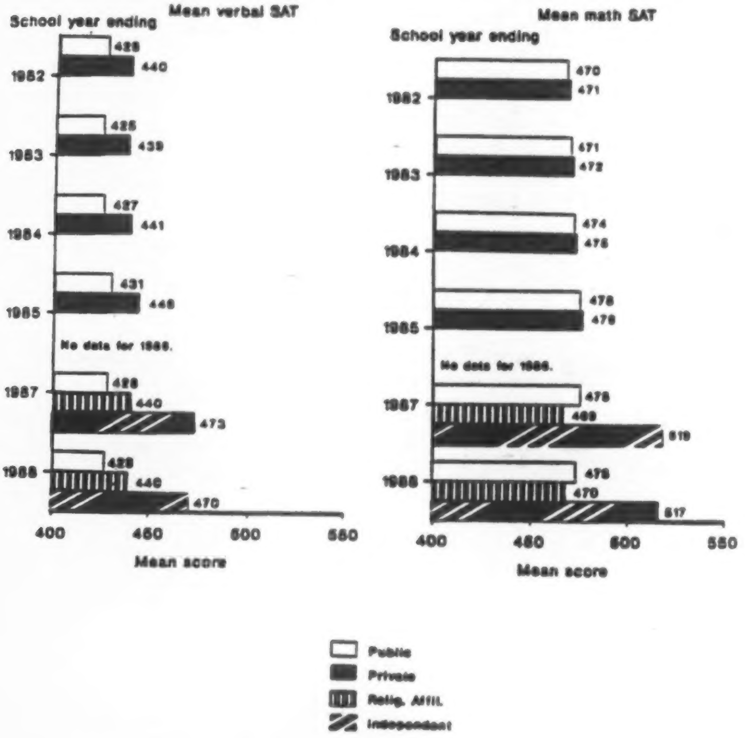
This report presents information on Scholastic Aptitude Test scores, as well as student achievement in reading, writing, science, mathematics, and geography. Chronological and international comparisons are provided when available.

DEPARTMENT OF EDUCATION

Scholastic Aptitude Test (SAT) Scores by Control of High School

Because of the changing mix of students by ethnicity and ability taking the SAT, definitive conclusions cannot be made on whether students with similar backgrounds perform better or worse now than in previous years. However, differences in scores between public and private school students are worthy of further analysis. Beginning in 1987, private schools began to be reported in two categories: "religiously affiliated" and "independent". From 1982 to 1985 mean mathematics scores were comparable for public and private school students. The mean verbal score of private school students, however, was typically 14 points higher than that of public school students.

Mean verbal and math SAT, by control of high school: 1982–1988



NOTE: As of 1987, private is reported as religiously affiliated or independent.

DEPARTMENT OF EDUCATION

Student Achievement in Reading

The results across the three ages show tremendous growth in reading comprehension as students move through school. The results also indicate improvement from 1971 to 1988 at all three ages, particularly at the lower levels on the scale. However, no gains are evident at the higher levels of reading ability defined by NAEP, characterized by adept and advanced skills and strategies.

Level 150 -- Rudimentary Skills and Strategies: Performance at this level suggests the ability to carry out simple, discrete reading tasks.

Level 200 -- Basic Skills and Strategies: Performance at this level suggests the ability to understand specific or sequentially related information.

Level 250 -- Intermediate Skills and Strategies: Performance at this level suggests the ability to search for specific information, interrelate ideas, and make generalizations.

Level 300 -- Adept Skills and Strategies: Performance at this level suggests the ability to find, understand, summarize, and explain relatively complicated information.

Level 350 -- Advanced Skills and Strategies: Performance at this level suggests the ability to synthesize and learn from specialized reading materials.

DEPARTMENT OF EDUCATION

Percentage of Students at or Above the Five Levels of Reading Proficiency, 1971 to 1988*

	Age	1971	1980	1988	Percent Change 1971 to 1988

Student Achievement in Writing

Informative writing is used to share knowledge and convey messages, instructions, and ideas. Persuasive writing attempts to bring about some action or change. Imaginative writing provides a special way of sharing our experiences and understanding the world. Five levels of proficiency were defined for each task: non-rateable, unsatisfactory, minimal, adequate, and elaborated. Non-rateable responses included those that were blank, off-task, and unreadable. Unsatisfactory responses were those that failed to reflect a basic understanding of the purpose of the writing. Minimal responses recognized the elements needed to complete the task, but were not managed well enough to ensure that the intended purpose of the writing was achieved. Adequate responses included the features critical to accomplishing the purpose of the writing and were likely to have the intended effect. Elaborated responses went beyond the merely adequate, reflecting a higher level of coherence and elaboration.

The average writing proficiency of Black and Hispanic students remained stable across time at all three grades. The performance gap between these minority students and their White counterparts was reduced slightly at grade 8 and unchanged at the other grades. This indicates that overall, the gap in writing performance between these minority students and their White counterparts remained large. In the results by gender, females at all grades performed noticeably better than males.

DEPARTMENT OF EDUCATION

Percentage of students writing at a minimal level or better,[1] by sex and race/ethnicity, by age: 1974, 1979, 1984

---

[1] Standards for minimal performance level differ by grade level.

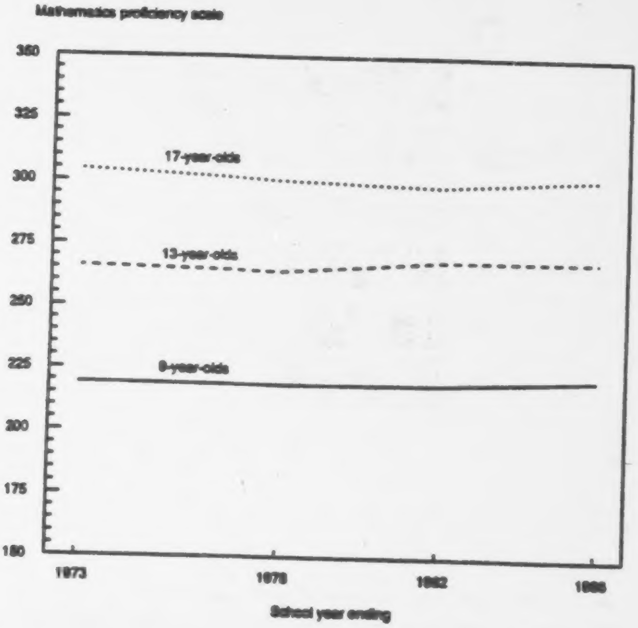
[2] All participants of this group were in school.

DEPARTMENT OF EDUCATION

Mathematics Achievement

In 1986, mathematics proficiency of 17-year-olds was no higher than in 1973, but it was slightly higher than in 1982. Between 1978 and 1986, 9- and 13-year-olds improved their mathematics performance slightly. While mathematics performance has improved, it remains low. Improvements occurred at the lower levels of the mathematics proficiency scale -- even at age 17, 49 percent of students were unable to perform moderately complex procedures.

Trends in average mathematics proficiency



NOTE: Mathematics Proficiency Scale

- Level 150 — Simple arithmetic facts
- Level 200 — Beginning skills and understanding
- Level 250 — Basic operations and beginning problem solving
- Level 300 — Moderately complex procedures and reasoning
- Level 350 — Multistep problem solving and algebra.

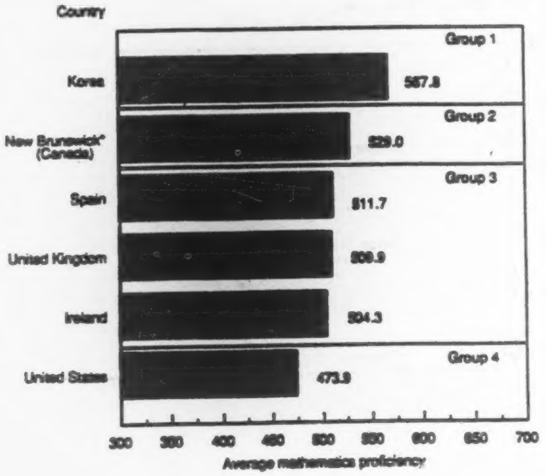
DEPARTMENT OF EDUCATION

International Comparison of Mathematics Achievement

As the world grows increasingly technological, mathematics skills of a nation's workers may be a crucial element of economic competitiveness. In the first International Assessment of Educational Progress, 13-year-olds from the United States and five other countries were assessed in a standardized fashion in mathematics proficiency. Students from the United States were in the lowest scoring group.

Average mathematics proficiency of 13-year-old students in six countries: 1988



* New Brunswick (English) is the median group of seven groups assessed in four Canadian provinces.

NOTE: Differences in performance among the four groups shown are statistically significant at the 0.05 level; differences within groups are not statistically significant.

Skills characteristic of different levels on the mathematics scale:
Level 300 – Simple addition and subtraction
Level 400 – Basic operations to solve simple problems
Level 500 – Intermediate level skills to solve two-step problems
Level 600 – Measurement and geometry concepts to solve more complex problems
Level 700 – More advanced mathematical concepts.

SOURCE: International Assessment of Educational Progress, *A World of Differences, An International Assessment of Mathematics and Science*, 1989.

DEPARTMENT OF EDUCATION

Average Mathematics Proficiency of 13-Year-Old Students in Six Countries, 1988

Country	Average Mathematics Proficiency
Korea	567.8
New Brunswick* (Canada)	529.0
Spain	511.7
United Kingdom	509.9
Ireland	504.3
United States	473.9

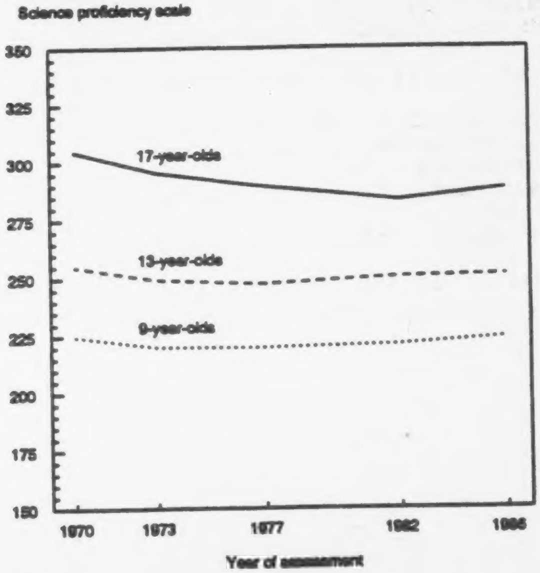
DEPARTMENT OF EDUCATION

Science Achievement

Despite some overall chronological improvement, there is no improvement in performance at the highest level by any age group compared to the 1982 NAEP assessment. Average science achievement scores remain low for all three age groups. The ability to apply scientific information, interpret data, and make inferences about outcomes of experimental procedures was exhibited by 28 percent of 9-year-olds, 53 percent of 13-year-olds, and 81 percent of 17-year-olds. However, only 8 percent of 17-year-olds could integrate specialized scientific information, infer relationships, and draw conclusions using knowledge from the physical sciences and applying the principles of genetics.

Trends in average science proficiency of 9-, 13-, and 17-year-olds: Selected years 1970–1986



* While 9- and 13-year-olds were assessed in the spring of 1970, 17-year-olds were assessed in the spring of 1969.

NOTE: Science Proficiency Scale
Level 150 = Knows everyday science facts
Level 200 = Understands simple scientific principles
Level 250 = Applies basic scientific information
Level 300 = Analyzes scientific procedures and data
Level 350 = Integrates specialized scientific information.

DEPARTMENT OF EDUCATION

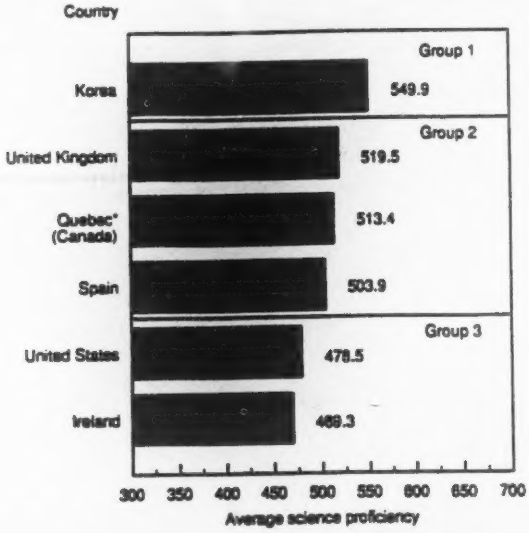
International Comparison of Science Achievement

The scientific proficiency of U.S. students is well below the mean on the first International Assessment of Educational Progress. The scientific capabilities of U.S. workers may indicate how competitive the nation will be in the global economy. In the first assessment, 13-year-old students from the United States and five other countries were assessed in a standardized fashion in science. Average proficiency levels fell into three groups, which were significantly different from one another. Students in the United States were in the lowest scoring group, well below the mean, along with Irish students and two groups of Canadian students.

Average science proficiency of 13-year-old students in six countries: 1988



* Quebec (French) is the median group of seven groups assessed in four Canadian provinces.

NOTE: Differences in performance among the three groups are statistically significant at the 0.05 level; differences within groups are not statistically significant.

Skills characteristic of different levels of proficiency on the science scales:

Level 300 = Knows everyday science facts
Level 400 = Understands and applies simple scientific principles
Level 500 = Uses scientific procedures and analyzes scientific data
Level 600 = Understands and applies scientific knowledge and principles
Level 700 = Integrates scientific information and experimental evidence.

DEPARTMENT OF EDUCATION

International Comparison of Geography Achievement

Global economic competitiveness and constructive diplomacy are dependent on an understanding of world demographics, political and physical boundaries, and a host of other geography facts that extend well beyond basic place names. Most students have never had a course devoted solely to geography and one out of seven adult Americans cannot positively identify the United States on a globe. Without adequate knowledge and analysis of geography, our students cannot hope to be cultural or economic equals of their international peers.

Mean Number of Areas[1] Correctly Identified in a Test of Geography Knowledge, by Country and Age: 1988

	Age				
Country	18 to 24	25 to 24	35 to 44	45 to 54	55 and over

COMPENSATORY EDUCATION FOR THE DISADVANTAGED

WITNESSES

DANIEL F. BONNER, ACTING ASSISTANT SECRETARY FOR ELEMENTARY AND SECONDARY EDUCATION

MARY JEAN LETENDRE, DIRECTOR, COMPENSATORY EDUCATION PROGRAMS, OFFICE OF ELEMENTARY AND SECONDARY EDUCATION

FRANCIS V. CORRIGAN, DIRECTOR, MIGRANT EDUCATION PROGRAMS, OFFICE OF ELEMENTARY AND SECONDARY EDUCATION

WILLIAM D. TYRRELL, DEPUTY DIRECTOR, DIVISION OF ASSISTANCE TO STATES, OFFICE OF SPECIAL EDUCATION AND REHABILITATIVE SERVICES

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET, AND EVALUATION

THOMAS M. CORWIN, DIRECTOR, DIVISION OF ELEMENTARY, SECONDARY, AND VOCATIONAL ANALYSIS, OFFICE OF PLANNING, BUDGET, AND EVALUATION

INTRODUCTION OF WITNESSES

Mr. NATCHER. At this time we take up the budget request for fiscal year 1991 for Compensatory Education for the Disadvantaged. We have before the committee Mr. Bonner.

Mr. Bonner, before you give us your statement, tell us who you have with you there.

Mr. BONNER. Thank you. On my right, Tom Corwin, Director, Division of Elementary, Secondary, and Vocational Analysis, Office of Planning, Budget, and Evaluation; Sally H. Christensen, Director, Budget Service, Office of Planning, Budget and Evaluation; and William D. Tyrrell, Deputy Director, Division of Assistance to States, Office of Special Education and Rehabilitative Services.

On my left is Mary Jean LeTendre, Director, Compensatory Education Programs, Office of Elementary and Secondary Education; and Francis V. Corrigan, Director, Migrant Education Programs, Office of Elementary and Secondary Education.

Mr. NATCHER. Thank you very much.

We are delighted to have all of you before the committee at this time.

Now, we will be pleased to hear from you.

FY 1991 BUDGET REQUEST

Mr. BONNER. Thank you very much, sir.

Mr. Chairman and members of the committee, I am pleased to appear before this committee to discuss the 1991 budget request for Compensatory Education for the Disadvantaged. The Department places the highest priority on programs that benefit the educationally disadvantaged. It is imperative that we not only continue to provide resources for the education of the disadvantaged, but that we ensure that those resources are used wisely and that schools are held accountable.

Our request responds to that need. Fiscal year 1991 marks the third year of operation for the Chapter 1 program as reauthorized by the Hawkins-Stafford Elementary and Secondary School Improvement Amendments (P.L. 100-297). Our budget request of $5,800,000,000 for Compensatory Education for the Disadvantaged is a $521,000,000 increase over the 1990 appropriation and reflects a continuing commitment to help States and localities meet the special educational needs of disadvantaged children.

Secretary Cavazos puts the highest priority on these programs.

CHAPTER 1 BUDGET PRIORITIES

This account makes up one of the largest budget items within the Department, accounting for almost 24 percent of our total 1991 request. Our 1991 request focuses funds on three priority areas: targeting resources on the most needy; supporting early intervention at the preschool level; and ensuring program improvement and accountability.

As part of our effort to target funds on the needy and to raise the educational performance of the disadvantaged, we are requesting increases for Basic Grants to local educational agencies, Concentration Grants, and the State agency migrant and neglected and delinquent programs.

Our proposal to double funding for the Even Start program reflects our support for early intervention programs. To encourage and support program improvement and accountability, we are requesting a large increase for State Program Improvement Grants that help States provide educational services to school districts implementing program improvement plans.

Increases are also proposed for State Administration to assist states in meeting their added technical assistance and administrative responsibilities resulting from Chapter 1's program improvement requirements, and for evaluation and technical assistance in order to support additional evaluations and to provide an analytical framework for the upcoming reauthorization process.

Rural technical assistance would be funded at the 1990 level. To create incentives for schools to improve, particularly those that serve disadvantaged children, we are requesting a large increase for the Presidential Merit Schools program.

I would like to submit the rest of my statement for the record and my colleagues and I will be pleased to answer any questions.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Daniel F. Bonner
Acting Assistant Secretary for
Elementary and Secondary Education

on

Compensatory Education for the Disadvantaged

Mr. Chairman and Members of the Committee:

I am pleased to appear before this Committee to discuss the 1991 budget request for Compensatory Education for the Disadvantaged. The Department places the highest priority on programs that benefit the educationally disadvantaged. It is imperative that we not only continue to provide resources for the education of the disadvantaged, but that we ensure that those resources are used wisely and that schools are held accountable.

Our request responds to that need. Fiscal year 1991 marks the third year of operation for the Chapter 1 program as reauthorized by the Hawkins-Stafford Elementary and Secondary School Improvement Amendments (P.L. 100-297). Our budget request of $5.8 billion for Compensatory Education for the Disadvantaged is a $521 million increase over the 1990 appropriation and reflects a continuing commitment to help States and localities meet the special educational needs of disadvantaged children. This account makes up one of the largest budget items within the Department, accounting for almost 24 percent of our total 1991 request.

Our 1991 request focuses funds on three priority areas: targeting resources on the most needy; supporting early intervention at the preschool level; and ensuring program improvement and accountability. As part of our effort to target funds on the needy and to raise the educational performance of the disadvantaged, we are requesting increases for Basic Grants to Local Educational Agencies, Concentration Grants, and the State Agency Migrant and Neglected and Delinquent programs. Our proposal to double funding for the Even Start program reflects our support for early intervention programs. To encourage and support program improvement and accountability, we are requesting a large increase for State Program Improvement Grants that help States provide educational services to school districts implementing program improvement plans. Increases are also proposed for State Administration to assist States in meeting their added technical assistance and administrative responsibilities resulting from Chapter 1's program improvement requirements and for Evaluation and Technical Assistance in order to support additional evaluations and to provide an analytical framework for the upcoming reauthorization process. To create incentives for schools to improve, particularly those that serve disadvantaged children, we are requesting a large increase for the Presidential Merit Schools program.

Grants to Local Educational Agencies

Chapter 1 Grants to Local Educational Agencies (LEAs) are the primary vehicle for providing compensatory education services to the disadvantaged. Within the LEA Grant program, we are requesting $4.5 billion for Basic Grants, which is $250.5 million more than the 1990 amount. These funds would be allocated under the basic grant formula that distributes funds to school districts that apply and have at least 10 eligible children. Consistent with the policy of targeting resources on areas with the greatest need, our proposed budget also includes $496 million for Concentration Grants, which is a $115 million increase over the 1990 amount. This allocation of funds between Basic and Concentration Grants follows the policy set forth in P.L. 100-297, the Hawkins-Stafford Amendments.

At the requested level, nearly 14,000 school districts, 90 percent of the districts in the United States, would continue receiving Chapter 1 funds in school year 1991-92. School districts would likely serve between 6.0 and and 6.2 million children with Basic Grant and Concentration Grant funds. However, this range is strictly an estimate because local school districts, not the Federal Government, determine the actual number served in any year. Program data attest to the large variation in the ways States and localities choose to use their Federal funds. In the 1987-88 school year, which is the latest year for which actual participation data are available, the program served 4.9 million children and the average Federal contribution per child ranged from $467 to $1,172, depending on the State.

Capital Expenses for Private School Children

For Capital Expenses for Private School Children, our budget includes $25.7 million, the same as last year's amount. These funds help school districts pay for the additional capital costs, incurred since July 1, 1985, of providing Chapter 1 services to private school students as a result of the *Felton* decision. Because of this Supreme Court decision, school districts have had to divert Chapter 1 funds ordinarily used for instruction to pay for the cost of noninstructional items, such as the purchase or rent of mobile vans and transportation of children to neutral sites.

Even Start

In keeping with the Secretary's belief in the importance of and benefits derived from early intervention, which was reaffirmed by the President and governors at the Charlottesville Education Summit, we propose to increase funding for the Even Start program from $24.2 million to $48 million -- nearly double last year's amount. This program integrates early childhood education and adult education for parents into a unified program to provide educationally disadvantaged adults with the basic literacy skills needed to help their children succeed in school. The requested increase would enable the program to operate an estimated 131 new projects in 1991, and continue funding for about 127 projects begun with 1989 and 1990 funds.

State Agency Programs

For the Chapter 1 Migrant program, we are requesting $293.7 million, an increase of $11.3 million over the 1990 level. Of this amount, about $8.4 million would support migrant coordination activities, including the Migrant Student Record Transfer System, and the remainder would support compensatory education activities provided by the State. In 1987-88, the latest year for which actual participation data are available, 386,000 children received services in the Migrant program.

For the Neglected and Delinquent program, we are requesting $34.1 million, a $1.3 million increase over the 1989 appropriation level. The increased funding for States is consistent with our general policy of focusing resources on programs that serve a needy population. In 1987-87, the latest year for which actual data are available, States provided services to 52,000 students.

Our budget includes $146.4 million in 1991 for the Chapter 1 Handicapped program, the same as the 1990 appropriation. In 1989-90, 266,200 children were counted and served by the program. Our request for level funding for this program, unlike the increases for the other State agency programs, stems from a strong belief that additional funds for educating the handicapped should be provided through the Education of the Handicapped Act State Grant program.

State Administration

To permit States to fulfill the various administrative requirements of Chapter 1, our 1991 budget request includes $54 million for State Administration. This is a $3.8 million increase over the 1990 amount. These funds will help States carry out their administrative and technical assistance responsibilities, which have grown in recent years because of the added accountability and program improvement requirements of the statute.

State Program Improvement Grants

For State Program Improvement Grants, our request provides $24 million, an $11.5 million, or 91 percent, increase over the 1990 level. This increase underscores our commitment to promoting accountability for program results at the State and local level. The proposed increase would enable States to provide additional educational services to school districts implementing school improvement plans. All of these funds must be used by States for direct services to schools.

Evaluation and Technical Assistance

We are requesting $15 million for Evaluation and Technical Assistance, a $3.1 million increase over the 1990 appropriation level. The additional funds are needed to support the third year of the longitudinal study in which data needed to assess the impact of Chapter 1 participation on student and adult outcomes will be gathered. Additional funds will also be used to conduct program studies that would focus on gathering evaluation data useful to the upcoming reauthorization process. Technical assistance activities would continue at their previous year's level.

Rural Technical Assistance Centers

We propose to fund the Rural Technical Assistance Centers at the 1990 level of $4.4 million. The services authorized under this program are designed to help rural districts address the special problems that the evaluation and program accountability requirements of Chapter 1 present for those districts, which tend to have few staff with sufficient expertise in program evaluation.

Presidential Merit Schools

For Presidential Merit Schools we are requesting $225 million, a $100 million increase over the 1990 contingent appropriation. This program, first proposed by the President as part of the Excellence in Education Act of 1989, is central to the Administration's campaign to raise academic achievement by strengthening accountability and providing financial incentives for educational success. Funds for this program would be used by States to reward schools that make substantial progress in raising students' educational achievement, creating a safe and drug-free school environment, and reducing the dropout rate. At the school level, the funds could be used for any purpose that furthers the school's educational program.

HEP and CAMP

Finally, we are requesting $9.6 million for the High School Equivalency program (HEP) and the College Assistance

Migrant program (CAMP) -- the same as the 1990 appropriation. This request would enable the Department to support project continuations for the current cycle of grants for both programs.

My colleagues and I will be happy to respond to any questions you may have.

Biographical Sketch

NAME : Daniel F. Bonner

POSITION : Acting Assistant Secretary for Elementary and Secondary Education

BIRTHPLACE AND DATE : Bronx, New York, August 10, 1937

EDUCATION : Fordham University, B.A.
New York University, M.A.

EXPERIENCE

Present : Acting Assistant Secretary for Elementary and Secondary Education, Department of Education
1988 - 1989 : Acting Deputy Assistant Secretary for Elementary and Secondary Education
1988 : Acting Director, State and Local Educational Programs, Office of Elementary and Secondary Education
1983 - 1988 : Associate Director, Domestic Anti-Poverty Operations, ACTION Agency
1983 : Director, Volunteers in Service to America (VISTA), ACTION
1982 : Special Assistant, Office of Volunteer Liaison, ACTION Agency; Director, ACTION/White House Regional Conferences on Voluntarism
1981 : Associate, Ethics and Public Policy Center, Washington, D.C.
1981 : Associate, Law and Economic Center, Emory University, Atlanta, Ga.
1973 - 1980 : Philanthropic Activities Associate, Education and Health Programs, Chase Manhattan Bank, New York, N.Y.
1970 - 1973 : Management Development Programs, Chase Manhattan Bank, New York, N.Y.
1960 - 1969 : Classified Advertising Specialist, New York Times, New York, N.Y.
1959 - 1960 : Bookkeeper, Loans and Discounts, Irving Trust Co., New York, N.Y.
1957 - 1959 : Company Clerk, U.S. Army, France, USAREUR
1955 - 1957 : Bookkeeper, Loans and Discounts, Irving Trust Co., New York, N.Y.

EFFECTIVENESS OF CHAPTER 1

Mr. **Natcher**. Thank you.

What are the latest reports on the overall effectiveness of the Chapter 1 Program in meeting the needs of disadvantaged students? What do they show?

Mr. **Bonner**. On the basis of assessments done in the past and our ongoing information, there is a definite improvement shown between Chapter 1 children who receive the attention and students who do not.

Ms. **LeTendre**. I would like to add that we see students who receive help in mathematics showing greater gains than students who receive help in reading.

Our latest report for the Chapter 1 evaluation shows that in reading there is an average of 2.81 NCE's and in math 6 percentile gains. We see students who are in elementary grades are showing greater gains than students in the secondary schools.

We also see that over the course of time the children who do not continue in the program tend to lose gains. I have noted in my travels and meetings that there is a tremendous variation in progress from school to school in our Chapter 1 Program.

For that reason we are pleased to focus on the accountability requirements in program improvement. Last week I sat with a panel that was selecting successful Chapter 1 programs. While, again, average gains in schools are between 3 and 6, in this program we saw 7 to 10 and even 23 NCE's. With the new focus on the legislation on success in the regular program and achieving not only basic but more advanced skills, I think we are going to see an even greater emphasis on gains in appropriate areas.

I think we will see more schools involved in improvement nationwide.

CHARACTERISTICS OF CHAPTER 1 STUDENTS SERVED

Mr. **Natcher**. Would you review for the committee the size and characteristics of the target population for Chapter 1 services.

Ms. **LeTendre**. Children eligible for Chapter 1 are children who live in areas with high concentrations of poverty who are considered educationally deprived. We define educational deprivation as a level that would be expected for children of their age and these children would not be attaining that level.

Because that definition will vary from local school district to local school district, some may have children up to the 50th percentile participate. When we looked at the schools we found most children entering at the 23rd percentile.

The numbers are not precise in terms of how many children are eligible, but looking at the children who do participate we see that 21 percent are Hispanic, 29 percent are black, those in pre-K, and K represent 8 percent. One through six is 72 percent and about 20 percent are in grades 7 through 12.

Fewer are in the secondary level. About 97 percent are in the public schools. We are currently serving about 4.92 million children. We expect to increase that amount by between 250,000 to 450,000 in 1990 and anywhere from 105,000 to 305,000 in 1991.

PORTION OF CURRENTLY ELIGIBLE CHAPTER 1 CHILDREN SERVED

Mr. NATCHER. What portion of those students who are eligible for Chapter 1 services are expected to be served under the 1991 budget and how has this changed in the last two years?

Mr. BONNER. I believe, Mr. Chairman, that the figure was between 45 percent and 62 percent of eligible children.

Ms. LETENDRE. Let me refer back to the definition of educational deprivation. It is difficult to get the number. I received information from nine large public school districts and they indicated to me that they were serving about 61 percent of the eligible population.

The increase in concentration grants means that those cities are serving more than the other cities in Chapter 1. You asked about the increased numbers indicating that we served about 200,000 more between 1986 and 1987 through 1988 and given that school districts determine how much money they are going to spend on their population, on an average we expect between 1990 and 1991 to serve 225,000 more students.

That is an estimate. It depends on intensity of services and numbers to be served.

Mr. CORWIN. We are clearly making progress in the Chapter 1 LEA grants program. We have been serving increasing numbers since fiscal year 1986. In 1990 we think we will show substantial progress and will continue that in 1991.

We are never too sure of the percentage of the eligible population we are serving because the eligible population is not clearly defined in the statute, but it looks like we are doing better.

AVERAGE PER-PUPIL COST OF CHAPTER 1

Mr. NATCHER. What is the average per student cost nationwide of the Chapter 1 Program and also tell us typically what type of services are being provided.

Mr. BONNER. The average is about 700-odd dollars. It ranges from about $406 to $1,100 or so dollars from one state to the others.

CHAPTER 1 SERVICES

Mr. NATCHER. What type service is provided, generally speaking?

Ms. LETENDRE. About 74 percent of the participants will receive reading and 43 percent will receive mathematics services, usually in small group settings of under eight with a teacher who is highly skilled, usually for 30 to 35 minutes class time spent with that Chapter 1 teacher.

By and large, although there is a trend away from it, that the majority of the instruction is provided in a pull-out setting such as a lab room fully equipped. Ninety percent are served in a pull-out setting or in combination with some pull-out setting.

CAPACITY OF CHAPTER 1 PROGRAM TO ABSORB INCREASED FUNDING

Mr. NATCHER. The 1990 Chapter 1 increase was $789,000,000 or about 17 as approved by Congress. If Congress wishes to expand the program in 1991, could the Chapter 1 system continue to grow at this rate without creating management problems?

Mr. BONNER. Sir, the program has absorbed to date the increases with some difficulty. We feel that the matter is a subject of close examination and scrutiny because we do feel that services within the program as required must be provided and, to underscore it, we need to take a hard look at current staffing and what it would take to meet the needs of the statute.

Ms. LETENDRE. It is true at the federal and state level that the monitoring and regulatory matters are not as sensitive to the size of allocation as you would find at the local level. With a sizeable increase of 17 percent, and with the statutory provision which will be in effect with the 1990 appropriation allowing only a 15 percent carryover, it may cause districts to have slightly more difficulty in management of those resources than they have had in the past.

CHAPTER 1 SECONDARY SCHOOLS BASIC SKILLS AND DROPOUT PREVENTION PROGRAM

Mr. NATCHER. This committee has been lobbied from time to time to fund the new secondary school grants under Chapter 1. This activity is authorized to receive up to $450,000,000 in 1991. The committee has taken the position that the distribution of Chapter 1 money should be left at the local level.

How do you feel about this?

Mr. BONNER. We agree that the decisions should be left at the local level to the extent practicable.

PORTION OF CHAPTER 1 FUNDS SERVING SECONDARY SCHOOL STUDENTS

Mr. NATCHER. What portion of Chapter 1 funds are being used for secondary school children and how will this change with the large increase in 1990?

Ms. LETENDRE. Approximately 20 percent of the participants are at the secondary level. We are not exactly sure what that translates to in terms of actual dollars being spent at that level. Districts must conduct an annual needs assessment and determine the priorities.

I have been concerned that many districts have continued to fund many of the same programs that they have funded in the past without carefully reviewing the data and making those decisions. However, that still remains a local decision.

It is possible that, particularly with the concern for a literate America, an America that is competitive, and the issues raised by the Governors and the President at the Education Summit, that there will be a closer look at providing assistance at the secondary level more than there has been in the past.

Mr. NATCHER. Will that percentage increase in 1990?

Ms. LETENDRE. Again, we have no way of knowing. One could assume that if decisions are made at the local level as they are—in the past we have found the level of participants to remain relatively stable with regard to the funding split between 1 and 6 and then 7 through 12.

I can only speculate with the heightened interest on the issue of dropouts, functionally illiterate Americans, that there may be an increased emphasis at that level.

Mr. NATCHER. Mr. Conte?

ASSISTANT SECRETARY OF ELEMENTARY AND SECONDARY EDUCATION

Mr. **Conte**. Mr. Chairman, thank you very much.

Mr. Bonner, this part of the education budget reminds me of the "Peanuts" cartoon where Lucy asks her buddies to describe what shapes they see in the clouds. Schroeder looks up and sees the head of Chopin; Linus sees the four the four horsemen of the Apocalypse. Charlie Brown pauses then says "I was going to say I saw a horsy and a ducky, but forget it."

Mr. Bonner, when I look in the clouds and think about Chapter 1, I see roses!

Mr. Bonner, have you ever been in the theater?

Mr. **Bonner**. No.

Mr. **Conte**. I am surprised, because you have done a fair amount of acting: acting director, acting deputy assistant, now acting assistant secretary. I think that must qualify you for an Oscar.

Mr. **Bonner**. Thank you very much.

Mr. **Conte**. What is the status of the top position in that office now?

Mr. **Bonner**. We are all delighted to say that within days the Assistant Secretary designate will be the Assistant Secretary. He is here and I would like to introduce Jack McDonald to you.

Mr. **Conte**. Good to have you with us. Congratulations.

RELATIONSHIP BETWEEN HEAD START AND CHAPTER 1

With the leadership of the President and the Governors, the primary emphasis has been on helping children in their early years. Head Start is up $500 million and depending on how you calculate it, Chapter 1, is up $366,000,000. What is the relationship between Head Start and Chapter 1? How do you assure that the benefits of those who receive Head Start are carried forward into the elementary school where they may or may not be served by Chapter 1?

Mr. **Bonner**. I think we can answer by pointing to a new program in Chapter 1, Even Start, for which we are requesting $48,000,000. The Even Start Program is a new venture, but it is validly rooted in social science practice and theory. It indicates that parents who are low income and who do not communicate well with their children must do that if their children are to thrive in school.

We feel that the tandem of a Chapter 1 Program, the entire program plus the Head Start, makes a welcome assist to the improvements for Head Start children.

Ms. **LeTendre**. Most of the youngsters in the Even Start Programs are between the ages of 3 and 5. It is quite possible that the increased funding for that program may make it such that the children will not need the help in the Chapter 1 Program though our regulations say that an Even Start programming is to be in the Chapter 1 attendance areas.

We think it might obviate the need for remediation if they are served in the Even Start Program.

COMPREHENSIVE APPROACHES TO SERVING DISADVANTAGED CHILDREN

Mr. **Conte**. Are there any opportunities to try to integrate comprehensive approaches including Chapter 1? One of my good friends in the business of advocating for children, sent me an article about the Beethoven Program in Chicago.

Can that kind of creativity be used in conjunction with Chapter 1 programs?

Mr. BONNER. Without knowing more about the Beethoven Program, I could not say. I would say, however, that say we should seek out every opportunity to make sure the programs are complementary and helpful to one another.

Mr. CORWIN. I think there is ample opportunity in Chapter 1 to run pre-K activities and they can be coordinated with other programs. As a result of the Education Summit with the Governors, the Administration is interested in exploring other opportunities for permitting comprehensive approaches to address educationally disadvantaged children, adult literacy or what have you.

The White House, and the Department, and the Governors are looking at what they call the Ed Flex approach where we would remove statutory problems in the way of comprehensive approaches. We could at least experiment with ways to get around these impediments.

EVEN START

Ms. LETENDRE. In observing what is happening in the child centered portion of the Even Start Programs, it shows a lot of collaborations with school nurses, the United Way, job training, private industries and literacy councils.

Mr. CONTE. What have you done in Even Start so far?

Ms. LETENDRE. We just funded the programs in October. So they are just getting started. But we are having a meeting February 28 and March 1 and 2 where we are bringing in representatives of 73 projects we have funded to discuss with them their responsibilities for doing an evaluation of their program.

We have also funded a contract to do a national assessment looking at the services to the children, the adult/parent training, how well services are being integrated. That report is due in 1993. But we will have interim reports each year.

We don't have effectiveness data as yet. In studying profiles of the projects, we are getting a good sense of the program. We are seeing that the program draws on existing resources in the community and that, for instance, in Lowell, Massachusetts, while that is not your district, we know that there is collaboration with the university there in order to have work/study students and interns provided to support both the child and parent part of the program.

SCHOOLWIDE PROJECTS

Mr. CONTE. I am interested in that program, because we are thinking of something like that for Holyoke. In fact I spoke with the Secretary about it this morning.

The 1988 Hawkins-Stafford amendments encouraged the use of Chapter 1 funds under school-wide plans. Do you favor the use of Chapter 1 funds in that particular manner?

Mr. BONNER. Sure.

Mr. CONTE. Give me some advantages of school-wide plans.

Ms. LETENDRE. In order for that school to qualify the school has to have a poverty rate of 75 percent or more. Any time a school is that impacted with poverty we know there is a close correlation between the poverty level and the educational deprivation of the children attending.

In many cases it would be wisest for the school to look at its entire program rather than pull numerous children out and try to provide supplemental programs. It allows the school to assess its overall program and if it keeps lowering the class size, it is good. We think that there can be a plan with goals for the entire school and looking at generally increased in-service training for staff.

The good part of the program is that it does focus on effective schools within a total school setting. Studies have shown that when the Chapter 1 Program is successful more often than not, it is operating in a school that is also successful.

NUMBER OF SCHOOLWIDE PROJECTS NATIONALLY

Mr. CONTE. Since the Hawkins-Stafford amendments went into affect how many more local education agencies are now operating Chapter 1 school-wide plans than before?

Ms. LETENDRE. We know there were relatively few before. We just completed a survey including 14 on-site visits to states. We learned that of the possible 7,000 schoolwide projects nationwide, there are at least 745 in 45 states. Twelve states do not have any at all. Basically the reason is that they do not have LEA's that have schools that have that high degree of poverty.

Five states have a large number of them, including Tennessee, California, Texas, Florida and Pennsylvania. We are seeing that states are working with districts to try to make them effective. It is a new way of thinking for a Chapter 1 Program.

It does require some additional resources because when you are putting money into a school-wide project most schools within the district don't serve the whole span of grades. In a school-wide project if you were serving K through 3 in terms of educational deprivation, you would have to put in dollars not only for the K through 3 educationally deprived children, but for all the children in the school.

So it does take increased resources. I believe with the increased appropriations for 1990 we are going to see additional increases in school-wide projects. It has been one of the new provisions in the statute that I think has been implemented more than a lot of the others.

CHAPTER I ACCOMPLISHMENTS RESULTING FROM INCREASED BUDGET

Mr. CONTE. In the fiscal year 1990 budget, this committee, particularly Chairman Natcher, increased the funding of Chapter 1 by nearly $800,000,000. If he could, I think he would have made it $1,000,000,000.

What will be accomplished by this infusion of funds into this program?

Ms. LETENDRE. We know we will serve additional students. We expect over 200,000 additional students will be served. Hopefully they will be served better with the new accountability provisions in the statute.

Perhaps some will take advantage of the flexibility to use 5 percent of their district dollars to do innovative kinds of programs.

We have not seen that very widely used yet. Where it has been used it has been used for increasing parental involvement and following some of those children who otherwise would not be eligible, but have previously participated in the program.

EFFECT OF SEQUESTER

Mr. **Conte**. I fought very hard to try to stop sequestration last year and lost. We were sequestered for four months. Under Chapter 1 you lost $66,000,000 as a result of sequestering. The Secretary said this morning that the effects of sequestering had not been felt on these programs because they were forward funded.

That means the effects will be felt next September. What does the loss of $66,000,000 mean? How many children will not be served as a result of this $66,000,000 cut?

Ms. **LeTendre**. It is difficult again to tell you. We could do some estimating for the record.

Mr. **Corwin**. There is a wide range. We think it will be around $800 a child. That is 78 to 81,000 students. We still had a 17 percent increase. We were expecting a large increase in the number of students served. When the Congress puts more money into the program generally there is an increase in the number of students served.

In the two times when the funding went down there was a slight decrease in the number served. So clearly when you put money in we serve more.

Mr. **Conte**. Do you agree that sequestration does not work too well?

Mr. **Corwin**. Well, I will agree.

Mr. **Natcher**. Mr. Stokes, I yield to you.

AMOUNT AVAILABLE FOR CHAPTER 1 IN 1990

Mr. **Stokes**. What amount will the Department spend in fiscal year 1990 for Chapter 1? Let me give you the reason for wanting to know that figure.

Information provided by the Department gives us a figure of $4,500,000,000. You say your fiscal 1991 request amounts to an increase of 8 percent.

However, the Committee's chart showed that the fiscal year 1990 will be $4,700,000,000. So if that is true, the request would only represent a 4 percent increase, which is not enough for inflation.

It appears that your estimate of 1990 assumes that Magnet Schools of Excellence and Merit Schools will be authorized. Is that correct?

Ms. **Christensen**. Yes, Mr. Stokes that is correct. When we put the budget together, we were extremely hopeful we would have that legislation in place by March 1. Of course it is becoming increasingly evident that that will probably not happen. So that money will go back into Chapter 1.

In other words, when we go out with our allocations to the LEA's in March, that full amount will be reflected, assuming that there is no authorization language by that time.

Mr. STOKES. Based on what we have discussed, your actual increase will be 4 percent.

Ms. CHRISTENSEN. Yes, exactly.

EVEN START

Mr. STOKES. You are proposing that the Even Start Program be nearly doubled. Can you tell us how many families you are currently reaching and how many more could be reached with the proposed increase?

Ms. LETENDRE. We actually do not have numbers on how many families we are reaching in that we are just beginning and many of the new projects had to recruit participants. In our recruiting I have some examples for you in terms of numbers. We know in San Antonio there are 244 eligible families; Upper Marlboro, 2,200 eligible families. The numbers vary.

Part of our evaluation will be to gather correct data on that. It is difficult since they are just beginning and these families have not previously participated and have to be recruited. It is difficult to give numbers.

COORDINATION OF EVEN START WITH OTHER PROGRAMS

Mr. STOKES. This program incorporates early childhood and adult education programs. Is it coordinated with adult literacy programs and Head Start?

Mr. BONNER. It is a new program, it must be supplementary. We are conscious of the importance of coordination and constructing effective links to those other programs.

Ms. LETENDRE. We have met with people representing the Head Start program both here in Washington and those in the western part of the country. We have also met with the Adult Basic education staff in the Department.

We coordinate by sending applications and information about the Even Start program to all adult education State coordinators, as well as to literacy councils across the country.

NEGLECTED AND DELINQUENT PROGRAM

Mr. STOKES. I note an increase of $1,300,000, about 4 percent, is requested for the program for neglected and delinquent children. This is a modest increase for inflation. Can you tell us about the population you serve in this program and whether or not it is increasing?

Mr. BONNER. There are two basic types of categories that we are concerned with, as the title of the account indicates, neglected children who are largely taken care of at the State level, and delinquent children.

They are provided with a battery of enrichment programs to bring them to a level at which they can function when they are no longer either incarcerated or held in the institutions for the neglected.

Ms. LeTendre. I would like to add that our 1987-1988 data showed we served 52,000 of those students. Sixty-eight percent were in juvenile facilities, and 32 percent in adult correctional facilities. Most of them are older teenagers, with 58 percent being 17 to 18 years old. Thirty-seven percent were between 14 and 16. Only 5 percent were under the age of 13 years old.

We have a contractor who presented some preliminary data to us. We will be sharing that before October of this year, and we will then have a more complete profile of what a typical student would look like.

A typical student stays in the institution six to 12 months, so the opportunity to assist them is limited in terms of the institutions.

EVALUATION OF THE NEGLECTED AND DELINQUENT PROGRAM

Mr. Stokes. Have we had an evaluation of that program?

Ms. LeTendre. In 1977, there was one and there is one currently being conducted by a company known as Westat. They are in the process of identifying effective practices, as well as effective outcome data. We have identified a profile of an effective program that they consider exemplary. It emphasizes basic skills, occupational skills and life skills.

It has personal profiles, diagnostic type of assessment batteries, highly skilled, certified teachers. Peer tutoring seems to be successful, not only does it help the inmates, but it gives the one tutoring higher self-esteem and has been shown to improve relationships with the other peers in the institutional setting.

Most of all, the instructional materials in the programs are those that relate to real-life situations.

Mr. Stokes. I think that Westat report also reflects that the reasons for not serving more students in facilities for neglected and delinquent youth includes lack of funds and insufficient classroom space.

Ms. LeTendre. That is true. However, for juveniles in adult correctional facilities, it was more often inappropriate behavior and refusal of the services. We have 32 percent of the students served are in adult correctional facilities. It is something we will have to look at in terms of the approaches that will work in relation to people in institutions.

PRESIDENTIAL MERIT SCHOOLS

Mr. Stokes. Why is the Department requesting funding for Presidential Merit Schools under the compensatory education programs? I would like to know the relationship of compensatory education to the Merit Schools program.

Mr. Bonner. Merit Schools are those that are achieving in various ways measures of success, that have not arrived but which, under difficult circumstances, are making inroads into the matter of dropouts, scholastic deficiencies and the like, creating a safe environment in the school, et cetera.

That, it seems to us, is directly in line with the activities.

Mr. Corwin. An additional factor would be that a good portion of the Merit Schools' funding would go out through the Chapter 1 formula. In addition, we see the Merit Schools program as targeting funds to a lot of the same schools that receive Chapter 1 funding and giving an award and incentive to those Chapter 1 schools that are raising standards among disadvantaged students.

Mr. STOKES. How would the Department ensure that this funding does not go to schools that now have the resources to meet these goals? In other words, how would we get funds to schools that really need the help to achieve the goals?

Mr. BONNER. We would put the program on a footing such as the States will be given guidelines by which they must operate the program. We would, of course, want and require the programs to basically be in line with the same student populations that are served by Chapter 1.

Mr. STOKES. You agree this is something you ought to be concerned about?

Mr. BONNER. We appreciate that.

Mr. STOKES. Thank you.

Mr. NATCHER. Mr. Early?

EFFECT OF SEQUESTER

Mr. EARLY. We have had questions with regard to the sequestration, but could you provide for the record State-by-State listings of the effects of sequestration on basic and concentration grants?

Mr. BONNER. Yes, sir.

[The information follows:]

Comparison of Estimated 1990 Chapter 1 Basic Grant Allocation
Based on Conference Action and the Sequester

	Basic Grant Allocation Based on Conference Action	Basic Grant Allocation Based on Sequester	Loss Resulting from Sequester
United States	$4,427,250,000	$4,373,146,000	($54,104,000)

NEGLECTED AND DELINQUENT STUDY

Mr. **Early**. What is the status of the current study on neglected and delinquent programs?

Mr. **Bonner**. That is the Westat study.

Ms. **LeTendre**. It will be completed by October 1990. There are some draft reports and some preliminary data that have been released. The final will be out in October.

I think I shared some of the information that will be helpful to us. We will be looking at effective practices and programs, but there has not, to date, been an in-depth look at what makes an effective program, or what are some good measures and ways to assess progress, given the stay of only six to 12 months in neglected or delinquent institutions.

Mr. **Early**. We are not going to find out much that we don't know already about them, are we?

Mr. **Corwin**. We know it is a difficult population to serve. If a child is growing up in a orphanage, you can probably provide services, but when it is someone in an institution for six months or less, sometimes a month, there is not a whole lot that you can do. We want to find out where the institutions are succeeding so we can get the word out.

Mr. **Early**. An institution that has good management, will produce the best results. It is not something we don't already know.

Mr. **Bonner**. You make an excellent point, Mr. Early. I think it needs to be said that the compensatory nature of the services provided may be different from what the people in the institutions may employ on a day-to-day basis.

SCHOOL IMPROVEMENT

Mr. **Early**. The Administration is also requesting an increase for State program improvement grants, almost double the 1990 appropriation of $12,544,000. Since the funds for this program did not become available until July 1, 1989, we have had no data to estimate what our success has been. But you are doubling the amount of money.

You did not have to study it. You just did what you had to do in that program.

Mr. **Bonner**. I think we take seriously your logic.

Ms. **LeTendre**. We follow your logic, but we know there are a number of schools that are in need of improvement. We want to find out with the use of this money how these direct services to these schools can be improved. The whole issue of accountability and holding individual schools accountable for results is new, we know. It will make a big difference in the success of the program.

For the first time, they have to look at advanced skills. There are over 1,900 districts that have schools involved in improvement. Over 4,800 schools are involved in school improvement. Each must develop a program improvement plan. This is just a little money to provide added impetus.

USEFULNESS OF PROGRAM EVALUATIONS

Mr. **Early**. You did not get any data back and you doubled the program's funding. I think that is the right direction. I think there are very few programs in education which need further study.

Mr. **Corwin**. We are in a situation in the Department where the Hawkins-Stafford amendments made significant changes to the statute concerning for example, School-Wide Projects, and for Program Improvement, as Mr. Conte discussed. If we don't put any money at all into studies and evaluation, we would not have anything to tell the Congress when the program comes up again for reauthorization.

Mr. **Early**. You don't need a lot of stats, just your judgment. You are smart and educated.

Ms. **Christensen**. Mr. Early, you made a good point earlier that the types of services vary greatly from State to State, and their effectiveness in reaching the target population varies. To the extent that we can identify the most promising and effective practices and get them to other States and local schools; that is another, I think, an overriding reason for increasing funding for evaluation.

CAPITAL EXPENSES FOR PRIVATE SCHOOL CHILDREN

Mr. **Early**. On the private school initiative, I notice you level-funded that, and I know about the Supreme Court decision. If we are looking just to address the problem of the needy and disadvantaged, we need to get some money to the private schools.

Dr. Bonner, would you have preferred to increase that?

Mr. **Bonner**. It is a matter of addressing the overall needs for the entire education budget, all individual accounts, including that one. We recognize that there is a severe need there, because the effects of the earlier Supreme Court decision are still with us. That is why the capital expenses program is included in the budget.

Mr. **Early**. I think it would have been better off if we increased funding for this program, if we were just trying to do what was best educationally. Elementary and secondary schools are having more trouble than higher education. I am not as concerned about Harvard, Holy Cross and UDC as I am about the elementary and secondary schools.

Ms. **LeTendre**. The report indicated there was a need for future expenses of $104,000,000. With the funding of $19.7 million that was appropriated in 1989, and the $25,000,000 in 1990, we already have $44,000,000 so we are incrementally addressing that issue.

Mr. **Early**. I think that is money better spent, and we don't have to study anything. I know the private schools in my State, not only the Catholic ones, but all of them, are having trouble. I would prefer to see that accomplished.

Mr. **Natcher**. Mr. Hoyer?

PROPOSED INCREASE FOR CHAPTER 1

Mr. **Hoyer**. In looking at compensatory education, Mr. Stokes asked about including the Merit Schools, for which $225,000,000 is requested. If we do not include that, am I correct that the increase in Chapter 1 is approximately 4.4 percent?

Ms. **Christensen**. Right, it would be a 4-percent increase.

Mr. **Hoyer**. If it is a 4-percent increase, am I correct that you are using as your cost-of-living adjustment or CPI 4.1 percent?

Ms. **Christensen**. It is about 4.1.

Mr. **Hoyer**. Now, let me ask you this. I understand what you are saying about the relationship to Merit Schools and that is all well and good, but how can we serve more students when we are giving essentially only a cost-of-living increase other than Merit Schools?

Mr. **Corwin**. Our response, which indicated that we should be serving more students was predicated on the assumption that we should receive an 8-percent increase. With 4 percent, I wouldn't predict that would happen.

MERIT SCHOOLS BUDGET REQUEST

Mr. **Hoyer**. If the Merit Schools is not approved, would you favor putting the $225,000,000 into Chapter 1 grants?

Ms. **Christensen**. It would automatically go into chapter 1 in 1990.

Mr. **Hoyer**. In 1991.

Mr. **Bonner**. It needs to be said.

Mr. **Hoyer**. I am for doing it in 1990 and 1991. How about $225,000,000 in each year?

Mr. **Corwin**. Unless we get that authorization within the next week, we would certainly have no problem in putting Merit Schools funds back into Chapter 1 in 1990. For 1991, we would stand by our budget.

Ms. **Christensen**. The legislation is moving forward. We have a Senate-passed bill, and we believe the House will be marking up in committee in the near future. So, we are optimistic that we will have something for 1991.

Mr. **Hoyer**. You seem to be making a direct analogy between your Chapter 1 and Merit Schools grants. If you are doing that, what is the difference?

Mr. **Bonner**. I don't grasp the question, sir.

Mr. **Hoyer**. The President says we are going to increase the number of Chapter 1 students served. As I understand your budget, that premise is based upon the extra $225,000,000. If the increase is only 4 percent for chapter 1 and 4 percent for the Merit Schools, you cannot do it. That is what Mr. Corwin just told me. That seems to make sense. With inflation, you cannot expand service, you can simply pay for services already being provided.

That is the theory about the base line, correct? Now, my question to you is, if the $225,000,000 is different from the Chapter 1 grant, which clearly it is, how can you then add it on to justify the suggestion that we are going to increase services to students? The $225,000,000, as I understand it, is to reward those schools that are doing well, correct?

Mr. **Corwin**. Those that are making progress.

Ms. **Christensen**. We are not saying that the programs are basically the same kind of programs. What we are looking at is the appropriations language that was put in last year that had a provision that this money could be transferred—

Mr. **Hoyer**. To the Merit Schools?

Ms. **Christensen**. To the Merit Schools and to Magnet Schools, if the legislation were enacted in time.

BUDGET BASE FOR 1990

Mr. **Hoyer**. That is not going to be, so we will have that $225,000,000 in. That is included, I take it, in the $5,358,000,000 now? That was the post-sequestered fiscal year 1990 appropriations, so that $225,000,000 is in there.

Mr. **Corwin**. $5,358,000,000 was the pre-sequestered amount.

Mr. **Hoyer**. I think this is your document, sir. No, this is the——

Mr. **Corwin**. It is $5,183,000,000.

Ms. **Christensen**. But that excludes merit and magnet schools.

Mr. **Hoyer**. So, if you add merit and magnet schools back in, it is $5,358,000,000 which you like to do because you like to get your figures way up.

Ms. **Christensen**. This one, we were trying to get down, so we could show an 8-percent increase.

Mr. **Hoyer**. Ms. Christensen, such candor might get you in trouble. Seriously, that is a problem. We are not increasing 8 percent. I understand exactly what Sally is saying.

Ms. **Christensen**. When we put the budget together, we were very optimistic at that point that we would have the Merit Schools and Magnet Schools legislation in place.

BUDGET REQUEST FOR 1991

Mr. **Hoyer**. I think all of you and all of us on this committee want to serve the broadest range of children possible. You heard my questioning of Secretary Cavazos. I think we have a crisis in this country.

Inside the Beltway we have some very heavily impacted areas. We are not serving students.

Let me ask you some specific questions, if I can. I don't think this budget responds to our problem, because I think we need a crisis budget rather than a 4.1-percent budget. And possibly if you have another program, if you put that in there, Sally, it won't be 8 percent. Assuming you are going to spend $5,385,000,000 this year on Chapter 1, and $5,838,000,000 if you include the College Assistance Migrand Program, and High School Equivalency program?

Mr. **Corwin**. That is right, if you include Merit Schools in that total.

Mr. **Hoyer**. And the Merit Schools. Of course, I know you stand by your budget, but if we don't do that, we will roll it back in. I would really like a detailed answer as to why you think there will be a good analogy between the Merit Schools dollars and the Chapter 1 grant dollars to serve children in Prince Georges County or Massachusetts or Kentucky. How can you make sure the programs are comparable? I know the legislation would use the same formula.

QUALIFICATIONS OF CHAPTER 1 STAFF

Let me ask a specific question. Have you looked at the pay for teachers in compensatory education, and also in Head Start. I wonder if our least experienced teachers may be teaching our most at-risk and most difficult to educate children.

Do you believe that is the case?

Ms. LeTendre. I was looking at some data today that said our Chapter 1 teachers, in terms of holding certificates of advanced degrees, exceed the regular classroom teachers something like 6 to 28 percent.

ELIGIBILITY FOR CHAPTER 1

Mr. Hoyer. That is excellent. I didn't know that.

We mentioned the difficulty of defining who was eligible. There is no national standard. It is all done by States or by LEAs?

Ms. LeTendre. All done by LEAs.

Mr. Hoyer. Is that appropriate, do you think?

Ms. LeTendre. We had a long discussion about that. We received input through a series of six regional meetings held across the country in order to develop regulations. We discussed that again at negotiated rule-making. Almost without exception, the consensus of those who had to carry out the program at the State and local level was that it was most appropriate that those decisions would be made at the local level.

The law does address the issue of assessment of the students. It says they should be assessed according to objective criteria, both written and oral, uniformly applied across grades. One would hope that each district has some flexibility in doing that.

I have encouraged multiple factors to be considered. One standardized test alone should not give the total picture of educational deprivation. When we defined it to be that a child is not functioning at a level appropriate for its age, we made sure it was not grade, because some children are retained in grade, and we didn't want that to be the issue. Appropriate for age.

That allows local districts the opportunity to weigh in teacher judgment, grades in the classroom, other types of criteria and reference information they may have in order to say in our district, given our student population, this is what constitutes educational deprivation.

That, of course, is going to vary from district to district. We know that in some districts, there are lower achieving students that are not served at all grades and in all subjects because the concentration of poverty is high.

We also know in wealthier districts sometimes they apply local norms, because in fact that makes more sense in terms of selecting students for that particular school district.

Mr. Hoyer. If I understood what you said at the end, some districts are less educationally-deprived. Then we assume all educationally-deprived children would receive aid in that particular district, which more educationally-deprived children would not receive in another district because of criteria?

Ms. LeTendre. That is right. Any county or any school district where there are 10 poor children counted for census purposes is eligible to receive a grant by law. Therefore, you see a variation in degree of poverty.

IMPACT OF CHAPTER 1 FORMULA

Mr. HOYER. Would it be fair to conclude the operation of that formula may have the effect of underserving the most needy?

Ms. LETENDRE. The Administration proposed tightening up that formula to some degree, and we were not successful. Congress rejected it because it eliminated some——

Mr. CORWIN. We did some tightening up. We came away with half a loaf. We think the formula is doing better. A lot of the data we use are 10 years out of date now. To a large extent, the Chapter 1 funds are allocated on the basis of 1980 census data. The pattern of poverty has changed since 1980.

CHAPTER 1 INSTRUCTION

Mr. HOYER. How many minutes of instruction does the average Chapter 1 student receive now?

Ms. LETENDRE. Students receive Chapter 1 instruction for approximately 30 to 35 minutes a day. They usually receive it five days a week. However, since most of the programs are being provided within the context of the regular school day, children are usually missing some other subject. Classroom teachers, and I think rightfully so, are making the decision that if you are going to get extra help in reading, let's take it out of the language arts block, provide reading instruction for 20 minutes and another group for 20 minutes.

The student who is not receiving direct instruction from the teacher would be having independent seat work at the time that other students are receiving additional instruction in Chapter 1.

In terms of real time, only 10 to 15 minutes has been added to a child's instructional day. I have been saying, any time I have an opportunity to speak to local school districts, that they should look at extending the time by looking at different ways of providing instruction, take-home computers, asking them to seriously take another look at before and after-school programs, and, if they didn't work before, to try again. The majority of our parents are concerned about children going home, becoming latchkey children, if you will. They have indicated they would be willing to pay for additional time. Chapter 1 could provide that.

District administrators, I think, need to take a real hard look at adding real time to the child's day. We really want a supplemental program. We need to take a look in that regard at funding more pre-school programs. That is when we really have supplemental time, when they are not engaged in any other kind of instruction.

PRE-SCHOOL EDUCATION

Mr. HOYER. How early would you recommend that pre-school time? What age?

Ms. LETENDRE. Our guidance in the legislation talks about an age from which they will be able to benefit from instruction. We find no earlier programs than 3 years old. Most are 3 and 4-year-old programs.

Mr. HOYER. Montessori begins at 3?

Ms. LETENDRE. Yes.

Mr. HOYER. They are pretty effective programs?

Ms. LeTendre. For some children.

Mr. Hoyer. Why?

Ms. LeTendre. There are different children who benefit from different kinds of approaches to instruction. There are different theories about what is best for all children. For some, it may be better. For some, a more developmental, more relaxed pace would be more appropriate. We let school districts make that decision themselves.

SCHOOL EXPECTATION FOR STUDENT PERFORMANCE

Mr. Hoyer. How big a problem do you think the expectation of "who can" and "who cannot" perform is in our educational system?

Ms. LeTendre. I think it is a major problem.

Mr. Hoyer. I think you just articulated that somewhat?

Ms. LeTendre. We just released a study called "Alternatives." It challenges some of the past conventional wisdom, if you will, about education of the disadvantaged. Some of that has to deal with notions that we have regarding ethnicity and minorities and various cultures, and what one can expect from certain children.

There is also a challenge to the notion that you must be able to have the basic skills. In other words, you have to be able to spell before you can write. The study is encouraging schools and teachers and all those involved with education to set higher expectations. We continue to do that as we look at the accountability provisions in Chapter 1.

For the first time, we have an emphasis on not only basic skills, but more advanced skills. This year for the first time, we will be receiving data on advanced skills. I am quite sure that the 9.5 percent of schools that have been currently identified for program improvement are going to increase when we have to look at not only the basic skills score in reading, but also, if you will, a comprehension score, and not only basic computation in math, but also problem-solving.

I think we are going to see more schools recognizing that we have to address the issue of advanced skills. We are currently in the process in the Department of conducting eight regional meetings across the Nation on program improvement. As part of those sessions, we are focusing on these very issues and are providing strategies for effectively addressing how one can teach advanced skills, what they are in the context of Chapter 1.

Mr. Hoyer. Thank you, Mr. Chairman.

TARGETING OF CHAPTER 1 FUNDS

Mr. Natcher. The Hawkins-Stafford amendments in 1988 attempted to significantly improve the targeting of Chapter 1 funds. In your view, has that effort been successful?

Ms. LeTendre. The national assessment of Chapter 1 indicated that there is a very strong correlation between the concentration of poverty in a school and the educational deprivation and achievement level of the children attending that school.

The study showed that children, regardless of income, are going to do less well in a school where there is lots of poverty. I think our formula does address it, particularly through concentration grants.

We know that 42 percent of the Chapter 1 population is poor compared to 20 percent of the general school-age population. Ninety percent of those school districts that have a high concentration of poverty—in which the poverty rate is 50 percent or higher—receive Chapter 1.

Seventy-five percent of all Chapter 1 students are in districts that are considered to be high-poverty and above the national midpoint for poverty. We know that 45 percent of all the students are in the quartile of the districts that have between 50 to 100 percent poverty.

I would say the statute, while it is not perfect, is certainly addressing targeting of resources and subsequently targeting of those children who are educationally deprived.

ACCURACY OF DATA ON WHICH THE CHAPTER 1 FORMULA IS BASED

Mr. NATCHER. How accurate is the information that you use to determine the distribution of Chapter 1 funds? From time to time, we read stories that you are having serious problems with the data that you are using. What about this?

Mr. BONNER. We have run into concerns about it. Our data is based on census and, updated annually, reports on State per-pupil expenditure. We have been notified, informed by the IG Report, that there are concerns that we simply must address in order to get better information.

We have set in motion a number of activities, including a Department-wide task group to study the issue of better reporting standards—particularly as they concern State per pupil expenditure data.

Mr. NATCHER. Mr. Conte, I yield to you.

PULIDO DECISION

Mr. CONTE. Thank you, Mr. Chairman.

You know, Mr. Bonner, I have been concerned about the effects of the *Felton* decision on Chapter 1 programs in private schools. It has come to my attention that the United States District Court has ruled in *Pulido* that the current regulations for allocating certain funds are constitutional problems.

Tell us about this rule and what is means to private schools.

Mr. BONNER. *Pulido* decided that in LEAs governed by by-pass provisions in the State of Missouri, they could not put vehicles on private property for the sake of providing Chapter 1 instruction to private school children. The impact is restricted only to those by-pass districts.

Ms. LETENDRE. I want to add that perhaps a more significant and more disturbing part of that ruling had to do with the Department's policy of withholding from an LEA allocation the cost of providing the expenses off the top. That was the second practice that was ruled unconstitutional in the *Pulido* decision.

We currently have the case under appeal to the U.S. Circuit Court of Appeals in the Eighth Circuit. The Department filed a motion to stay the District Court's decision as well.

I want to emphasize that the Department, as Dan indicated, and the court has ruled that these provisions are unconstitutional only in those local school districts in Missouri. For the rest of the Nation, the regulations and guidance that have been issued on these two issues remain in effect for Chapter 1 programs, and all LEAs are therefore, except those in *Pulido*, are not subject to the *Pulido* litigation.

Therefore, the policies issued are in effect in all other districts in the Nation.

PRIVATE SCHOOL PARTICIPATION

Mr. CONTE. According to a recent GAO study, participation by private school pupils in Chapter 1 has increased in recent years. It is still well below the level before the 1985 decision. Has this continued reduction of private school pupil services indicate a need for additional funds for capital expense grants?

Ms. LETENDRE. I think we addressed that. To date, there has been $44,000,000 that Congress has appropriated to address the $104,000,000 that the GAO indicated would be needed to reimburse for past expenses and to address future operating expenses.

I think they indicated there was 60-something-million dollars that would be needed for reimbursement for past expenses. We are finding that most States are reimbursing local school districts for those past capital expenses, thereby increasing numbers of both public and private school students who can participate in the Chapter 1 program.

Mr. CONTE. Get the answer to these next two questions for the record.

STATE PROGRAM IMPROVEMENT GRANTS

How are States using their Chapter 1 program improvement grants first provided in fiscal year 1990, and how will the State Program Improvement Act be distinguished from State administration and evaluation activity?

[The information follows:]

USE OF CHAPTER 1 PROGRAM IMPROVEMENT GRANTS

School year 1989-90 is the first year of operation for Chapter 1 School Improvement Grants. Thus no information about the exact uses of these funds is available at this time. However, it is anticipated that the most common uses of Chapter 1 Program Improvement funds will involve: the sponsoring of workshops by evaluation and program improvement experts; consulting with developers of exemplary or promising educational practices; training or retraining local school district personnel who work with Chapter 1; and developing innovative strategies.

DISTINCTION BETWEEN PROGRAM IMPROVEMENT ACTIVITIES AND STATE ADMINISTRATIVE ACTIVITIES

Funds provided for Chapter 1 State Program Improvement Grants, as opposed to those provided for State Administration, can only be used for direct educational services in schools implementing program improvement plans. Parents of participating children and staff from the individual school, the local educational agency, and the State educational agency must jointly agree on who will provide technical assistance and on how best to use these funds in the effective implementation of the program improvement plan. Separate accounting of these funds is required, and documentation must be maintained to show that these funds are used in accordance with the statute.

CHAPTER 1 LONGITUDINAL STUDY

Mr. CONTE. The longitudinal study of Chapter 1, as mandated by the Hawkins-Stafford Education Amendments of 1988, is supposed to determine the impact of participation of that program. Four options are under consideration with costs ranging from $35,000,000 to $41,000,000, plus additional costs of up to $26,000,000 to include special populations.

Question: What is the timetable for selecting these options? How soon will the study be fully under way? What are the implications for provision of funding?

Mr. CORWIN. A few weeks ago, the staff of the Department, who are in charge of that study, did a briefing for staff of the House and Senate side to present them with the options and generate their ideas on which options should be selected. At that time, the congressional staff asked for additional information before they made up their mind on that. I think that, just within the last week, we sent them that additional information.

What we have done so far is really the design work. Fiscal year 1991 is when we will get out in the field to begin collecting data on the different students. We will make a decision within the next several weeks on which option we are going to go with and then begin to pursue that.

Mr. CONTE. I see.

MERIT SCHOOLS PROGRAM

It bothers me a little bit. It doesn't look like the Presidential Merit School legislation appears to be funded in fiscal year 1990. Why are you proposing to jump into this program with initial funding of $225,000,000?

Mr. BONNER. Taking seriously the efforts at the national level by the Administration and efforts at the State level by the Governors, it makes sense to attempt innovations that provide incentives to the schools that are struggling to improve. Not enough attention in our minds has been paid to that.

We are seeking, therefore, as I think I mentioned before, to bring about a sense that schools that are struggling against great odds—schools we often see are associated with Chapter 1—should be recognized. By providing them with an incentive assistance which, after all, is a form of assistance to disadvantaged students to create an atmosphere in which students can improve their scholastic performance, we hope to reduce the dropout rate. In other words, it is designed to recognize the efforts of struggling schools, not schools that have made it over the top to success. We want to try to encourage innovation that will change the equation, as it were, with struggling schools.

ADMINISTRATION OF MERIT SCHOOLS

Mr. CONTE. Dan, who is going to make the determination on what school and how much money? Is it the Feds or the local government or the States?

Mr. BONNER. States are being given allocations through a formula that is associated with the school population in Chapter 1.

Mr. CONTE. Will they make the decision?

Ms. **LeTendre**. There will be criteria established at the Federal level for raising achievement levels, reducing dropout rates, and creating a safe and orderly environment, including a drug-free environment. In addition, States would address other criteria. They would be encouraged to take into account criteria that would address high proportions of low-income children.

They would be assisted by a panel which is specified in the legislation, consisting of various educators, local administrators, institutions of higher education, community and business representatives, teachers, parents, board members and the like. They would not in isolation be making those decisions, but would, therefore, be having the input of people who on a day-to-day basis are involved in education in that State.

MISALLOCATION OF CHAPTER 1 FUNDS

Mr. **Conte**. Okay. The Inspector General has reported that an estimated $60,000,000 of Chapter 1 money is misallocated among the States each year because of faults in the data used to calculate the grants. How can this be corrected?

Mr. **Bonner**. We aim to correct it.

Mr. **Conte**. You aim to correct it?

Mr. **Bonner**. There are reporting requirements now that have led to a certain looseness in the aggregation of State per pupil expenditure amounts that may cause misallocations between and among the States. The $60,000,000 figure comes out of an average that had been adduced by the Inspector General.

We feel that it is important to take seriously and at face value what the Inspector General is saying about the looseness of reporting of these data by the States to the Federal Government. As I mentioned before, we have set up a task force in the Department with the specific aim of finding ways to obtain the best possible information on State per-pupil expenditures, which is important.

And, of course, we intend to go full speed ahead on that.

Ms. **LeTendre**. There are eight recommendations the Inspector General made. Four have been carried out. Much of the work is being done by the National Center for Education Statistics which collects this data. They have been revising forms and providing additional direction to State agencies.

The other recommendations that deal with proposed legislation are under consideration by a Department-wide task force. It is a Department-wide task force inasmuch as this is not purely a Chapter 1 issue. The State per-pupil expenditure is used in calculating other allocations as well. This audit was brought by the Chapter 1 office when we noted discrepancies from State to State. We asked them to take a look at it. They did.

REGIONAL MEETINGS

Mr. **Conte**. You mentioned the regional meetings are going to be up in Boston?

Ms. **LeTendre**. Yes, next Monday and Tuesday.

Mr. **Conte**. You just tell them what a great job Joe Early and Sil Conte are doing.

Ms. **LeTendre**. I absolutely will do that. If you are there, we would love to have you bring greetings as well.

Mr. **Conte**. Mr. Chairman, I will put the rest of the questions in the record.

REQUIRED DAYS OF SCHOOL ATTENDANCE BY STATE

Mr. **Early**. Mr. Bonner, what is the range, from the fewest to the most, of the number of school days required for elementary and secondary schools.

Mr. **Bonner**. I could not tell you offhand. We could submit that information for the record.

Mr. **Early**. What would be your opinion of what they are? The State of Massachusetts goes to school 180 days? Would that be correct?

Mr. **Bonner**. Close.

Mr. **Corwin**. I believe most States are fairly close to that.

Mr. **Early**. Do you know of any that are more than that?

Ms. **LeTendre**. Parts of Florida are considering right now adding a significant number of days to the school year.

Mr. **Bonner**. Los Angeles is broaching the issue of year-round schooling.

FEDERAL MANDATE FOR LENGTH OF SCHOOL YEAR

Mr. **Early**. Would you for the record provide what the number is? When we look at how everyone is trying to do the best thing for education, let me ask you this. Most States require schools to be in around 180 days, if we were to increase that by 10 percent, that would get them up to 198 days.

Why shouldn't the Federal Government be mandating a 10-percent increase in the school year and we would fund 20 percent for teachers? We would do more for education than we do with all the other programs.

Mr. **Bonner**. On the basis of a mandate?

Mr. **Early**. Yes.

Mr. **Bonner**. From the Federal side to the States?

Mr. **Early**. Yes.

Mr. **Bonner**. Repellent to our traditions, I do believe, to mandate.

Mr. **Early**. The heck with traditions. Why wouldn't it be right to increase the school year by 10 percent? If we increase the school year 10 percent, we know in the East how many days they are going. We hear all the educators telling us other nations are getting ahead of us because their children are going to school more days. Why wouldn't we be better off doing this?

We spend $350,000,000,000 on all of education, of which 6 percent of that is the Federal share, which includes no funds for teachers' salaries. That would get it down to roughly $320,000,000,000. If we were to say that seventy percent of education is teachers.

Then you take 70 percent of $320,000,000,000 and you are talking about $20,000,000,000 to increase teachers' salaries. We would do more if we took all our money and increase the school year length by 10 percent—mandate it, because then you'd know what every

State did. If they don't increase it 10 percent, they don't get the 20 percent increase for teachers.

Mr. Bonner. I would say that salaries for teachers have been rising in the past decade.

Mr. Early. Did they have any room to drop?

Mr. Bonner. A good question.

Mr. Early. I left teaching because I couldn't support a family. We don't—do you think it's wrong to say we drive our best students away from education, Mr. Bonner?

Mr. Bonner. No, sir. That is a fact. And we are seeking ways, through alternative certification and through other means, to raise consciousness on the issue of appropriate salaries for skilled people in and out of the profession.

Mr. Early. Do you think we have to study that to conclude that they have to pay teachers more money? All we have to do is pay them more money. Will you, for the record, give me your opinion on increasing the school year 10 percent for each State, and on increasing the teachers' salary? That way, we can control it. We know what States spent the previous year.

[The information follows:]

Days per school year, U.S. average:	
Current average (days)	[1] 178.0
10 percent increase (days)	195.8
National cost for elementary and secondary instruction:	
Current cost (billions)	[2] $84.0
20 percent increase (billions)	$100.8

[1] Source: NCES, "Fast Response Survey on Public High School Requirements," 1988 (school year 1984-85).

[2] Source: NCES, Common Care of Data Survey," 1987 (school year 1984-85).

The Department believes that the issues such as the length of the school year and teacher salaries should be decided at the State and local level. I do not think it appropriate at this time for the Federal Government to mandate either an increase in the length of the school year or an increase in teacher salaries.

QUALIFICATIONS OF CHAPTER 1 TEACHERS

Mr. Early. Ms. LeTendre, in regards to a question Mr. Hoyer asked. He asked you if the best teachers were with the disadvantaged. You said that the ones with the most degrees are. When I visited schools in my district, I found all the young teachers were the ones reaching the disadvantaged. I don't have problems with that, because I think it is much easier to be young to teach the disadvantaged.

But I don't think our best teachers are teaching the disadvantaged, I don't care what your study——

Ms. LeTendre. I was one of those teachers. I have to say that I find in visiting with teachers across the country that there may be some variations. By and large, I see our Chapter 1 teachers are the teachers others are turning to for additional assistance.

Mr. Early. Are they our young teachers, though? You have got so many studies, you must have a mean on what the average——

Ms. LeTendre. I don't think we looked at a teachers's age. We looked at their qualifications.

Mr. Early. I would think most of the teachers in special education are the younger teachers. I don't have a problem with that, because they are more aggressive, more eager. We lose a little zest.

Ms. **LeTendre**. I have heard some Chapter 1 district coordinators are concerned that the most tenured teachers were put into the program because it took a lot of their budget. I think you are going to find a lot of variation. One of the trends we have seen, however, from data that are reported to us each year by the States, not studies, data that they submit to us, is that we are finding more teachers and less teacher assists involved in the Chapter 1 program.

In other words, people who have had more training are working with the children.

Mr. **Early**. Mr. Bonner, will you provide for the record, as best you can, the number of days to increase the school days in each State, what they have now and what are 10 percent. I can figure out what a 10-percent increase is. If there is available data on what is the total amount to the teachers of the $353,000,000,000 in education. Even if that 353,000,000,000 in education in the States, I would have to expect that the Secretary Cavazos is talking about private schools?

Mr. **Bonner**. I do believe that is included.

Mr. **Early**. That is going to drastically cut—I mean, if we are looking toward a 20-percent salary increase for teachers, it might not be a lot of money. I don't think we approach problems with practical solutions.

We all know we couldn't increase the school year by 10 percent without giving teachers a 20-percent increase in salaries, because the teachers union would fight that, and they rightfully should. If you can, Mr. Bonner, I would be interested in that information.

Mr. **Early**. Thank you, Mr. Chairman.

Mr. **Natcher**. Mr. Hoyer?

CHAPTER 1 FUNDS FOR ELEMENTARY AND SECONDARY GRADES

Mr. **Hoyer**. Mr. Early wants you to look at that, but do not study it. Look at it and report it.

How much of the compensatory money, if you can break it out, is spent, on primary and how much is spent on secondary? Do we have figures?

Mr. **Bonner**. I think the secondary is between 15 and 20 percent.

Mr. **Hoyer**. So that 85, 80 percent is spent on elementary?

Ms. **LeTendre**. Eight percent is spent on pre-K and K. Then the remainder——

QUALITY OF TEACHERS

Mr. **Hoyer**. What did you teach, Ms. LeTendre?

Mr. **Early**. Statistics?

Ms. **LeTendre**. I taught Title I reading. I was a Title I reading specialist. I also taught Kindergarten and elementary school.

Mr. **Hoyer**. Where did you teach?

Ms. **LeTendre**. In Chippewa Falls, Wisconsin. That is Congressman Obey's district. I worked with Congressman Obey's wife.

Mr. **Hoyer**. My wife coordinates early childhood education in Prince Georges County. One of the problems is the Mary Jean LeTendres who are bright, innovative, and make the same decision that Joe Early made. You can't make enough money here, so we are going to do something that our talent and brains and spunk allow us to do.

So, we have you sitting at a table and doing a very important job. But I am convinced that we have some of our brightest, most able teachers in other professions.

Ms. **LeTendre.** I agree with you.

Mr. **Hoyer.** I guess I have given this speech before. You are tired of hearing it. That is why Joe Early's suggestion is so important. We can't compete in the marketplace for the Jean LeTendres in 1990 that we could in 1980 when you entered teaching.

SERVICE PRIORITIES WITHIN CHAPTER 1—PRESCHOOL

Do you believe that 8 percent, based upon your experience—and I am glad to hear you are focusing on Kindergarten as well, is an appropriate mix? I realize that we have a policy preference on a different mix of the funds for below first grade?

Ms. **LeTendre.** I am not satisfied with it. We have issued guidance providing additional flexibility for pre-school. One of the policies I looked at when I first came was paying for the assessment of children to participate in the programs. While we require that districts pay for the selection of the students and their basic needs assessment, we looked at the appropriateness of paying for the assessment and the recruitment of those students. Very recently we issued guidance to States and locals indicating that paying for a student needs assessment is an appropriate Chapter 1 expenditure with the fear that that initial expense might have deterred some from looking at the pre-school population.

If we are going to, as the President and Governors have said, prepare all students to be ready to enter school, then surely we should pay more attention to pre-school and Chapter 1.

I think part of it is that history has been our own enemy in the program. We find many decisions being made year after year, because we have done the same kind of thing each year. Administrators like it, parents like it. We don't have to try something new, we don't have to find new space, we don't have to provide transportation. Pre-school programs cost more money. With the increases in appropriations, we have been trying to encourage wherever we go that schools provide additional pre-school programs. A loud and clear no to your question isn't enough. I don't think it is.

Mr. **Hoyer.** I am glad to hear that.

HOW PROBLEMS OF 1990 DIFFER FROM THE PAST

I have a sense and would like your thoughts on the motion that problems that we confront in 1990 are radically different than the problems that we faced in 1950 or 1960 or 1970. I think the crack babies are going to be an incredible burden on the system.

Do you agree with the premise, and if so, what strategies are being developed to meet that problem lest we lose hundreds of thousands of children?

Mr. **Bonner.** I heard you speak eloquently about this before, and I appreciate your words. We are all in agreement on the need to look upon this as a radically changed circumstance in the United States. Our plans have to address, I believe, changing the equation for the way subjects are taught in school. That has to be looked at radically.

Adopting an approach that allows new phalanxes of teachers assuming, taking care of the question of drawing people of quality into the profession. But drawing them in in such numbers that their classroom activities will be devoted solely and totally to bringing out the best from children who are most severely afflicted. That is a task that grows more serious with the passing years.

If the maelstrom in New York, where I am from, is any indication, we go for 20 years without a shred of improvement in the situation. To put it another way, of 100 young people who go into school in first grade, that group will graduate 50 percent in the senior year of high school.

Of that group, one-half will graduate at a level at which they will be able to hold down, say, jobs requiring functional literacy. That is a scandal that goes on for all of our large cities. All of our exertions in the past 20 years, say since 1965, 25 years, have been directed in one way or other to trying to address that, and we have not done it. We have not done it because, as you said, we have the equation in the social class in the cities. It has changed radically.

I think we are all strategizing day in and day out, seeking desperately for ways to address the situation in the classroom. I can't say that we have the solution. We are all striving for it.

OVERALL PLANS TO ADDRESS NATIONAL EDUCATIONAL PROBLEMS

Mr. HOYER. I asked the Secretary about an overall plan to accomplish the President goals. I support the President and the Governors who are involved in that effort. We are obviously not going to achieve to those goals if we don't have a plan which includes the necessary resources to affect those changes.

Are you providing your component of the plan for that? Are you involved in that effort now?

Mr. BONNER. Day in and day out, yes, sir, everyone here.

Mr. HOYER. I guess I meant more specifically, so that we at some point in time can say this is what we are going to do over the next 10 years.

For instance, the Defense Department perceives the threat. It says in order to meet that threat, we need to provide X number of B-2 Bombers, X number of tanks, X number of military personnel. It seems to me that we need that kind of plan, because we have perceived the threat, and it is very great.

Mr. BONNER. May I interject, sir? I was at a Chapter 1 meeting, one of the school improvement meetings in Detroit last Monday. One of the speakers, in addition to our own eloquent Mary Jean LeTendre, was John Porter, Acting Interim Superintendent of the Detroit Public Schools, truly an eloquent man.

He said what it will take, in addition to all of the other reforms and activities and expenditures over the next 10 years, is that each of us become extraordinary people, extraordinary people without question, and across the board in the classroom, administrators, politicians, Federal officials, extraordinary people. He said it several times for emphasis. I think that kind of consciousness is a minimum, the minimal requirement to take for any of us to address this.

CLOSING REMARKS

Mr. **Hoyer**. You know, I came into politics when John Kennedy was running for office. I got very excited about that. He called for excellence and extraordinariness from each one of us. We need to have that again.

Thank you, Mr. Chairman.

Mr. **Natcher**. Mr. Early?

Mr. **Early**. I request permission to include all the other questions for the record.

One point. Mr. Bonner, on that assessment that I asked of you, would you include in that how much is other than public education and how much is higher education? Again, I don't want to spend a lot of money. Just get the statistics that you already have. I would like to find out how much of the $353,000,000,000 is spent on higher education, how much is spent on the private schools.

I am trying to conclude with how much we are paying teachers for a total sum.

Thank you, Mr. Chairman.

Mr. **Natcher**. Mr. Bonner, this has been a good hearing. I want to thank you and your associates for appearing before our committee at this time on behalf of your budget request for fiscal year 1991.

The committee will now adjourn until 2:00 p.m.

[The following questions were submitted to be answered for the record:]

STATE PROGRAM IMPROVEMENT GRANTS

Mr. Natcher: Does your 1991 request for program improvement exceed the current authorization?

Mr. Bonner: Yes it does. Based on our 1991 request, the authorization for this program (which is based on .25 percent of the amount allocated to the States under Chapter 1, Parts A and D, but not less than $90,000 per State) would be approximately $13.6 million. Our request is $24 million. The national priority for program improvment and greater accountability in Chapter 1 justifies the higher request.

EVEN START

Mr. Natcher: The President's 1991 request doubles funding for the new Even Start program to $48 million. Our friend Bill Goodling talks to us about this program. Why didn't you go up to $50 million which would convert this program to a formula grant?

Mr. Bonner: First-year Even Start projects are just beginning in this school year. At the same time the Department is also implementing the requirement that these projects be evaluated. We would like to see how the program is working through these discretionary grant projects, before making Even Start a formula program to the States.

CONCENTRATION GRANTS

Mr. Natcher: How much of the Concentration Grant money goes to urban districts and how much to rural areas?

Mr. Bonner: Of the 1989 allocation, 25 percent of the funds went to counties that were classified as central cities; 38 percent went to counties that were located in metropolitan areas but not in central cities; and 37 percent went to counties in non-metropolitan areas.

NUMBER OF PRIVATE SCHOOL STUDENTS SERVED BY CHAPTER 1

Mr. Natcher: How does the number of private school students served under Chapter 1 to date compare to the year before the Felton case?

Mr. Bonner: In the school year 1984-85, 184,532 private school students received Chapter 1 services. In the 1987-88 school year, the last year for which we have data, 134,598 private school students received services.

CHAPTER 1 HANDICAPPED PROGRAM

Mr. Natcher: Last year, the General Accounting Office recommended that the Chapter 1 Handicapped program be merged with similar activities under Public Law 94-142. What is your response to this proposal?

Mr. Bonner: We agree strongly with GAO's recommendation that the Chapter 1 Handicapped program (Chapter 1) be merged with Part B of the Education of the Handicapped Act (EHA). As the GAO pointed out, both programs now serve children of similar ages with similar kinds of handicapping conditions, but there is significant funding imbalance between the Federal share per child States receive under the Chapter 1 program and the EHA. The Department has made similar proposals in the past, because we believe that it would be more efficient to serve all handicapped children under one program. We do not necessarily agree, however, with the GAO's recommendations about how the merger should be structured. Before reaching a decision about structuring the merger, we would have to determine how infants and toddlers (who can be counted under Chapter 1 but not under EHA, Part B) should be treated, whether funds should be set aside for services to severely handicapped children, and how we can ensure a smooth transition in providing services for children previously served under Chapter 1.

BUDGET REQUEST FOR THE LONGITUDINAL STUDY IN 1991

Mr. Natcher: Your office recently submitted a report to the Committee on various cost options for conducting the Chapter 1 longitudinal study. We have been concerned that this study could cost more than $40 million. We will insert this report in the record at this point. Tell us first how much is in your 1991 budget for this study?

Mr. Bonner: The report provided to the Committee projected a 1991 cost of $4.9 million. This projection included the cost for a study, not required by mandate, on best practices. Subtracting out the best practices component and funding that independently will reduce this year's cost for the longitudinal study from $4.9 million to approximately $4.3 million, which is within the authorized limit for the study.

An independent study of best practices was recommended to us by our experts, and by our stakeholder and technical work groups as being an important aspect of studying Chapter 1 participation. Such a study would enable us to examine rigorously and document carefully practices that hold the greatest promise for educating disadvantaged students. The areas of practice we expect to study include the following:

Schoolwide projects
Curriculum innovations
Extended time
Parent involvement

Technological innovations
Peer or adult tutoring
Integrated services
Programs serving limited-English proficient students
Migrant programs
Programs serving Native Americans
Preschool programs

We expect to complete, under the Best Practices study, 10 data collection activities by the time interim report on the longitudinal study is completed in January 1993. The main longitudinal study will have had only two data collection activities during this same period (May 1991 and May 1993). The Best Practices study, in conjunction with the longitudinal survey, will allow us to provide Congress with useful information regarding student participation and effective strategies in Chapter 1 programs.

AUTHORIZATION FOR THE LONGITUDINAL STUDY

Mr. Natcher: Doesn't your 1991 request for the study exceed the authorization which I believe is only $4.4 million?

Mr. Bonner: The report projected a 1991 cost that would have exceeded the authorization by $500,000. However, as indicated in the response to the previous question, we would fund the Best Practices Study independently. Thus, the 1991 cost for the Longitudinal Study will now be approximately $4.3 million in 1991.

TOTAL COST OF THE LONGITUDINAL STUDY

Mr. Natcher: What is the total cost of this study as it is currently designed?

Mr. Bonner: The total estimated cost of the study, including the best practices component, is estimated to be $41 million over a nine-year period. If the best practices component is not included, the estimate is $28 million.

Mr. Natcher: What would we lose if we were to scale this project back to option #4 which we understand would save about $5 million?

Mr. Bonner: Option #4 would provide for a longitudinal study that includes a best practices component. The study would, however, consist of only two cohorts--students beginning in grade 1 and students beginning in grade 4. Students beginning in grade 1 would be followed through grade 6 and, students beginning in grade 4 would be followed through grade 9. This option would result in a savings of approximately $6 million. However, if option #4 is exercised, we would not be able to follow Chapter 1 participants until they are 18 years of age or evaluate the effects of participation on 25-year olds as required by the statutory mandate.

MIGRANT EDUCATION PROGRAM

Mr. Natcher: Mr. Bonner, is the total number of migrant students of all types increasing or decreasing in this country?

Mr. Bonner: The total number of migrant students counted for allocation purposes has increased from 420,199 full time equivalent (FTE) students in 1987 to 514,462 FTE students in 1989. There was an especially large increase in the number counted in 1989 because the authorizing legislation expanded the ages of children counted for allocation purposes from 4 through 17 years to 3 through 21 years.

The total number served has also increased from 277,798 in school year 1984-85 to 386,039 in school year 1987-88.

Mr. Natcher: Insert in the record at this point a copy of your report to the Committee on the migrant program.

Mr. Bonner: A copy of the Department's report on the Chapter 1 Migrant Education program follows:

Report on the Department of Education Review of Chapter 1 Migrant Education Data

This report was prepared in response to a directive in the House Committee on Appropriations report on the Departments of Labor, Health and Human Services, and Education, and Related Agencies Appropriations Bill for 1990. In that report, the Committee expressed its concern over the high proportions of formerly migrant students settled in local communities who are served by the Chapter 1 Migrant Education program. The Committee requested that the Department of Education review the data on these children, and their policy implications, and submit a report to the authorizing and appropriations committees by February 1, 1990. The Committee stated that the report should specifically address the issue of whether formerly migrant students are significantly more disadvantaged educationally than other Chapter 1-eligible students.

Background

The Chapter 1 Migrant Education program was first enacted in 1966 to provide financial assistance to State Educational Agencies (SEAs) for use in providing compensatory education services to children of migratory agricultural workers. Subsequent legislation extended program services to children of migratory fishermen. When establishing this program, Congress recognized that, in addition to coming from low-income backgrounds, migrant children faced a number of unique factors that contributed to their being educationally disadvantaged. Among these factors:

- A high incidence of mobility that disrupted any continuity in the educational services migrant children received.
- A general view held by most local school districts that migrants were non-resident children and therefore not a local responsibility.
- A structured and regular school year with a specified number of days and a sequential curriculum that did not meet the educational needs of migrant children who came to school at varying times during the year.
- A lack of any system to transfer academic or health records from one place to another as migrant children moved, thus making it extremely difficult for them to receive instruction in a coordinated manner.
- The unpredictable nature of the agricultural cycle and the variations in routes that migrant families followed from one year to the next, which made it difficult for needed money and services to follow migrant children.

Program Operations

Program funds are allocated to SEAs based on a State's per-pupil expenditures and the number of eligible full-time equivalent (FTE) migrant children aged 3 through 21 residing within each State. This count is adjusted to account partially for the additional costs of running summer programs. These FTE counts of migrant children are provided to the U.S. Department of Education (ED) by the Migrant Student Record Transfer System (MSRTS), a computerized data base located in Little Rock, Arkansas and operating under contract with the Department.

A small portion of the funds appropriated for Migrant Education is also set aside for migrant education coordination activities. These funds support the operation of MSRTS and other projects designed to improve inter- and intra-State coordination of migrant education activities.

In fiscal year 1989 the breakout for Migrant Education State grants and coordination activities was as follows:

Distribution of
FY 1989 Migrant Education
Appropriation

Grants to SEAs	$263,920,000
Migrant coordination activities:	
MSRTS	5,707,337
Inter- and intra-State coordination projects	2,072,663
Subtotal, coordination activities	7,780,000
Total	271,700,000

Individual State grants ranged from $41,190 to $87 million.

Once an SEA receives Migrant Education funds, it may operate a program either directly, through subgrants with local school districts, or through arrangements with public or nonprofit private agencies. In practice most program services (86 percent) are delivered through SEA subgrants to local or regional educational agencies.

To receive migrant funds an SEA must submit an application to ED that describes how:

1. Funds will be used for activities that meet the special educational needs of migratory children and coordinate with similar programs in other States.

2. Planning and operation of Chapter 1 Migrant education programs will be coordinated with other Federal programs that benefit migrant children.

3. Parents are involved through parent advisory councils in program planning and implementation.

4. The needs of pre-school migrant children will be addressed in the design and implementation of migrant education projects.

5. The effectiveness of programs implemented within the State is to be evaluated.

6. Programs operated by subgrantees will comply with all applicable statutory and regulatory requirements.

Eligibility Criteria

Under the statute and regulations, two types of children are counted for allocation purposes and are eligible for services: currently migratory and formerly migratory children. According to the regulations a "currently migratory child" is one:

> whose parent or guardian is a migratory agricultural worker or migratory fisher; and who has moved within the past 12 months from one school district to another — or, in a state that is comprised of a single school district, has moved from one school administrative area to another — to enable the child, the child's guardian, or a member of the child's immediate family to obtain temporary or seasonal employment in an agricultural or fishing activity. This definition includes a child who has been eligible to be served under the requirements in the preceding sentence, and who, without the parent or guardian, has continued to migrate annually to enable him or her to secure temporary or seasonal employment in an agricultural or fishing activity. This definition also includes children of migratory fishermen, if those children reside in a school district of more than 18,000 square miles and migrate a distance of 20 miles or more to temporary residences to engage in fishing activity (34 CFR Section 201.3(a)).

A "formerly migratory child" is one who: (1) was eligible to be counted and served as a currently migratory child within the past five years but is not currently migratory; and (2) has a parent's or guardian's concurrence to continue to be considered a migratory child (34 CFR Section 201.3(b)).

MSRTS data show that for each of the years 1984 through 1989 between 60 and 63 percent of the FTE migrant students counted for allocation purposes were formerly migratory and had resided in the same school district for at least a year. The following table compares the number and proportion of formerly migratory and currently migratory children counted for allocation purposes during that period:

Number of FTE Children Counted for
Allocation Purposes

Year	Currently Migratory	Formerly Migratory	Total
1984	173,209 (39%)	266,408 (61%)	439,617
1985	154,939 (37%)	263,816 (63%)	418,755
1986	158,296 (38%)	256,331 (62%)	414,627
1987	159,857 (38%)	260,342 (62%)	420,199
1988	164,511 (38%)	272,435 (62%)	436,947
1989*	204,124 (40%)	310,338 (60%)	514,462

* The number reflects the change resulting from P.L. 100-297 that expanded the ages of children counted for allocation purposes from 5 through 17 years to 3 through 21 years.

Similarly, data reported to ED by the States on the number of children served by the program for school years 1984-85 through 1987-88 (the last year for which actual data are available) show that, in each year, at least half of the students served have been formerly migrant. The following table summarizes these data:

Number of Children Served

Year	Currently Migratory	Formerly Migratory	Total
1984-85*	131,779 (47%)	146,019 (53%)	277,798
1986-87	162,705 (47%)	180,564 (53%)	343,269
1987-88**	192,401 (50%)	193,638 (50%)	386,039

* Texas and Washington did not report data on the number of students served for that year.

** Preliminary

Needs of Eligible Migrant Children

Migrant children as a group are severely disadvantaged educationally. They are, on average, over two years behind academically when compared to all students in the same grade. This situation is made worse because migrant children tend to be older than the average child in the same grade. As they grow older, migrant children drop further behind non-migrant children and their drop-out rate accelerates rapidly after the eighth grade. Likewise, average standardized pretest scores for migrant students participating in the program range from the 11th to the 26th percentile in reading and from the 18th to the 41st percentile in mathematics (Research Triangle Institute, Study of the ESEA Migrant Education Program, 1981).

More recently a survey of MSRTS data completed by the Migrant Education Secondary Assistance (MESA) project in 1989 shows that migrant children continue to be educationally disadvantaged. In that survey almost half of the currently migrant students participating in regular school term migrant education projects were at least one year below grade level in academic achievement and 45 percent of formerly migratory students participating in those projects were one or more years below grade level.

No data exist from which to determine if eligible formerly migrant children in recent years have been: (1) as educationally disadvantaged as currently migratory children, or (2) significantly more disadvantaged than other children receiving services under the Chapter 1 LEA grant program. The Department will have more comprehensive data on these two issues in 1992 upon completion of a National Study of the Migrant Education program and collection of State Migrant Education participation data from the 1990-91 school year.

In the meantime, to provide Congress with some information on these issues, we have reanalyzed data from the 1981 Research Triangle Institute (RTI) Study of the Migrant Education program, the last study to provide comprehensive information on the program. In analyzing RTI data (gathered in 1977-78), we converted pre-service test scores 1/ for currently and formerly migratory student participants in second, fourth, and sixth grades to normal curve equivalent scores (NCEs) 2/ and to percentile ranks and compared them to each

---

1/ "Pre-service test scores" refer to scores from tests administered to participating migratory children before they received program services.

2/ A normal curve equivalent (NCE) unit is a standard metric that provides a common frame of reference to enable comparisons of scores from different kinds of a standardized tests.

other and to comparable data for children participating in the Chapter 1 LEA Grant program in the 1979-80 school year (the earliest year for which those data are available). In this way, we are able to make a rough comparison of academic performance between currently and formerly migratory children and between formerly migrant children and children participating in the regular Chapter 1 program.

Based on these comparisons, we found no significant differences in the reading and mathematics test scores and precentile rankings of currently and formerly migratory children at the grade levels (second, fourth, and sixth) examined by RTI. In other words, currently and formerly migrant children appeared to be equally disadvantaged. The following table provides a more detailed breakout of these data:

Comparison of Average Reading
Normal Curve Equivalent (NCE) Scores and
Percentile Ranks for Currently and Formerly Migratory Children

Grade Level	Test Score	Currently Migratory	Formerly Migratory	Difference, Currently Migratory vs.Formerly Migratory
2	Average NCE score	34.1	37.1	-3.0
	Percentile rank	23	27	-4
4	Average NCE score	35.2	35.7	-.5
	Percentile rank	24	25	-1
6	Average NCE score	33.0	32.6	+.4
	Percentile rank	21	20	+1

Comparison of Average Mathematics
Normal Curve Equivalent (NCE) Scores and
Percentile Ranks for Currently and Formerly Migratory Children

Grade Level	Test Score	Currently Migratory	Formerly Migratory	Difference, Currently Migratory vs. Formerly Migratory
2	Average NCE score	42.9	42.9	0
	Percentile rank	37	37	0
4	Average NCE score	42.3	40.2	+2.1
	Percentile rank	34	32	+2
6	Average NCE score	40.0	38.8	+1.2
	Percentile rank	32	30	+2

Data comparing differences in pretest academic performance of formerly migratory children participating in the Migrant Education program and children participating in the regular chapter 1 LEA Grant program were mixed but generally showed few differences. In some cases (second and sixth grade reading scores, for example), regular Chapter 1 students appeared to be a little better off academically than formerly migratory children. In other cases (fourth grade reading scores and second, fourth, and sixth grade mathematics scores) test scores for formerly migratory children were higher than they were for similar children in the regular Chapter 1 program. The following tables present data on these comparisons for grades two, four, and six in reading and mathematics.

Comparison of Average Reading
Normal Curve Equivalent (NCE) Scores and
Percentile Ranks for Formerly Migratory Children and
Regular Chapter 1 Children

Grade Level	Test Score	Formerly Migratory Students Participating in a Migrant Education Program	Students Participating in in a Regular Chapter 1 Program	Difference, Formerly Migratory vs. Regular Chapter 1
2	Average NCE score	37.1	37.6	-.5
	Percentile rank	27	28	-1
4	Average NCE score	35.7	34.7	+1.0
	Percentile rank	25	23	+2
6	Average NCE score	32.6	33.9	-1.3
	Percentile rank	20	22	-2

Comparison of Average Mathematics
Normal Curve Equivalent (NCE) Scores and
Percentile Ranks for Formerly Migratory Children and
Regular Chapter 1 Children

Grade Level	Test Score	Formerly Migratory Students Participating in a Migrant Education Program	Students Participating in in a Regular Chapter 1 Program	Difference, Formerly Migratory vs. Regular Chapter 1
2	Average NCE score	42.9	41.9	+1.0
	Percentile rank	37	35	+2
4	Average NCE score	40.2	37.5	+2.7
	Percentile rank	32	28	+4
6	Average NCE score	38.8	35.4	+3.4
	Percentile rank	30	24	+6

Conclusions and Policy Implications

The data presented here are old and, because comparable data for only three grade levels were available and these data were gathered from different years, are also limited in scope. Therefore, they must be interpreted with caution.

Given this caveat, we summarize the data as follows: First of all, there appear to be few differences in level of academic achievement between formerly and currently migrant children. Second, the data seem to suggest that migrant children in general and formerly migrant children in particular are roughly equivalent in terms of academic achievement to children who participate in the regular Chapter 1 program. The differences in terms of average test scores for second, fourth, and sixth graders are generally minor. In some instances, such as when math test scores were compared, both currently and formerly migratory children seem to have been better off academically than children who participated in the regular Chapter 1 program. In other cases (second and sixth grade reading scores), formerly migrant students appeared more academically disadvantaged than regular Chapter 1 participants.

Given the limitations of these data, it is impossible to draw any firm policy conclusions at this time. These must await the analysis of 1990-91 State performance data and the completion of the national study in early 1992. However, several issues should be considered in any discussion of policy for the Migrant Education program:

1. The intent of the Migrant Education program is to serve a population that, in addition to being educationally disadvantaged, has special needs because of its mobility. There is a greater likelihood that migrant children will be overlooked by a school district in its assessment of the service needs of its educationally disadvantaged population and therefore not receive needed compensatory educational services. However, the statute provides that a child may be considered migratory for up to five years after the initial move. Roughly half the number of children served by the Migrant Education program have remained in the same school district for at least one year, and in many cases these children have been in the same district for two or more years. Should there be a point at which these formerly migrant children cease to be considered migratory and eligible for services? To the extent that these formerly migrant children are educationally disadvantaged and live in eligible Chapter 1 school attendance areas, they could be served through the regular Chapter 1 program.

2. On the other hand, formerly migrant children appear to suffer roughly the same level of educational deprivation as currently migratory children. This suggests (as the statute reflects) that the disruptive effects of a migrant child's initial move extend for more than one year after the child settles into a community. Any action to limit further the eligibility of formerly migratory children under this program could result in a significant number of needy children not receiving compensatory education services because there is no guarantee that such children would in fact receive them under the regular Chapter 1 program.

PRESIDENTIAL MERIT SCHOOLS

Mr. Natcher: I believe the Senate-passed bill includes a "trigger" provision which would delay funding for Merit Schools until certain conditions are met. How would this work in 1991?

Mr. Bonner: Under the Senate passed bill the funding authorization for the Presidential Merit Schools program would be the lesser of: (1) the amount appropriated for Chapter 1 of the Elementary and Secondary Education Act in excess of $5,090,000,000; or (2) the amount appropriated to carry out Chapter 1, Part C (Secondary School Basic Skills and Dropout Prevention) in excess of $200,000,000. In no case, however, could the amount made available for this program exceed $200,000,000. If the Senate provision becomes law and the trigger provisions were followed by the appropriations committees, the Department, based on its 1991 budget request, could not fund the Presidential Merit Schools program in fiscal year 1991 because no funds were requested for the Chapter 1, Part C program.

SUSTAINING EFFECTS STUDY

Mr. Natcher: Would you review for the Committee briefly the results of the so-called "sustaining effects" study and tell us what this means for Chapter 1?

Mr. Bonner: The Sustaining Effects study was completed in 1980 and collected data on Title I programs from school years 1976-77 through 1978-79. The following are major findings that continue to have implications for current Chapter 1 operations:

Services

Title I was not fully supplementary in terms of time provided for instruction but instead only partially replaced other instruction.

- While Title I students received considerably more instruction in reading and math than did regular students, regular students also received instruction of some type. Thus it is not clear that Title I students enjoyed a net gain in total instruction.
- Title I instruction focused on basic rather than advanced skills. In reading, Title I students were exposed, throughout their elementary grades, to more elementary or basic reading methods than were regular students, who received information in more complex materials. In the first two grades, the approaches used in teaching reading were similar for Title I and regular students, but then they began to diverge. By the sixth grade, the approaches most

frequently used with Title I students were the ones least frequently used with regular students and vice versa.

Participation

There are targeting problems with Title I. Significant numbers of Title I students are neither poor nor low-achieving:

- Among students who were both poor and low achievers, 40 percent received compensatory education (CE) while 60 percent did not. Other comparisons showed that there were significant numbers of non-poor, regular achievers who received CE services.
- Because there were many more non-poor students than poor students, the absolute number of non-poor students receiving CE services was larger than the number of poor students receiving services. In 1976-77 there were about 1,230,000 poor students and 1,693,000 non-poor students receiving Title I. There were about 2,500,000 poor students who did not receive any CE services.
- Among low-achieving students, 46 percent received CE services while 54 percent did not. Among regular-achieving students 19 percent received CE services.

Outcomes

Title I had not narrowed the achievement gap between Title I students and nondisadvantaged students though the services may help keep the most-disadvantaged students from falling further behind:

- Children who received Title I services increased their performance at a faster rate than similarly disadvantaged students who did not receive services.
- The performance of Title I students usually grew at a rate that was similar to the rate of growth of students in the regular curriculum. Nevertheless, the gap between Title I students and nondisadvantaged students widened as grade level increased.
- A number of analyses show that the less-disadvantaged Title I students benefitted from a year of Title I services and were promoted out. However, the most-disadvantaged students usually received Title I services during all three years of the study and did not show relative gains, but did not fall further behind.

Title I seemed to be most effective in the earlier grades.

There was considerable turnover in students receiving Title I services. About 40 percent of the students receiving Title I services in a given year did not receive them in the following year. There was no evidence of an optimum duration for CE services.

The effects of Title I were not sustained much beyond the years in which services were provided:

- During the year when CE services had been discontinued, the students who had been "promoted out" continued to perform at their new levels and did not seem to revert to lower achievement levels.
- By the time students reached junior high school, however, there was no evidence of sustained or delayed effects of Title I.

Title I resources had little or no effect on student achievement. A lower student/staff ratio was positively related to percent of students on-task, percent of teacher time devoted to instruction, quality of classroom management, and level of direct supervision of students. However, resources were not positively related to achievement, except for fifth grade math where the relationship was quite moderate.

DATA BASE FOR SUSTAINING EFFECTS STUDY

Mr. Natcher: Is it true that the Sustaining Effects Study was based on 1976 data? If so, at what point will we get more current information on this question?

Mr. Bonner: The Sustaining Effects Study (SES) collected data in three successive school years: 1976-77, 1977-78 and 1978-79. Each fall and spring, all students in the 329 schools sampled took achievement tests and answered attitude questionnaires; their teachers indicated the amounts and kinds of instruction each child received in reading and mathematics during the school year; and the teachers and principals reported on their own training, characteristics, and methods of instruction.

The planned National Longitudinal Study of Chapter 1 will provide new information on the effects of Chapter 1 services on students over time. The design phase proposes data collection over six years beginning in spring 1991 and concluding in spring 1996. An interim report, analyzing data from spring 1991 and 1992, will be submitted to Congress in January 1993. The final report examining longitudinal effects from 1991 to 1996 will be submitted to Congress in January 1997.

In addition, the ongoing Study of Academic Instruction for Disadvantaged Students will examine the effects of continuity in instructional approach on students. The final report will be available in December 1991.

STATE MINIMUMS FOR CONCENTRATION GRANTS AND STATE ADMINISTRATION

Mr. Natcher: The budget proposes to eliminate the special minimum State grants for concentration grants and State administration. Which States are affected and how much money would each of these States lose?

Mr. Bonner: The following table compares the 1991 estimated allocations for Concentration Grants and State Administration based on the statutory State minimums and the special State minimums established in the 1990 appropriation.

Comparison of Estimated ~~1991~~ State Administration Allocation Using Statutory State Minimum of $325,000 and a State Minimum of $375,000

	State Administration Allocation Using Statutory State Minimum of $325,000	State Administration Allocation Using $375,000 State Minimum	Gain or Loss for States Using the Statutory Minimum of $325,000
National Total	$54,000,000.00	$54,000,000.00	$0
Alabama	1,053,415	1,035,256	18,159
Alaska	325,000	375,000	(50,000)
Arizona	606,120	595,671	10,449
Arkansas	628,232	617,403	10,829
California	5,452,649	5,358,653	93,996
Colorado	474,726	466,543	8,183
Connecticut	553,566	544,023	9,543
Delaware	325,000	375,000	(50,000)
District of Columbia	325,000	375,000	(50,000)
Florida	2,309,230	2,269,422	39,808
Georgia	1,333,599	1,310,610	22,989
Hawaii	325,000	375,000	(50,000)
Idaho	325,000	375,000	(50,000)
Illinois	2,440,488	2,398,417	42,071
Indiana	759,320	746,230	13,090
Iowa	398,304	391,438	6,866
Kansas	344,001	375,000	(30,999)
Kentucky	892,861	877,469	15,392
Louisiana	1,200,531	1,179,836	20,695
Maine	325,000	375,000	(50,000)
Maryland	804,938	791,062	13,876
Massachusetts	1,246,479	1,224,992	21,487
Michigan	2,002,342	1,967,825	34,517
Minnesota	571,435	561,584	9,851
Mississippi	953,331	936,897	16,434
Missouri	812,339	798,336	14,003
Montana	325,000	375,000	(50,000)
Nebraska	325,000	375,000	(50,000)
Nevada	325,000	375,000	(50,000)
New Hampshire	325,000	375,000	(50,000)
New Jersey	1,626,447	1,598,409	28,038
New Mexico	384,860	378,226	6,634
New York	5,405,902	5,312,712	93,190
North Carolina	1,151,049	1,131,206	19,843
North Dakota	325,000	375,000	(50,000)
Ohio	1,705,364	1,675,966	29,398
Oklahoma	473,629	465,464	8,165
Oregon	506,679	497,945	8,734
Pennsylvania	2,458,049	2,415,676	42,373
Rhode Island	325,000	375,000	(50,000)
South Carolina	745,957	733,097	12,860
South Dakota	325,000	375,000	(50,000)
Tennessee	1,017,974	1,000,426	17,548
Texas	3,572,648	3,511,061	61,587
Utah	325,000	375,000	(50,000)

Comparison of Estimated 1991 State Administration Allocation Using Statutory State Minimum of $325,000 and a State Minimum of $375,000

	State Administration Allocation Using Statutory State Minimum of $325,000	State Administration Allocation Using $375,000 State Minimum	Gain or Loss for States Using the Statutory Minimum of $325,000
Vermont	325,000	375,000	(50,000)
Virginia	977,572	960,721	16,851
Washington	629,423	618,573	10,850

Puerto Rico	24,661,787	24,652,689	9,098

NATIONAL ASSESSMENT OF CHAPTER 1

Mr. Natcher: What is your estimate of the cost of the proposed new National Assessment of Chapter 1 which is currently being authorized at a level of $6 million. Is this too high?

Mr. Bonner: The conduct of the new Assessment will require the replication of key sub-studies of the previous Assessment as well as the integration of those results with a number of ongoing and planned studies that address the Assessment's objectives.

Specifically, the following sub-studies of the earlier Assessment will be replicated through our current and planned evaluations:

The School Survey
The Private School Student Participation Study
The Targeting Study
The Resource Allocation Study
The Program Design Study
The Whole Day Study

In addition, it will be necessary to compete contracts for the analysis of district-level data from the 1990 decennial census, and for the provision of overall technical support for the study.

In fiscal year 1985, the year contracts for the original sub-studies were awarded, the above studies and technical support cost a total of $5,729,114. For fiscal year 1991, we would estimate these costs to be approximately $6,073,000. With an additional $100,000 needed for analyzing 1990 district-level census data, the estimated cost of the National Assessment would total $6,173,000.

As indicated above, the study components will be supplemented with results from other studies, focusing on some of the Assessment components, that are already planned or underway. These studies would not add to the cost of the new Assessment.

LEGISLATIVE EARMARKS

Mr. Natcher: Insert a list of the legislative earmarks requested in the budget which are not strictly required in order to carry out the President's budget policy.

Mr. Bonner: The following earmarks cited in the appropriations language accompanying the President's 1991 budget are not strictly required:

- $4,463,100,000 available for Basic Grants under Chapter 1, section 1005; and

- $495,900,000 available for Concentration Grants under Chapter 1, section 1006.

When the amounts for these two activities are specified in report language, they should be split so that 90 percent of the total for these two activities supports Basic Grants and 10 percent supports Concentration Grants.

REVISED SUMMARY OF CHANGES

Mr. Natcher: Insert in the record at this point a revised schedule of budget authority by activity and "summary-of-changes" listing which reflects the failure to authorize Merit and Magnet Schools prior to March 1, 1990.

Mr. Bonner: The following tables present the information requested:

Compensatory Education for the Disadvantaged

Budget Authority by Activity

	1989 Appropriation	1990 Appropriation	1990 Revised	1991 Request
1. Chapter 1 Grants for the disadvantaged:				
(a) Grants to local educational agencies:				
(1) Basic grants............	$3,853,200,000	$4,373,146,000	$4,373,146,000	$4,463,100,000
(2) Concentration grants.................	172,900,000	395,112,000	395,112,000	495,900,000
Subtotal.............	4,026,100,000	4,768,258,000	4,768,258,000	4,959,000,000
(b) Capital expenses for private school children.................	19,760,000	25,682,000	25,682,000	25,682,000
(c) Even Start................	14,820,000	24,201,000	24,201,000	48,000,000
(d) State agency programs:				
(1) Migrants..............	271,700,000	282,444,000	282,444,000	293,742,000
(2) Handicapped...........	148,200,000	146,389,000	146,389,000	146,389,000
(3) Neglected and delinquent...........	31,616,000	32,791,000	32,791,000	34,103,000
Subtotal...........	451,516,000	461,624,000	461,624,000	474,234,000
(e) State administration......	40,508,000	50,176,000	50,176,000	54,000,000
(f) State program improvement grants.............	5,686,000	12,544,000	12,544,000	24,000,000

Compensatory Education for the Disadvantaged

Budget Authority by Activity -- Continued

	1989 Appropriation	1990 Appropriation	1990 Revised	1991 Request
2. Evaluation and technical assistance....................	$7,904,000	$11,853,000	$11,853,000	$15,000,000
3. Rural technical assistance centers......................	3,952,000	4,445,000	4,445,000	4,445,000
Subtotal, Chapter 1...........	4,570,246,000	5,358,783,000	5,358,783,000	5,604,361,000
4. Presidential Merit Schools......................	---	---	---	225,000,000
5. Migrant Education:				
(a) High school equivalency program............	7,410,000	$7,838,000	$7,858,000	$7,858,000
(b) College assistance migrant program..........	1,482,000	1,720,000	1,720,000	1,720,000
Subtotal.............	8,892,000	9,578,000	9,578,000	9,578,000
Total..............	4,579,138,000	5,368,361,000	5,368,361,000	5,838,939,000

Explanations of 1990 Revisions

1(a), and 4 The 1990 revised column is identical to the 1990 appropriation column because legislation authorizing the Presidential Merit Schools and Magnet Schools of Excellence programs was not enacted by March 1, 1990.

Compensatory Education for the Disadvantaged

Summary of Changes

1990 Appropriation..............................	$5,368,361,000
1991 Request....................................	5,838,939,000
Net Change............	+470,578,000

	1990 Base	Change from Base
Increases:		
Program:		
1. Grants for the disadvantaged: Basic grants to local educational agencies -- Increase reflects the Department's belief that LEA grants should continue to be the centerpiece of Federal aid to elementary and secondary education.............	$4,373,146,000	+ $89,954,000
2. Grants for the disadvantaged: Concentration grants -- Increase would improve Chapter 1's targeting of resources. Program funds flow to counties based on the concentration grant formula................	395,112,000	+100,788,000
3. Even start -- Increase reflects the importance of and benefits derived from an early childhood education program in which parents gain the literacy skills necessary to participate effectively in their children's education..	24,201,000	+23,799,000
4. State agency programs: Migrant education -- Increase is part of the Department's general policy of focusing additional resources on programs that benefit educationally disadvantaged populations................	282,444,000	+11,298,000

Compensatory Education for the Disadvantaged

Summary of Changes -- Continued

	1990 Base	Change from Base
5. State agency programs: Neglected and delinquent program -- Increase is part of the Department's general policy of focusing additional resources on programs that benefit educationally disadvantaged populations..................	$32,791,000	+$1,312,000
6. State administration -- Additional funds would help States respond to statutory requirements that they work with LEAs to develop and refine standards for program effectiveness, and provide technical help to improve program quality...	50,176,000	+3,824,000
7. State program improvement grants -- Increase would support State efforts to assist school districts in upgrading the quality of local Chapter 1 projects that do not improve academic performance..................	12,544,000	+11,456,000
8. Evaluation and technical assistance -- Increase would provide additional funding needed to continue evaluation activities authorized in P.L. 100-297 and to conduct the mandated Chapter 1 longitudinal study...........	11,853,000	+3,147,000
9. Presidential merit schools -- The 1991 request would enable the program to begin operations and provide greater incentives for school improvement..................	---	+225,000,000
Subtotal.................		+470,578,000
Net Change........		+470,578,000

ESTIMATED 1990 CHAPTER 1 STATE ALLOCATION TABLE ASSUMING NO FUNDS ARE TRANSFERRED TO THE MERIT SCHOOLS OR MAGNET SCHOOLS PROGRAMS

Mr. Natcher: Include a series of State tables showing overall allocation for Chapter 1 grants and similar tables for basic and concentration grants. Also include tables for each State agency program assuming that no funds are transferred in 1990 to Merit or Magnet schools.

Mr. Bonner: The following table provides the information requested:

FY 1990 ESTIMATED CHAPTER 1 ALLOCATION
(BASED ON THE SEQUESTER)

	BASIC GRANTS TO LEAS	CONCENTRATION GRANTS	TOTAL LEA GRANTS	CAPITAL EXPENSES	MIGRANT EDUCATION	HANDICAPPED	NEGLECTED AND DELINQUENT	STATE ADMINISTRATION

DESCRIPTION OF CHAPTER 1 ALLOCATION FORMULAS

Mr. Natcher: Insert in the record at this point a short description for allocating funds for Chapter 1 programs under the basic law with a series of mathematical formulas which could be used to distribute compensatory education dollars.

Mr. Bonner: The following outlines the formulas used in allocation of Chapter 1 funds:

Basic Grants to LEAs Allocation Formula (Chapter 1, section 1005)

Under the statute, one percent of the amount available to the States for Basic Grants under Section 1005 is set aside for the Outlying Areas and the Bureau of Indian Affairs. The remaining amount is distributed to the counties based on: (1) the number of formula eligible children (who are children from low-income families, children in foster homes, children in locally operated institutions for the neglected and delinquent, and children in families who receive Aid to Families with Dependent Children (AFDC) payments but are above the current census poverty level); and (2) 40% of the State's per-pupil expenditure (SPPE) for education.* The figures from (1) and (2) for each county are multiplied to determine each the entitlement. That figure is then ratably reduced to the amount appropriated for Basic Grants to LEAs subject to the "hold harmless" requirements of 85% of the previous year's allocation. States then make sub-county allocations to individual school districts based on the latest available data on low-income children.

Mathematically the formula looks like this:

Step 1 (Number of formula eligible children in each
county) X
(40% of individual county's SPPE for
education)* =
(Individual county entitlement)

Step 2 (Individual county entitlement determined in
Step 1)/
(National entitlements for all counties
across the country) X
(The amount appropriated) =
(Allocation for individual county)

Step 3 Compare county figure reached in Step 2 with the amount received in the previous year. In no case can a county receive less than 85% of the amount received in the previous year. County allocations are then ratably reduced for counties above the 85% level in order to bring all counties up to the 85% "hold harmless" level.

* While the cost factor is 40% of a State's SPPE for education, no State's SPPE may exceed 120% nor fall below 80% OF 40% of the national average per-pupil expenditure.

Concentration Grants Allocation Formula (Chapter 1, section 1006)

Concentration Grants are allocated to counties with at least 6,500 formula-eligible children or in which such children make up at least 15% of the school-age population. County entitlements are based on the product of (1) the number of formula children in excess of 6,500 if the county qualifies only on the basis of the 6,500 child threshold, or all formula children if such children are at least 15% of a county's total school-aged population and (2) the current year's Basic Grant entitlement divided by the previous year's number of Basic Grant formula-eligible children. That amount is ratably reduced to the amount appropriated for Concentration Grants.

Mathematically the formula looks like this:

Step 1 (Number of formula-eligible children in counties that qualify for Concentration Grants) X
(Current year's Basic Grant entitlement for each county qualifying for Concentration Grants) /
(Previous year's number of Basic Grant formula-eligible children in each county qualifying for Concentration Grants) =
(Individual county entitlement)

Step 2 (Individual county entitlement determined in Step 1) /
National entitlement, the sum of the entitlements for all counties across the country) X
(The amount appropriated for Concentration Grants) =
(Allocation for individual county)

The statute also establishes a minimum that each State is entitled to receive. The minimum is the lesser of (1) .25% of the amount appropriated for Concentration Grants; (2) 150% of the State's previous year's Concentration Grant allocation; or (3) 150% of the national average per pupil payment (NAPP) multiplied by the national total of concentration grant formula children in the State for the previous year. (The NAPP is determined by dividing the Concentration Grant appropriation by the national total of Concentration Grant formula children.) In no case, however, may a State receive less than $250,000.

Capital Expenses for Private School Children Allocation Formula (Chapter 1, Section 1017(d))

Funds are allocated to States based on their proportion of non-public school students served under the Chapter 1 Basic Grants program in the school year 1984-85.

Mathematically the formula looks like this:

> (The number of private school children in each State served by Chapter 1 in the 1984-85 school year) /
> (The total number private school children nationally served by Chapter 1 in the 1984-85 school year) X
> (The amount appropriated for this program) =
> (Allocation for individual State)

State Agency Programs Allocation Formula (Chapter 1, Part D, Subparts 1, 2, and 3)

Funds are allocated to the States based on the number of students eligible for the program and 40% of an individual State's SPPE for education. These two figures are multiplied to determine each State's entitlement. A State's entitlement is ratably reduced to the amount appropriated.

Mathematically the formula looks like this:

Step 1 (Number of eligible children in each State) X
(40% of individual State's SPPE for education)* =
(Individual State entitlement)

Step 2 (Individual State entitlement determined in Step 1) /
(National entitlement, the sum of the entitlements for all States nationally) X
(The amount appropriated) =
(Allocation for individual State)

* While the cost factor is 40% of a State's SPPE for education, no State's SPPE may exceed 120% nor fall below 80% of 40% of the national average per-pupil expenditure

State Administration Grants Allocation Formula (Chapter 1, Section 1404)

The authorizing statute provides that each State shall receive 1% of the amount allocated for its Part A (LEA Grants) and Part D (State Agency Grants) Chapter 1 programs, with no State receiving less than $325,000, or $50,000 in the case of the Outlying Areas. When appropriations are insufficient to fund the program at this level, funds are allocated to States on the basis of their Parts A and D allocations, subject to the State and territorial minimums.

State Program Improvement Grants Allocation Formula
(Chapter 1, Section 1405)

The authorizing statute provides that each State shall receive .25 percent of the amount allocated for its Part A (LEA Grants) and Part D (State Agency Grants) Chapter 1 programs, with no State receiving less than $90,000, or $15,000 in the case of the Outlying Areas. When appropriations are insufficient to fund the program at this level, funds are allocated to States on the basis of their Parts A and D allocations, subject to the State and territorial minimums.

LONGITUDINAL STUDY

Mr. Stokes: In the fiscal year 1990 House Appropriations Report, the Committee expressed its concern over the projected cost of the Chapter 1 Longitudinal study and asked the Department to review its plans to determine whether its goals could be met at a lower cost. What is the status of your effort in this regard?

Mr. Bonner: The report on the cost of the National Longitudinal study of Chapter 1 was sent to the Committee on Appropriations on January 31, 1990.

Mr. Stokes: What are you requesting for this study in fiscal year 1991?

Mr. Bonner: By factoring out the Best Practices study, which was originally a component of the longitudinal study but will now be funded separately, approximately $4.3 million of the amount requested for Chapter 1 Evaluations and Technical Assistance would support the third year of the longitudinal study.

FLEXIBILITY FOR CHAPTER 1

Mr. Stokes: The Secretary has made flexibility in education a focus for legislative initiatives within the Department. As you know, this issue was addressed for compensatory education programs in the Education Consolidation and Improvement Act Amendments in 1983. Would the Chapter 1 program be a target of the flexibility initiatives now being considered by the Department?

Mr. Bonner: As a result of the education summit held with the Nation's governors last fall in Charlottesville, Virginia, the President and the National Governors' Association are examining legal and structural impediments to providing quality education in this country and the need for providing States and localities with more flexibility in the use of Federal education funds. Based on this examination, the Secretary will consider legislative, regulatory, or administrative initiatives that would add flexibility to the way Chapter 1 and other Department programs operate.

PRESIDENTIAL MERIT SCHOOLS

Mr. Dwyer: The President's budget requests $225 million for the Presidential Merit Schools program for fiscal year 1990, in addition to a $175 million transfer of Chapter 1 funds appropriated in fiscal year 1990 to Merit Schools. In light of the absence of an authorization, why should this committee provide the program with an increase of that magnitude?

Mr. Bonner: Our 1991 request assumed enactment of legislation authorizing the Presidential Merit School program by March 1, 1990. We fully expect final enactment of this legislation in 1990.

Our requested $100 million increase for this program in 1991 is central to the President's campaign to raise academic achievement nationally by strengthening accountability and providing financial incentives for educational success. In order to bring about improvements in education nationally, we firmly believe that:

1. Achievable standards of excellence can and should be set for all students and all schools:

2. Financial incentives can spur schools to rise to the challenge of meeting these standards; and

3. Demonstrated school-wide progress in achieving excellence deserves recognition.

This program would also help the Nation to attain the goals, established by the President and the Governors, of:

1. Increasing the high school graduation rate;

2. Enabling American students to leave grades four, eight, and twelve with a demonstrated competency over challenging subject matter; and

3. Ensuring that American schools are free of drugs and violence and offer a disciplined environment conducive to learning.

EFFECT ON STUDENT ACHIEVEMENT

Mr. Dwyer: According to your budget justification, Chapter 1 appears to have an immediate positive effect on student achievement, but "participating students did not improve enough academically to eliminate their need for special assistance in later years." Despite these data, the Department's request would only serve 980,000 students in grades 7-12. In light of this apparent contradiction, how does the Department intend to meet the continuing needs of Chapter 1 students? What barriers continue to provide Chapter 1 participants with such short-term benefits; and how can Chapter 1 be changed to alleviate this problem?

Mr. Bonner: I would first note that local school districts develop and implement their own Chapter 1 programs to meet the needs of their educationally disadvantaged children. In designing their Chapter 1 programs, school districts assess student needs and focus Chapter 1 resources on services at the appropriate grade levels. Local school districts do in fact devote a substantial part of their Chapter 1 resources to serving students in secondary schools. Based on 1987-88 data (the last year for which actual data are available), school districts served slightly over one million students in grades 7 through 12 (22 percent of the total served). In funding terms this meant that roughly $882.9 million of the fiscal year 1989 Chapter 1 LEA Grant appropriation supported compensatory education programs for secondary school students.

In terms of the barriers that prevent Chapter 1 students from receiving long-term benefits from the program, it must be remembered that Chapter 1 services make up only a portion of the total instructional services that a child receives during the school day. Chapter 1 services are designed to supplement the regular instruction that a child is already receiving from the school. The lack of sustained benefits for children served by Chapter 1 is as much a function of the general quality of educational services they receive from the school as it is of the quality of specific Chapter 1 services they receive.

To help meet the continuing needs of Chapter 1 students in the longer run, we would first advocate giving greater emphasis to early intervention with compensatory education services. This would, we believe, alleviate or at least reduce the need for compensatory education in later years and address in part the problem of the program providing only short-term benefits. Our 1991 request for Even Start, which provides early remedial help to children under age 7 and their parents, supports our emphasis on early childhood intervention. That request is almost double last year's level.

A second area that we would emphasize to address the problem of Chapter 1 providing only short-term benefits would be our continued focus on program improvement and accountability. The Hawkins-Stafford amendments established, for the first time, rigorous standards for program accountability and authorized funds for States to help local school districts in their program improvement efforts. We have requested a substantial increase in 1991 for State Program Improvement Grants to help States provide educational services to school districts implementing program improvement plans and believe this effort will help bring about more long-term benefits to students participating in the program.

At the same time we would continue to maintain current levels of technical assistance to help States and localities take advantage of proven educational approaches to compensatory education instruction. ED-sponsored activities carried out by the Chapter 1 Technical Assistance Centers and Rural Technical Assistance Centers have helped State and local education personnel in improving program quality and sustaining program benefits already derived.

EFFECT OF EDUCATION REFORM AT THE STATE LEVEL ON CHAPTER 1 STUDENTS

Mr. Dwyer: Across the country, States and localities are examining their curricula and finding them lacking. Consequently, graduation requirements have been raised and higher standards set. While this is certainly a laudable effort, which we must encourage, I am interested to learn if Chapter 1 secondary students are keeping up with these changes. If not, what efforts are being undertaken to prepare Chapter 1 students to meet these more demanding requirements? In addition, has there been a proportional increase in drop-outs with the introduction of more rigorous standards?

Mr. Bonner: It appears that Chapter 1 secondary students are not being hurt by rising academic standards resulting from the education reform movement. A recent study entitled "The Progress of Reform, An Appraisal of State Education Initiatives," released in 1989 by the Center for Policy Research in Education indicates that while many believe that higher standards will push at-risk students out of schools, the authors "..have not seen evidence that tougher standards cause higher dropout rates. In fact some studies find evidence to the contrary...."

NUMBER OF ELIGIBLE STUDENTS SERVED

Mr. Dwyer: The Department estimates that Chapter 1 served over 4.92 million elementary and secondary school students, or roughly 10 percent of the student population. How many eligible students remain unserved by Chapter 1?

Mr. Bonner: We have no precise data on the number of children eligible for Chapter 1 services. Chapter 1 is designed to serve children who are educationally disadvantaged and reside in low-income areas. School districts ultimately determine who is educationally disadvantaged. The student selection process is based on an assessment of needs that is conducted by each local educational agency. Because the selection criteria vary from district to district, the number of eligible children also varies.

Depending on the estimation method used, between 45 and 62 percent of the children who score below the 35th percentile in standardized tests are served by Chapter 1. Additional children are served through State-and locally-funded compensatory education programs.

Mr. Dwyer: How much additional funding would be needed to serve these children?

Mr. Bonner: Because of the lack of precision on the exact number of children eligible for Chapter 1 services, it is impossible to provide a figure on how much additional funding would be required to serve all eligible children.

Mr. Dwyer: In addition, would you please provide the Committee with the ratio of served to unserved students over the past 5 fiscal years?

Mr. Bonner: Again, because there are no precise data on the number of children eligible for Chapter 1, it is impossible to provide a ratio of the number of students served to the number eligible. The following table provides figures on the number served for the last 5 years for which actual data exist.

Year	Number of Children Served
1983-84	4,572,635
1984-85	4,712,709
1985-86	4,739,870
1986-87	4,725,970
1987-88	4,943,729

REQUEST FOR THE CHAPTER 1 HANDICAPPED AND NEGLECTED AND DELINQUENT PROGRAMS

Mr. Dwyer: Despite the Department's contention that Chapter 1 funds are being targeted to those students most truly in need, once again handicapped and neglected were either level funded or receive nominal increases before inflation. Why haven't these groups of children, which can truly be described as needy, been targeted for increases in fiscal year 1991?

Mr. Bonner: Our proposal to level fund the Chapter 1 Handicapped program was based on two factors:

1. A study completed by the Government Accounting Office (GAO) in 1989 indicated that the Chapter 1 and the Education of the Handicapped Act (EHA) State Grant program, although originally created at different times and for different purposes, are now similar administratively. Both programs serve students of similar ages and with similar kinds of handicapping conditions, use program funds to supplement State and local services, count children for funding allocation purposes on the same day each year, and are concurrently monitored at the Federal level.

2. Growth for the EHA program has been significantly higher than it has been for Chapter 1. The number of handicapped students served by the EHA grew by about 102,000 between 1988 and 1989 while the number of students served by Chapter 1 increased by about 4,700 between 1988 and 1989. This trend indicates the continued commitment of States to serve most children with handicaps through LEA programs under the EHA rather than through the State-supported or operated programs under Chapter 1 even through the Federal share per child is greater under Chapter 1. In recognition of this fact, we have requested an additional $72.5 million for the EHA State grant programs while proposing to level fund the Chapter 1 Handicapped program.

Our proposed $1.3 million increase for the Neglected and Delinquent program is consistent with our general policy of focusing available resources on programs that serve a needy population. We believe that our 1991 request adequately addresses the needs of this special population.

CHAPTER 1 SCHOOLWIDE PROJECTS

Mr. Hoyer: Like many local systems, the Prince George's County schools work hard to address issues of educational equity. There is great effort made to equalize potential education benefits across the entire system. Is the 75 percent poverty rate requirement for participation in schoolwide programs an absolute limit on the ability of schools which have dispersed their student population under desegregation plans?

Mr. Bonner: The 75 percent poverty rate requirement is set in the law. In a case of a district that has a desegregation plan in which students attend schools outside the attendance areas in which they reside, an LEA bases the poverty rate on enrollment figures of the school to which children are transported as a result of the desegregation plan in order to determine whether that school qualifies for a schoolwide program.

EVEN START

Mr. Hoyer: What are the parallels, if any, in the way the Head Start program seeks to involve parents in the education of their children?

Mr. Bonner: There are a number of parallels in the parental involvement components of Head Start and Even Start. Both programs focus on the parent as the child's first teacher. Both provide home- or center-based activities. In Even Start the involvement of parents in the program is a requirement. In Head Start the parenting component is voluntary. Both programs assist parents with job training and educational training. Even Start, however, requires that parents involved in the program must be eligible for adult basic education in accordance with the Adult Education Act. Both programs provide referrals for parents and their children to a number of community agencies for services.

CHAPTER 1 STAFFING

Mr. Hoyer: The Prince George's County Chapter 1 program staff includes one home/school teacher, 56 resource teachers, and 152 instructional aides serving 8,039 students in 66 schools. Are these ratios of teachers to students and aides to teacher reflective of Chapter 1 programs nationally?

Mr. Bonner: In the 1986-87 school year 65,773 teachers and 55,817 aides served a national total of 4,732,986 students in Chapter 1.

Based on the national survey of principals conducted as part of the National Assessment (1987), 75 percent of Chapter 1 teachers provided instruction to groups of eight students or less.

According to Prince George's County school officials, each Chapter 1 teacher works with about 55 children daily, in groups of 3 to 5 children. The average size is about 10 per group. There is one Chapter 1 aide for 3 to 5 regular teachers. Thus each aide works with an average of 6 children at a time.

EDUCATIONAL AIDES

Mr. Hoyer: What level of education have these aides attained, and what type of training do these aides receive?

Mr. Bonner: Each year in Prince George's County there is one week of orientation training for the aides, plus an average of 5 more days. Most training deals with the teaching of reading or mathematics. In addition, teachers who specialize in reading and mathematics assist the aides on the job.

For several years the minimum requirement has been a high school diploma. According to Prince George's County school officials, of the total of 197 aides employed (some only part-time), 96 have only a high school diploma; 31 have at least 30 college hours; 22 have at least 60 college hours; and 45 have more than 90 college hours or a college degree. Three, hired before the minimum rule, have no high school diploma.

CHAPTER 1 ELIGIBILITY STANDARDS

Mr. Hoyer: How are eligibility standards determined in local education agencies, and can you explain whether the differences in Chapter 1 and non-Chapter 1 eligible students are more arbitrary than real?

Mr. Bonner: Standards for the selection of participants are determined by each LEA on the basis of an annual needs assessment. The needs assessment process identifies educationally deprived children in all eligible attendance areas. From the identified educationally deprived children, the LEA selects those who have the greatest need for special assistance. The selection process generally works well within individual LEAs since the standards are locally established and reflect the characteristics of the children in that school district, and the children selected for services are those most in need of the special assistance provided by Chapter 1.

SCHOOL IMPROVEMENT

Mr. Hoyer: How much more is included in this budget for helping school systems plan and implement program improvements apart from increased data collection and more general information sharing?

Mr. Bonner: For Grants to Local Educational Agencies, the 1991 request provides an 8 percent ($365,742,000) increase. This increase may not only be used to provide additional services and to serve additional children but to carry out new responsibilities under Chapter 1, including the program improvement requirements.

In addition, the 1991 request includes an $11,456,000 (91 percent) increase over the 1990 appropriation for State Program Improvement grants. These funds will be used for direct educational services in schools implementing program improvement plans.

STATE PROGRAM IMPROVEMENT GRANTS

Mr. Conte: How are States using their Chapter 1 program improvement grants that were first provided in fiscal year 1989?

Mr. Bonner: School year 1989-90 is the first year of operation for Chapter 1 School Improvement Grants. Thus no information about the exact uses of these funds is available at this time. However, it is anticipated that the most common uses of Chapter 1 Program Improvement funds will be: conducting workshops with evaluation and program improvement experts; consulting with developers of exemplary or promising educational practices; training or retraining local school district personnel who work with Chapter 1; and developing innovative program strategies.

Mr. Conte: How will State program improvement activities be clearly distinguished from State Administration and Evaluation activities?

Mr. Bonner: Funds provided for Chapter 1 State Program Improvement Grants, as opposed to those provided for State Administration, can only be used for direct educational services in schools implementing program improvement plans. Parents of participating children and staff from the individual school, the local educational agency, and the State educational agency must jointly agree on who will provide technical assistance and on how best to use these funds in the effective implementation of the program improvement plan. Separate accounting of these funds is required, and documentation must be maintained to show that these funds are used in accordance with the statute.

PLANS TO UPDATE POVERTY DATA FROM THE 1990 CENSUS

Mr. Conte: The Chapter 1 programs are dependent on Census data on the number of school-age children in poor families for the allocation of funds. Adequate Census data have never been available for Chapter 1 allocations at the local educational agency level, nor have county or even State Census data been available more frequently than every 10 years. Will accurate local educational agency level data be available from the 1990 census? Are there plans to update data on children from poor families between 1990 and the next census in 2000.

Mr. Bonner: The National Center for Education Statistics, is contracting with the Bureau of the Census to obtain 1990 census data for local educational agencies. This work is well underway. The mapping of all public school districts will be completed at the State level and will be sent to the Census Bureau within six months to be merged with county data. It is expected that the entire project will be completed in 1992.

We are not aware of any plans that the Bureau of Census has to provide census updates between 1990 and 2000 on children from poor families. In any event, the Department would need a change in the authorizing legislation to permit us to use any data sources other than the data provided by the most recent decennial census.

CHAPTER 1 HANDICAPPED PROGRAM

Mr. Porter: In the past we have discussed the duplicative regulatory and administrative structures created by the Chapter 1 Handicapped program and the Education of the Handicapped Act (EHA). Although these program share a fundamentally similar mission, States may not commingle funds from the two programs. Nor are they coordinated in any other way. What remedy would you suggest?

Mr. Bonner: The Hawkins-Stafford Elementary and Secondary School Improvement Amendments of 1988 (Public Law 100-297) strengthened the coordination between the Chapter 1 Handicapped program (Chapter 1) and the EHA. For example, States now serve children through age 21 under Chapter 1; the Chapter 1 child count data must conform to the data requirements of EHA and be reported on the same date as the EHA data; children (other than infants and toddlers) served under Chapter 1 must receive a free appropriate public education, as required by the EHA, and they and their parents must be provided all the rights and procedural safeguards required under Part B of the EHA; infants and toddlers served under Chapter 1 and their families must be provided the rights and procedural safeguards required under Part H of the EHA; and by fiscal year 1991, the Chapter 1 program must be administered by the State office responsible for Part B of the EHA. The existence of two programs for handicapped children, however, necessitates separate financial structures and inevitably results in some administrative duplication. To remedy this situation, we believe that, as the General Accounting Office has recently recommended, the Chapter 1 program should be merged with the EHA program.

CHAPTER 1 PROGRAM IN CHICAGO

Mr. Porter: The Chicago Public School system has recently undergone a radical change in its administrative structure. Schools are now governed by semi-autonomous, locally elected school boards which have real power over the administration of the individual schools. What implications do these changes have for the effectiveness of Chapter 1 in Chicago?

Mr. Bonner: In some ways, this structure will coincide with the new program improvement provisions created in Chapter 1 because program improvement is targeted on individual schools. Consequently, these school improvment provisions should complement the reform efforts taking place in Chicago.

Other administrative activities, such as the allocation of funds to schools, will continue to be carried out by the local educational agency. The Chicago Public School system will have to work out arrangements to fit these requirements to the new administrative structure.

EVEN START

Mr. Porter: You are requesting an appropriation for Even Start that is double last year's. In order for Even Start programs to be successful, they must be well publicized and well coordinated with other local education programs. Outreach is arguably the most important aspect of this program. Have grantees generally demonstrated competence in these areas of program administration?

Mr. Bonner: Yes. Although Even Start projects are just beginning (and we have no data on the success of outreach efforts), a key component in each Even Start project is its ability to cooperate and coordinate with existing services and resources in the community. Thus, services to the children and their parents may be provided in schools, in extended school day settings, in libraries, Head Start centers, Chapter 1 centers, or Follow Through centers. In a number of instances, local college students work with the children and their parents. The adult literacy component is often coordinated with similar programs already active in the community, such as Literacy Volunteers of America, community colleges, Job Training Partnership programs, literacy councils, and private industry councils.

COMPENSATORY EDUCATION FOR THE DISADVANTAGED

For carrying out the activities authorized by chapter 1 of title I of the Elementary and Secondary Education Act of 1965, as amended, [and by section 418A of the Higher Education Act, $5,434,777,000, of which $5,408,581,000] $5,604,361,000, of which $15,000,000 for purposes of sections 1437 and 1463 and $4,445,000 for subpart 3 of part F, shall become available on October 1, 1990 and remain available until September 30, 1991; and the remaining $5,584,916,000 shall become available on July 1, [1990] 1991 and shall remain available until September 30, [1991] 1992: Provided, That [$4,427,250,000] $4,463,100,000 shall be available for basic grants under section 1005, [$400,000,000] $495,900,000 shall be available for concentration grants under section 1006, [$285,938,000] $293,742,000 shall be available for migrant education activities under subpart 1 of part D, [$148,200,000] $146,389,000 shall be available for handicapped education activities under subpart 2 of part D, and [$33,197,000] $34,103,000 shall be available for delinquent and neglected education activities under subpart 3 of part D, [$50,797,000] $54,000,000 shall be for section 1404, and [$12,699,000] $24,000,000 shall be for section 1405[: Provided further, That no State shall receive less than $340,000 from the amounts made available under this appropriation for concentration grants under section 1006: Provided further, That no State shall receive less than $375,000 from the amounts made available under this appropriation for State administration grants under section 1404: Provided further, That funds made available under sections 1437 and 1463 may be expended by the Secretary at any time, provided that notices of proposed rules for all currently operating programs authorized under chapter 1 have been published]. 1/

Compensatory Education for the Disadvantaged

[From the amounts appropriated for part A of chapter 1, an amount not to exceed $125,000,000 may be obligated to carry out a new Merit Schools program and an amount not to exceed $50,000,000 may be obligated to carry out a new Magnet Schools of Excellence program only if such programs are specifically authorized in law prior to March 1, 1990.] 2/

For carrying out a program of Presidential merit schools, $225,000,000, which shall become available on July 1, 1991, and remain available until September 30, 1992: Provided, That these funds are not available until specifically authorized. 3/

For carrying out activities authorized by section 418A of the Higher Education Act, $9,578,000. 4/ (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ Special appropriation language establishing higher State minimums for Concentration Grants and State Administration is deleted, thus allowing the existing statutory minimums established by Congress in the authorizing statute to take effect. Language enabling the Department to expend funds for Chapter 1 evaluation and technical assistance only after proposed regulations for all currently operating Chapter 1 programs have been published is deleted because all proposed regulations have been published and final regulations for all funded Chapter 1 programs are expected to be published by October 1, 1990.

2/ This language is deleted becuase the Department is requesting funds for only the Presidential Merit Schools program in 1991 under this account.

3/ This language is needed to appropriate funds for the new Presidential Merit Schools program contingent upon enactment of authorizing legislation pending before Congress.

4/ This language is added to specify the amount for the High School Equivalency and College Assistance Migrant programs.

Compensatory Education for the Disadvantaged

Language Analysis

Language Provision	Explanation
For carrying out the activities authorized by chapter 1 of title I of the Elementary and Secondary Education Act of 1965, as amended, [and by section 418A of the Higher Education Act, $5,434,777,000 of which $5,408,581,000] $5,604,361,000, of which $15,000,000 for purposes of sections 1437 and 1463 and $4,445,000 for subpart 3 of part F, shall become available on October 1, 1990 and remain available until September 30, 1991; and the remaining $5,584,916,000 shall become available on July 1, [1990] 1991 and shall remain available until September 30, [1991] 1992:	This language establishes a total funding level of $5,604,361,000 for programs authorized by Chapter 1 of Title I of the Elementary and Secondary Education Act of 1965. It also sets aside $15,000,000 for program evaluation, studies, and technical assistance activities authorized by sections 1437 and 1463, and $4,445,000 for rural technical assistance activities authorized under subpart 3 of part F. Funds appropriated for activities authorized by sections 1437 and 1463 and by subpart 3 of part F would become available on October 1, 1990, or immediately upon enactment of the fiscal year 1991 appropriation. Funds for the remaining activities appropriated under Chapter 1 would become available on July 1, 1991, and remain available through September 30, 1992.
Provided, That [$4,427,250,000] $4,463,100,000 shall be available for basic grants under section 1005, [$400,000,000] $495,900,000 shall be available for concentration grants under section 1006, [$285,938,000] $293,742,000 shall be available for migrant education activities under subpart 1 of part D, [$148,200,000] $146,389,000 shall be available for handicapped education activities under subpart 2 of part D, and [$33,197,000] $34,103,000 shall be available for delinquent and neglected education activities under subpart 3 of part D, [$50,797,000] $54,000,000 shall be for section 1404, and [$12,699,000] $24,000,000 shall be for section 1405	This language establishes specific funding levels in fiscal year 1991 for the Chapter 1 Basic Grants to Local Educational Agencies (LEAs), Concentration Grants, the State Agency Migrant, Handicapped, and Neglected and Delinquent programs, State Administration, and State Program Improvement Grants. Funds made available for Grants to LEAs would be divided between Basic Grants and Concentration Grants as provided in the authorizing statute. That is, 10 percent of Part A funding would be distributed under the Concentration Grant formula.

Compensatory Education for the Disadvantaged

Language Analysis — Continued

Language Provision	Explanation
[: Provided further, That no State shall receive less than $340,000 from the amounts made available under this appropriation for concentration grants under section 1006:]	Language modifying the statutory minimum that each State receives under Chapter 1 Concentration Grants is eliminated. Thus, as set by the statute, each State would receive at least $250,000.
[Provided further, That no State shall receive less than $375,000 from the amounts made available under this appropriaton for State administration grants under section 1404:]	Languaging modifying the statutory minimum that each State receives under Chapter 1 State Administration is eliminated. Thus each State would receive the statutory minimum of $325,000.
[Provided further, That funds made available under sections 1437 and 1463 may be expended by the Secretary at any time, provided that notices of proposed rules for all currently operating programs under chapter 1 have been published].	This language is eliminated because proposed rules for all operating Chapter 1 programs have been published. All final rules are expected to be published by the beginning of fiscal year 1991.
[From the amounts appropriated for part A of chapter 1, an amount not to exceed $125,000,000 may be obligated to carry a new Merit Schools program and an amount not to exceed $50,000,000 may be obligated to carry out a new Magnet Schools of Excellence program only if such programs are specifically authorized in law prior to March 1, 1990.]	This language is eliminated because the Department is requesting funds for only the Merit Schools program in 1991 under this account.
For carrying out a new program of Presidential merit schools, $225,000,000, which shall become available on July 1, 1991, and remain available until September 30, 1992: Provided, That these funds are not available until specifically authorized.	This language establishes a funding level of $225,000,000 for the Presidential Merit Schools program and makes funding contingent upon enactment of a specific authorization. It also provides for forward-funding of this new program.

Compensatory Education for the Disadvantaged

Language Analysis — Continued

Language Provision	Explanation
For carrying out activities authorized by section 418A of the Higher Education Act, $9,578,000.	This language establishes a specific funding level for the High School Equivalency and College Assistance Migrant programs.

Compensatory Education for the Disadvantaged

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1989 House Report	
Chapter 1 Migrant Education	
The Committee expressed concern about the high proportion of formerly migratory students served under this program. The Committee requests that the Department review data on the number of formerly migratory children counted for allocation purposes and served and their policy implications and submit a report to both the authorizing and appropriations committees by February 1, 1990. The report should specifically address whether formerly migratory children are significantly more disadvantaged educationally than other Chapter 1 eligible children.	The Department will submit the report to the authorizing and appropriations committees by February 1, 1990.
Chapter 1 Evaluation and Technical Assistance	
The Committee expressed concern over the projected cost of the Chapter 1 longitudinal study and believes that the Department should review this plan to determine whether its goals can be met at a lower cost.	The Department is in the process of reviewing the projected cost of the longitudinal study to see whether its goals can be met at a lower cost. A report on various options will be submitted to Congress by February 15, 1990.

Legislative History

The Federal Government has a commitment and responsibility, in cooperation with States and localities, to help students who are educationally disadvantaged master the basic and more advanced skills they need to succeed in school and become productive citizens. For over two decades, the primary Federal vehicle for helping schools meet the educational needs of disadvantaged children has been the Grants for the Disadvantaged programs authorized by Title I of the Elementary and Secondary Education Act (ESEA) and Chapter 1 of the Education Consolidation and Improvement Act of 1981 (ECIA). Congress has appropriated almost $68 billion for Title I/Chapter 1 services since 1966. During this time the program has been the Department's "flagship" effort in elementary and secondary education.

In the early 1970's, Congress amended the Title I statute to clarify the purpose of the program and to ensure that it met the specific needs of educationally disadvantaged students. These amendments required that Federal funds supplement local expenditures and prohibited local school districts from discriminating against Title I schools in the allocation of State and local funds.

As Title I matured and the law and regulations became more complex, critics noted that the program had become increasingly burdensome. In response to concerns about the administrative burden, which many believed had sapped the program of its vitality, Congress enacted Chapter 1 of the Education Consolidation and Improvement Act (ECIA). As the successor to Title I, Chapter 1 maintained Title I's allocation formula and its basic policy of serving the educationally deprived children most in need, but simplified the administrative and program requirements and removed unnecessary Federal supervision and control.

Congress further clarified and expanded the Chapter 1 statute in 1983, with the ECIA Technical Amendments of 1983, P.L. 98-211. School districts were provided additional flexibility in such areas as establishing eligible school attendance areas and targeting Chapter 1 funds. Certain Chapter 1

Compensatory Education for the Disadvantaged

Account Summary -- Continued

provisions, relating to supplanting of local funds, participation of private school children who reside in project areas, and parental involvement, were clarified. States were required to conduct an evaluation of all their Chapter 1 compensatory education programs and to collect data every two years describing the children served.

As the expiration of the Chapter 1 ECIA authorization approached, both the Administration and Congress took a hard look at the statute. Studies of Chapter 1 programs, including the National Assessment of Chapter 1 (completed in 1987), found that these programs were often successful in improving the basic skills of participating students but that further improvements could be made. Drawing on these research results, the Administration and Congress worked together closely in developing and enacting the Hawkins-Stafford Elementary and Secondary School Improvement Amendments (P.L. 100-297). This law improved the targeting of resources, strengthened accountability mechanisms, provided incentives to encourage innovation and reward successful practice, and strengthened parental involvement requirements.

1991 Request

Fiscal year 1991 will mark the third year of operation for the Chapter 1 programs as reauthorized by the Hawkins-Stafford Elementary and Secondary School Improvement Amendments. The 1991 budget request of $5.8 billion for Compensatory Education for the Disadvantaged represents a $520.6 million increase over the 1990 level and reflects the importance the Administration places on providing resources to serve disadvantaged children. The 1991 request for this account falls into three priority areas: focus on the disadvantaged, early childhood education, and program improvement and accountability.

Focus on the disadvantaged

The Department requests $4.959 billion for Grants to Local Educational Agencies (LEAs), an increase of $365.7 million (8 percent) over the 1990 level. Following the basic law, 90 percent of the total LEA Grant request would be used for Basic Grants and 10 percent for Concentration Grants. This major increase proposed for Chapter 1 Grants to LEAs reflects the Secretary's belief that this program should continue to be the centerpiece of Federal aid to elementary and secondary education.

For the State Agency Migrant program, the Department's request would provide an $11.3 million (4 percent) increase to serve a population that has traditionally been among the most academically disadvantaged. Likewise the Department requests a $1.3 million (4 percent) increase for the Neglected and Delinquent program which serves another disadvantaged population group. Funding for the Capital Expenses for Private School Children, the State Agency Handicapped program, and the High School Equivalency and College Assistance Migrant programs would remain at their 1990 levels.

Compensatory Education for the Disadvantaged

Account Summary — Continued

Early childhood education

The Secretary's strong belief in the importance of and benefits derived from early intervention programs is reflected in the proposed increase for the Even Start program, from $24.2 million to $48 million — almost double last year's amount, to provide early remedial help to educationally disadvantaged children and their parents. This program integrates early childhood education and adult education into a unified program to provide educationally disadvantaged parents with the basic literacy skills needed to help their children succeed in school. The increase would enable the program to operate an estimated 131 new projects in 1991.

Program improvement and accountability

Program accountability, a major Administration priority, is promoted by conducting carefully designed program evaluations, providing technical assistance to school districts on program improvement strategies and evaluation strategies, and, in Chapter 1, through the State-monitoring and program improvement process established by the Hawkins-Stafford Amendments. To support this priority, the Department requests an $11.5 million (91 percent) increase for State Program Improvement Grants. This increase would help States provide educational services to school districts implementing program improvement plans in order to improve student academic performance. The Department also requests a $3.8 million (7.6 percent) increase for State Administration to help States carry out their administrative and technical assistance responsibilities which have grown in recent years because of added accountability and program improvement requirements of the statute.

For Chapter 1 Evaluation and Technical Assistance the Department proposes a $3.1 million increase in 1991. This increase would be used for evaluations to determine: the extent to which the program improvement requirements of Chapter 1 are being met; the effect that changes resulting from the Hawkins-Stafford Amendments have had on school districts, schools, and students; and areas that need improvement so that these issues can be addressed when the statute comes up again for reauthorization.

The Department also requests continued funding of Rural Technical Assistance Centers at the 1990 level. The technical assistance activities carried out under Chapter 1 will focus on helping State and local education officials address Chapter 1 program improvement and accountability issues.

Finally, the Department proposes to fund Presidential Merit Schools at $225 million, a $100 million increase over the comparable 1990 level. This program would make cash awards to public and private elementary schools that have made substantial progress in raising student educational achievement, creating a safe and drug-free school environment, and reducing the dropout rate. The program is designed to give financial incentives to spur schools to meet these challenges and provide public recognition to schools that have made progress in achieving excellence.

---

1. Grants for the disadvantaged: a. Grants to local educational agencies
   (1) Basic grants
   (Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Section 1005)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,212,647,000	$4,463,100,000	+$250,453,000

Purpose and Method of Operation

Basic grants to local educational agencies (LEAs) support supplementary compensatory educational services designed to increase the educational attainment of educationally disadvantaged children to a level appropriate for children of their age. The program provides financial assistance to school districts on the basis of their number of children from low-income families. Local school districts develop and implement their own programs to meet the needs of their students.

Financial assistance flows to school districts by formula, based on the State's per pupil expenditure for education and the number of each district's school-aged children from low-income families. Within districts, local school officials target funds on schools with the greatest number of poor children.

Appropriations for the LEA grant program are forward funded. The 1991 appropriation will become available on July 1, 1991, and will remain available for obligation until September 30, 1992. School districts generally will use the funds for the 1991-92 school year. The level of funding is dependent upon the availability of appropriations.

Accomplishments 1/

Effectiveness -- Data show that Chapter 1 has had some success in improving the basic skills of students participating in the program.

Data from the Sustaining Effects Study (1982) and the National Assessment of Chapter 1 (1986) showed that Chapter 1 students gained more than similar

---

1/ The data cited are descriptive of the antecedent Title I ESEA and Chapter 1 ECIA programs.

Accomplishments -- Continued

students who did not receive Chapter 1 services, in both reading and mathematics. Although significant, those gains were not great enough for the Chapter 1 participants to "catch up" with non-disadvantaged, non-Chapter 1 students. While the program appeared to have an immediate positive effect on student achievement, participating students did not improve enough academically to eliminate their need for special assistance in later years. Thus, compensatory education students seemed to receive long-term benefit only from continuing program participation.

Preliminary State data from the 1987-88 Chapter 1 Evaluation and Reporting System also indicate that Chapter 1 has a positive impact on raising academic achievement. Achievement results of Chapter 1 students show modest gains in all grades in reading and mathematics. However, these gains tend to be greater for students in the elementary grades than for those in junior and senior high. The achievement gains measured in the 1987-88 school year are consistent with those observed in 1979-80 through 1986-87.

Participants -- Data submitted by the States under the Chapter 1 Evaluation and Reporting System for the 1987-88 school year indicate that Chapter 1 served slightly over 4.92 million children. This figure represents roughly 10 percent of all children enrolled in elementary and secondary schools nationally, and is roughly 200,000 more than the number served in the 1986-87 school year.

The majority of Chapter 1 students (72 percent) are in grades one through six, 8 percent are in kindergarten or preschool programs, and 20 percent are in grades 7 through 12. A large majority (97 percent) of these students attend public schools. Roughly 45 percent of Chapter 1 LEA participants are white, 29 percent are black, 21 percent are Hispanic, 2 percent are American Indian, and 3 percent are Asian or Pacific Islander. Approximately 42 percent of the participants in grades 1-6 were poor in 1976. Because the poverty rate among the total population of children living in poverty has increased since that time, it is reasonable to assume that a higher percentage of today's Chapter 1 participants are living in poverty. (National Assessment of Chapter 1: Current Operation of the Chapter 1 Program, 1987.)

Accomplishments — Continued

The majority (54 percent) of elementary and secondary school students receiving Chapter 1 services score below the 25th percentile in achievement. A small but significant percentage of students (12 percent) receiving Chapter 1 services score above the 50th percentile. (National Assessment of Chapter 1: Poverty, Achievement, and the Distribution of Compensatory Education Services, 1986.)

A significant percentage (48 percent) of low-achieving elementary school students who score below the 25th percentile are not served by Chapter 1 or any other State or local compensatory education programs. (National Assessment of Chapter 1: Poverty, Achievement, and the Distribution of Compensatory Education Services, 1986.) This is because of a number of factors, such as the presence of low achievers in unserved schools and grade levels and decisions made by school officials to serve only the very lowest achievers within selected grades and schools. (National Assessment of Chapter 1: Current Operation of the Chapter 1 Program, 1987.)

Eligible population served -- Chapter 1 is designed to serve children who are educationally disadvantaged and reside in low-income areas. School districts ultimately determine who is educationally disadvantaged. The actual child selection process is based on an assessment of needs that is conducted by each LEA. Because the selection criteria vary from district to district, the number of eligible children may also vary. Thus, any estimate of the number of children eligible for Chapter 1 services is necessarily imprecise.

The National Assessment of Chapter 1, in its first interim report in 1986, generated several estimates on the proportion of eligible Chapter 1 students served. Based on a reanalysis of 1976 data, the National Assessment found that:

- Of the lowest-achieving elementary students (those scoring below the 25th percentile on standardized tests) enrolled in Title I schools, about 40 percent received services under Title I. About 58 percent of these students received compensatory education services from either Federal or State and local sources.

- Of those elementary students scoring below the 50th percentile and enrolled in schools eligible for Title I services, about 30 percent received services under Title I. About 47 percent received compensatory education services either through Federal or State and local programs.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: a. Grants to local educational agencies
   (1) Basic grants

Accomplishments — Continued

District and School Characteristics -- Chapter 1 funds flowed to nearly 14,000 school districts, about 90 percent of the districts in the United States, during the 1985-86 school year. Some 70 percent of all elementary schools and roughly 36 percent of all secondary schools participate in the program. (National Assessment of Chapter 1: Poverty, Achievement and the Distribution of Compensatory Education Services, 1986.)

About 90 percent of all elementary schools with high poverty rates (50 percent or higher) receive Chapter 1 services. Of the high poverty schools not receiving services, almost all are located in districts that have poverty rates above the national midpoint (12.5 percent). About 75 percent of all Chapter 1 students are enrolled in districts and schools where the poverty rates are above the national midpoint. (National Assessment of Chapter 1: Poverty, Achievement and the Distribution of Compensatory Education Services, 1986.)

Chapter 1 students are more likely than students generally to reside in large urban school districts. Thirty-seven percent of all Chapter 1 participants attend public schools in urban districts, while 26 percent of all students nationally attend such schools. School districts in the 25 largest cities receive 25 percent of all funds. About 45 percent of all Chapter 1 students are in the quartile of all districts with the highest rates of poverty. (National Assessment of Chapter 1: Current Operation of the Chapter 1 Program, 1987.)

Services -- During the 1987-1988 school year, approximately 74 percent of Chapter 1 participants received compensatory reading instruction, while 43 percent received remedial mathematics instruction. In addition, Chapter 1 students received instruction in other academic areas such as language arts (21 percent) and support services such as health and nutrition services (8 percent), guidance counseling (16 percent), and transportation (4 percent).

Services are typically provided outside the regular classroom for about 30 to 35 minutes daily, and about three-quarters of all teachers provide instruction in groups of eight students or less. (National Assessment of Chapter 1: Current Operation of the Chapter 1 Program, 1987.)

Staffing -- School year 1987-88 data show that Chapter 1 projects employ the equivalent of approximately 144,000 people full-time. About 85 percent are either teachers or teachers aides. The remainder serve as administrators, support staff, or curriculum specialists.

Expenditures -- In 1987-88, the Federal contribution per child varied widely by State, ranging from $467 in Utah to $1,172 in Wyoming (Chapter 1 Evaluation and Reporting System). Within States, the Federal contribution

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: a. Grants to local educational agencies (1) Basic grants

---

Accomplishments -- Continued

per child differs among school districts depending on their size, degree of urban development, and incidence of poverty. Costs tend to be higher for large, highly urban districts with a greater incidence of poverty than for smaller districts with less poverty.

1991 Budget Proposal

The Department proposes to fund Basic Grants at $4.46 billion -- an increase of $250.5 million over the amount available in 1990. This request reflects the priority that the Administration places on programs serving the disadvantaged generally and on Chapter 1 LEA grants in particular. Together with the request for Concentration Grants, the Administration will follow the policy established in P.L. 100-297, the Hawkins-Stafford Elementary and Secondary School Improvement Amendments, of providing a base amount for Basic Grants equal to 90 percent of the total proposed for Grants to LEAs. These funds would benefit all local school districts currently receiving Chapter 1 support. The remaining 10 percent of the total requested for LEA Grants would be targeted through the Concentration Grant program on areas that have high concentrations of poor children.

At the 1991 request level, Basic Grants, in conjunction with the Concentration Grant program, would remain the Department's primary vehicle for providing compensatory education services to disadvantaged students. No changes from the policies established in P.L. 100-297 are proposed. Local school districts would continue to determine the allocation of resources among eligible children, the grades served, and the type of educational services provided.

Impact Data 1/	1989	1990	1991
No. of LEAs participating	14,000	14,000	14,000
Estimated No. of students served	5,000,000 - 5,200,000	5,253,000 - 5,453,000	5,357,000 - 5,558,000
Estimated average per pupil expenditure	$740 - $770	$770 - $800	$800 - $830

1/ These figures are estimates. Local school districts determine the actual number of children receiving services (and thus the Federal contribution per child) in any given year.

Compensatory Education for the Disadvantaged

---

1. **Grants for the disadvantaged: a. Grants to local educational agencies (2) Concentration grants (Elementary and Secondary Education Act of 1965, Title 1, Chapter 1, Section 1006)**

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$380,611,000	$495,900,000	+$115,289,000

1/ Amount in excess of $3,900,000,000 appropriated for Grants to LEAs, up to $400,000,000; 10 percent of LEA Grants funding if LEA Grants appropriation exceeds $4,300,000,000.

Purpose and Method of Operation

Like Basic Grants to local educational agencies (LEAs), Concentration Grants support supplementary compensatory education services designed to meet the special needs of educationally deprived children.

Under P.L. 100-297, funds flow to counties and LEAs with at least 6,500 children from low-income families or a poverty rate of at least 15 percent. In cases where counties and LEAs qualify under the 15 percent poverty rate threshold, the statute requires all children to be counted for allocation purposes. The law also provides a statutory minimum State allocation (subject to a limit of: (a) .25 percent of the amount appropriated for Concentration Grants; (b) 150 percent of the national average per pupil payment, which is determined by dividing the appropriation by the number of formula children; or (c) 150 percent of the previous year's allocation, whichever is less). In no case, however, can a State receive less than $250,000. The Outlying Areas do not receive funding.

Funds for this program are provided on a forward-funded basis. The 1991 appropriation would become available on July 1, 1991, and remain available for obligation until September 30, 1992. School districts would use the funds for the 1991-92 school year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Second-year funding for the Concentration Grants program authorized under P.L. 100-297 was provided through the 1990 appropriation. This program provides the same services as Basic Grants to LEAs.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: a. Grants to local educational agencies
   (2) Concentration grants

1991 Budget Proposal

The Department proposes to fund Concentration Grants at $495.9 million, an increase of $115.3 million over the 1990 amount.

The request reflects the Administration's policy and congressional intent to improve the targeting of Chapter 1 by focusing more resources on areas with higher numbers and percentages of low-income children — areas that have the greatest need. This budget proposal follows the statute by providing that 10 percent of the total amount requested for LEA Grants would be allocated under the Concentration Grant formula.

The National Assessment of Chapter 1 highlighted the close association between high concentrations of poverty in a school and low academic achievement. Data from this study indicate that children, regardless of income, are more likely to do poorly when attending schools with higher than average concentrations of poverty. This request would direct additional funds to these high-poverty areas. Approximately 58 percent of counties nationally receive Concentration Grants.

Impact Data 1/	1989	1990	1991
Estimated number of students served	225,000 - 234,000	475,000 - 493,000	595,000 - 618,000
Estimated average Federal contribution per child	$740-$770	$770-$800	$800-$830
Number of counties that quality	1,780	1,780	1,780

1/ These figures are estimates. Local school districts determine the actual number of children receiving services (and thus the Federal contribution per child) in any given year.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: b. Capital expenses for private school children
(Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Section 1017(d))

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$25,682,00	$25,682,000	---

Purpose and Method of Operation

The Capital Expenses Program for Private School Children makes assistance available to local school districts to pay for the additional capital costs, incurred since July 1, 1985, associated with providing equitable Chapter 1 services to private school students as a result of the *Felton* decision. LEAs use program funds for activities such as: rental of classroom space in neutral sites; rental or purchase of mobile vans for Chapter 1 instruction; and transportation of private school students to public schools or neutral sites.

Funds are allocated to States based on their proportion of non-public school students served under the Chapter 1 Basic Grants program in school year 1984-85. States in turn distribute these funds to LEAs based on their needs as set forth in individual applications.

This program is forward funded. The 1991 appropriation request would become available on July 1, 1991 and remain available for obligation until September 30, 1992. School districts would use the funds for the 1991-92 school year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Because fiscal year 1989 funds only became available on July 1, 1989, no actual data on program accomplishments are yet available.

1991 Budget Proposal

The Department proposes to fund Capital Expenses for Private School Children at $25.7 million, the same as the 1990 appropriation level.

As a result of the Supreme Court's *Felton* decision on July 1, 1985, the number of private school children participating in Chapter 1 declined by 50,000 in the 1985-86 school year. Although the number of participants has

---

1991 Budget Proposal -- Continued

increased in each succeeding year, it remains well below the pre-*Felton* figure. A General Accounting Office study completed in 1987 also noted similar changes in the number of private school students in the 15 school districts it examined.

Since 1985, school districts with significant numbers of eligible private school children have had to redirect existing Chapter 1 funds to pay for non-instructional goods and services such as the purchase, lease, and renovation of real and personal property, insurance and maintenance costs, and transportation. This has reduced funds available for direct instructional services. LEAs will continue to incur additional non-instructional expenditures as they strive to provide equitable services to private school children.

The Department's $25.7 million request continues the policy of helping to reimburse school districts for the expenses incurred through providing Chapter 1 services to private school children in a manner consistent with *Felton*. The request would enable LEAs to devote more of their regular Chapter 1 funds to providing instructional services and to serve a larger number of private school children.

Impact Data	1989	1990	1991
Estimated average award	$380,000	$493,885	$493,885
Estimated smallest award	$5,140	$6,680	$6,680
Estimated largest award	$4,247,182	$5,520,047	$5,520,047

---

1. Grants for the disadvantaged: c. Even Start
   (Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Part B)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$24,201,000	$48,000,000	+$23,799,000

Purpose and Method of Operation

The Even Start program grants funds to eligible school districts to operate projects that provide educational services to parents of children under 7 years of age who live in Chapter 1-eligible school attendance areas. The purpose of the program is to help parents who lack a high school education become full partners in the education of their children and assist children to reach their full potential as learners by integrating early childhood education and adult education for parents into a unified program.

Three percent of the Even Start appropriation is used for programs for migrants and up to 2 percent is set aside for program evaluations. The remainder is distributed in one of two ways: (1) in a fiscal year in which the program's appropriation is less than $50 million, the Department awards grants directly to local educational agencies (LEAs); and (2) in years where the program's appropriation equals or exceeds $50 million, the Department would allocate funds to the States through a formula based on each State's portion of the Chapter 1 Basic LEA Grant allocation. States would in turn make grants to LEAs. The formula also provides for a minimum State allocation. In all cases the authorizing statute requires that funds be equitably distributed among urban and rural areas through the grant award process. The statute also establishes a limitation on the Federal share of the cost of an Even Start project. In its first year of operation, a project may use its Even Start grant to pay for 90 percent of the total costs. The Federal share gradually declines to 60 percent in the fourth and any subsequent year.

This program is forwarded funded. Thus funds appropriated for fiscal year 1991, will become available on July 1, 1991, and remain available for obligation until September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Fiscal year 1989 marked the first year of funding for this program. The Department awarded 73 grants to LEAs in 44 States and the District of Columbia. In addition, three Migrant Education Even Start projects were funded. Because projects are in their first year of operation, program evaluation data are not yet available.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: c. Even Start

1991 Budget Proposal

The Department proposes to fund this program at $48 million, a $23.8 million increase over the amount available for 1990. At this level, Even Start would continue funding projects begun in 1989 and 1990 at 80 percent and 70 percent of their total costs respectively, and start roughly 131 new projects at 90 percent of their total cost. Three percent ($1.44 million) of the total request would support projects that serve migrant students and up to $960,000 would go for program evaluation.

Researchers agree that preschool activities can be cost-effective for disadvantaged children. A study that tracked low-income children who participated in the Perry preschool project in Michigan indicated that, by the time those children reached 19, they were twice as likely to have gone on to postsecondary education, twice as likely to be literate, twice as likely to have a job, a third less likely to drop out of school, half as likely to become pregnant as teenagers, and half as likely to be on welfare as similar students who did not participate in the project. Other evaluations of preschool programs for disadvantaged students such as Head Start, however, indicate the immediate gains realized by participating in such a program are not always sustained and that the progress made is often lost during the transition between preschool and elementary school. Parents who lack the literacy skills needed to help their children may contribute to this situation.

Researchers have also found that parents play a pivotal role in laying the foundation for their children's acquisition of basic skills -- a parent is a child's first tutor. However, when parents themselves lack the literacy skills to help their children learn, it becomes impossible for them either to provide their children with early learning skills or to reinforce the skills children learn in preschool programs.

Even Start addresses this problem by integrating early childhood education and adult education programs. Parents not only receive basic skills instruction themselves but also receive help in becoming partners in their children's education.

The Department believes that increased funding for this program would help make other Federal programs such as Head Start, which primarily addresses the needs of children before they begin school, and Chapter 1 LEA grants, which mostly reaches children once they have entered school, become more effective by: (1) helping disadvantaged children to sustain the progress made in preschool programs as they make the transition into elementary school and thereby providing them with a firmer educational base so that they have less need for remedial instruction; and (2) giving educationally disadvantaged parents the basic literacy skills they need to help their children succeed in school.

1. Grants for the disadvantaged: d. State agency programs (1) Migrant education
(Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Part D, Subpart 1)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$282,444,000	$293,742,000	+$11,298,000

Purpose and Method of Operation

The Migrant Education program provides financial assistance to State educational agencies for compensatory education services to children of migrant agricultural workers and fishermen. Funds are allocated through a statutory formula based on the number of eligible full-time equivalent migrant students aged 3 through 21 residing within each State and the State's per pupil expenditure for education.

The program also supports the Migrant Student Record Transfer System (MSRTS) and inter- and intra-State coordination activities. MSRTS is a computerized system that provides migrant enrollment data needed to make State allocations and gives local school officials centralized access to school and health records of migrant students who move into their school districts. Coordination activities support contracts designed to improve inter- and intra-State coordination of migrant education activities.

This program, like the LEA Grant program, is forward funded. The 1991 appropriation will become available on July 1, 1991 and will remain available for obligation until September 30, 1992. Funds appropriated for fiscal year 1991 generally will support Migrant Education programs in the 1991-92 school year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Children counted for allocation purposes -- For the 1989-90 school year MSRTS identified 514,447 full-time-equivalent (FTE) students aged 3 to 21 as eligible to receive Chapter 1 Migrant Education services. About

---

Accomplishments -- Continued

40 percent of the students counted are currently migratory (that is, they have moved from one school district to another within the past year); the remainder are formerly migratory. The total number of currently and formerly migrant children counted showed a sharp increase between 1988 and 1989 because P.L. 100-297 expanded the ages of children counted from 5 to 17 years to 3 to 21 years. The proportion of the migrant population counted as formerly migratory has ranged between 60 and 63 percent over the past 5 years. MSRTS data further indicated that 29 percent of all migrant students counted for the 1989-90 allocation have remained in the same school system for at least 3 years.

Participants -- Preliminary data submitted by the States show that, during the 1987-88 school year, 386,039 students participated in the program, a 42,770 (12 percent) increase from the previous year. Of this total, 105,226 participated in summer term programs. Three States, California, Texas, and Florida, operated the largest programs and accounted for over half of all the program's participants.

Half of all students served were classified as formerly migrant. The majority (55 percent) of participating students were in grades 1 through 6; 12 percent were in kindergarten or prekindergarten; and 33 percent were in grades 7 through 12. Roughly 75 percent of all the participating students were Hispanic; 12 percent were white; 5 percent were black; 4 percent were Asian or Pacific Islander; and 2 percent were American Indian. (The remaining 3 percent of the participants were not identified by racial or ethnic category.)

Most (97 percent) of the migrant children came from families working in agricultural jobs. The remaining 3 percent were from families working as migrant fishermen. Almost half (45 percent) of the children participating in the program came out of the western migrant stream along the Pacific Coast. About one-third (34 percent) came from the central migrant stream in which migrant families use Texas as a home base and travel up through the midwest. The remaining 21 percent of the program participants are located in the eastern stream which stretches along the Atlantic coast.

Services -- Most program resources are devoted to providing supplemental instructional assistance for students and are similar to those provided under the Grants to LEAs program (Case Studies of the Migrant Program, 1987). During the 1987-88 school year, 44 percent of the migrant students participating in the program during the regular term received reading instruction and 31 percent received remedial mathematics instruction. Students also received instruction in other areas such as language arts (16 percent), English for limited English proficient students (17 percent), and vocational education (4 percent).

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: d. State agency programs (1) Migrant education

---

Accomplishments — Continued

Staffing — School year 1987-88 data show that the program employed, during the regular school term, the equivalent of 10,529 people full-time. Teachers and teacher aides accounted for 70 percent of the staff. About 13 percent of the staff were recruiters and data entry personnel for MSRTS. The remaining 17 percent were administrative and support personnel and curriculum specialists.

Expenditures — Overall, the Federal contribution per student participating in the program during the 1986-87 school year was $717. That figure, however, varied widely by State, ranging from $175 per child in Puerto Rico to $1,521 per child in Rhode Island. The three States with the largest migrant programs -- California, Texas, and Florida -- spent $684 to $1,211 per child.

1991 Budget Proposal

The Department proposes to fund the Migrant program at $293.7 million -- a $11.3 million increase over the 1990 level. The request is consistent with the Department's general policy of focusing resources on programs that benefit educationally disadvantaged populations.

At the 1991 request level about $8.4 million would support migrant coordination activities, including the Migrant Student Record Transfer System (MSRTS). The remaining $285.4 million would flow to the States for compensatory education activities.

The request is based on the current provisions contained in the authorizing statute. The Department proposes no policy or legislative changes for 1991.

Impact Data	1989	1990	1991
Migrant education:			
Grants to SEAs	$263,920,000	$264,399,000	$285,375,700
Coordination activities	7,780,000	8,045,000	8,366,300

Impact Data — Continued	1989	1990	1991
Estimated Federal share per child served	$718	$749	$779

1/ Estimate is based on the number of FTE migrant students aged 3 to 21 years. These figures are derived from data used to allocate funds for the 1989-1990 school year.

1. Grants for the disadvantaged: d. State agency programs
(2) Handicapped
(Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Part D, Subpart 2)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$146,389,000	$146,389,000	---

Purpose and Method of Operation

The Chapter 1 Handicapped program supports early intervention and special educational services for handicapped children, from birth through age 21, in State-operated or -supported programs. Those who can be served under this program also include children who have transferred from State to local programs, if the child was receiving and continues to receive a free appropriate public education and if the State educational agency transfers to the local educational agency all the funds the State educational agency receives for the child. Funds are allocated to individual States based on: (1) the number of handicapped children enrolled in State-operated or supported programs (including the transfer students described above) on December 1 of the fiscal year for which funds will be allocated; and (2) the State's per pupil expenditure for education. Funds are to be used to supplement the provision of special education and related services or early intervention services.

This program is forward funded. The 1991 appropriation will become available on July 1, 1991, and will remain available for obligation until September 30, 1992. Funds appropriated in fiscal year 1991 generally will support Chapter 1 Handicapped programs in the 1991-92 school year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Children served -- In fiscal year 1989, the program provided funds to over 2,400 State agencies, institutions, and local educational agencies serving 266,212 children, aged birth through 21. Of the children served, approximately 13 percent were aged birth through two years, 16 percent were aged three through five years, and 71 percent were aged six through 21 years. Of the six-through-21-year-olds served 1/, about 66 percent were identified as having one of the three following handicapping conditions: "mentally retarded" - 31 percent; "seriously emotionally disturbed" - 22 percent; or "learning disabled" - 13 percent (Fiscal year 1989 State report data).

1/ In accordance with the statute, data by disability category are collected only for children and youth aged 6 through 21.

Accomplishments — Continued

High- and low-use States — As in the past, there continues to be significant variation among States regarding the number of children served under the Chapter 1 Handicapped program as compared with the total number of handicapped children served in the State. The percentage of State's handicapped children served under this program ranges from a high of 60 percent in the District of Columbia to a low of less than one percent in Alabama, California, Minnesota, and New Mexico (fiscal year 1989 State report data).

Comparison of Handicapping Conditions of Children Served Under the Chapter 1 Handicapped Program and the Education of the Handicapped Act (EHA) -- The percentage of children reported under the various handicapping categories under each program differs significantly:

	Chapter 1 Handicapped	EHA
Mentally retarded............	31%	13%
Emotionally disturbed........	22	8
Hearing impaired.............	9	1
Learning disabled............	13	49
Speech impaired..............	6	24
Visually handicapped.........	3	—
Other handicapping conditions	16	5
Total...............	100	100

(Source: Fiscal year 1989 State report data)

There are at present no data to explain these differences. In its May 1989 study of the Chapter 1 Handicapped program, the Government Accounting Office (GAO) concluded that the program "... is generally providing services to severely handicapped students in educational settings consistent with their individual placement decisions, although...the program includes many less severely handicapped children in a few States." However, the study did not examine the number of severely handicapped children who are being served under the EHA or whether the Chapter 1 program includes more of the severely handicapped than the EHA program. Information from State reports suggests that the decision to serve a handicapped child under the Chapter 1 Handicapped program instead of the EHA is apt to be based on administrative considerations rather than on the severity of the child's handicapping condition.

The number of children served under the Chapter 1 Handicapped program is far less than the number served under the EHA, but the average Federal share per child is significantly higher. In 1989, about 266,200 children were served under the Chapter 1 Handicapped program at an average share per child of $557. Under the EHA, about 4,338,000 children were served at a share per child of $340, a difference of $217 per child served.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: d. State agency programs
   (2) Handicapped

1991 Budget Proposal

For fiscal year 1991, $146.4 million is requested, the same as the 1990 amount.

No increase is requested for the Chapter 1 Handicapped program. This policy is supported by several factors:

1. The study completed by the GAO in 1989 indicated that the Chapter 1 and the EHA programs, although originally created at different times and for different purposes, are now similar administratively. Both programs serve students of similar ages and with similar kinds of handicapping conditions, use program funds to supplement State and local services, count children for funding allocation purposes on the same day each year, and are concurrently monitored at the Federal level.

2. Growth for the EHA program has been significantly higher than it was for Chapter 1. The number of handicapped students served by the EHA grew by about 102,000 between 1988 and 1989 while the number students served by Chapter 1 increased by about 4,700 between 1988 and 1989. This indicates the continued commitment of States to serve most children with handicaps through LEA programs under the EHA rather than through the State-supported or -operated programs under Chapter 1 even though the Federal share per child is greater under Chapter 1.

Impact Data

	1989	1990	1991
Estimated No. of students counted and served 1/	266,200	266,200	266,200
Estimated average Federal contribution per child	$557	$549	$549

1/ Under this program, all children counted must be served. Thus the only number that can vary is the average Federal contribution per child. Estimates are based on data used for the 1989-90 school year.

Compensatory Education for the Disadvantaged

---

1. **Grants for the disadvantaged: d. State agency programs (3) Neglected and delinquent (Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Part D, Subpart 3)**

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$32,791,000	$34,103,000	+$1,312,000

Purpose and Method of Operation

This program provides financial assistance to State educational agencies for compensatory education services to neglected and delinquent children in State-run institutions and juveniles in adult correctional institutions. Funds are allocated to individual States through a formula based on: (1) the number of children in State-operated institutions; and (2) each State's per-pupil expenditure for education.

This program is forward-funded. The 1991 appropriation will become available on July 1, 1991, and will remain available for obligation until September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

National profile of participants -- Preliminary data from the Chapter 1 Evaluation and Reporting System for the 1987-1988 school year (the most recent year for which data are available) show that the program served 52,249 students in over 550 facilities across the country. Most of the students served (62 percent) were in facilities for juvenile delinquents; 32 percent were in adult correctional facilities; and the remaining 6 percent were in facilities for neglected children. The children served by the program tended to be older teenagers, with a significant number at or past the age of majority: 5 percent were under 13 years of age; 37 percent were between 14 and 16; and 58 percent were between 17 and 18. Data on the racial and ethnic background of the students served show that 45 percent were black; 38 percent were white; 15 percent were Hispanic; 1 percent were American Indian; and 1 percent were Asian or Pacific Islander.

Preliminary findings from a study of the program currently being conducted by Westat, Inc. indicate that the typical Chapter 1 neglected or delinquent student is a black male, who, prior to participating in the program, lived in an urban area, completed the eighth grade, was unemployed, and lived in a household where the natural father was absent.

Accomplishments — Continued

Services — Emphasis in program services is placed on basic skills instruction. During the 1987-88 school year, about 71 percent of the participating students received reading instruction; 65 percent received remedial mathematics instruction; 31 percent were taught language arts; and 14 percent received instruction in other academic areas. Projects also used program funds for other types of activities, such as guidance and counseling and psychological services (Chapter 1 Evaluation and Reporting System data, 1987-88).

Based on preliminary findings from the Westat study, about half of all eligible students in participating facilities received Chapter 1 services, but the percentage varies considerably by the type of facility. For example, in facilities for neglected children, 66 percent of the children eligible for Chapter 1 receive services, while 56 percent of the eligible youths in facilities for delinquents and 38 percent of all eligible students in adult correctional instructions are served. The reasons cited most frequently for not serving more eligible students in facilities for neglected and delinquent youths were the lack of funds and sufficient classroom space. In adult institutions, the biggest reasons for not serving more eligible students were student refusal of services and inappropriate student behavior.

Teaching staff — Preliminary findings from the Westat study show that virtually all Chapter 1 teachers are on the full-time staff of the facility where they work and are State certified. On average they have 15 years of instructional experience, including 7 years at their current facility and 6 years as a Chapter 1 teacher. Teachers in this program spend roughly 70 percent of their time on instructional tasks.

Program operation and administration — The primary role of the State educational agency (SEA) is to act as a funding conduit between the Federal Government and the State Applicant Agencies (SAAs) within the State. The SAAs have the key administrative role in the program; they take the responsibility for developing programs, allocating funds to specific institutions, conducting regular on-site monitoring, providing technical assistance, and generally overseeing program operations. SAAs retain about 10 percent of the Chapter 1 funds they receive from the SEA for administrative purposes. SAAs monitor about two-thirds of all facilities at least twice a year while the SEAs monitor 10 percent of all facilities during a year (Preliminary findings from the Westat study).

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: d. State agency programs (3) Neglected and delinquent

---

Accomplishments — Continued

In terms of fiscal effort, Chapter 1 funding accounts for about 10 percent of the education budget at the average facility serving neglected or delinquent children. This figure, however, varies by type of facility. For example, Chapter 1 funds account for 14 percent of the education budget at youth facilities serving neglected and delinquent children and 5 percent of the education budget at adult institutions (preliminary data from the Westat Study).

1991 Budget Proposal

For 1991, the Department requests $34.1 million for the Neglected and Delinquent program, a $1.3 million (4 percent) increase over the 1990 level.

The request will provide States with an increase that is consistent with the Department's general policy of focusing resources on programs that serve a needy population.

Impact Data

	1989	1990	1991
Estimated number of students served	47,000	47,000	47,000
Estimated Federal contribution per child	$672	$700	$728

Compensatory Education for the Disadvantaged

---

1. Grants for the disadvantaged: e. State administration
(Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Section 1404)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$50,176,000	$54,000,000	+$3,824,000

1/ One percent of the amount allocated to States under Chapter 1, Parts A and D, but not less than $325,000 per State ($50,000 minimum per Outlying Area).

Purpose and Method of Operation

Funds provided under this authority enable State educational agencies to meet their administrative responsibilities under the Chapter 1 LEA program and the State agency programs. The statute provides that each State shall receive one percent of the amount allocated for its Part A (LEA Grants) and Part D (State Agency Grants) Chapter 1 programs, with no State receiving less than $325,000 ($50,000 in the case of the Outlying Areas).

The program is forward funded. Funds appropriated for fiscal year 1991 will become available for obligation on July 1, 1991 and remain available through September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In fiscal year 1989, the Department distributed $40.5 million to the States and Outlying Areas for administrative purposes. State educational agencies used these funds for allocating Chapter 1 funds to local educational agencies, monitoring Chapter 1 programs, and reviewing reports to ensure LEA compliance with legal requirements such as comparability, nonsupplanting, and maintenance of effort. They also used these funds to provide technical assistance to local educational agencies for improving program quality, establishing parent involvement procedures at the project level, providing equitable services to nonpublic school children, establishing performance objectives, and evaluating Chapter 1 programs. Finally, the States used administration funds to establish and maintain systems for the proper control and disbursement of Chapter 1 funds and the audit of local Chapter 1 programs.

Accomplishments — Continued

Evaluation data on Chapter 1 ECIA indicated that most States concentrated their administrative efforts more on monitoring and compliance activities than on program improvement and technical assistance. Despite this concentration on compliance and monitoring, State activity in this area declined after Chapter 1's enactment in 1981. At both the Federal and State levels, Chapter 1 ECIA was administered by fewer staff than was the antecedent Title I program. At the local level, the number of staff for special functions such as parental involvement, evaluation, and curriculum development declined even though administrative costs remained fairly constant. (National Assessment of Chapter 1: Current Operation of the Chapter 1 Program, 1987).

1991 Budget Proposal

The Department is requesting $54 million for State Administration — an increase of $3.8 million over the 1990 amount. At this level States would continue to carry out the administrative and technical activities required by the Hawkins-Stafford Elementary and Secondary School Improvement Amendments (P.L. 100-297). In addition to conducting their traditional program monitoring and administrative activities, the increase would help States respond to P.L. 100-297 requirements that SEAs work with LEAs to refine and develop standards for program effectiveness, and provide technical help to improve program quality.

Impact Data	1989	1990	1991
No. of States served (includes D.C. and Puerto Rico)	52	52	52
No. of Outlying Areas served	5	5	5
Average award	$710,667	$880,281	$947,400
Maximum award	$4,051,702	$4,899,428	$5,358,653
Minimum award:			
States	$325,000	$375,000	$325,000
Outlying Areas	$50,000	$50,000	$50,000

Compensatory Education for the Disadvantaged

---

1. Grants for the disadvantaged: f. State program improvement grants (Elementary and Secondary Education Act of 1965, Chapter 1, Section 1405)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$12,544,000	$24,000,000	+$11,456,000

1/ .25 percent of the amount allocated to the States under Chapter 1, Parts A and D, but not less than $90,000 per State ($15,000 minimum per Outlying Area).

Purpose and Method of Operation

Funds for this activity support the efforts of State educational agencies (SEAs) to help school districts correct problems with ineffective Chapter 1 projects. Section 1021 of P.L. 100-297 requires that SEAs work with school districts to develop and implement a program improvement plan if local efforts to bring about improvements to student academic performance through their Chapter 1 programs are unsuccessful after one year. All funds appropriated under Section 1405 must be used for direct educational services to implement program improvement plans. None of these funds may be used for administrative functions.

The statute provides that each State shall receive .25 percent of the amount allocated for its Part A (LEA Grants) and Part D (State Agency Grants) Chapter 1 programs, with no State receiving less than $90,000, or $15,000 in the case of the Outlying Areas.

This program is forward funded. Funds appropriated for fiscal year 1991 will become available for obligation on July 1, 1991 and remain available through September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Department has awarded State Program Improvement Grants to all 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas. However, because first-year (1989) funds for this program did not become available until July 1, 1989, program accomplishment data are not yet available.

Compensatory Education for the Disadvantaged

1. Grants for the disadvantaged: f. State program improvement grants

---

1991 Budget Proposal

To support State efforts to assist school districts in upgrading the quality of local projects in which participating students do not improve their academic performance, the Department is requesting $24 million for fiscal year 1991 — almost double the amount available in 1990.

This request underscores the Administration's commitment to promote accountability for program results at the State and local level. The proposed increase will enable States to provide additional educational services to school districts implementing school improvement plans.

Impact Data	1989	1990	1991
No. of States served (includes D.C. and Puerto Rico)	52	52	52
No. of Outlying Areas served	5	5	5
Estimated average award	$99,754	$220,070	$421,050
Estimated maximum award	$357,636	$1,231,421	$2,516,741
Minimum award:			
States	$90,000	$90,000	$90,000
Outlying Areas	$15,000	$15,000	$15,000

---

2. Evaluation and technical assistance
(Elementary and Secondary Education Act of 1965, Chapter 1, Sections 1437 and 1463)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$11,853,000	$15,000,000	+$3,147,000

1/ Funding authorization for activities appropriated under Section 1437 is indefinite. The funding authorization for activities appropriated under section 1463 is $4.4 million.

Purpose and Method of Operation

Funds for this activity, authorized in Sections 1437 and 1463 of P.L. 100-297, enable the Department to conduct studies of program effectiveness, analyze program participation and achievement data, support regional technical assistance centers to aid State educational agencies (SEAs) and local school districts in evaluating their Chapter 1 programs, and assist States in improving program quality at the local level.

This is a current-funded program for which fiscal year 1991 funds will be available from October 1, 1990 to September 30, 1991. The level of funding for this program is dependent upon the availability of appropriations.

Accomplishments

Evaluation funds supported three types of activities in fiscal year 1989 -- the technical assistance centers, evaluations of program effectiveness, and the Chapter 1 program improvement initiative.

Technical Assistance

Regional technical assistance centers (TACs) help State and local officials collect and report evaluation data and use these data to improve their compensatory education programs. Fiscal year 1989 marked the second year of operation under the current TAC contracts. Currently, there are six centers located in Hampton, New Hampshire; Indianapolis, Indiana; Atlanta, Georgia; Overland Park, Kansas; Denver, Colorado; and Mountain View, California.

Accomplishments — Continued

A 1988 study found that:

- TACs have helped familiarize local districts with research findings on effective school and classroom practices.
- TAC assistance has promoted greater coordination between Chapter 1 and regular instruction;
- TAC staff members have acted as a reference service for virtually all their State and local clients;
- The Centers have acted as capacity builders when they and local districts commit reasonable amounts of time to intervention strategies such as conducting a workshop series; and
- TACs have been effective because they have gained the confidence of SEAs and local school districts by developing close working relationships.

Evaluations

In 1989, the Department completed several activities. They were:

- A study that looked at issues concerning the design, implementation, and evaluation of existing programs that promote home-school partnerships and enhance the skills of parents in supporting their children's academic performance. The purpose of the study was to examine programs that could be helpful in the design, implementation, and evaluation of similar parent-education programs under Chapter 1. This study will be useful as the Department begins to evaluate the Even Start program.
- An evaluation of the Chapter 1 "negotiated rulemaking" requirements of the Hawkins-Stafford Amendments (P.L. 100-297). The study looked at the impact of the new "reg-neg" process on the content of the regulations, the public's understanding of the new law, and time needed to promulgate final regulations, and at the cost of implementing the new process. The study concluded that although the new rulemaking procedures — especially the regional meetings — resulted in improved public understanding of the new Chapter 1 law, the lack of consensus on key regulatory issues meant that the new proceeding exerted minimal substantive influence on the development of Chapter 1 regulations. Furthermore, the new procedures did not shorten the time required to develop final regulations.

Accomplishments -- Continued

- Reports that summarized State level data on the participation and achievement of Chapter 1 students in the LEA Grant, Neglected and Delinquent, and Migrant Education programs. These annual reports, required by Section 1452 of P.L. 100-297, describe participation, services, and staffing and present available information on achievement.

The Department also continued or began a number of evaluation activities in 1989 in the following areas:

1. Impact of P.L. 100-297 on Program Operation and Administration. The Department launched a 50-State survey on State program improvement activities during the first year of program operation under the new statute. In addition, a large-scale study to examine State and local implementation of the new Chapter 1 requirements under P.L. 100-297 began. This study will gather information on school-wide projects, assess the effects of the new national evaluation standards, and describe how LEAs are implementing other new program requirements.

2. Program Outcomes: Activities within this area focused on long-term outcomes associated with Chapter 1 participation. On-going activities included the design phase of the longitudinal study and a study of academic instruction for the disadvantaged.

3. Special Studies: Work began on two studies mandated by Congress: a Chapter 1 tutoring study and a study of funds allocation under Chapter 1 and other programs. Work also commenced on studies that will look at Chapter 1 services to limited English proficient students and Chapter 1 programs at the secondary school level.

4. Early Childhood Education: Several studies are underway. They include: a profile of childcare settings to describe their characteristics; an examination of promising ways to maintain gains made by disadvantaged children in preschool programs after they enter elementary school; a nationally representative survey of before-and after-school care programs available across the Nation; and an examination of the quality of preschool programs with special emphasis paid to children participating in Chapter 1-supported preschool programs.

5. Evaluations of State-Administered Programs: The activities within this area included completing the first phase of the Neglected and Delinquent Study and continuing the national study of the Migrant Education program.

Accomplishments — Continued

In 1990, the Department will complete its work on the design phase of the longitudinal study, which will be followed by a larger-scale contract for work on actual data-gathering. Other activities that are planned or under consideration in 1990 include:

- Identifying best practices in Chapter 1 programs. This activity will be operated in conjunction with the longitudinal study to provide information on appropriate educational practices that result in the success of Chapter 1 children.
- Completing the mandated Chapter 1 tutoring study that examines current programs operated by institutions of higher education that offer tutoring services to disadvantaged elementary and secondary school students.
- Continuing the study of academic instruction for the disadvantaged with the release of the study's first report.
- Continuing the national descriptive evaluation of the Chapter 1 Migrant Education program.
- Beginning a study of migrant summer-term projects and funding patterns.
- Continuing the early childhood studies begun in 1989.
- Continuing the mandated study of the distribution of elementary and secondary education funds begun in 1989.
- Continuing a study begun in 1989 that analyzes data on how services are provided to Chapter 1 students with limited English proficiency.
- Gathering data on Chapter 1 services provided to secondary school students.
- Examining special issues on Chapter 1 effectiveness and program improvement. This effort would include a study to examine the extent to which States use Chapter 2 funds to support program improvement efforts in Chapter 1, a study to identify effective practices for developing advanced skills, and a review of recent literature to update information developed in 1984 on the attributes of successful compensatory education programs.

Accomplishments — Continued

Chapter 1 Program Improvement

The Department continued its efforts, begun in 1983, to bring about improvements in Chapter 1 program quality. In 1989, this activity had three elements:

1. Technical assistance: The Chapter 1 Technical Assistance Centers helped States to: (1) identify, validate, and disseminate information about successful Chapter 1 projects and practices; and (2) implement program improvement strategies.
2. National recognition: The Chapter 1 recognition program provided national exposure to school districts that operated successful Chapter 1 projects. In 1989, more than 120 school districts were recognized through this program.
3. Dissemination: The Department prepared and distributed a source book, that profiled nationally recognized exemplary projects and identified their key elements.

In addition, the Department will support other efforts in 1990 to foster improved program quality. The Department will produce the mandated Chapter 1 Policy Manual and distribute it to all State educational agencies and local school districts. The Department will also hold eight regional program improvement meetings to discuss how program improvement is to be planned for and achieved. TAC staff will provide workshops on topics such as: implementing advanced skills in Chapter 1, using evaluation results for program improvement, designing desired outcomes for program improvement, and devising strategies to implement program changes. Finally, the Department plans to conduct an intensive examination of program improvement efforts at selected sites, combining this evaluation with technical assistance from the TACs.

1991 Budget Proposal

For 1991, the Department proposes to fund Evaluation and Technical Assistance at $15 million, a $3.1 million increase over the 1990 appropriation. These additional funds would focus on the continuing longitudinal study and program evaluations needed for the upcoming reauthorization.

Of the total requested, approximately $5 million would support the continuing activities of the Chapter 1 Technical Assistance Centers (TACs), roughly the same amount provided for this activity in 1990.

1991 Budget Proposal — Continued

Approximately $4.4 million would support the third year of the Chapter 1 longitudinal study. This is a $900,000 increase over the amount provided in 1990 to fund this study. These funds would be used to collect the data needed to assess the impact of Chapter 1 participation on student and adult outcomes.

About $4.6 million, an increase of $2.6 million from the previous year, would support other studies of the Chapter 1 program, including replicating key substudies of the National Assessment of Chapter 1 and examining issues relating to Chapter 1 effectiveness. These activities and the funding increase would focus on gathering evaluation data that would be useful in the reauthorization process.

Roughly $215,000 of the total (a slight decrease from last year) would support program improvement activities, such as the recognition and source book programs.

About $500,000 of the total request, roughly the same as 1990, would support the analysis of program achievement and participation data gathered from the States for the LEA Grant, Neglected and Delinquent, and Migrant Education programs.

Approximately $250,000 would be used for support activites ranging from printing of reports to hosting regional and national meetings. This is a slight decrease from last year because preparation and printing of the Chapter 1 policy manual will not be required in 1991.

Impact Data	1989	1990	1991
($ in 000s)			
Technical assistance centers	$1,907	$5,000	$5,000
Program evaluations	3,849	2,044	4,635

Program improvement activities	290	345	215
Data analysis	486	500	500
Support Activities	188	464	250
Total	7,904	11,853	15,000
Number of TACs	6	6	6

3. **Rural technical assistance centers**
(Elementary and Secondary Education Act of 1965, Title I, Chapter 1, Part F, Subpart 3)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,445,000	$4,445,000	---

Purpose and Method of Operation

Under the Rural Educational Opportunities program, the Secretary is authorized to establish, through either grants or contracts, regional technical assistance centers to help State and local educational agencies improve the quality of education services provided to educationally disadvantaged children living in rural areas or attending small schools. Each center would, among other things, focus on problems related to districts with declining enrollment and ways in which districts can combine resources and management skills to provide effective programs for the educationally disadvantaged.

This is a current funded program for which funds are available from October 1, 1990 to September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Fiscal year 1989 marked the first year of operation for this program. Ten contracts were awarded. The centers are located in Hampton, New Hampshire; Indianapolis, Indiana; Decatur, Georgia; Overland, Kansas (for both the Region 4 and the BIA schools centers), Denver, Colorado; Portland, Oregon (for both the Region 6 and the Alaska centers), Kailua, Hawaii; and Hato Rey, Puerto Rico. Six of these rural TAC regions will serve the same regions as those served by the Chapter 1 regular technical assistance centers. Three separate (and smaller) rural TACs have been established for Alaska, Hawaii, and Puerto Rico because of their geographic isolation. A separate rural TAC was also established in Kansas to serve the special needs of Indian children in Bureau of Indian Affairs (BIA) schools.

1991 Budget Proposal

The Department proposes to fund the Rural Technical Assistance Centers at $4.45 million, the same as the 1990 level.

1991 Budget Proposal — Continued

The additional evaluation, program accountability, and technical assistance requirements of Chapter 1 present special problems to rural school districts because these districts tend to have few staff with sufficient expertise to address these issues. Although the regular Chapter 1 TACs are designed to provide assistance to all areas, they do not have sufficient resources to work with all districts. Given the current evaluation and accountability requirements of Chapter 1 and the Administration's commitment to program accountability, the Department believes that the rural TACs should be continued.

The Depatment has taken steps to avoid duplication of effort by the regular and rural TACs. Each rural TAC contractor must coordinate with the regular Chapter 1 TAC in its region under the terms of a written agreement. Each written agreement will be reviewed by the Department and coordination will be closely monitored.

Impact Data	1989	1990	1991
Number of rural technical assistance centers	10	10	10
Average award per center	$395,200	$444,500	$444,500

4. Presidential Merit Schools

---

[1] Assumes passage of authorizing legislation by March 1, 1990.

Purpose and Method of Operation

The Presidential Merit Schools program would provide cash awards to public and private elementary and secondary schools that have made substantial progress in raising student educational achievement, creating a safe and drug-free school environment, and reducing the dropout rate.

Under proposed legislation pending before Congress, funds would be allocated by formula to the States based on the State's school-aged population and its share of funding under the Chapter 1 Basic Grants program. Within each State, Presidential Merit Schools would be selected by a special State Review Panel using State and Federal criteria. These criteria would focus on improvement in students' educational performance, the degree to which the school maintains a safe environment, and progress in reducing the number of students who drop out of school or encouraging those who have dropped out to reenter school and complete their schooling. Panels could also take into consideration the composition of a school's student body and give special consideration to schools enrolling substantial numbers or proportions of children from low-income families.

The amount of each Presidential Merit Schools award would depend on State-established criteria, including criteria related to the size of the school and the composition of the student body. A school selected as a Presidential Merit School could use its award for any purpose that furthers its educational program, including development or implementation of special programs, purchase of computers and other materials and equipment, and bonus payments to teachers and administrators.

This program would be forwarded funded. The 1991 appropriation would become available on July 1, 1991 and remain available until September 30, 1992. The level of funding is dependent upon the availability of appropriations.

4. Presidential Merit Schools

Accomplishments

Legislation is currently pending before Congress. Therefore, the program has not begun operating and there are no data on program accomplishments.

1991 Budget Proposal

The President requests $225 million for the new Presidential Merit Schools program for 1991, a $100 million increase over the 1990 level. The requested increase is central to the President's campaign to raise academic achievement by strengthening accountability and providing financial incentives for educational success. The program is based on the following principles concerning the improvement of education throughout the Nation:

- That achievable standards of excellence can and should be set for all students and all schools;
- That financial incentives can spur schools to rise to the challenge of meeting these standards; and
- That demonstrated school-wide progress in achieving excellence deserves public recognition.

Impact Data	1989	1990	1991

5. **Migrant education: a. High school equivalency program b. College assistance migrant program**
(Higher Education Act of 1965, Part A, Subpart 5, Sec. 418A)

1991 Authorization: Indefinite

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
High school equivalency program....................	$7,858,000	$7,858,000	—
College assistance........... migrant program............	1,720,000	1,720,000	—
Total....................	9,247,000	9,578,000	—

Purpose and Method of Operation

These two migrant education programs provide three-year grants to institutions of higher education or other public and private nonprofit organizations to: (1) assist migrant and seasonal farmworkers beyond the age of compulsory school attendance to complete the course work necessary to receive a high school diploma or its equivalent; and (2) assist migrant students to complete their first undergraduate year at a college or university.

Organizations that participate in the High School Equivalency program (HEP) provide the outreach, teaching, counseling, and placement services necessary to recruit and serve eligible migrant dropouts, aged 17 to 24, who wish to obtain a high school equivalency certificate and subsequently seek admittance to a college or university, enter a job-training program, join the military, or seek full-time employment. Grantees provide services in either residential, commuter, or mixed residential and commuter settings. Participants attend at least 30 hours of class a week in the subjects covered by the General Education Development (GED) examination and receive additional tutoring if necessary. The program also provides career and personal counseling, as well as placement assistance.

The College Assistant Migrant program (CAMP) helps migrant and seasonal farmworkers enrolled as first-year undergraduates to make the transition from secondary to postsecondary education and to complete their first year of college. Participants receive tuition scholarships and a stipend for personal expenses. The program also provides tutoring and counseling services and assists students in obtaining grants, loans, and work-study arrangements to meet their financial needs during the remaining undergraduate years.

Purpose and Method of Operation -- Continued

From 1974 to 1980 the Department of Labor funded HEP and CAMP, using discretionary funds set aside for migrant and seasonal farmworker programs. The Comprehensive Employment and Training Act Amendments of 1978 included specific authorizations for these programs. In 1980, the programs were transferred to the Department of Education and, in 1981, they were reauthorized as part of the Higher Education Act.

These programs are current funded; funds are available from October 1, 1990 to September 30, 1991. The level of funding is dependent upon the availability of appropriations.

Accomplishments

HEP

Participants -- For the 1989-90 school year HEP is serving an estimated 3,300 students in 22 projects.

Data from a 1988 study conducted by Pelavin Associates, Inc. indicate that the average student entering a HEP project in 1987 read at the seventh or eighth grade level. Almost two-thirds of the participants are Hispanic, 18 percent are white, 10 percent are black, and four percent are Native American. Fifty-seven percent are male. Almost two-thirds of the participants are "seasonal" farmworkers, while the remainder are migratory farmworkers.

Services -- Services provided by HEP projects include academic instruction, counseling, tutoring, cultural and social activities, and, in some instances, preliminary remedial academic work for students who need additional help before they can receive instruction for the GED examination. In 1987, roughly 57 percent of the total average hours of services provided involved academic instruction; 17 percent of the time was spent providing instructional support services such as tutoring; 14 percent involved job training; 7 percent of the program's service time was used to provide counseling; and 5 percent involved cultural and social activities aimed at enriching the student's academic work.

Expenditures -- In 1987, HEP projects used about 57 percent of their Federal funds for personnel costs and fringe benefits; 9 percent for student room and board; 6 percent for student stipends; 4 percent for travel expenses; and 3 percent for rent, equipment, and supplies. The remaining 21 percent covered various indirect costs. The average stipend per student was $153.

Outcomes -- Seventy percent of HEP participants successfully completed the GED during the 1986-87 school year. The rate of GED attainment varied according to the type of project. For example, 73 percent of participants in projects

---

Accomplishments — Continued

operated by a college or university completed the GED, in contrast to 53 percent of participants at HEP projects operated by private nonprofit organizations. At residential projects, 86 percent of the participants received a GED certificate, while only 68 percent at commuter projects and 67 percent at mixed commuter and residential projects were successful.

Roughly 29 percent of the HEP participants continued their education at a postsecondary institution upon completing the program. About 25 percent of the participants found employment in nonmigrant positions.

CAMP

Participants -- For the 1989-90 school year, CAMP is serving about 280 students at 4 institutions of higher education (IHEs). Preliminary data from a recent study indicate that, in 1987, virtually all of the students participating in CAMP were Hispanic, and they were evenly divided between males and females.

Services -- Unlike HEP, CAMP projects do not provide direct instructional services. Because CAMP participants have completed high school, programs instead emphasize support services such as academic and personal counseling and tutoring. CAMP projects also provide student stipends that range from $128 to $243 per student.

Expenditures -- CAMP projects use about 43 percent of their Federal funds for personnel costs and fringe benefits; 13 percent for student room and board; 7 percent for stipends; and 2 percent for travel costs. The remaining 35 percent covers various other indirect costs.

Outcomes -- Eighty-one percent of the participants at the three CAMP projects studied in 1987 completed their first year of college. However, the completion rate varied by project ranging from 50 percent at one site to 100 percent at another.

1991 Budget Proposal

The Department is requesting $7.86 million for HEP and $1.72 million for CAMP, the same as the 1990 amounts for these programs. The 1991 budget request would enable the Department to fund project continuations for their second year at 1990 levels. No new grants would be awarded.

1/ The 1989 figures are actual allocations. The 1990 and 1991 figures are estimated allocations. Under the statute, one percent of the amount available to the States for Basic Grants under Chapter 1, Section 1005 is set-aside for the Outlying Areas and the Bureau of Indian Affairs. The amounts appropriated for LEA Grants and the State agency programs are distributed based on the number of formula eligible students and each State's per-pupil expenditure. Concentration Grants are allocated to counties with at least 6,500 formula-eligible children or in which such children make up at least 15 percent of the school-aged population. For counties qualifying on the basis of the 6,500-child threshold, only formula-eligible children in excess of that number are counted in making allocations; for counties qualifying on the basis of the percentage threshold, all formula-eligible children are counted. Appropriations language for 1989 and 1990 requires that each State receive at least $340,000 for Concentration Grants. For 1991 the Department proposes to provide each State with at least the statutory minimum of $250,000. Funds appropriated for Capital Expenses for Private School Children, authorized in Section 1017(d), are distributed based on the number of private school children who participated in the Chapter 1 Basic LEA Grant program in 1984. The amount set aside for State administration in 1989 is distributed based on each State's proportion of the total State Chapter 1 allocation under Parts A and D, with no State receiving less than $325,000; the Outlying Areas receive a minimum of $50,000 each. In 1990 appropriations language increased the State minimum was to $375,000. For 1991 the Department proposes to maintain the statutory State minimum pf $325,000. For State Program Improvement Grants, the amount appropriated is also distributed based on each State's proportion of its total Chapter 1 allocation under Parts A and D. Each State receives the statutory minimum of $90,000, while the Outlying Areas receive a minimum of $15,000 each.

2/ Under the terms of the Compacts of Free Association, grants will not be made to the Federated States of Micronesia and the Marshall Islands in 1990 and 1991.

Federal Activities	—	500,000	500,000

1/ All figures are estimates. One-quarter of one percent of the total appropriated would be set aside for the Outlying Areas. Up to $500,000 of the total appropriation would be set aside for activities at the Federal level. The remaining amount would be distributed to the States, the District of Columbia, and Puerto Rico. Half of the amount available to the States would be distributed based on each State's proportion of the national population of children aged 5 to 17. The other half would be allocated to States based on their proportionate share of Chapter 1 Basic LEA Grant funds (authorized in Section 1005 of ESEA) received in the current fiscal year.

WEDNESDAY, FEBRUARY 21, 1990

SPECIAL INSTITUTIONS FOR THE HANDICAPPED

WITNESSES

MICHAEL E. VADER, DEPUTY ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION, AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

Mr. NATCHER. At this time, we take up the budget request for the Special Institutions for the Handicapped.

We have before the committee Mr. Michael Vader. Mr. Vader, we will be pleased to hear from you at this time.

OPENING STATEMENT

Mr. VADER. Thank you, Mr. Chairman, and members of the committee. I am pleased to have the opportunity before the Committee to represent the Department's testimony on the fiscal year 1991 President's Budget Request for Special Institutions for the Handicapped.

This includes the American Printing House for the Blind, the National Technical Institute for the Deaf, and Gallaudet University. Representatives of these institutions will provide additional testimony in support of the budget request for their institutions. I will not duplicate their testimony. However, I would like to take a few minutes to summarize the budget and comment upon several key issues related to these programs.

BUDGET REQUEST

The fiscal year 1991 budget request for the Special Institutions for the Handicapped is $117,979,000, an increase of $8,603,000, or 7.9 percent, above the 1990 appropriation level. The Department is requesting a total of $5,901,000 for the American Printing House for the Blind, $37,531,000 for the National Technical Institute for the Deaf, and $74,047,000 for Gallaudet University.

The budget provides operations increases of 4.2 percent for the American Printing House for the Blind, 8.2 percent for NTID, and 5.8 percent for Gallaudet University, plus increases for special projects. The increases for these programs demonstrate the high priority we place on providing educational opportunities for disabled persons.

ENDOWMENT AND CONSTRUCTION FUNDS

The budgets for NTID and Gallaudet University also include $336,000 and $1,000,000, respectively, for endowment matching grants to help promote the financial independence of the institutions and give them a permanent source of funds for operations and special projects. NTID and Gallaudet fully matched the amounts appropriated for this purpose in 1989 and are on schedule in raising the amounts necessary to match the 1990 appropriations for the endowment matching grant program.

In addition, the increase proposed for Gallaudet University contains $2,500,000 for construction to remodel and expand the Hall Memorial Building. These funds would be matched by the University and used to begin a renovation of existing classrooms and laboratories and new construction to add office space for the research program.

EVALUATION STUDIES

Over the past few years, the Department has begun an initiative to review and evaluate the educational programs and activities and administrative operations of the Special Institutions. Evaluation efforts include a small, ongoing study of the Model Secondary School for the Deaf and Kendall Demonstration Elementary School, a study of the American Printing House for the Blind and its role in the provision of the educational materials for the blind, and a planning study for a comprehensive programmatic evaluation of Gallaudet University.

The 1991 budget for the Special Institutions for the Handicapped includes a request for $500,000 for evaluation studies. This new activity responds to provisions of the Education of the Deaf Act which require the Secretary to conduct monitoring and evaluation activities of the education programs and activities and the administrative operations of Gallaudet University and the National Technical Institute for the Deaf.

An evaluation studies activity also responds to the recommendation of the Commission on Education of the Deaf that the Department conduct periodic program evaluations of the federally-funded education programs for the deaf. In recent years, there has been little objective analysis of the efficiency and effectiveness of these programs.

In 1989, the Department convened a work group of experts in higher education, deafness and evaluation, including representatives of Gallaudet University, to assist in developing guidelines for a programmatic evaluation of Gallaudet. The recommendations of the panel of experts indicated that the Department should first gather baseline data on the postsecondary educational experiences of exiting high school students and students at all six of the federally-funded postsecondary educational programs for the deaf.

This recommendation formed the basis for the Department's proposal to conduct a study of postsecondary educational opportunities for the deaf as the first study under the new evaluation activity. In fiscal year 1991, the Department will also continue to assess the need for additional evaluations related to the Special Institutions and develop guidelines on how to conduct such studies.

FOREIGN STUDENTS

In response to a 1990 Conference Report directive, the Department of Education has recently granted NTID permission to admit foreign students for the summer 1990 session at the same tuition rate as that levied by Gallaudet. However, we continue strongly to believe that the Federal Government should not be subsidizing the majority of the cost to educate these students.

Funding for Gallaudet and NTID currently subsidizes the education of about 3,400 hearing and hearing-impaired students, including over 300 students from other countries. The foreign student population has been increasing and now constitutes approximately 13 percent of the students in the various postsecondary level programs at Gallaudet University. The admission of foreign students at NTID will compound this situation in 1991.

Gallaudet has restored its tuition surcharge for foreign students to 50 percent in fiscal year 1990. This was a positive first step. However, we remain concerned that funds that could be used for programs to serve low-functioning and other deaf citizens are being used to subsidize a large percentage of the educational and related expenses of foreign students.

The Department endorses the goal of gradually increasing the surcharge for foreign students to a level equivalent to the average percentage differential charged out-of-State students by land grant, State, and other public four-year colleges and universities.

Gallaudet and NTID currently use land grant and State universities as the base for setting their tuition levels. Our goal would be consistent with that practice and provide a reasonable, objective basis for calculating the surcharge.

The current three-year tuition parity agreement between NTID and Gallaudet expires in 1991. The Department plans to convene meetings on the next stage of this agreement in 1990. The level of subsidy to be provided foreign students will be considered as part of these negotiations.

PROGRAMMATIC RESPONSIBILITY

Fiscal year 1987 marked a change in how the Department administers the Special Institutions. Previously, the Office of Planning, Budget and Evaluation had the primary responsibility for these institutions. The programmatic responsibility for these institutions is now housed within the Office of Special Education and Rehabilitative Services.

Specific responsibilities are assigned to a liaison officer within the Office of the Assistant Secretary. I am pleased to announce that we have recently appointed a person who is deaf to that position.

I believe that these changes have enhanced our understanding of these institutions, increased coordination with the other major programs for handicapped persons which we administer, and resulted in better oversight and direction to the various programs of the Special Institutions for the Handicapped. These changes are consistent with the increase in the Secretary's monitoring and evaluation responsibilities under the Education of the Deaf Act of 1986.

CONSOLIDATED ACCOUNT

The budget proposes a single new account instead of three separate accounts for these institutions. These institutions have a unique relationship with the Federal Government. All serve handicapped students and all receive the largest source of their funding through Federal appropriations.

A single account would simplify budget presentation, analysis, and program administration and encourage consideration of policy towards these institutions in concert with other policies and programs for persons with disabilities. Separate earmarks are provided for each institution to identify the specific amounts of support to be provided.

In closing, the Department expects to continue to make progress in monitoring and evaluating the operations of the Special Institutions. Representatives of the institutions will be included in these reviews.

Thank you for your consideration of the 1991 budget request for the Special Institutions. Mr. Chairman, I will be pleased to answer any questions you or your colleagues may have.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by Michael E. Vader

Deputy Assistant Secretary for
Special Education and Rehabilitative Services
on
Special Institutions for the Handicapped

Mr. Chairman and Members of the Committee:

I am pleased to have the opportunity to appear before this Committee to present the Department's testimony on the fiscal year 1991 President's Budget Request for the Special Institutions for the Handicapped. This includes the American Printing House for the Blind (APHB), the National Technical Institute for the Deaf (NTID), and Gallaudet University. Representatives of these institutions will provide specific testimony in support of the budget request for their institutions. I will not duplicate their testimony. However, I would like to take a few minutes to summarize the budget and comment upon several key issues related to these programs.

Budget Request

The fiscal year 1991 budget for the Special Institutions for the Handicapped is $118.0 million, an increase of $8.6 million, or 7.9 percent, above the 1990 appropriation level. The Department is requesting a total of $5.9 million for the American Printing House for the Blind, $37.5 million for the National Technical Institute for the Deaf, and $74.0 million for Gallaudet University. The budget provides operations increases of 4.2 percent for the American Printing House for the Blind, 8.2 percent for NTID, and 5.8 percent for Gallaudet University, plus increases for special projects. The increases for these programs demonstrate the high priority we place on providing educational opportunities for disabled persons.

Endowment and Construction Funds

The budgets for NTID and Gallaudet University also include $336,000 and $1 million, respectively, for endowment matching grants to help promote the financial independence of the institutions and give them a permanent source of funds for operations and special projects. NTID and Gallaudet fully matched the amounts appropriated for this purpose in 1989 and are on schedule in raising the amounts necessary to match the 1990 appropriations for the endowment matching grant program. In addition, the increase proposed for Gallaudet University contains $2.5 million for construction to remodel and expand the Hall Memorial Building. These funds would be matched by the University and used to begin a renovation of existing classrooms and laboratories and new construction to add office space for the research program.

Evaluation Studies

Over the past few years, the Department has begun an initiative to review and evaluate the educational programs and activities and administrative operations of the Special Institutions. Evaluation efforts include a small, ongoing study of the Model Secondary School for the Deaf and Kendall Demonstration Elementary School, a study of the American Printing House for the Blind and its role in the provision of educational materials for the blind, and a planning study for a comprehensive programmatic evaluation of Gallaudet University. The 1991 budget for the Special Institutions for the Handicapped includes a request for $500,000 for evaluation studies. This new activity responds to provisions of the Education of the Deaf Act which require the Secretary to conduct monitoring and evaluation activities of the education programs and activities and the administrative operations of Gallaudet University and the National Technical Institute for the Deaf. An evaluation studies activity also responds to the recommendation of the Commission on Education of the Deaf that the Department conduct periodic program evaluations of the federally funded education programs for the deaf. In recent years, there has been little objective analysis of the efficiency and effectiveness of these programs.

In 1989, the Department convened a work group of experts in higher education, deafness, and evaluation, including representatives of Gallaudet University, to assist in developing guidelines for a programmatic evaluation of Gallaudet. The recommendations of the panel of experts indicated that the Department should first gather baseline data on the postsecondary educational experiences of exiting high school students and students at all six of the federally funded postsecondary educational programs for the deaf. This recommendation formed the basis for the Department's proposal to conduct a study of postsecondary educational opportunities for the deaf as the first study under the new evaluation activity. In fiscal year 1991, the Department will also continue to assess the need for additional evaluations related to the Special Institutions and develop guidelines on how to conduct such studies.

Foreign Students

In response to a 1990 Conference Report directive, the Department of Education has recently granted NTID permission to admit foreign students for the summer 1990 session at the same rate as levied by Gallaudet. However, we continue strongly to believe that the Federal Government should not be subsidizing the majority of the cost to educate these students. Funding for Gallaudet and NTID currently subsidizes the education of about 3,400 hearing and hearing impaired students, including over 300 students from other countries. The foreign student population has been increasing and now constitutes approximately 13 percent of the students in the various postsecondary level programs at Gallaudet University. The admission of foreign students at NTID will compound this situation in 1991.

Gallaudet has restored its tuition surcharge for foreign students to 50 percent in fiscal year 1990. This was a positive first step. However, we remain concerned that funds that could be used for programs to serve low functioning and other deaf citizens are being used to subsidize a large percentage of the educational and related expenses of foreign students. The Department endorses the goal of gradually increasing the surcharge for foreign students to a level equivalent to the average percentage differential charged out-of-State students by land grant, State, and other public four-year colleges and universities. Gallaudet and NTID currently use land grant and State universities as the base for setting their tuition levels. Our goal would be consistent with that practice and provide a reasonable, objective basis for calculating the surcharge. The current three-year tuition parity agreement between NTID and Gallaudet expires in 1991. The Department plans to convene meetings on the next stage of this agreement in 1990. The level of subsidy to be provided foreign students will be considered as part of these negotiations.

Programmatic Responsibility

Fiscal year 1987 marked a change in how the Department administers the Special Institutions. Previously, the Office of Planning, Budget and Evaluation had the primary responsibility for these institutions. The programmatic responsibility for these institutions is now housed within the Office of Special Education and Rehabilitative Services. Specific responsibilities are assigned to a liaison officer within the Office of the Assistant Secretary. I am pleased to announce that we have recently appointed a person who is deaf to that position. I believe that these changes have enhanced our understanding of these institutions, increased coordination with the other major programs for handicapped persons which we administer, and resulted in better oversight and direction to the various programs of the Special Institutions for the Handicapped. These changes are consistent with the increase in the Secretary's monitoring and evaluation responsibilities under the Education of the Deaf Act of 1986.

Consolidated Account

The budget proposes a single new account instead of three separate accounts for these institutions. These institutions have a unique relationship with the Federal Government. All serve handicapped students and all receive the largest source of their funding through Federal appropriations. A single account would simplify budget presentation, analysis, and program administration and encourages consideration of policy toward these institutions in concert with other policies and programs for persons with disabilities. Separate earmarks are provided for each institution to identify the specific amounts of support to be provided.

In closing, the Department expects to continue to make progress in monitoring and evaluating the operations of the Special Institutions. Representatives of the Institutions will be included in these reviews. Thank you for your consideration of the 1991 budget request for the Special Institutions.

Mr. Chairman, I will be pleased to answer any questions you or your colleagues may have.

DEPARTMENT OF EDUCATION

Office of Special Education and Rehabilitative Services

Biographical Sketch

NAME : Michael E. Vader

POSITION : Deputy Assistant Secretary for Special
Education and REhabilitative Services

BIRTHPLACE AND DATE : Saulte St. Marie, Michigan, August 16, 1941

EDUCATION : University of Nevada, 1969, B.S.
1972, M.B.A

EXPERIENCE

1989 - PRESENT : Deputy Assistant Secretary for Special
Education and Rehabilitative Services

1987 - 1989 : Deputy Director/Chief, Department of Consumer
Affairs, State of California
Sacramento, CA

1984 - 1987 : Chief, Deputy Director, Department of Fair
Employment and Housing, State of California
Sacramento, CA

1984 : Deputy Director, Enforcement, Department of
Fair Employment and Housing, State of California
Sacramento, CA

1983 - 1984 : Chief, Bureau of Automotive Repair, Department
of Consumer Affairs, State of California
Sacramento, CA

1980 - 1983 : Deputy Secretary, State and Consumer Services
Agency, State of California
Sacramento, CA

1977 - 1980 : Program Manager, State Personnel Board, State of
California
Sacramento, CA

1974 - 1977 : Commissioner, Fair Employment Practice Commission, State of California
Sacramento, CA

1974 - 1975 : Consultant, Department of Education, State of
California
Sacramento, CA

1973 - 1977 : Yat-Ta-Hey, Potpourri (Retail Stores)
Sacramento, CA

1971 - 1973 : Executive Vice President, The Mentoris
Company
Sacramento, CA

1970 - 1971 : Vice President, International Luggage
Registry, Inc.
Reno, Nevada

1969 - 1970 : Chief Accountant, State of Nevada –
Carson City, Nevada

1966 - 1969 : Consultant, Vader/Zane Consultant Inc.
Reno, Nevada

1961 - 1966 : Internal Auditor, I.B.M. Corporation
San Jose, CA

CONSOLIDATED ACCOUNT

Mr. **Natcher**. Thank you, Mr. Vader.

Now, as you know, the Department is again requesting a consolidated appropriation for the Special Institutions. Why is this being done, Mr. Vader? And if you will tell us, how many years has the Department requested consolidation?

Mr. **Vader**. The President's request for 1991 proposes one account, a Special Institutions for the Handicapped account, to replace the three current separate accounts. Specific earmarks are included for each supported institution in order to maintain a separate funding identification for each.

The primary advantage of this recommendation is administrative ease. I believe that the Administration has requested this consolidated account since fiscal year 1984.

Mr. **Natcher**. Have the Institutions voiced any concern or reservations about a consolidated request? Have you talked with them, Mr. Vader, or anyone in your agency?

Mr. **Vader**. I am not personally aware of any major objections to the consolidated proposal.

EVALUATION STUDIES

Mr. **Natcher**. The budget requested $500,000 for evaluation of the Special Institutions. Last year, this proposal focused on Gallaudet. Tell the committee what prompted this year's request and how do you intend to use these monies, this $500,000?

Mr. **Vader**. Essentially, the $500,000 is requested to assist the Department to fulfill its responsibility to monitor and evaluate Federal postsecondary educational opportunities for the deaf. Without this appropriation, we would not have evaluation funds available for this particular purpose.

In April 1989, we began a planning study in response to our responsibility under the Education of the Deaf Act and recommendations of the Commission on Education of the Deaf. The Department convened a panel of experts to discuss various data and issues that relate to educational opportunities for the deaf, particularly in relation to a programmatic evaluation of Gallaudet University.

The panel felt it was important to gather baseline data before a comprehensive programmatic evaluation be initiated. The $500,000 we are requesting is to gather data on the postsecondary deaf population such as attendance trends and demographic and functional data. These data would be useful in determining the type and level of programs to be offered in the future.

AMERICAN PRINTING HOUSE FOR THE BLIND STUDY

Mr. **Natcher**. According to your opening statement, the Department is funding a study of the American Printing House for the Blind and its role in providing educational materials to the blind. Who is actually conducting the study, and tell us, if you will, when it will be completed?

Mr. **Vader**. The study is currently in process. It was begun in October 1989. It is the first study of the American Printing House for the Blind in its 121-year history. It will cover a wide range of issues, including average cost of supplying materials, identification of emerging issues, and distribution and coordination activities.

Mr. **NATCHER**. Who is conducting this study?

Ms. **CICHOWSKI**. We have a small contract with Pelavin Associates, which does education-related studies for the Department.

FOREIGN STUDENTS

Mr. **NATCHER**. The tuition surcharge for foreign students at Gallaudet and the National Technical Institute for the Deaf is currently 50 percent. Tell us why the Administration thinks this is too low, and also tell us what surcharge the Department thinks is reasonable.

Mr. **VADER**. At this time, we feel the 50 percent surcharge is appropriate as a first step, and we have recommended as such. We will soon begin the process of organizing meetings between Gallaudet and NTID to discuss the three-year tuition parity agreement, which expires in 1991 and will bring up the subsidy of the foreign students as a part of these discussions.

RESTRICTION ON NUMBER OF FOREIGN STUDENTS

Mr. **NATCHER**. Instead of raising tuition, Mr. Vader, any further, should the number of foreign students admitted to any of the Special Institutions be restricted?

Mr. **VADER**. That clearly is an option that we could consider in the future, in addition to raising tuition.

Mr. **NATCHER**. Mr. Conte, I yield to you.

CONSOLIDATED ACCOUNT

Mr. **CONTE**. Thank you, Mr. Chairman.

The Chairman asked you about the consolidated account. I think I finally figured out why the Department comes up here every year asking to consolidate these three fine institutions. OMB Director Darman came out with one budget book instead of the usual four or five volumes. By consolidating to save space you are trying to make a contribution by combining these three accounts into one.

You are going to save at least a half-column in the 1500-page document. Is that right?

Mr. **VADER**. I have not estimated the actual space that would be saved.

MONITORING AND EVALUATION RESPONSIBILITY

Mr. **CONTE**. The Education Department began oversight of the three Special Institutions for the Handicapped three years ago. Last year, it was mentioned at the oversight they turned up three areas of concern, 1) excessive compensation; 2) tuition, room and board agreements and admission of foreign students; and 3) accountability.

A year later, where do you stand with regard to the oversight of these programs? Have the Department's concerns been resolved?

Mr. **VADER**. Those are ongoing considerations. We are working with the institutions to resolve them. Regarding oversight, we have assigned programmatic responsibilities to the Assistant Secretary's office. I am happy to say we have appointed a deaf person as the manager of that operation. I am happy that the relationships between all the parties have evolved and the result is enhanced educational opportunities for persons who are deaf.

EVALUATION STUDIES

Mr. CONTE. Your testimony indicates that you intend to conduct a study of the postsecondary education opportunities for the deaf under the new evaluation activity. If I try to translate that into plain, ordinary language, wouldn't it be fair to say that the purpose of the study is to determine where deaf students can go to college or further training after graduating from high school?

Mr. VADER. Yes, the first stage of the study primarily is to gather existing data on demographics and baseline data on what is available before we can assess the kinds of appropriate placements still needed to appropriately serve deaf persons.

Ms. CICHOWSKI. The purpose of the study would be to get information on who the deaf students are who are exiting secondary schools and moving on from special education, what their characteristics look like, what their interests are, and what their needs are. We are interested in the kinds of choices they make about postsecondary education and their experiences in postsecondary education.

We think this kind of information will help us better assess what kinds of postsecondary programs are needed to meet the needs of deaf students. This has implications for programs like NTID, Gallaudet, and the Regional Postsecondary Education Programs for the Deaf. It will also assist in addressing the needs of the low-functioning deaf, which has been a strong interest of the Congress and one that we share.

Mr. CONTE. Carol, how does that constitute an evaluation, which compares actual results of a given program to expected or anticipated results?

Ms. CICHOWSKI. It is not an evaluation of an institution, but it will provide information on the context in which those institutions operate that will enable us to assess whether or not the institutions are in fact addressing the needs.

The main reason that we are pursuing this area of study is that it responds to the recommendations of the panel of experts we convened last spring. We invited nine experts in higher education, education of the deaf, and programmatic evaluation to give us assistance in developing guidelines for an evaluation of Gallaudet University. They began asking questions about whether we had data on the characteristics of deaf students attending existing postsecondary schools and their experiences. We did not have this baseline information. The experts agreed that prior to pursuing an evaluation of any of these institutions, we should gather baseline information on the population and their current experiences.

EVALUATION STRATEGY

Mr. CONTE. Did the 1989 working group recommend an overall evaluation strategy for you to take?

Ms. CICHOWSKI. The strategy we are pursuing is in response to their recommendation. They recommended that we start collecting baseline data on the current experiences these students are having at the postsecondary level before we proceed with an evaluation focused on any one of these institutions specifically and their programs. We agree with that recommendation.

Since we could not provide the kind of information they requested, we recognized that we need to start at the beginning with some very basic information.

FOREIGN STUDENTS

Mr. CONTE. The chairman asked about the 50-percent surcharge for foreign students. I believe an agreement has been reached between Howard and the Department as to how those charges will be instituted over the three-year period.

I wonder if there are any similar agreements in place for NTID and Gallaudet?

Mr. VADER. Here again, we have agreement upon the 50-percent surcharge currently for 1990 and 1991. The three-year agreement is up for consideration in 1991. We will be starting to meet with NTID and Gallaudet later this year to discuss any increases that may be necessary and the surcharge for foreign students in the future.

Mr. CONTE. You don't think the 50 percent surcharge is enough?

Mr. VADER. No we don't. I have an opinion on this, but I want a chance to evaluate it further.

CONSORTIUM PROGRAM

Mr. CONTE. In the 1990 bill, the conference report provided $888,000 for a consortium program involving NTID. No budget request was presented for that activity. Is there a policy reason within the Department for not continuing with that activity?

Mr. VADER. Yes, the Department believes additional funding should not be committed until all options have been considered. In 1990, the Department is establishing a research and training center for low-functioning persons who are deaf to support research on services to this population. As part of this particular center there will be projects to evaluate various needs as well as identification of available resources. This information should be examined before more funds are considered for consortium activities.

We believe that, right now, the best way to address the concerns of low-functioning deaf persons is through the research and training center which will recommend approaches for best serving these individuals.

Mr. CONTE. You are not planning to rescind the $888,000?

Ms. CICHOWSKI. No, we are not.

Mr. NATCHER. Thank you very much, Mr. Vader.

[The following questions were submitted to be answered for the record:]

FOREIGN STUDENTS

Mr. Natcher: The tuition surcharges for foreign students at Gallaudet and the National Technical Institute for the Deaf is currently 50 percent. Tell us why the Administration thinks this is too low and also tell us what surcharge the Department thinks is reasonable.

Mr. Vader: The Department has very serious reservations about the size of the Federal subsidy for foreign students attending Gallaudet University and those who will be attending NTID. Gallaudet estimated that the average cost per student in 1987 was $25,730. Using this uninflated amount and the 1990 enrollment of foreign students, we estimate a total cost of $7,744,730 for foreign students in 1990. Foreign student tuition, including the 50 percent surcharge, is $4,626 in 1990. At this rate, foreign students contributed only $1,392,400 toward the cost of their education or less than 18 percent of the cost. Over half of the students enrolled at Gallaudet and 80 percent of the foreign applicants to NTID are from Canada. There are enough Canadian students to open a Canadian school. However, it is much less expensive for Canada to send their students here at an extremely discounted price.

The Department agrees with the 1990 Senate report language that would have required Gallaudet to work with the Department to develop a plan for reaching a 135 percent surcharge level over a 5-year period. The 135 percent level is the average percentage differential charged out-of-State students by public colleges and universities. NTID and Gallaudet are premier institutions for the deaf that are primarily supported by the American taxpayer. We believe foreign nationals and their governments should at least be asked to pay a reasonable portion of our cost to educate their students.

Mr. Natcher: Would an increase of this magnitude significantly restrict the number of deaf foreign students able to attend schools in the U.S.?

Mr. Vader: The Department believes that a higher surcharge for foreign students would not significantly affect the level of foreign student enrollment. Despite the increase in the surcharge for these students from 20 percent to 50 percent in 1990, enrollment of foreign students increased by 31 percent. In fact, the foreign student population is the fastest growing segment of Gallaudet University. These students represented 65 percent of the overall increase in enrollment in 1990. The Commission on Education of the Deaf recommended that the number of foreign students at both schools be limited to 10 percent of the student body and that tuition be increased to cover 75 percent of the average per student cost at each institution. The enrollment of foreign students at Gallaudet is now almost 13 percent of the student body and they pay only approximately 18 percent of the average per student cost. The earlier argument put forth by the University that these students are only adding marginal costs to the overall cost of the University does not hold up when they comprise almost 13 percent of the total enrollment.

The amount of the tuition surcharge that foreign students attending Gallaudet University are required to pay is extremely reasonable. Public colleges and universities charge out-of-State students an average of 135 percent more than in-State students, a rate significantly more than the 50 percent charged by Gallaudet and soon to be charged by NTID. Private schools, which enroll a significant number of foreign students, also charge tuition rates that are generally higher than the Gallaudet rate, including the 50 percent surcharge, and continue to attract foreign students. We believe these students directly affect the educational, support service, and capital expenditure needs of the University and should be asked to pay a reasonable share of their cost. Concerns about opportunities for students from developing nations can be better addressed through a scholarship program than through an across-the-board subsidy.

Mr. Stokes: Do you know what countries most of the foreign students at Gallaudet come from? For the record, please provide a list of countries that currently have students enrolled at Gallaudet.

Mr. Vader: In 1990, Gallaudet enrolled 301 foreign students from 57 countries in University programs. The following chart lists the countries represented and number of students from each:

Angola	3
Australia	1
Belgium	2
Brazil	2
Cameroon	1
Canada	151
Chile	1
China	1
Denmark	6
El Salvador	2

EVALUATION STUDIES

Mr. Stokes: You are requesting $500,000 for an evaluation of postsecondary educational opportunities for the deaf in 1991. Has such an evaluation been conducted before?

Mr. Vader: To our knowledge, there has not been a comprehensive evaluation of postsecondary educational opportunities for persons who are deaf. The study would gather baseline data on the deaf population that would qualify for entry into postsecondary institutions, the attendance trends of this population, factors contributing to choice of postsecondary institution, and demographic, academic, and functional data related to this population. This study would examine the reasons why deaf students choose particular types of institutions in an effort to assess the appropriate role for Federal assistance in this area.

Mr. Stokes: Your justification states that this special line item is necessary because it is not possible to conduct a large-scale study of this type with general Departmental funds. Please explain this. Could this study be funded under the Department's research and statistics budget?

Mr. Vader: Section 405 of the General Education Provisions Act, which authorizes the research activities carried out by the Office of Educational Research and Improvement, is broad enough to cover such an evaluation. However, this authority is most often used for research related to general educational issues. Where separate authority exists for research that is closely related to the purpose of a particular Federal program, it has been our practice to request funds under that specific program authority. Only 17.3 percent of the research and evaluation funds requested for the Department for fiscal year 1991 would fall under the section 405 authority. In addition, historically, there has been very little money available within the research and statistics account beyond that needed to comply with statutory mandates. While the Department has requested an increase for research, this study was not included in that request. The Department would not be able to support a study of this magnitude without the addition of specific funds for this purpose.

CONSOLIDATED ACCOUNT

Mr. Early: The Administration is requesting language changes to create one account for "Special Institutions for the Handicapped." Why is this change being proposed?

Mr. Vader: The three institutions all enjoy a similar special relationship with the Federal Government. A single account would simplify budget presentation, analysis, and administration. One account makes it easier to coordinate policy concerns which relate to all three institutions. It also ensures that the three remain together for purposes of administration.

Mr. Early: Won't this make these separate institutions vulnerable to reprogramming requests and complicate planning at the individual institutions?

Mr. Vader: There is no conceivable way this change could affect the internal planning processes at any of the institutions. The institutions each have their own methods for developing and implementing their budgets. The consolidated account only makes it easier for the Department to analyze and present the requests once the institutions have submitted them. Each institution would still receive allotments from the Department in exactly the same way they currently receive them. Regarding reprogramming, each institution is still separately identified as an activity in the appropriation request. The Department cannot reprogram between budget activities without the express permission of Congress.

Mr. Early: If there is a sequester on fiscal year 1991 appropriations, how would that effect one "Special" account as the Administration has requested, compared to three separate accounts as the current language provides?

Mr. Vader: The effect would be the same as for three separate accounts. All earmarked activities within an account are affected in the same manner as separate accounts. The Department does not have discretion to distribute sequester-related reductions among earmarks within an account.

MONITORING AND EVALUATION RESPONSIBILITY

Mr. Early: The Education for the Deaf Act of 1986 (EDA) gave the Department of Education increased responsibility for monitoring and evaluating Gallaudet and the National Technical Institute for the Deaf (NTID). What specific changes or problems has the Department made or found since taking over this responsibility?

Mr. Vader: The Department made several changes following the passage of the EDA. The most significant of these was the transfer of programmatic responsibility for these accounts to the Office of Special Education and Rehabilitative Services (OSERS). The Assistant Secretary for OSERS has established a separate liaison officer position for the Special Institutions for the Handicapped in response to provisions of EDA. This person has lead responsibility for programmatic oversight of Gallaudet, NTID, and the American Printing House for the Blind. The current individual selected for this position is a deaf person with a strong background in rehabilitation, special education, and administration.

In terms of problems, the Department has identified a number of concerns related to these institutions. They include research coordination, salary levels, the continuation of the tuition parity agreement, appropriate charges for foreign students, and accountability for funds. We have begun to request more specific budget data and have initiated several small studies related to the institutions. Additional evaluation activities are being planned to obtain better information on the planning and budget processes of the institutions. The Department is working with the institutions to address these concerns.

EFFECT OF SEQUESTER

Mr. Early: What impact did the sequester have on the individual institutions?

Mr. Vader: The sequester, which came to under 1.4 percent for these accounts, in total, still left each institution with a significant increase above the 1989 appropriation level. APHB received an additional $318,000 or 5.9 percent increase. NTID received an increase of $1,256,000 or 3.8 percent for operations, $124,000 or 63 percent for endowment, and new monies of $476,000 for construction. Gallaudet received an increase of $1,647,000 or 2.5 percent for operations, and a $2,000 or .2 percent reduction in endowment funds. According to the institutions, this resulted in a decline of 1.5 cents in APHB's per student allotment and a smaller purchase of new equipment and less of an increase in outreach activities at NTID. Gallaudet offset the reductions with the elimination of two vice president level positions and reductions in support positions which were already planned by the University.

SALARY INCREASES

Mr. Early: How much of an increase in salaries is requested in the Administration's fiscal year 1991 request?

Mr. Vader: An increase is being requested for each institution. The amount of the increase devoted to salaries varies for each institution, depending upon their request. APHB's salaries are not tied to the appropriation. NTID is planning a 5.5 percent and Gallaudet a 5 percent general increase in salaries, plus merit increases and promotions. Increased funds are built into the requests for projects and priorities in addition to the amounts requested for salaries.

WEDNESDAY, FEBRUARY 21, 1990.

GALLAUDET UNIVERSITY

WITNESSES

I. KING JORDAN, PRESIDENT

MICHAEL E. VADER, DEPUTY ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION, AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

Mr. NATCHER. We now take up the budget request for fiscal year 1991 for Gallaudet University. We have before the committee our friend and colleague from Wisconsin, who is not only very concerned about the requests for Gallaudet University, but is also concerned about health and education for the people of this country.

Before turning to President Jordan, Mr. Gunderson, we will be pleased to hear from you.

Mr. GUNDERSON. Mr. Chairman, it has been perhaps the highest reward I have had as a Member of Congress to be made one of the two congressional trustees to Gallaudet; Congressman Dave Bonior is the other. Both of us have found this not only a mission of love, but of high rewards as we have been able to work with King Jordan, making it not only a college but also a university and making it a leader throughout the world.

I also want to introduce to you and to Mr. Conte the Chairman of the Board of Trustees, who is also here, Phil Bravin from New York. He is a typical Chairman of the Board of Trustees who spends more time donating his work than he does earning his pay in his private sector job.

With that, let me turn over this request for our budget to King Jordan. I believe I and Dave Bonior, during the day of testimony from members, would like to come back to you with our personal thoughts.

Mr. NATCHER. Thank you, Mr. Gunderson.

Dr. Jordan, it is a pleasure to have you, and we will be pleased to hear from you at this time.

Dr. JORDAN. Thank you very much, Mr. Chairman. Thank you, Congressman Gunderson, I appreciate your kind words.

Mr. Chairman, I have a lengthy opening statement that I would ask be entered into the record, and I will make a brief oral statement.

ACCOMPLISHMENTS IN FISCAL YEAR 1989

Mr. NATCHER. It will be entered into the record, and we will be pleased to hear from you.

Dr. **Jordan**. I am delighted to be here. This is my second year as President of Gallaudet University and my third time before your committee. If I may speak to one point about Gallaudet in those two years, instead of the momentum slowing down, if anything it speeded up. Things continue to happen at a very, very rapid pace.

We continue to report a number of significant firsts. For example, during the summer of this year, we hosted the Deaf Way Conference, bringing more than 5,000 people together from 80 different countries.

U.S. News and World Report recently ranked Gallaudet University as number one for faculty, number one for academic reputation, and number two for overall liberal arts colleges in the East. During the year, we appointed four new members on the Board on which Congressman Gunderson is an active participant. They include a businessman from the Washington, D.C. area who manages a multi-million-dollar computer software corporation, a CPA partner from a firm in California, a Director of research and development in Arkansas and an internationally-known linguist.

All four also happen to be deaf people. We believe by appointing these four people, we are complying with the recommendation that Gallaudet ultimately achieve a deaf majority on the Board of Trustees. At the same time, we have implemented a number of other recommendations from the Commission on Education of the Deaf, including better focused outreach programs.

We have submitted detailed research plans to the Department of Education, and we have increased the tuition charge to international students. During the last year, I implemented a major reorganization at Gallaudet University that resulted in the reduction of staff and the elimination of two vice president level positions.

This will lead to a much less centralized administrative structure and management style. I also recently announced to the campus that we will reduce staffing by 2 percent per year for the next 5 years.

BUDGET REQUEST FOR FISCAL YEAR 1991

Gallaudet is an exciting place to work. With the continued support of both the Department of Education and the Congress, we know that we will be able to continue to carry out our mission and achieve our goals. I testify in full support of the Administration's budget. The total budget request, as you know, is $74,047,000.

That includes an increase for operations of $3,890,000, a $14,000 increase in the endowment matching grant, and $2,500,000 for construction. The increase in operations will enable us to continue to compensate our faculty and staff at competitive levels. It will also enable us to implement new programs in areas that we have identified as priorities.

The $14,000 increase in the endowment challenge grant will bring us back to the $1,000,000 level. That grant has given us the opportunity to increase our private giving significantly. We were able to match it each of the first two years. We have already raised enough money to match it for 1990, the third year, and if given the dollars in 1991, we will match it this time as well.

We have requested $2,500,000 this year for construction, and we will ask for $2,500,000 for the next two years as well. That money is intended to be used to add significantly needed space by adding onto an existing building, and at the same time, renovating that building. It was constructed in the 1950s and has never undergone any change since that time.

Mr. Chairman, I thank you for the opportunity to make this statement and to testify before you. I would be happy to respond to your questions.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

I. King Jordan
President
Gallaudet University

Mr. Chairman and Members of the Committee:

I am very pleased to come before you today at the end of my second year as President of Gallaudet University. This year has been one of accomplishment for Gallaudet and for the world deaf community. In July, we sponsored the Deaf Way, an international festival and conference on the language, culture, and history of deaf people. This conference, which focused on the accomplishments of deaf people rather than on the limitations of deafness, attracted more than 5,000 people from 81 different countries. These people attended lectures, workshops, and theatrical and other presentations during the week-long event. The University was able to attract substantial private funding to support the Deaf Way, and I believe that the event has made a significant contribution to the development of the deaf community, both in the United States and throughout the world.

I also come before you today to reaffirm my belief that, with the cooperation and support of the Congress and the Department of Education, we will continue to be able to achieve our goals and fulfill our mission. That mission continues to be to provide the best possible higher education to deaf students in our university programs, to provide the most innovative and effective national demonstration programs in our elementary and secondary schools, to be a world leader in research related to deafness, and to conduct outreach and advocacy programs to enhance the lives of deaf people of every age and to increase their potential and level of participation in American society.

Budget Request for Fiscal Year 1991

I testify today in full support of the Administration's budget request for Gallaudet University. The budget request of $74.047 million for Gallaudet University includes an increase for operations of $3,890,000. These funds will be used for compensation improvements. In addition, we will be establishing or continuing development of several new instructional programs. Also requested is an increase of $14,000 in the endowment matching program that would bring it to $1 million. Finally, $2.5 million is requested for construction.

The level of funding proposed in the request, together with projected increases in nonappropriated revenue and the continuing introduction of efficiencies, will allow us to continue moving toward our goal of making our faculty and staff compensation programs competitive with local and national markets and to establish or expand some long awaited and much needed new programs. In particular, we have initiated new graduate programs in clinical psychology and social work, and these will be fully funded in 1991. Program development for the Ph.D. in clinical psychology is proceeding with a start-up date of the fall of this year. In addition, we are initiating a new Ph.D. program in the education of the deaf. Finally, we will be establishing a Center for Excellence in Learning and Teaching and other programs to improve the assessment of student performance and to enhance the professional development of faculty and staff. The funding level proposed in the President's fiscal year 1991 budget will allow us to launch or expand these programs as well as to provide needed improvements in our faculty and staff compensation systems.

I testified last year that we have been working to implement recommendations of the Commission on Education of the Deaf. In particular:

1. Our Board of Trustees has adopted a resolution that will lead to a deaf majority on the Board, and we have added four new members during the past year, all of them deaf;

2. We have increased the tuition surcharge for international students;

3. We have developed detailed research plans and have submitted them to the Department of Education for review; and,

4. We have improved the outreach and dissemination activities of our pre-college programs.

Reorganization

During the past year, we completed a reorganization designed to increase the responsibility of the chief academic officer, the Provost, enhance the status of the chief development officer, and reduce the number of senior administrators. As a result, two vice presidential positions were eliminated and the number of people reporting to the President was reduced. In addition, we have initiated a plan to reduce overall employment by 2 percent a year for the next five years, thereby increasing efficiency while ensuring our ability to maintain a competitive compensation system. Finally, one of my highest priorities is to increase our level of support from the private sector. Due to increased revenue from grants and contracts, gifts and private grants, endowment, and contributions to the Deaf Way, we were able to reduce our dependence on the Federal appropriation from 75 percent of funding from all sources in fiscal year 1988 to 72 percent in fiscal year 1989.

University Programs

The focus in our University program in fiscal year 1991 will again be upon excellence and productivity--excellence in teaching and student performance and productivity in the lives of our graduates. In order to promote this objective, as I stated earlier, we will be establishing a Center for Excellence in Learning and Teaching. This Center will draw together resources from around the University dedicated to the support of quality instructional programs. At the same time, various other units at the University will be initiating or expanding efforts to improve student assessment and professional development for faculty and staff.

In addition, the Master of Social Work program, established in the fall of 1989, will train much needed professionals to supply social services to deaf people. This program is now in partial operation. Additional funds will be applied to make this program fully operational in 1991. Gallaudet will continue development of a Ph.D. program in clinical psychology in order to meet the needs of deaf and hard of hearing people in the area of mental health services. The program has been partially funded and will be launched in the fall of 1990. Our faculty has also identified the need for a terminal degree program for educators of the deaf and plans for this program are under development.

In the areas of research and outreach, I am committed to programs designed to meet the needs of expanding constituencies. Gallaudet will continue to seek funding for expansion of these programs from than Federal appropriations. However, I believe that in order for Gallaudet to maintain quality programs in these areas on an ongoing basis, we need to retain a funding base anchored in our appropriation.

Model Secondary School for the Deaf and Kendall Demonstration Elementary School

A unique feature of Gallaudet University is the existence of its two pre-college programs--the Model Secondary School for the Deaf (MSSD) and the Kendall Demonstration Elementary School (KDES). Both schools continue to develop exemplary instructional programs, conduct research, and develop and disseminate materials for both mainstream and special school settings. During fiscal year 1989 and continuing into fiscal year 1990, the pre-college programs are focusing on their dissemination and outreach activities. These efforts include expanded market research, development of new brochures and catalogues, and appointment of a Director of Outreach Services. During fiscal year 1990, we will be implementing enrollment plans to guide the development of the schools in 1991 and beyond.

Endowment Matching Program

Under my administration, Gallaudet remains committed to increasing the proportion of funding that comes from sources other than the appropriation. The endowment matching program has proved very useful to us in convincing potential donors to support the University financially. During the first two years of its existence, we were able to match the available funds and have already nearly matched the full amount for fiscal year 1990. We look forward to the continuing challenge of increasing our endowment funds.

Construction

During the past fiscal year, the University completed a space utilization and facilities planning process that identified a critical need for renovating and expanding the largest classroom building on the Kendall Green Campus. This is the Hall Memorial Building, which was built in 1958. The building has been deteriorating and is in need of major renovation. In addition, the space utilization study identified the need for additional space to house the Gallaudet Research Institute and the expanding graduate programs in Psychology and Social Work. The total amount needed for these improvements is $15 million over a three year period. We are committed to raising half of the funds needed to effect these improvements in our facilities and have requested support from the Federal Government for the other half.

Mr. Chairman, I thank you for this opportunity to come before you today, and I welcome your questions.

DEPARTMENT OF EDUCATION

Special Institutions for the Handicapped
Gallaudet University

Biographical Sketch

NAME	: I. King Jordan
POSITION	: President, Gallaudet University
BIRTHPLACE AND DATE	: Glen Riddle, PA - June 16, 1943
EDUCATION	: University of Tennessee, 1973, Ph.D. Psychology University of Tennessee, 1971, M.A. Psychology Gallaudet College, 1970, B.A. Psychology
EXPERIENCE (Gallaudet)	
Present	: President, Gallaudet University, Washington, D.C.
1986-3/7/88	: Dean, College of Arts and Sciences
1983-1986	: Chair, Department of Psychology
1982-1988	: Professor of Psychology
1977-1982	: Associate Professor of Psychology
1973-1977	: Assistant Professor of Psychology
HONORS AND AWARDS	: Faculty Member of the Month, Gallaudet University Student Body Government, 1987. United States Comptroller General's Award, 1987. Outstanding Young Men of America, 1975. National Defense Act, Title IV Fellowship, University of Tennessee, 1973. University of Tennessee Non-Service Fellowship, 1971. Graduated "With Distinction," Gallaudet College, 1970 Phi Alpha Pi Honorary Society, 1969.

REORGANIZATION

Mr. **Natcher**. Thank you, Dr. Jordan.

As you know, Gallaudet recently had a reorganization that consolidated a number of programs and reduced the number of Vice Presidents from five to three. The justification also indicates the total number of employees is expected to decrease by 37 between 1989 and 1991. Dr. Jordan, what prompted these reorganizations?

Dr. **Jordan**. I would like to answer first by saying that the decision to do that was completely mine, an internal decision. There was no pressure from outside in any way for me to do it. It was done only after a very careful study of staffing and the overall organization.

STAFFING REDUCTIONS

We are very much aware that the Congress is faced with a very serious problem in reducing the overall deficit in the United States budget. We are trying to do what we can to help in that regard.

We believe honestly that we will see a significant improvement in the flexibility of the budget within Gallaudet if we can reduce the number of staff positions. Sometimes there is no discretionary money for new programmatic initiatives because staff compensation ties it up. We expect only positive results.

I anticipate we will be able to realize the reduction in current positions simply by monitoring, when someone leaves Gallaudet, whether or not we need to hire another person to fill that position. I believe we can do this by attrition and resignations.

Mr. **Natcher**. Will services to students be reduced in any way?

Dr. **Jordan**. Not at all. We don't intend for any reduction in services. We may reprogram some services, but there will not be any way in which services to students suffer.

FOREIGN STUDENTS

Mr. **Natcher**. The Department states that it is in favor of a tuition surcharge of 135 percent for foreign students. This is what the land grant colleges and State universities charge out-of-State students. Do you think this rate is reasonable, Dr. Jordan?

Dr. **Jordan**. No, sir, I don't. I think the 135 percent surcharge is the correct figure based on the average of public universities and colleges; however, if you look at our tuition for U.S. students, it is among the highest of the land grant colleges and universities.

We arrived at that level at the urging of the Department of Education and the Congress. Because of our tuition base, if you look at the dollar amounts, we may be already charging our international students more than or close to the average dollar amount charged by land grant colleges and State universities, when the 50 percent surcharge is added.

Mr. **Natcher**. The estimate is that the number of foreign students at Gallaudet will decrease from 301 in 1990 to 250 in 1991. Is this the result of tuition surcharge?

Dr. **Jordan**. The 1991 projection was not based on the surcharge, but I believe that there is no question that the surcharge may hurt in some cases. Students who come to Gallaudet sometimes come from very poor countries. It is too early for us to recognize what the implications of the recently reinstituted 50 percent surcharge will be. However, I can tell you that a number of the students who come without financial aid from their country really struggle to pay the tuition.

Mr. NATCHER. As you know, foreign students represent about 13 percent of Gallaudet University's population in 1990. Do you think this is too high a proportion, and further, should there be a cap on foreign enrollment?

Dr. JORDAN. One thing I would respond with is the fact that we have never denied enrollment to a qualified American student because we were full with foreign students. That has never happened. I would say that the 13 percent represented by international students enriches Gallaudet's environment. The diversity of life experience and cultural backgrounds that these people bring to Gallaudet University is wonderful. I would be reluctant to suggest a quota or a cap.

Mr. NATCHER. What countries are most heavily represented in the Gallaudet student population at this time?

Dr. JORDAN. We have students attending Gallaudet from more than 50 different foreign countries. I believe the country with by far the most students would be Canada, because of the proximity, the ability to afford the tuition, and the fact that they share English as their language.

CONSTRUCTION REQUEST

Mr. NATCHER. Gallaudet is requesting $2,500,000 for construction in fiscal year 1991. The justifications indicate that construction funds are requested because of overcrowding. But overall, our records indicate that enrollment in Gallaudet is decreasing.

Why do you need more classrooms if the number of students is declining?

Dr. JORDAN. The number of students at the university level is pretty much the same as it has been for the last couple of years. The expansion that we are talking about is programmatic expansion. We are not talking about seeking new bodies or students to attend Gallaudet. We decided to add space after a very, very careful analysis that was done by an architectural firm here in Washington.

The primary beneficiaries of the new space will be research programs and the clinical psychology program that we have just established. The renovation will enable us to pull together all the College of Arts and Sciences programs in one place, which will include the teaching and learning center.

Mr. NATCHER. Total construction costs are estimated at $15 million over three years. Gallaudet is proposing to finance half of this total. Tell the committee how you will match the Federal funds. How will you bring this about?

Dr. JORDAN. First, I would like to respond by saying that the decision to renovate and expand is an essential decision. It is very important that we have the new space, and we have the repaired facility. We will try to match with private giving.

We have established a priority of approaches to doing that. First, we will seek new private money to match the $2,500,000. If we cannot raise the private money, then we would look at deferred maintenance money.

For a number of years, we have put aside some of our nonappropriated revenue for deferred maintenance. We do this in accordance with NACUBO guidelines. It is a highly recommended strategy. A big part of the work on the building will be windows and heating and air conditioning, which will actually be deferred maintenance.

We have had some bankers and investment people come to Gallaudet and explain to us the ways in which debt financing would work. It seems likely if we needed to incur debt, we could do so. But currently Gallaudet University is completely debt free, so I would hope we would not have to go that way.

Mr. NATCHER. Doctor, according to our records enrollment will be down about 5.5 percent, down to about 2,250. Are those figures correct?

Dr. JORDAN. They are estimates, sir, but if that question is in reference to the space, we are not talking about dormitory space. We are talking about a facility named the Hall Memorial Building that was built in the 1950s. It is a disgrace. It was not designed for deaf students. It was simply thrown up as a classroom building. It is not an appropriate facility for achieving excellence in education.

Mr. GUNDERSON. I was one of the board who strongly encouraged the president of going with the idea of demolishing the building and going ahead with a new one. He has convinced me, as the architectural firm has, that we can save money by gutting the building.

I toured the building. It is in terrible shape.

SALARY INCREASES

Mr. NATCHER. For the past two years you have proposed using the bulk of the appropriation increase for salaries. What was the average increase in salaries in 1989 and 1990 and what increase is estimated in 1991?

Dr. JORDAN. The way in which we compensate our faculty and staff is by analyzing comparable compensation rates at area colleges and universities. We try to achieve parity with those local institutions.

The increase that was awarded last year to faculty and staff was a five percent increase. There were additional increases for merit and promotion, but the average was five percent. The average increase the year before was seven percent and 5 percent is proposed for 1991.

Mr. NATCHER. Mr. Conte, I yield to you.

Mr. CONTE. Thank you Mr. Chairman. Dr. Jordan what portion of the new request will be used for salaries?

Dr. JORDAN. I would have to sit down and analyze the number. I would say the majority of it will be used for salaries. I can give you a specific answer for the record.

[The information follows:]

SALARIES AS A PERCENTAGE OF TOTAL INCREASE

Gallaudet University plans to use $2,915,000 of the overall increase for compensation increases. This is equivalent to 45.5 percent of the total increase proposed in the

President's Budget. However, the total increase includes funds designated for construction and endowment. The funding for compensation increases represents 74.9 percent of the $3,890,000 increase requested for operations.

COMPARATIVE FACULTY SALARIES

Mr. **Conte**. Do you think that with the 3.9 we gave you last year, and what is in this budget this year, you will be able to draw from top notch faculty with the pay scale that you have?

Dr. **Jordan**. We remain competitive. At the beginning of the year we projected what the area salaries would be and aimed for the average. Last year it was sixth out of eight. I don't believe we have the actual data yet from this year's salaries, but we are competitive, yes, sir.

Mr. **Conte**. Good.

Gallaudet is a very unique university because of its unique student population and special location and tradition. The location is a blessing, and it is a curse also. It is a blessing because you have easy access to the Congress and the Department of Education, and a curse because we can haul you up here at any time we want.

Seriously, Dr. Jordan, it is a pleasure to have you back before this committee. This is your third time here as the first deaf president in the history of the world's first collegiate program in for deaf students.

You started at Gallaudet under some very unusual circumstances. How are things going in general?

Dr. **Jordan**. As I said in my opening remarks, sir, they are still on the move. I said at the beginning, personally, that there were a number of things I would like to do when things settle down. They have not settled down and I don't expect them to. Things are going fine at Gallaudet. We really believe that we are moving ahead.

PRE-COLLEGE GRADUATES IN POSTSECONDARY PROGRAMS

Mr. **Conte**. The Chairman asked you about the enrollment trend. How many students in your precollegiate programs are seeking additional schooling?

Dr. **Jordan**. The number of students from our precollegiate programs that go on to post-secondary educational opportunities is very high. I will have to get the specific percentage for the record, but I can tell you more than half continue on to the postsecondary level.

[The information follows:]

Pre-College Graduates in Postsecondary Programs

The number of students from the Model Secondary School for the Deaf continuing their education after graduation is very high. Currently, 78 percent of graduates from the Model School go on to some form of postsecondary education.

ENROLLMENT TRENDS

Mr. **Conte**. There is a drop in the enrollment. We are over the rubella peak, but lets assume the university went to full capacity. Do you have a contingency plan in place?

Dr. **Jordan**. In the event that should occur, I would prefer to go with a plan of increasing standards. We have been able to, in the last two years, raise the admissions standards quite a bit. I would like to see us do that even more in the future.

If we reach a point where we are full, then I would prefer that we are full with the best possible students.

SKILL LEVEL OF APPLICANTS

Mr. CONTE. Given the changes in public schools due to achievement in the recent years, have you noticed changes in the academic skill level in the students applying for entrance into Gallaudet?

Dr. JORDAN. I have noticed an increase in the reading level and the achievement scores of people applying. I don't know whether that means the students are better or the applicants are, but we have better students applying and enrolling.

STUDENT RETENTION LEVEL

Mr. CONTE. How about the retention level?

Dr. JORDAN. That is one of my primary concerns. We are getting better retention now but not nearly as much as I would like it to be in the future.

The mission of Gallaudet is to provide a collegiate education to as many deaf people as possible. Frankly, we admit "at risk" students and we will continue to admit at risk students because this may be the only liberal arts opportunity that they have. We believe with our new center on learning and teaching, we will be better able to support them to help them persist to graduation.

Mr. CONTE. What is your retention rate?

Dr. JORDAN. We estimate that our retention rate from entering students through graduation is around 40 percent.

SALARIES OF GRADUATES

Mr. CONTE. What are you doing to assure your graduates become productive citizens? What about their salaries? How do they compare with other graduates?

Dr. JORDAN. They compare very well. We have a high placement rate and a high percentage of graduates who go on to postgraduate study.

We prepared a study of the 1988 class. Their average beginning salary was about $15,000. This compares well with other colleges and universities.

We recently established a management institute that goes one step further and attempts to provide workshops and educational materials to people in the profession, people who have finished at Gallaudet and are out in the business world, to get continuing education.

STUDENT LOAN DEFAULT RATE

Mr. CONTE. What is your loan default rate?

Dr. JORDAN. I cannot quote that. I cannot tell you what it is. I will get it for the record, but I don't know the answer to your question.

[The information follows:]

STUDENT LOAN DEFAULT RATE

Gallaudet University maintains a default rate of 12.4 percent for the Gauranteed Student Loans program. This compares favorably to the national average of 17 percent. However, this figure includes proprietary schools and public and private two year technical and community college programs. The average for four-year public and private colleges and universities is seven percent. Gallaudet's default rate for the Perkins Loans Program (formerly National Defense Student Loans program) is 7.98 percent.

MENTAL HEALTH PROGRAMS

Mr. CONTE. All right. You mentioned a new masters degree program in social work (MSW) was recently started at Gallaudet and a clinical work in psychology is scheduled for next fall. How do these programs fit in with the overall plans for Gallaudet?

Dr. JORDAN. The two new programs are specifically mental health programs. Mental health is among my highest priorities. We have a specialist degree program in school psychology. That is between a masters and a Ph.D. degree.

We have a masters level program in mental health counseling. With the addition of the MSW and a Ph.D. in clinical psychology, we will have a comprehensive mental health program.

We are studying the establishment of a community counseling center that we hope will be a model for community counseling of the deaf all over the United States. This will be the first of its kind for deaf people and will include social work, counseling, and psychological services.

ENDOWMENT FUNDS

Mr. CONTE. What is the status of Gallaudets endowment fund? How much do you have?

Dr. JORDAN. The market value of our combined endowment funds is a little more than $21,000,000. We are very happy with that.

HEARING STUDENTS

Mr. CONTE. That is very good. If you keep doing so well we will have to get you up here to manage our budget.

In 1988 the Commission on Education of the Deaf recommended that Congress prohibit you or the school from enrolling hearing students. Last year you were questioned by this committee about the nonhearing-impaired students enrolled at Gallaudet.

What thoughts do you want to share with us about the enrollment of hearing students at Gallaudet?

Dr. JORDAN. We have not admitted any new hearing students in the baccalaureate program. We believe the program started several years ago was designed to provide educational opportunities for students who would work in areas that would later serve deaf people. However, we saw it as a multiplier type of thing that was not a subsidy for hearing students.

We opposed the Commission on Education of the Deaf's position on that.

EXCELLENCE IN EDUCATION

Mr. CONTE. The theme of excellence in education has become the rallying cry throughout the land. In addition to things you have mentioned here today what else are you doing to increase the level of excellence at Gallaudet?

Dr. JORDAN. A number of important programs are included in the 1991 budget request that will help to lead to excellence. In addition to the Center for Excellence in Learning and Teaching already mentioned, the request includes funds for professional development for faculty and staff and the assessment of student outcomes.

We have established an assessment program at our Northwest campus for preparatory students. We plan to expand that to the rest of the university. We are confident that with additional professional development opportunities and a very careful assessment of outcomes and modifications of programs to fit with those outcomes, we will achieve excellence.

Mr. CONTE. Thank you.

Mr. NATCHER. Mr. Early?

RECRUITMENT ACTIVITIES

Mr. EARLY. President Jordan, we want to welcome you back.

Mr. President, how does Gallaudet disseminate information about its programs to the high schools throughout the country?

Dr. JORDAN. To high schools, we have an Office of Admissions and Enrollment Services that has, as part its duties, a recruiting section. We have two recruiters who travel around the country and a number of publications we disseminate around the country.

You may know, as recently as five or six years ago, the enrollment at Gallaudet was comprised mostly of students from residential schools for the deaf. Now, it is about half students from mainstream programs.

We are making a special attempt to focus on mainstream programs this year. We have hired a Hispanic woman who is deaf and speaks fluent Spanish and English and also signs. We have targeted the States that have the largest bilingual Spanish and English communities for her to travel through and disseminate information.

OUTREACH BUDGET

Mr. EARLY. Are you satisfied with the outreach monies in this budget or do you think that is something we should be doing more of?

Dr. JORDAN. We developed a list of priorities just last month at Gallaudet University. We pulled together a group of people, including faculty, staff, and students from all over the campus. Included among our priorities was outreach and advocacy. We believe that the budget request is sufficient and very fair. We may have to rechannel some of the monies within the university, but we think the request is very fair.

FUNDRAISING

Mr. EARLY. Are you a typical college president in that you spend 90 percent of your time fund-raising?

Dr. JORDAN. I was told recently that the university president is a guy who dresses nice and begs for money.

Yes, I spend a great deal of my time fund-raising. That is one of my highest priorities, trying to raise money. I spent last week in Florida going from house to house. That will continue to be one of my priorities.

ENTRANCE EXAMINATIONS

Mr. **Early**. Mr. President, you mentioned to Mr. Conte that you were raising your admission standards for the incoming students. Is there a college entrance exam similar to college boards or is it a language standard or what are those standards?

Dr. **Jordan**. The Scholastic Aptitude Test administered by the Educational Testing Service in Princeton is typically used as an admission test at colleges and universities around the country.

There is a special test which we use called the Stanford Achievement Test—Hearing Impaired (SATHI). We use this test regularly, as a substitute for the SAT, to help us make decisions on who to admit.

The scores of applicants on this test have increased over the past two years.

Mr. **Early**. Are you satisfied that students throughout the country who have a hearing problem are familiar with the SATHI?

Dr. **Jordan**. No, I am not. The schools for the deaf and the larger mainstream programs are very familiar with the SATHI. As mainstreaming becomes more and more an option in placing students, you often see only one or two students in a school system who are hearing-impaired. In that case they may not be familiar with it.

COMPUTER USE AT GALLAUDET

Mr. **Early**. Most of the schools I talk to are unable to keep up with high technology and believe there is not enough computer equipment available to them.

Are you satisfied that Gallaudet is keeping with its computer systems? I would think Gallaudet is a little unique and should look at spending more than double what they currently spend on computers?

Dr. **Jordan**. I believe we are really leaders when it comes to technology and computer use in higher education. We have a very sophisticated mainframe computer system. We have literally hundreds of personal computers throughout the campus. We have computer terminals in each of the dormitories.

Since last year, student-use of the mainframe computer has approximately doubled to about 1500 students who regularly use it, particularly because of the addition of electronic mail and computer bulletin boards. We have a computer conferencing system where students can look in and exchange ideas about topics that concern them, about anything, someone will set up a conference. It is fascinating to read how much information is in there.

Sometimes I work late at night and I may log into the computer at midnight. At that hour, there are still 100 or 150 people using it.

Mr. **Early**. Computer technology changes so rapidly. Are you satisfied that you are staying up-to-date with this budget? I don't think you should suggest in developing this budget that you have all the tools necesary.

I sit here and say they have a nice budget, they are doing all right.

Dr. JORDAN. We are at the point with our mainframe computer where we are almost to maximum usage. Mr. Paul Kelly, my able administrative vice president is investigating what the next generation will cost Gallaudet. But we are not ready to move to the next generation of computers now.

As you know, it takes a great deal of time to make a decision about what the entire university computing system will be like. We are studying that and may come back next year and ask for it.

Mr. EARLY. Another college president tells me what they need most is money for computers. You have much more of a need at Gallaudet for computers. All my schools, Harvard, Holy Cross, they are computerizing, making almost every student an expert in the use of computers.

But at Gallaudet, I would think you would be twice as aggressive with computers. I can even spell with computers today. You just type in a word and it tells you if it is spelled correctly or not.

Dr. JORDAN. You are absolutely right. The use of computers, sir, with deaf individuals gives us an opportunity to be absolutely equal communication partners.

One of the things I do in my office is use computer mail and phone to communicate with people on campus and communicate with people all over the country. I received the other day a message from the president of Reed College who just happened to notice my name in a magazine article, and he sent me a question.

When I want to communicate with students, I can send a message on the computer. If the students go out into the world and are knowledgeable about COBOL, for example, they have a leg up.

If the committee were to grant me $2,000,000, I would go to the next generation of computers. However, we need time for planning because we want to be sure this is a cost-effective decision. I am sorry if it seems I am not interested in or receptive to suggestions that we could use more. Yes, we always could use more. I am responding to the budget request which is a very favorable request for Gallaudet.

We will be working and studying hard on the computer question.

STAFFING REDUCTIONS

Mr. EARLY. The reductions you mentioned before were administrative. Were there any reductions in faculty positions?

Dr. JORDAN. Elimination of faculty positions? No, we don't intend to eliminate positions. We intend to not fill positions as they became vacant.

Mr. EARLY. Are you going to eliminate teaching positions as they become vacant?

Dr. JORDAN. Yes, sir. If it is determined that a teaching position becomes vacant that is no longer necessary, then we would eliminate that position.

STUDENT/FACULTY RATIOS

Mr. EARLY. Finally, will you supply for the record your teacher ratio, teacher to student ratio. What it has been for the last three years and what you think would be the ideal student to teacher ratio? Also what your faculty teaches in hours per week?

Don't do such a good job in justifying this budget.

Thank you.

[The information follows:]

STUDENT-FACULTY RATIOS

Program	School year—		
	1988–89	1989–90	1990–91
University programs	9.2:1	9.1:1	9.0:1
Model Secondary School for the Deaf	4.4:1	4.1:1	4.3:1
Kendall Demonstration Elementary School	4.4:1	4.1:1	4.3:1

The most recent figures available on faculty workload are for school year 1988–89. For that year, the University estimates that faculty were responsible for an average of 10 credit hours per semester. This level has been relatively constant over the past three years, and Gallaudet feels it represents an appropriate workload. The University also believes that resultant student/faculty ratios at all levels are currently in the ideal range to promote learning and social skills.

MINORITY STUDENTS

Mr. NATCHER. Mr. Stokes, I yield to you.

Mr. STOKES. It is nice to see you again.

Can you tell me how the university's programs are serving special populations, particularly blacks and Hispanics?

Dr. JORDAN. I believe you are aware of the conference in March 1989 that was called "Black and Hispanic Deaf Students: Is the System Meeting Their Needs?" That conference attracted more than 300 people.

When we saw the level of the response, we decided to repeat it. This year the conference will be in San Diego in April. It will be cohosted by the Council of Educational Administrators Serving the Deaf. We expect an equal number of people to attend. We broadened the focus to include multicultural deaf persons, such as Asian and Native American students.

The other thing we are doing is that we recently established a multicultural affairs officer, a person who will be responsible to see that the diverse cultural needs of the different groups, especially blacks and Hispanics, are met.

I mentioned earlier, I believe, our Hispanic recruiter. We also plan to hire a black recruiter. We are moving to increase our work in many cultural aspects.

EMPLOYMENT OF DEAF PERSONS

Mr. STOKES. The Commission on Education of the Deaf recommended the hiring and promotion of deaf people. Have you taken steps to implement those recommendations?

Dr. JORDAN. Yes. A little more than a year ago I established an affirmative action task force and charged them with developing an affirmative action plan. They have recently given me a draft of the affirmative action plan.

We are currently reviewing it to make sure that we meet all the legal requirements. We expect it will be fully implemented very soon. The percentage of deaf employees has increased since last year. It is now 28 percent. A year ago it was 25 percent. The percentage of minority employees continue to be about 33 percent.

We are proud of those figures, but are not satisfied. We will continue to work to increase them.

EVALUATION REQUEST

Mr. **Stokes.** The Education of the Deaf Act mandates that the Secretary conduct monitoring of the educational programs and administrative operations of Gallaudet. The Commission on Education of the Deaf also recommended such an evaluation.

I understand such an evaluation was undertaken in 1989. Can you summarize the findings of that evaluation for us?

Dr. **Jordan.** In 1989, the Department of Education brought together a panel of experts to outline a plan for evaluating Gallaudet University. I had two criticisms or objections to that plan last year when I testified before this committee. Those objections were that the money to support the plan was placed in the Gallaudet budget, but would be under the control of the Department of Education. Secondly, the plan was narrowly focused only on Gallaudet University.

The Department of Education plans to broaden the scope to include all programs for the deaf. The money requested for 1991 is requested in a separate activity by the Department of Education. The full scale study proposed last year did not take place. The planning study panel of experts met and came up with a list of suggested areas of study. I am much more satisfied with the plan the Department has for 1991.

CONSOLIDATED ACCOUNT

Mr. **Stokes.** The Department is proposing to consolidate three accounts for special institutions—the American Printing House for the Blind, NTID and Gallaudet—into one account.

From your perspective would this be advantageous?

Dr. **Jordan.** My personal position is that it would not. We were established by Congress in 1864. Since that time we have received attention and oversight by Congress. I think that is appropriate. I would prefer to see those accounts remain separate.

FOREIGN STUDENTS

Mr. **Stokes.** Doctor, what percentage of your student body is foreign and can you tell us what countries those students come from?

Dr. **Jordan.** It is about 13 percent of the total student body. They come from 50 countries, all over the world.

Mr. **Stokes.** Will an increase in the surcharge as proposed by the Department effect the number of foreign students that could be enrolled in your college?

Dr. **Jordan.** In my opening remarks, I talked about the Deaf Way Conference and Festival. During that festival, I was approached by people from different countries. A group of people from Bulgaria came to my office saying they would love to send their students, but they could not afford the tuition, even with the current Federal subsidy. Any time the tuition is increased it is likely to have an adverse effect on students who want to come.

HEARING-IMPAIRED EMPLOYEES

Mr. **Stokes**. Doctor, what percentage of your faculty and staff are hearing-impaired?

Dr. **Jordan**. Twenty-eight percent overall.

Mr. **Stokes**. Can you break it down between the two?

Dr. **Jordan**. I can do so for the record. I don't have those records in my head. I know it differs according to job responsibility. I will be happy to submit for the record specific break downs of this data.

[The information follows:]

HEARING-IMPAIRED FACULTY AND STAFF

	Hearing—		Deaf—	
	Number	Percent	Number	Percent
Designated administrators [1]	26	76	8	24
Other staff	789	75	267	25
Subtotal	815	75	275	25
Faculty	270	66	140	34
Total	1,085	72	415	28

[1] This category includes the President's Council, deans, and directors.

Note: These data are current as of February 1990. The figures include regular status, extended temporary status, federally funded, grant, and income supported positions.

MINORITY EMPLOYEES

Mr. **Stokes**. I would also like to have what percentages of both your staff and faculty are minority.

Dr. **Jordan**. I can tell you overall it is 32 percent. To break it down further, I will have to provide that for the record.

Mr. **Stokes**. I would like to have that in the record.

Dr. **Jordan**. Yes, sir.

[The information follows:]

MINORITY STAFF AND FACULTY EMPLOYMENT

	White—		Black—		Asians—		Hispanic—		American Indian—	
	No.	Percent	No.	Percent	No.	Percent	No.	Percent	No.	Percent
Designated administrators [1]	30	88	4	12	0		0		0	
Other staff	630	60	378	36	26	2	21	2	1	
Subtotal	660	61	382	35	26	2	21	2	1	
Faculty	357	87	33	8	9	2	10	2	1	
Total	1,017	68	415	28	35	2	31	2	2	

[1] This category includes the President's Council, deans, and directors.

Note: These data are current as of February 1990. The figures include regular status, extended temporary status, federally funded, grant, and income supported positions.

KDES ENROLLMENT CAPACITY

Mr. **Stokes**. Thank you.

Mr. **Natcher**. Mr. Hoyer?

Mr. **Hoyer**. First, Dr. Jordan, let me congratulate you on the job that you have been doing since you became the president. I think the entire community here and nationally is impressed by your leadership.

Dr. **Jordan**. Thank you. I also would like to thank you for the leadership you have shown on the Americans With Disabilities Act.

Mr. **Hoyer**. Mr. Conte is a very strong supporter of that legislation' and is a cosponsor of the original bill.

Mr. **Conte**. I co-sponsored the original bill with Mr. Coelho.

Mr. **Hoyer**. As we enter into the final months of work on the ADA, your continuing leadership will be critical. As you know, I am very interested in the Kendall Demonstration Elementary School. Can you tell me the availability of slots in both the elementary and the secondary school?

Dr. **Jordan**. Currently, the elementary school has approximately 200 students. The secondary school has 315. The Kendall School is full. We are operating at an appropriate level.

The Model Secondary School for the Deaf has available spaces for students. As you may know, the enrollment has declined over the past few years. There are a number of factors that have contributed to that. We are paying close attention to that.

Mr. **Hoyer**. In terms of the Kendall School, do you have a waiting list?

Dr. **Jordan**. I don't think so. I believe that we are full, but not with a waiting list, or with a very short one.

ELDERLY PERSONS WITH HEARING LOSSES

Mr. **Hoyer**. With our aging population what are we doing with respect to the accompanying hearing loss that the elderly are experiencing?

Dr. **Jordan**. For a number of years, Gallaudet has hosted an elder hostel program for senior citizens with hearing impairments. These are two very distinct groups, older people who are becoming deaf and deaf people who are becoming old. The two are distinct groups.

We try to bring them together to let them enrich each other's lives. It has been a successful program. Last year we had seven sessions during the summer. They include coping strategies for the hard of hearing, a program designed to assist people experiencing hearing loss and their families to learn how to cope, and strategies on how to deal with the hearing loss in daily life.

This May, Gallaudet will hold a conference on hearing loss in elderly people that is called Sound Advice for the Nineties. We will be bringing people in from all over the country, including key leaders in the field of gerontology and audiology. That will be in May.

We hope some staff people from the Congress will be able to come.

SCHOOL OF MANAGEMENT

Mr. **Hoyer**. You mentioned last year that the school of management was one of your fastest growing schools. Can you give us an update?

Dr. **Jordan**. Yes, sir. It continues to grow. It now has an enrollment of about 300. These students are majoring in accounting, general business, economics or entrepreneural studies. We expect it will continue to grow. It is a very attractive field for young deaf people, as it is for young hearing people.

That school was established in 1987. I should also mention the management institute, which provides continuing education for deaf professionals. There are a total of 15 full time equivalent faculty people in the School of Management.

EMPLOYER ACCOMMODATION TO HEARING LOSS

Mr. **Hoyer**. With respect to the ADA, as you know, it requires reasonable accommodations that could be readily achievable to be made for those who have a disability. In terms of your graduates, how willing have you found businesses in accommodating your students?

Dr. **Jordan**. Mr. Hoyer, the best answer I can give is that the biggest accommodation is attitudinal, not physical. The barrier we face is a communication barrier. The specific part of the ADA that focuses on us is Title IV, the telecommunication section. But more important, I think than the physical barrier, is telecommunication and the attitudinal barrier that has existed for years.

One of the best things about the way in which I became president, and the attention that Gallaudet has received and continues to receive, is that it is opening the eyes of people all over the country to the abilities of deaf people instead of the disability of deafness.

We in the disability community try to move the focus from the "dis" over to the ability.

Mr. **Hoyer**. Nobody I think has done that better than you have.

As I said, I think that is one of the reasons we will pass this bill with a big majority. Hopefully, it will take us a long way in supporting the work that you and many others continue.

Thank you, Mr. Chairman.

Mr. **Natcher**. Dr. Jordan, I have a few additional questions that will be presented to you and you will give us good answers for the record.

Are there any additional questions?

Mr. **Stokes**. I have some for the record.

[The following questions were submitted to be answered for the record:]

USE OF ENDOWMENT INTEREST FOR CONSTRUCTION

Mr. Natcher: Will interest income from the endowment fund contribute towards construction financing?

Dr. Jordan: There are two basic categories of endowment income: restricted and unrestricted. The restricted funds have legal restrictions associated with them that require that they be expended only for specified purposes. These funds comprised somewhat more than fifty percent of our endowment income in FY 1989. The unrestricted part of the endowment income becomes part of our general budget, and some of these funds could be allocated to support construction. However, in recent years, it has been our practice to return most of this income to the endowment corpus, which leads to more rapid growth in our total endowments. We believe that this continues to be a sound practice. Whether we consider using endowment interest for construction will depend on the success of our capital campaign in raising other funds to meet our half of the total cost.

ENDOWMENT FUND INTEREST

Mr. Natcher: What is the current balance in the endowment fund, how will this increase in 1991, and how much interest income does the endowment generate annually?

Dr. Jordan: The current market value of all University endowment and similar special funds is approximately $21 million. We expect this to increase by $2 to $3 million in fiscal year 1991. In fiscal year 1989, the total income from endowments was just less than $1 million, slightly more than half of which was restricted. We expect this yield to increase moderately as the endowment fund corpus grows.

Mr. Natcher: What is the current level of interest income available for immediate use?

Dr. Jordan: Our most recent information is for fiscal year 1989. At that time, unrestricted endowment income was approximately $450,000.

SALARY AND BENEFIT LEVELS

Mr. Natcher: Last year you estimated that Gallaudet was probably 6th out of 8 in Washington area schools in terms of overall (faculty) salary compensation. Where does Gallaudet stand now, Doctor?

Dr. Jordan: In fiscal year 1989, we awarded functional increases to all employees of 7 percent plus additional increases for merit and promotion. In 1990, we gave an average increase of 5 percent and are planning to provide another 5 percent increase in 1991. These compensation increases are designed to keep our salary schedule competitive. Despite large increases at the other area institutions, we believe that Gallaudet has continued to maintain its relative position and is competitive in terms of recruitment and retention of faculty.

ENROLLMENT TRENDS

Mr. Natcher: Enrollment at the Model Secondary School continued to decline in 1990. Is enrollment at the High School declining at a faster rate than that at the elementary level or University level?

Dr. Jordan: Yes, it is. Enrollment continued to decline at MSSD for the sixth year in a row. However, we believe that MSSD has reached a stable enrollment of between 300 and 325 students. Enrollment at the elementary level decreased by small amounts over the past several years, but is now relatively stable in the range of 190 to 200 students. Enrollment at the University level surged from 2,287 in 1988 to 2,391 in 1989 due to the increase in awareness of Gallaudet following the demonstrations in 1988. The number declined slightly to 2,373 in 1990, and we believe that it will stabilize in the range of 2,250 to 2,400 students. Gallaudet does not expect significant reductions in enrollment in these programs.

STAFFING IMPLICATIONS OF ENROLLMENT TRENDS

Mr. Natcher: What are the long-term staffing implications if this downward trend persists?

Dr. Jordan: We are currently reducing staff at the rate of 2 percent per year for the next 5 years. I believe that this reduction will be relatively evenly distributed among the schools. In addition, the University began a comprehensive enrollment planning process this fall. As part of this process, we are conducting an in-depth review of pre-college programs with respect to the future of enrollments and programs. We will report to the Department of Education on our conclusions.

MODEL SCHOOL ENROLLMENT PROJECTIONS

Mr. Natcher: The justification indicates that various options for recruitment of secondary students are being considered. In fact, the justification predicts that you will maintain enrollment at Model Secondary School from 1990 to 1991. How will this be possible?

Dr. Jordan: As previously indicated, we are conducting an in-depth review of the MSSD program. Our preliminary review of demographic statistics and the program characteristics of the school have indicated that it would maintain a stable enrollment at about the current level. That was the reason for indicating stable enrollment levels in the justification. However, we are continuing our review and will revisit that conclusion if necessary.

MEDICAL RECORDS TECHNOLOGY

Mr. Natcher: The justification indicates that you originally requested funds for a Medical Records Technician program, but are no longer seeking funding. What were your reasons for requesting funds for this program and why are you no longer seeking funding?

Dr. Jordan: We understand and have been responsive to the Department's concerns by not going forward with this program. We also had some internal concerns about the direction this program would have taken the University. However, we continue to believe that the proposal was generally sound. The University originally had two goals in considering this program. We hoped to provide increased career training opportunities for students, and we wanted to offer an alternative to the four year programs for those students who wanted a degree with less than a four year requirement. We also recognized that many students seeking two year associate degrees often prefer to attend institutions close to their homes.

PRE-COLLEGE PROGRAMS FINANCIAL ACCOUNTING

Mr. Natcher: In response to a 1987 GAO evaluation, Gallaudet is proposing an alternative financial accounting system that will produce more reliable data. Is the proposed system being developed in-house?

Dr. Jordan: Yes, the University is developing the system in-house with the help of some outside consultants. We anticipate that the system will be fully operational by the end of this fiscal year.

Mr. Natcher: Does the Department agree that the system being developed will address the GAO concerns?

Mr Vader: The Department has not been involved in the development of this system and has not had the opportunity to evaluate it. However, Gallaudet has been in contact with the General Accounting Office concerning its progress in complying with their recommendations. The new system will result in the production of annual reports concerning the national mission costs. We expect that these reports will be submitted to the Department for review.

NORTHWEST CAMPUS

Mr. Natcher: What part of your operation is housed at the Northwest Campus? How many staff and students? Please contrast these numbers to the Kendall Green campus staff and students.

Dr. Jordan: The Northwest Campus houses our School of Preparatory Studies. This school offers a special program designed to help incoming students who are not fully prepared to begin their freshman year. Approximately 70 percent of newly admitted Gallaudet students need this preparation. In FY 1990, 323 students are enrolled at the Northwest campus, and 39 faculty members and 37 staff are assigned to the campus. In FY 1990, there are 2,559 students enrolled at the Kendall Green campus (including MSSD and KDES). They are served by 1,424 faculty and staff.

GRADUATE SCHOOL DEAF ENROLLMENT

Mr. Natcher: Have you had any success in increasing the number of graduate students who are deaf?

Dr. Jordan: In FY 1989, 87 of the 379 students enrolled in graduate studies were deaf. In FY 1990, 89 of the 401 graduate students are deaf. We are initiating several efforts to increase the pool of qualified deaf candidates for our graduate programs. These include creating a Clerc Scholarship fund especially for deaf students entering the education program. Growth in the number of deaf undergraduates in teacher education programs should lead to an increase in graduate education program applicants. The new Coordinator of Graduate Recruitment will also be focusing efforts on the recruitment of qualified deaf graduates.

ASL ELIGIBILITY FOR BILINGUAL EDUCATION

Mr. Natcher: Has there been any further discussion about whether or not students proficient in American Sign Language are eligible for support under the Bilingual Education Act?

Dr. Jordan: This was a recommendation of the Commission on Education of the Deaf that was made in 1988. We have expressed our support for this recommendation. However, the Department has gone on record opposing it. To my knowledge there has not recently been more discussion of the issue.

EFFECT OF 1990 SEQUESTER

Mr. Natcher: What cost saving measures were necessary to absorb the fiscal year 1990 sequester?

Dr. Jordan: As I have stated elsewhere, late in fiscal year 1989, we conducted a major reorganization that went into effect fully in fiscal year 1990. This reorganization resulted in the elimination of two vice president level positions and reductions in some support positions. The savings from this reorganization were sufficient to offset the sequester.

PRE-COLLEGE PROGRAMS ACCOMPLISHMENTS

Mr. Early: The Administration is requesting an increase in funds for both the Model Secondary School for the Deaf (MSSD) and the Kendall Demonstration Elementary School. How will this increase be used? Can you give me some indication of how these programs are working?

Dr. Jordan: The funding increases for the Model Secondary School for the Deaf (MSSD) and Kendall Demonstration Elementary School (KDES) will be used for compensation increases needed to maintain a competitive salary structure at these two schools.

As a part of Pre-College Programs' efforts this year to respond to recommendations of the 1988 report of the Commission on Education of the Deaf, our Educational Resource Centers are only funding training and technical assistance activities that focus on one or more of the priorities contained in this document. These priorities are:

- lower-achieving deaf students;
- students with disabilities in addition to deafness;

- multi-cultural deaf students;
- deaf students with non-English speaking families;
- deaf students in transition; and
- families of deaf infants and children.

The General Accounting Office audit of Pre-College Programs (PCP) and the Commission on Education of the Deaf report recommended that the Outreach Services Office of the Pre-College Programs establish a marketing program so that services and resources would be made available to a larger number of programs associated with the education of the deaf. A marketing coordinator was hired last year and he is implementing an aggressive campaign to market and track the sales of a select group of Pre-College materials and service requests. The materials include all the KDES curriculum guides and two new publications for use in classrooms with non-handicapped students. Over $35,000 has been reallocated from other PCP to support this increased emphasis on marketing.

Outreach Services is responsible for publishing four periodicals: WORLD AROUND YOU, PERSPECTIVES ON EDUCATION AND DEAFNESS, AMERICAN ANNALS OF THE DEAF, and THE PROGRESS REPORT. This year, WORLD AROUND YOU subscriptions increased by 23.7% over last year and AMERICAN ANNALS subscriptions were up 10.4% over the previous year, while PERSPECTIVES subscriptions remained stable. PROGRESS REPORT is now distributed to over 17,000 individuals free of charge, more than half of whom work in public school programs.

A federal grant that provides for the mainstreaming of KDES students at Gallaudet's Child Development Center is in the second year of a three-year cycle. A videotape of the first year of the project that shows how the day care center staff learned how to interact with deaf mainstreamed students has been completed. After presentations at national conferences and information dissemination in Outreach Services periodicals, requests for additional information have dramatically increased from schools and day care centers around the country.

New programs initiated during the last year include a multi-cultural diversity training program at MSSD and an Office of Hispanic Services at both KDES and MSSD. It is anticipated that, within the next year, PCP will be prepared to offer training to professionals in other schools in a more comprehensive fashion, although some training is already offered in these areas. PCP will also be disseminating an important curriculum guide for use with K-12 students with multiple handicaps at the end of the fiscal year. All of these activities reflect the special attention being given to the priorities recommended by the Commission on Education of the Deaf.

WEDNESDAY, FEBRUARY 21, 1990.

AMERICAN PRINTING HOUSE FOR THE BLIND

WITNESSES

TUCK TINSLEY III, PRESIDENT, AMERICAN PRINTING HOUSE FOR THE BLIND

MICHAEL E. VADER, DEPUTY ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION, AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

Mr. NATCHER. We take up the budget request for the American Printing House for the Blind. We have Dr. Tinsley, the President of the American Printing House for the Blind.

Dr. Tinsley, who do you have with you there?

Dr. TINSLEY. Mr. Chairman, it is a pleasure for me to appear as President of the American Printing House for the Blind. With me are Michael Vader and Ms. Carol Cichowski of the U.S. Department of Education.

BUDGET REQUEST

Let me summarize my statement by saying that the total appropriation for 1991 is $5,901,000, an increase of $238,000 over that appropriated for 1990. This amount would provide approximately 39 percent of the Printing House's total sales income, the remainder coming from other Federal programs, product sales to State and local agencies, and individual purchases. Private donations and investments provide other income.

The 1991 request reflects the passage of the Handicapped Programs Technical Amendments Act of 1988, which terminated the American Printing House for the Blind's $10,000 permanent appropriation.

Of the funds requested for fiscal year 1991, $5,366,000 would be used to supply special educational materials to an estimated 48,180 blind students. This number represents an increase of 1,696 students over fiscal year 1990. Of the 48,180 blind students, 45,761 would be enrolled through educational programs and 2,419 through rehabilitation programs. The per capita allotment for fiscal year 1991 would be $111.37, an increase of $.60 over that for 1990.

The 1991 request includes $159,000 for expenses for advisory services. This budget category covers the expenses of the two advisory committees which determine what books will be published and what other new materials will be developed.

More importantly, however, this budget covers the cost of informing teachers and administrators regarding what materials are available, how they may be obtained, and how they are to be used, as well as the cost of the annual census of blind students.

The request provides $376,000 for 1991 for educational and technical research. These funds serve as a base to enable the American Printing House to develop needed educational materials in a variety of subject areas such as braille reading and writing, low vision training, and microcomputer applications, and to develop products for special groups such as the multihandicapped blind and preschool blind.

Mr. Chairman, I will be glad to answer any questions that you have.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Tuck Tinsley, III
President
American Printing House for the Blind

Mr. Chairman and Members of the Committee:

The American Printing House for the Blind was chartered by the Commonwealth of Kentucky in 1858 for the nonprofit manufacture of books and other materials for use by the blind. In 1879, the Congress passed an Act to Promote the Education of the Blind which, as amended, now enables the Printing House to provide educational materials for all blind students below college level throughout the United States, it territories, and possessions. These materials include textbooks in braille and large type, educational books such as braillewriters and microcomputer software and hardware, teaching aids such as educational tests and performance measures, and other special supplies. The total request for 1991 for this programs is $5,901,000, an increase of $238,000 over that appropriated for 1990. This account would provide approximately 39 percent of the Printing House's total sales income, the remainder coming from other Federal programs, product sales to State and local agencies, and individual purchases. Private donations and investments provide other income. The 1991 request reflects the passage of the Handicapped Programs Technical Amendments Act of 1988, which terminated the American Printing House for the Blind's $10,000 permanent appropriation.

Educational Materials

Of the funds requested for fiscal year 1991, $5,366,000 would be used to supply special educational materials to an estimated 48,180 blind students. This number represents an increase of 1,696 students over fiscal year 1990. Of the 48,180 blind students, 45,761 would be enrolled through educational programs and 2,419 through rehabilitation programs. The per capita allotment for fiscal year 1991 would be $111.37, an increase of $.60 over that for 1990.

Advisory Services

The 1991 request includes $159,000 for expenses for advisory services. This budget category covers the expenses of the two advisory committees which determine what books will be published and what other new materials will be developed. More importantly, however, this budget covers the cost of informing teachers and administrators regarding what materials are available, how they may be obtained, and how they are to be used, as well as the cost of the annual census of blind students.

Educational and Technical Research

The request provides $376,000 for 1991 for educational and technical research. These funds serve as a base to enable the

American Printing House to develop needed educational materials in a variety of subject areas such as braille reading and writing, low vision training, and microcomputer applications, and to develop products for special groups such as the multihandicapped blind and preschool blind.

General Information

The APHB continues to serve a growing number of blind students with complex needs who require a wide variety of educational materials. Public Law 99-457, enacted by Congress in 1986, amended the Education of the Handicapped Act to mandate services to all preschool children with disabilities. Programs initiated in response to this law continue to increase the number of students to be served by APHB. In 1991, the American Printing House will continue to focus on the development of new materials to serve blind children from birth through their entry into regular school programs.

Of the 46,484 legally blind students registered for fiscal year 1990, 38,430, or 83 percent, were registered through State Departments of Education, 4,323, or 9 percent, were enrolled in residential schools, 1,397, or 3 percent, were enrolled in separate programs for the multihandicapped, and 2,334, or 5 percent, were enrolled in rehabilitation programs. Among these, 5,471, or 12 percent, were registered as braille readers, 14,370, or 31 percent, as visual readers, 7,034, or 15 percent, as auditory readers, 4,618, or 10 percent as prereaders, and 14,991, or 32 percent, as nonreaders.

New educational materials and teaching aids are developed and produced each year to keep educational programs current for these students, with reprints and reruns of older materials produced as required. Additionally, the American Printing House uses its own funds to maintain a finished goods inventory of over $3 million to ensure timely delivery of special materials to the educational programs.

Significant accomplishments during the past twelve months include the following:

1. A prebraille instruction program for blind students was developed.

2. A cooperative agreement was signed with the Kentucky Department for the Blind to train blind individuals to be proofreaders.

3. APH-DOTS, a program which will greatly increase the number of textbooks available in braille, was introduced. Under this program, volunteer transcribers and agencies submit disks containing computer transcriptions to APHB. APHB uses these disks to emboss interpoint braille copies of the texts which are made available for purchase on demand nationwide.

4. A comprehensive survey of ex officio trustees was conducted to determine areas of satisfaction and dissatisfaction with the products and services of APHB.

5. A Xerox management system is being implemented which provides forecasting information necessary to adjust work processes to maximize resources in a cost-effective manner.

The APHB continues to be committed to meeting the needs of children who are blind through the research, development, and provision of educational materials necessary for their growth and development.

Mr. Chairman, I will be glad to answer any questions concerning the budget request.

DEPARTMENT OF EDUCATION

Special Institutions for the Handicapped
American Printing House for the Blind

Biographical Sketch

NAME : Tuck Tinsley, III

POSITION : President
American Printing House for the Blind

BIRTHPLACE AND DATE : Jenkins, Kentucky, July 30, 1946

EDUCATION : Florida State University; Tallahassee, Florida
1968, BS
Florida State University; Tallahassee, Florida
1971, MS
University of Florida; Gainesville, Florida
1982, Ed.D.

EXPERIENCE

1989-PRESENT : President, American Printing House for the Blind, Louisville, Kentucky

1980-1989 : Principal, Florida School for the Deaf and the Blind, St. Augustine, Florida

1981 (6 months) : Interim Principal, Florida School for the Deaf and the Blind, St. Augustine, Florida

1979-1980 : Assistant Principal, Florida School for the Deaf and the Blind, St. Augustine, Florida

1978-1979 : Acting Assistant Principal, Florida School for the Deaf and the Blind, St. Augustine, Florida

1968-1979 : Mathematics Teacher, Florida School for the Deaf and the Blind, St. Augustine, Florida

ASSOCIATION MEMBERSHIP : Association for Education and Rehabilitation of the Blind and Visually Impaired

Council for Exceptional Children and its Division for Visually Handicapped

Council of Executives of American Residential Schools for the Visually Handicapped

PUBLICATIONS : Seventeen professional monographs and articles regarding the blind and visually impaired.

SURVEY OF EX OFFICIO TRUSTEES

Mr. **Natcher**. In your opening statement, Dr. Tinsley, you informed the committee that a comprehensive survey of ex-officio trustees was conducted last year to determine user satisfaction with Printing House services. Just briefly what were the results of the survey?

Dr. **Tinsley**. We surveyed all 160 ex officio trustees. Of these, 99 responded. While the ex officio trustees were generally very pleased with our responsiveness to requests and the quality of materials, areas of concern included the cost of materials and timeliness of delivery.

FEDERAL ROLE IN PROVIDING MATERIALS

Mr. **Natcher**. In your personal opinion, what is the appropriate role of the Federal Government in providing educational materials for the blind? If you will, tell us how this responsibility gets divided among State, local and national governments.

Dr. **Tinsley**. The number of blind students is only 4 percent of the total blind population in the country. This small percentage is made much more complex to serve because of the wide variety of service delivery programs. Ten or 15 years ago, blind students were served in mainly residential schools for the blind. Today, the majority of blind students are mainstreamed.

States also were not as involved in State-adopted curricula. The Printing House could select and produce a single series of mathematics textbooks and the schools would adopt that series. The variety of materials needed at this time with students throughout the country and in local school programs makes it more difficult for local programs to acquire materials and for producers to determine priorities regarding textbook needs.

For example, you could have five blind students in a certain county in Kentucky or Florida. If they are attending different high schools, they might need five different mathematics text books. In producing books for blind children, approximately 70 percent of the time is involved in transcribing the book into Braille. The American Printing House for the Blind is able to take advantage of volunteers throughout the country who invest their time using personal computers in transcribing materials by serving as a central source and making these materials available to blind students throughout the country.

We believe the Federal Government, because of the wide range of special education materials needed for this population, is crucial in meeting the service delivery needs of these children.

The current appropriation in this budget, $111.37 per pupil, is just a small part of what is required. We have had estimates from various States of $750 per year per student to $1,900 to provide the materials needed by blind students. One of the objectives of the study being conducted by the Department of Education is to determine the average annual cost to provide these materials.

The Federal Government's involvement, which provides about $111.00 per student, does not provide the entire amount of money needed to provide specialized materials for blind students. Therefore, State local, and Federal funds are certainly needed.

BUDGET REQUEST

Mr. NATCHER. Is the President's budget request for fiscal 1991 the amount that the Printing House for the Blind first requested or was this reduced by OMB and the Department? What do we have here, Mr. Tinsley?

Dr. TINSLEY. The budget before you is a budget that is very favorable to the Printing House. What was submitted by the administration of the American Printing House for the Blind included three levels. One level was flat funding from 1990, a second level was a 3.3 percent increase, and the third level was the request of the Printing House.

Mr. NATCHER. Tell us, Mr. Tinsley, did you finally get that figure selected? Is that the figure that we have? You said 3 percent. What level are we talking about?

Dr. TINSLEY. The second level was 3.3 percent in our request. The level in the President's budget is 4.2 percent above last year.

STAFFING LEVEL

Mr. NATCHER. Your budget justification states that the production changes this year resulted in a smaller, more flexible work force, yet the FTE request for 1991 is the same as the 1990 level. How do you account for that, Dr. Tinsley?

Dr. TINSLEY. We have 320 employees. We had 328 last year. We project 320 for the next two years. Did I answer your question, sir?

EMPLOYEE SALARY LEVELS

Mr. NATCHER. All right. What is the average salary of the full-time employees assumed in your 1991 request and how does this compare with the 1989 and the 1990 request.

Dr. TINSLEY. I can provide that for the record, sir. The appropriation for fiscal year 1989 represented 32 percent of the Printing House's total sales. For 1990, we estimate that it will comprise approximately 39 percent of total sales.

I will include a description of how this relates to salaries for employees for the record.

Mr. NATCHER. Tell us about the salaries, average increase in 1989, 1990, and 1991.

Dr. TINSLEY. The average increase for 1990 for Teamsters Union employees was 2.7 percent for approximately 160 employees in the plant. The average for other employees, non-union, was around 6 percent in 1990.

I could provide figures for the record for the year before. I don't have that with me, sir. I will be glad to provide it.

Mr. NATCHER. Fine.

[The information follows:]

EMPLOYEE SALARY LEVELS

The request for educational materials does not assume a particular funding level for salaries and expenses. Salaries related to production and overhead are not associated with specific funding sources. The cost of personnel related to the production of materials is built into the cost of the products. The Federal appropriation for educational materials is used as a credit against which States can purchase materials. Therefore, the percentage of salaries covered by the appropriation equals the percentage of salaries incorporated into the sale of materials purchased by the Federal Government.

Regarding salary levels, of the 328 employees retained by the American Printing House for the Blind in 1989, 267 were full-time with an average salary of $16,563.50. This was a 12.6 percent increase over the 1988 average of $14,705.82. The average salary for the 275 full-time (320 total employees) in 1990 is $16,760.34, an increase of 1.2 percent from 1989. Salaries for 1991 will be negotiated in November 1990. Nonbargaining unit employees increases will be determined in December of 1990.

COMPUTER-RELATED PRODUCTS

Mr. NATCHER. I will yield to Mr. Conte.

Mr. CONTE. It is good to have you with us. You have lived in both Kentucky and Florida. Which do you like the best?

Dr. TINSLEY. I was born in eastern Kentucky. It is nice to be back on solid ground.

Mr. CONTE. The Chairman will be glad to hear that. Your products now sound like they come from the pages of PC World. It sounds like the computer is making an enormous difference in the kinds and types of materials available. What do you say to that?

Dr. TINSLEY. It is a major focus. The educational research advisory committee, made up of seven ex officio trustees have focused on the development of technological aids as one of their top four priorities. We are moving rapidly in this area.

Mr. CONTE. How do materials like the Braille keyboard overlay out for the Apple 2 GS and go out to the users of the printing house?

Dr. TINSLEY. The materials are provided for instruction of students and also for transcription of Braille materials. With a special software program, you can use six of your home-based keys as the six dots of the Braille cell. An individual who knows Braille is then able to produce a disk that is transcribed into Braille symbols. In Braille you have six dots and any combination can form short forms. For instance, B stands for but.

This allows individuals to transcribe into Braille and put the information on a soft or hard disk.

Mr. CONTE. Does the increasing use of computers make it more or less expensive to produce material?

Dr. TINSLEY. The hardware production is more expensive. We are looking at a small population so you don't have a great quantity of sales. The pocket Braille and other computer equipment are quite expensive to produce.

The nice thing about the appropriation is that research and development costs are funded separately and not included in the cost consumers.

TIMELINESS OF DELIVERY

Mr. CONTE. Last year, you testified that starting in May 1989, the Printing House would change procedures so that the books would be available at the start of the school year as opposed to October 1 which had been the previous practice.

Has that change gone into effect? What has been the response to that change?

Dr. TINSLEY. Yes, it has and the respone has been very favorable, sir. As I mentioned in relation to the survey, timely delivery was a problem. If someone needs a book, we have to receive two copies, even if it is only for large print items. Then, we have to have copyright permission from the publisher. Finally, we have to print it.

The survey was in March of last year, soon after I came on board. We guaranteed that any orders in by June would be out the second week in August so service providers would have them by the start of the school year.

We were able to fulfill this pledge for orders received by the second week in June and provide the materials on time.

MATERIALS FOR PRE-SCHOOL-AGED CHILDREN

Mr. CONTE. Recently, as you know, Congress amended the Education for Handicapped Act to extend services to pre-school aged children.

Dr. TINSLEY. Yes, sir.

Mr. CONTE. Has that affected you at all?

Dr. TINSLEY. Yes, sir, it has. Public Law 99-457 has had an impact on the number of students we serve. Also it has had an impact on the range of materials required. Because many preschool children are served in their homes, we have had to develop materials to be used by the families.

There are many multi-handicapped children in that age group which adds to the complexity of the materials needed for use by and with these children. In 1980, we had 1,314 kindergarten students registered. In 1989, we had 8,521 registered, including infant, pre-school and kindergarten aged blind children. It has had a major impact, yes, sir.

FEDERAL FUNDS FROM OTHER SOURCES

Mr. CONTE. Of the Federal funds that you get, what are the ones you are requesting here today? Are there any other Federal funds?

Dr. TINSLEY. Through the National Library Service, we bid for contracts to produce books. We bid to produce IRS publications and forms in Braille. We also participate in competitive bidding, including research grants for other projects. The appropriation is all that is non-competitive.

Mr. CONTE. Do receive some contracts?

Mr. TINSLEY. Yes, sir. For example, we are producing 500 talking books for the Libary of Congress this year.

Mr. CONTE. Is that the only other one?

Mr. TINSLEY. No, we also have a contract with the IRS. We are doing four contracts for them now.

Mr. CONTE. Are these pretty good reliable funds or do they change from year to year?

Dr. TINSLEY. The Library of Congress has been very reliable. IRS is more competitive. It is not something we can depend on.

Mr. CONTE. I have four or five questions. I will put them in the record.

Mr. NATCHER. Fine.

Mr. Stokes.

EMPLOYEES WITH HANDICAPS

Mr. STOKES. Mr. Tinsley, last year at the hearings we had a discussion concerning the number of minorities and handicapped employees at the Printing House. Last year you told me you had only a 2 percent increase in the number of handicapped persons employed at the printing house. Have you made any progress in this area?

Dr. TINSLEY. Yes, sir. It is not as rapid as I would like but we have made some progress. The major thing we have done is to develop a cooperative agreement with the Kentucky Department for the Blind. Under this agreement we train individuals to become Braille proof readers. We provide the supervision, the training, the facility, and the equipment.

They provide a copy holder. We train these people for employment either at the Printing House or elsewhere. Although we have decreased our total employment this past year by eight, we have increased the total number of blind employees by one. Our total blind population was 20 last year, and it is 21 this year.

Our total employment has decreased by eight so the percentage of blind employees is further increased.

MINORITY EMPLOYMENT

Mr. STOKES. You also told me that 8.8 percent of your employees were minorities but none were officers or managers. The official data you submitted for the record states that among the 21 technicians there are also no minorities. What is your record this year?

Dr. TINSLEY. We have had no turnover, other than my coming on board, at the top positions. We are making a concerted effort and are looking very closely at the affirmative action plan. However, the number of employees has decreased from 328 to 320. Even with this decrease we had an increase of one visually impaired person. However we continue to focus on this issue.

Mr. STOKES. Are you saying in the category of officials and managers you have had no turnover at all?

Dr. TINSLEY. That is correct, sir.

Mr. STOKES. You mentioned an affirmative action program. What does that mean?

Mr. TINSLEY. We have an affirmative action plan. It has not been updated in the last year, but we are currently in the process of updating it now. We started at the end of last year to update the program and look at the demographics. It had been done two years ago. The percentage of minorities in the Louisville area was 12.5 percent two years ago. We need to update that, see what it is now, and review other areas.

We have a list of places where we post advertisements. We need to look at them to see if they are still viable and if there are others we need to access.

Mr. STOKES. I hope you will take a good close look at it and when you come in again you will be able to give us a comprehensive report.

Dr. TINSLEY. Thank you. Yes, sir.

Mr. NATCHER. Dr. Tinsley, as you know, from time to time we have inquired and we did of your predecessor, Dr. Noland, as to how many blind people were employed. In the questions that will be submitted to you, you will find several along that line.

This has been a good hearing. Thank you very much.

Dr. **Tinsley**. Thank you.

[The following questions were submitted to be answered for the record:]

STAFFING TRENDS

Mr. Natcher: Dr. Tinsley, the 320 employees you are reporting is considerably higher than the 265 you were estimating last year for fiscal year 1990. What can you tell us about this difference?

Dr. Tinsley: The difference in the number of APHB employees projected in the fiscal year 1990 Congressional Justifications from the actual number in 1990 indicated in the 1991 Justification is due to two factors. First, APHB is continually reevaluating its employment needs based on production requirements. Second, our accountants recommended that 38 talking book narrators be counted as APHB employees. The narrators, who in the past had been paid through accounts payable as contract workers, were included as APHB employees in July 1988. This change is due to IRS requirements. Presently, we foresee no reduction in the overall number of employees during the next two years; however, continual reevaluation of production needs will determine the appropriate figure.

INCIDENCE OF BLINDNESS

Mr. Natcher: What is the incidence of blind or visually impaired individuals in the general population and how has this rate changed over the past 10 years?

Dr. Tinsley: The incidence of blindness in the general population is three tenths of one percent. The incidence of blindness in the school-aged population is one tenth of one percent. The Census Bureau recently estimated there were 249.6 million people living in the United States as of January 1, 1990. At the rate of .3%, this would mean there are 748,800 legally blind persons in the United States at this time. The difference between the incidence of blindness in the general and school-aged populations is that approximately 70% of severely visually impaired persons are age 65 and older. We do not have information as to trends, but as our general population ages, there will likely be an increase in the number of persons with vision loss associated with aging. Another factor to be considered is that advances in medical technology permit extremely young and fragile children to survive, many who have visual losses in addition to other handicapping conditions. The 1990 population census will provide more current information on the number and how the rate has changed over time.

NUMBER OF PERSONS SERVED

Mr. Natcher: How do you estimate the number of students who will receive services each year when you prepare your budget request?

Dr. Tinsley: Estimates of the number of students who will be registered to be served through the annual appropriation supporting the Act to Promote the Education of the Blind are primarily the result of a review of trend data on the numbers served in preceding years. We also take into account the effect of any new laws or regulations that might affect the number of students eligible for registration. For example, APHB estimated that Public Law 99-457, the Education of the Handicapped Act Amendments of 1986, would increase the number of preschool visually handicapped children served by the Printing House.

Mr. Natcher: What accounts for the steady increase in the population served by the Printing House in the past two years?

Dr. Tinsley: We think there are a number of factors that have contributed to the increases in the population served by the American Printing House during the past two years. The Education of the Handicapped Act Amendments of 1986, Public Law 99-457, is one major reason for the increases. It has resulted in an increase in both the number of students to be served and the range of materials needed. This is because many preschool blind children are served in their homes, and that increases the need for specially designed materials that can be used by parents with their children. In addition, we are serving many more multihandicapped students. Specialized materials are also required for use with and by these children.

Aging has had an impact on the population we serve. As the general population ages and longevity increases, there is a rise in the number of persons with vision loss associated with aging, especially macular deterioration. There also has been an increase in the number of adults registered for participation in the Federal quota program. This has occurred despite the implementation of a rule that requires persons exceeding school-age to be enrolled in programs below the college level that provide at least 20 hours of instruction per week. The point at which individuals exceed school-age is determined by State law.

ACCURACY OF PROJECTIONS

Mr. Natcher: How accurate have prior year projections been for number of students served?

Dr. Tinsley: We believe that estimates of the numbers of students to be served have generally been reasonably accurate and have been extremely accurate for the past two years. Following is a table showing estimated and actual registrations for the past five years.

Fiscal Year	Estimate in Budget Request	Actual Registration	Difference
1985	43,400	44,313	+913
1986	45,800	45,221	-579
1987	47,400	45,930	-1,470
1988	47,500	45,930	-1,570
1989	44,400	44,821	+421
1990	46,500	46,484	-16
1991	48,180		

STUDY OF THE AMERICAN PRINTING HOUSE FOR THE BLIND

Mr. Natcher: The Department initiated a study of the Printing House in October 1989. What is your view of the study, Dr. Tinsley?

Dr. Tinsley: The Department is conducting a study of the operation of the Federal quota program at APHB, the effect of the program on the education of students who are blind, and the context under which it operates. The study is looking at a wide range of issues. We believe the results of the study should provide important data to help us in planning future activities. This includes information on product needs, ways to improve the annual allotment of quota products, data on the annual cost of supplying educationally related materials to visually impaired students, the relationship between the per capita allocation and the educational material needs of students who are visually impaired, emerging issues likely to affect the educational needs of students who are visually impaired, and the effect of the Education of the Handicapped Act on the provision of materials to these students.

Mr. Natcher: When will the study be completed and made available?

Dr. Tinsley: The study is currently scheduled for completion by the end of May 1990.

INSPECTOR GENERAL AUDIT

Mr. Natcher: Last year, based on an Inspector General's audit, the Printing House was directed to restore some $250,000 in disallowed costs. Has there been a final resolution of this situation?

Dr. Tinsley: No. The Office of Special Education and Rehabilitative Services sustained the Office of the Inspector General's recommendation regarding $250,320 in disallowed costs related to building depreciation and directed APHB to restore these funds as credits to the educational agencies and institutions participating in the program or to refund the amount to the Federal Government. APHB has appealed this determination. The Secretary has designated the Office of Administrative Law Judges to hear this appeal. Briefs have been submitted by respective parties and a tentative hearing date has been set for March 29, 1990.

PRE-SCHOOL PROGRAMS PRIORITY

Mr. Natcher: The budget justification states that the Printing House plans to place a priority on the development of new materials to serve children birth through age 3. Is this your own initiative or is it a legislative requirement?

Dr. Tinsley: The priority placed by the American Printing House for the Blind on developing new materials for blind children birth through age 3 is our own initiative. However, it is in response to identified market needs. This is the segment of our service population that is growing the most rapidly. Our Educational Research and Development advisory committee (comprised of ex officio trustees) has assigned a high priority to the development of materials for use with the preschool populations. We have placed a priority on this area for the past several years.

DISK OUTPUT TRANSCRIBING SYSTEM (APH-DOTS)

Mr. Natcher: Tell the Committee about the pilot program you are conducting called DOTS.

Dr. Tinsley: For many years, braille transcribers throughout the country have invested thousands of hours in tedious and valuable work producing books for students who are visually impaired. A significant number of transcribers are now using personal computers to transcribe materials into braille. Realizing this, APHB has developed the Disk Output Transcribing System (DOTS) project in order to make the benefits of this new method of braille translation available on a national level. Transcribers submit disks containing their computer transcriptions to the DOTS project. APHB uses these disks to emboss interpoint braille copies which are available for purchase upon demand. APH-DOTS allows transcribers and agencies to make their work more widely accessible and increase the range of titles available to students requiring braille materials.

Mr. Natcher: In response to a written question submitted during last year's hearing, you estimated that approximately 70% of the production cost of a book could be reduced by using this new technology. Won't that have a significant impact on the Printing House budget?

Dr. Tinsley: APHB estimates that the time required to transcribe textbook materials into braille is approximately 70% of the total production time for these books. Reducing or eliminating the transcription time will have a definite impact on the costs of books. However, in addition to textbooks, materials such as braillewriters, slates and styluses, type recorders, special paper, and other educational aids are also needed by students who are visually impaired. Since the Federal appropriation provides only a portion of the funds needed for educational materials for these students, we believe a reduction in the cost of braille books would not significantly reduce the need for materials from the Printing House. In addition, APHB is still transcribing books not available through this source.

EMPLOYMENT OF PERSONS WITH HANDICAPS

Mr. Natcher: Tell the Committee what you have done to increase the number of handicapped employees at the Printing House since last year. Have you made progress?

Dr. Tinsley: In order to increase the pool of qualified blind applicants, APHB has signed a cooperative agreement with the Kentucky Department for the Blind for the training of braille proofreaders. The Department for the Blind provides candidates for the program and copyholders necessary for their training. APHB provides facilities, supervisors, equipment, and administration of the certification test. APHB continues to search for qualified personnel to fill vacancies by actively recruiting through agencies which specialize in the placement of blind and handicapped workers. These include the Kentucky Department of Employment Services, Bureau of Rehabilitation Services, Department for the Blind, Industries for the Blind, School for the Blind, the National Federation of the Blind, American Council for the Blind, and ALPHA, Inc.

Mr. Natcher: Insert in the record at this point a table showing the number of handicapped employees over the last 5 years, both the actual number and as a percentage of the workforce.

Dr. Tinsley: A five year table showing total employment and employment of persons with handicaps follows:

Employment of Persons with Handicaps at APHB

Year	Total Employees	Handicapped Employees	Percentage
1986	387	60	15.5%
1987	353	60	17.0%
1988	325	52	16.0%
1989	328	60	18.3%
1990	320	59	18.4%

REALLOTMENT PROCEDURE

Mr. Natcher: Are there ever any funds left over in a State's annual allotment for materials? If yes, what happens to them?

Dr. Tinsley: Yes, that is not an uncommon occurrence. Any funds that are not spent during a specific fiscal year are reallocated to the ex officio trustees, as a whole, on September 30 based on the number of registered blind students for the following fiscal year. This number is determined by the annual census conducted in January of the prior fiscal year.

ANNUAL COST OF MATERIALS

Mr. Natcher: What is the average annual cost of educational materials for the visually impaired and how far does the Federal appropriation go in meeting that requirement?

Dr. Tinsley: This amount varies, and many States do not have accurate figures. We have estimates from a number of States which show the average annual cost of providing educational materials for visually impaired students as ranging from $700 to more than $1,800. Over the past ten years, the per capita allocation provided through the Federal appropriation has varied from a high of $131.87 in 1981 to a low of $105.79 in 1986. The present request would provide approximately $111.37 per student for the provision of educational materials, an increase of $.60 per child above the 1990 level.

Mr. Vader: The purpose of this program is to assist in providing quality educational materials to the States and to provide a base of support to the Printing House. Most of the cost of providing these materials is borne by State and local governments, which are required to provide appropriate special educational materials by the Education of the Handicapped Act. We hope the study currently being conducted by the Department will provide some new information on the estimated average cost for the provision of educational materials for these students.

FUNDING SCHEDULE'S EFFECT ON SERVICES

Mr. Natcher: The Printing House appropriation is current-funded, that is, the funds that you receive in October of any given year are actually for the school year that has already started. Does this cause any problems for the Printing House?

Dr. Tinsley: The fact that the appropriation to APHB is "current- funded" causes difficulties in planning for the timely delivery of educational materials to students who are visually impaired. If appropriated monies were not made available to educational programs until the Federal fiscal year begins on October 1, students would not receive needed materials until three to four months into the school year. For this reason, APHB advances one-half of the previous year's allocation to educational programs on May 1. In this manner, materials can be ordered and in place at the beginning of the school year in September.

DISK OUTPUT TRANSCRIBING SYSTEM (APH-DOTS)

Mr. Stokes: You mentioned that the recent development of "APH-DOTS" will greatly increase the number of textbooks available in braille. Can you tell us more about this computer program and can you quantify the impact it will have on the number of braille textbooks?

Dr. Tinsley: APHB developed the Disk Output Transcribing System (DOTS) project in order to take advantage of new technology which allows braille transcribers to use personal computers to transcribe material into braille. If transcribers submit computer disks with their work to APHB, the transcription can be copied and made available on a national level to anyone who wants the material. This system has the potential to greatly increase the range of titles available to students requiring braille materials. However, the program is relatively new, and its impact cannot be quantified at this time. I expect that we will be in a better position to measure the effect of APH-DOTS after we have more experience with the program.

STUDY OF THE AMERICAN PRINTING HOUSE FOR THE BLIND

Mr. Conte: In what way is the Department of Education's study of the Printing House proceeding? In what ways are you asked to participate? When is it expected to be done?

Dr. Tinsley: The Department of Education has contracted with an education consulting firm to conduct a study regarding the operation of the Federal quota program at APHB, the effects of the program on the education of students who are blind, and the context under which it operates. The study was initiated in October 1989. Staff members of the contractor and the Department of Education attended the Annual Meeting of Ex Officio Trustees of APHB and described the study during the general session. During the week of the annual meeting, the purpose of this study was reviewed with APHB staff, and interviews were conducted with various staff members. Currently, outside organizations and parents of visually impaired students are being surveyed. The Department expects the study to be completed by the end of May 1990.

CONCERNS EXPRESSED BY OUTSIDE GROUPS

Mr. Conte: The justification mentions that there are concerns expressed by outside groups about the effectiveness of the Federal quota program at APHB. Can you review for us what this issue is all about and give us your position on the issue?

Mr. Vader: The concerns were primarily raised by the National Federation of the Blind (NFB). They involved concerns that the sole source nature of the appropriation for the Printing House doesn't foster efficiency and that APHB doesn't offer materials manufactured by other entities. NFB recommended that State agencies and schools serving the beneficiaries of the Act to Promote the Education of the Blind should either be allowed to choose the supplier from whom they wished to purchase materials or that the funds allocated for materials should be competed to ensure the most effective use of these funds. In 1989, a variation on these proposals was introduced as H.R. 1627, a bill that would "permit the American Printing House for the Blind to acquire educational materials for schools for blind individuals through other suppliers."

Dr. Tinsley: The Printing House is strongly opposed to H.R. 1627 and the NFB proposals. A number of other organizations have also expressed opposition to the bill, including the American Council for the Blind, the National Council of State Agencies for the Blind, the National Council of Private Agencies for the Blind, the Association for the Education and Rehabilitation of the Blind and Visually Impaired, the Council of Executives of American Residential Schools for the Visually Handicapped, the Council for Exceptional Children-Division for Visually Handicapped, and the Affiliated Leadership League of and for the Blind of America.

We believe Congress was wise to vest a single agency with sole responsibility for administering the Act, and this is continually verified by experience. This arrangement enables the objectives of the Act, and the processes to achieve them, to be totally interrelated in the most cost-effective manner possible. The appropriation to a single agency facilitates a concentrated effort which results in:

a) oversight by a board of ex officio trustees who are the consumers of the services;

b) close monitoring of the use of appropriated funds;

c) accountability that assures appropriated funds are spent on special materials for visually impaired students;

d) continuity which results in the identification of needs, research, development, production, and distribution of special educational materials for visually impaired students; and

e) provision of coordinated advisory services.

We believe it is of the utmost significance that the assurance of the ongoing appropriation provided by the Act to a single agency encourages that agency to invest other funds of that agency in the equipment and inventory necessary to provide specific educational material needed by this special population. In addition, estimates from a selected number of States indicate that the annual cost of providing educational materials to students who are visually impaired ranges from $700 to more than $1,800. Since the Federal appropriation provides only a portion of the support needed for the purchase of these specialized materials, other funds (e.g., local, State, other Federal programs) are available for the purchase of additional materials either on the open market or from APHB on a cash basis.

STATE AGENCY PURCHASES ABOVE THE QUOTA LEVEL

Mr. Conte: The State education agencies have the option of buying products from the Printing House. How frequently do the States use this option and what percentage of your total sales are of this type?

Dr. Tinsley: Approximately 32% of APHB's total sales for 1989 were Federal quota sales. In addition, approximately $500,000, or 3.6%, of our total sales were from States using non-appropriated funds.

FEE SCHEDULE

Mr. Conte: Can you give us an example of the fee schedule you charge for that portion of your program that does not involve free distribution of materials?

Dr. Tinsley: The Printing House adds a 5.3 percent profit to the cost of materials which are not purchased through the Federal appropriation. Examples of items, their description, cost, and price follow:

Item	Description	Cost	Price
Signature Guide	An aluminum guide to assist in writing one's signature	$3.74	$3.94
Pocket Slate-Standard, Pin Down	An aid in writing and taking notes in Braille	12.55	13.22
Individual Study Screen	Behind screen projection allows close viewing for the low vision student unable to profit from group viewing of slides and film strips	32.52	34.24

Sound Matching Board I	Develops fine motor skills, manual dexterity and auditory matching and discrimination	42.98	45.26
Focus on Earth Science, 7 Volumes	Braille Science Textbook	194.18	204.47

WEDNESDAY, FEBRUARY 21, 1990

NATIONAL TECHNICAL INSTITUTE FOR THE DEAF

WITNESSES

WILLIAM E. CASTLE, DIRECTOR, NATIONAL TECHNICAL INSTITUTE FOR THE DEAF AND VICE PRESIDENT, ROCHESTER INSTITUTE OF TECHNOLOGY

WENDELL S. THOMPSON, ASSISTANT TO THE DIRECTOR, NATIONAL TECHNICAL INSTITUTE FOR THE DEAF AND VICE PRESIDENT, ROCHESTER INSTITUTE OF TECHNOLOGY

MICHAEL E. VADER, DEPUTY ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION, AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

OPENING STATEMENT

Mr. NATCHER. We take up next the National Technical Institute for the Deaf. We have before the Committee at this time the President, Dr. William E. Castle. Dr. Castle, it is a pleasure to have you back.

Before you give us your statement, tell us who you have with you at the table.

Dr. CASTLE. I have my immediate assistant, Wendell Thompson and Michael Vader and Caril Cichowski from the U.S. Department of Education.

Mr. NATCHER. We will be pleased to hear from you at this time.

Dr. CASTLE. I have my immediate assistant, Wendell Thompson, and Michael Vader and Carol Cichowski from the U.S. Department

Mr. NATCHER. It will be included in its entirety.

Dr. CASTLE. We are here to submit the 1991 request for NTID of $37,531,000. Of that, $37,195,000 is for operations of the Institute and $336,000 is for additions to the Endowment Matching Program. We believe the amount being recommended by the Department will allow us to continue to operate at current service levels.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

William E. Castle
Director
National Technical Institute for the Deaf and
Vice President, Rochester Institute of Technology

Mr. Chairman and Members of the Committee:

I am pleased to testify in support of the President's 1991 budget for the National Technical Institute for the Deaf.

The National Technical Institute for the Deaf at the Rochester Institute of Technology (NTID at RIT) was created by Congress to provide postsecondary technical education for the Nation's young deaf people to prepare them for successful employment. NTID trains professional staff to serve the Nation's deaf population and conducts research into educational achievement, communications, personal/social instruction, and economic and employment aspects of deafness. The 1991 request for the National Technical Institute for the Deaf is $37,531,000, which includes $336,000 to support the endowment matching grant program.

The specifics of the fiscal year 1991 request follow:

Operations

The fiscal year 1991 request of $37,195,000 for operations, which includes funds for services to students, research, training, information dissemination, and special outreach services, would increase funding by 8.2 percent over the 1990 appropriation level. The increase would be used to provide salary and benefit increases for faculty and staff to maintain NTID's competitiveness in the employment market, cover increased operating costs and acquire new equipment. The funds raised by NTID for tuition, room, board, and fees are expected to increase by 3 percent over 1990. The Federal subsidy would continue to constitute approximately 83 percent of total funding in 1991.

Enrollment

The rubella epidemic of 1964-65 doubled the incidence of babies born deaf throughout the United States during that period. The epidemic caused NTID's admissions to increase from a norm of 375 to 587 in fiscal year 1984. This number gradually declined to 377 in fiscal year 1989. Admissions for fiscal year 1990 were 371, which is the second year in a row where the volume was approximately equal to the pre-rubella norm. At the same time, enrollment grew from a normal pre-rubella level of nearly 1,000, to 1,319 in fiscal year 1985. Following the trend of admissions, this level gradually declined to 1,096 in fiscal year 1990. For the fall of 1991, NTID expects to admit approximately 400 new students. This would result in an enrollment level of about 1,100 students, which is 11 percent over pre-rubella levels. With the admission of international students, we expect enrollment would level off to around 1,150-1,200.

Career Development

The education provided at the National Technical Institute for the Deaf transcends that which is typically provided by a traditional technological institution by dealing with personal/social and communication setbacks that the deaf may experience. Through a coordinated system of direct instruction and instructional technology development, and support services such as tutoring, notetaking, and career counseling, the Institute strives to offer educational programs geared to the specific needs of each student. This approach has proven highly successful. An indication of our success is that, historically, more than 90 percent of our graduates who seek employment have been placed in jobs within eighteen months of their graduation.

Research

Studies performed through NTID'S Department of Communication Research, Department of Educational Research and Development, and Office of Postsecondary Career Studies and Institutional Research benefit deaf students and adults throughout the country. In addition to fulfilling their primary mission -- providing information that can lead to better teaching, training, and curriculum development at NTID -- research findings have an even greater impact when they are applied on a national and international basis.

To ensure that NTID's research departments continue to meet these standards, an institutional framework for research was implemented in fiscal year 1988. "A Framework for Research: Priorities, Models, Principles" established a program that is consistent with the Institute's priorities and allows for greater accountability. Highlights of this year's accomplishments are listed below for each research area.

Educational Outreach

In fiscal year 1989, the Educational Development Outreach Project programs reached out to audiences it had not previously served. NTID's systematic approach to outreach efforts that address career development needs of deaf people is designed to serve six audiences: employers, deaf adults, parents of deaf children, mathematics and science educators, language development educators, and support services personnel. In its second year, the project launched pilot programs to serve two of its audiences and continued a third effort initiated last year. Other programs currently are in planning stages and will be piloted in future years. During the summer of 1989, three workshops were held at RIT, two for deaf graduates working in the economic mainstream and one for math, science, and resource room teachers serving deaf students in mainstream secondary chool environments.

In addition, a workshop that promotes an understanding of deafness and deaf employees and encourages employers to hire deaf people was made available on a regional basis by NTID's National

Center on Employment of the Deaf. This program has been offered consecutively for two years in a row. The workshop was presented to 176 people and was offered for the second time in Chicago, Los Angeles, and Columbus, Ohio, and for the first time in New York City and Seattle. Another outreach program "Working Together: Deaf and Hearing People," a workshop and series of training materials focusing on the supervisor/employee relationship and career development of deaf employees, was presented to personnel representatives and supervisors at companies throughout the country. The program's participants now are able to train others who work with deaf people.

As a way of expanding the impact of outreach activities for deaf adults, NTID recently initiated the establishment of a network of postsecondary programs and rehabilitation agencies serving deaf people. This network, the Council of Directors, is composed of the leaders from Gallaudet University, NTID, and the Regional Postsecondary Educational Programs for the Deaf: California State University at Northridge, the Postsecondary Consortium at the University of Tennessee at Knoxville, Seattle Central Community College, and St. Paul Technical College. In addition, the president of the American Deafness and Rehabilitation Association, the Executive Director of the National Association of State Directors of Special Education, and the chairperson of the subcommittee on deafness of the Council of State Administrators of Vocational Rehabilitation serve as ex-officio representatives.

This cooperative effort allows each institution, program, or organization to enhance its efforts to meet its mandate by reaching out to a variety of audiences and enables each to call upon the collective expertise of the group in accomplishing its goals.

Other NTID outreach programs served a variety of people, including professional interpreters; elementary, high school, and graduate students; professionals who work with deaf people; and people interested in learning more about deafness. In fiscal year 1989, the Institute's various interpreter and notetaker training programs served 321 people. The emphasis of NTID's summer program changed this year from providing basic interpreter training to advanced and specialized training for interpreters already in the profession. A one-week course, "Sign Semantics," was offered on a pilot basis this summer.

The two-year associate degree program in educational interpreting continued to provide training to more than 60 students. This fall, 28 new students enrolled in the program and, thanks to extensive recruiting efforts, six of those students are minorities.

Sunshine Too, NTID's professional touring theater company, entertained and educated 67,750 school children and adults in 36 States. This group of deaf and hearing actors presented 605 performances and workshops at a variety of sites, including public schools, schools for deaf students, and colleges.

Explore Your Future, a summer program for deaf high school juniors that promotes career, technical, and personal awareness, attracted 86 students--19 more than last year--from 22 States. There was again this year a healthy representation of minority students--6 percent.

The 100 percent placement rate of the joint educational specialist program, a master's degree program in education sponsored by the Rochester Institute of Technology and the University of Rochester, was maintained.Each of the program's five certified graduates found jobs in which they will serve deaf students. Of the 21 students who enrolled in the two-year program in the fall of 1989, three are deaf.

Numerous training programs were offered by faculty and staff members to professional groups, community organizations, educational personnel, and graduates on topics that ranged from telephone accessibility to sign language proficiency rating, to working with deaf employees.

Thirty-two people from 13 States and Denmark, England, India, and Korea participated in professional, graduate, and special internships in areas that included audiology, counseling, sign communication, and teaching. Seven of the interns are deaf and three are members of minorities.

Nearly 61,000 educational awareness materials, including "Tips for Communicating with Deaf People" and "Answers to your Questions About Hearing Loss," were shared with schools, employers, government agencies, and vocational rehabilitation centers.

More than 5,600 people, including prospective students, special speakers, and foreign officials, visited NTID.

Endowment Grant

Three hundred and thirty six thousand dollars is requested for the endowment matching fund authorized by the Education of the Deaf Act of 1986. NTID will receive these funds as it raises additional endowment funds from non-Federal sources on a dollar for dollar matching basis. In addition, the Institute can spend up to fifty percent of the income derived from the investment of these funds for operations or special programs. The use of the endowment approach is an important step toward decreasing NTID'sdependence on Federal funding in future years. In fiscal year 1989, NTID matched the entire amount appropriated, $198,000, and has raised nearly half of the $322,000 appropriated for fiscal year 1990.

Summary

In summary, the 1991 request will enable the National Technical Institute for the Deaf to continue to pursue its commitment to the achievement of equal opportunities for disabled persons. In the Institute's brief history, it has been shown that young deaf adults can overcome the consequences of their disability, become contributing members of society, and vastly improve the quality of their lives. On the pragmatic side, recent collaborative research between NTID and the Internal Revenue Service shows that graduates of NTID pay back the cost of their education in 10 to 13 years and have lifetime earnings that are 2 to 3 times greater than deaf persons with no degree.

Mr. Chairman, I will be pleased to answer any questions you may have.

DEPARTMENT OF EDUCATION

Special Institutions for the Handicapped
National Technical Institute for the Deaf

Biographical Sketch

NAME : William E. Castle

POSITION : Vice President for Government Relations,
Rochester Institute of Technology, Director, NTID

BIRTHPLACE AND DATE : Thomas, South Dakota - September 5, 1929

EDUCATION : Northern State Teachers College - 1951, B.S.
State University of Iowa - 1958, M.A.
Stanford University, 1963 - Ph.D.

EXPERIENCE :

PRESENT : Vice President, Government Relations - RIT
Director - NTID
Sept. 1979 : Vice President, RIT
Director - NTID
1977-1979 : Dean and Director, NTID
1969-1977 : Dean, NTID
1968-1969 : Assistant to the Vice President & Director of
Division of Instructional Affairs, NTID
1965-1968 : Associate Secretary for Research and Scientific
Affairs, American Speech and Hearing Association
1963-1965 : Assistant Professor, Speech Pathology & Audiology,
University of Virginia
1961-1963 : Instructor, Speech Correction, Central Washington
State College
Summer 1961 : Instructor, Speech Correction, Central Washington
State College
1960-1961 : Instructor, English, Experimental Phonetics Lab,
Stanford University
1958-1960 : Instructor, Speech Correction, St. Cloud
State College
Summer 1956 : Customers Broker, Frank P. Dow Company
1952-1956 : Communications Specialist, United States
Air Force
1951-1952 : Secondary Teacher, English & Speech
Faulkton High School

ASSOCIATION MEMBERSHIPS : Academy of Rehabilitative Audiology
: Alexander Graham Bell Association for the
Deaf, Inc. (Life Membership - currently serves as
President Elect)
American Association for the Advancement of Science

ASSOCIATION MEMBERSHIPS

American Association of Community and Junior Colleges
American Association of Higher Education

DECLINING ENROLLMENT LEVELS

Mr. NATCHER. Thank you, Dr. Castle. Now for at least the third year in a row the number of students applying for admission to the National Technical Institute for the Deaf and actually enrolling has decreased. Why is this happening and what are the long-term implications on staffing if this trend persists?

Dr. CASTLE. One of the basic reasons for the decrease is that in the years 1983 and 1984 we accommodated the bulk of the rubella bulge.

In the years that have passed most of those students have exited the system, and now the student number, which is made up only of U.S. citizens, is beginning to go down. We anticipate the 1,100 enrollment level will remain the same in the coming year. This is primarily because, in the fall of 1990, we have permission to permit foreign deaf students as well. There will not be a large group this year because we were not able to go public with that information until mid-November.

FOREIGN STUDENTS

Mr. NATCHER. When will you admit the first group of foreign students and how many are you expecting?

Dr. CASTLE. The latest report from the admissions office is that there have been 30 applicants from other countries, all but six from Canada. Thirteen of the applications have been found acceptable. Five have been rejected and the others are undergoing analysis. We expect the final number to enroll this year to be between 20 and 30.

Mr. NATCHER. Does the Institute plan to restrict the number of foreign students admitted?

Dr. CASTLE. We believe that we can accommodate foreign students until we reach our optimal level, which is 1,250 students.

Mr. NATCHER. The Department is in favor of a tuition surcharge of 135 percent for foreign students which we understand is the equivalent of what the land grant colleges and State universities charge out-of-state students. What impact will a surcharge of this magnitude have on foreign students? Do you think that they will still come, Dr. Castle?

Dr. CASTLE. I think it might have a negative impact on the number of foreign students, but we have no experience in this area. We believe a 50 percent surcharge is a good compromise, and I believe Dr. Jordan testified the same way. If the surcharge goes as high as 135 percent, I think it may well have a very negative impact on the foreigners who can come to our institution other than those from Canada.

SALARY INCREASE

Mr. NATCHER. The budget justification that we have states that the bulk of the fiscal year 1991 increase requested for the Institute will be used for salary compensation. Is the 6 percent increase intended to maintain parity between the staff of the National Technical Institute for the Deaf and the Rochester Institute of Technology?

Dr. **Castle.** Yes, sir, that is the primary reason for the request level of that size.

EFFECT OF AGREEMENT WITH RIT ON SALARIES

Mr. **Natcher.** Last year the Senate requested a report on how the Federal Government's agreement with Rochester to operate the National Technical Institute for the Deaf relates to salary increases.

A copy of that report will be placed in the record.

[The information follows:]

SPECIAL INSTITUTIONS FOR THE HANDICAPPED

ANALYSIS OF THE AGREEMENT BETWEEN THE FEDERAL GOVERNMENT AND THE ROCHESTER INSTITUTE OF TECHNOLOGY FOR THE NATIONAL TECHNICAL INSTITUTE FOR THE DEAF

The purpose of this report is to analyze the provisions of the Department's agreement with the Rochester Institute of Technology (RIT) to operate the National Technical Institute for the Deaf (NTID), historical data on salary increases, and the legal context in which NTID operates to determine whether the agreement between the Federal Government and the Rochester Institute of Technology requires NTID to provide salary increases identical to those provided by RIT.

BACKGROUND

The National Technical Institute for the Deaf cites the following general provisions of paragraph IX of the 1966 agreement between the Department of Health, Education, and Welfare and RIT in support of its contention that it is required to provide the same salary increments as RIT:

> "Except as otherwise herein provided, in the construction, equipment, and operation of the Institute, the Sponsor shall observe and be guided by its normal institutional practices which govern the operation of its education institution and will furnish to the Secretary, if requested by him, justification for such variances from the Sponsor's normal fiscal practices because of the special nature of the Institute or the special types of services rendered."

Additional support is contained in the "Policies, Guidelines, and Application Procedures" developed by the National Advisory Board on the Establishment of the National Technical Institute for the Deaf. This document is incorporated by reference by section II of the Agreement and states that:

> "All contemplated and budgeted items for salaries, travel costs, retirement, insurance, sick leave, annual leave, sabbatical leave, service charges, etc. must conform to the standard rates and policies of the sponsoring institution."

Differences in employment practices between staff at NTID and RIT date back to the early days of the institution. NTID faculty were originally on twelve-month contracts and limited to four weeks' vacation. RIT faculty were on ten-month contracts and only expected to be at the University when students were present. NTID faculty also were paid less, on average, than comparable RIT employees. In the early 1980s, NTID faculty demanded equal pay and working conditions with RIT. In 1982, an external benchmark was established for determining appropriate salaries for NTID faculty. The benchmark was a composite of the salaries of five urban New York State community colleges, RIT, and Gallaudet University. The community colleges included Monroe, Erie, Suffolk, Nassau, and Onondaga Community Colleges. At that time, the Institute determined that NTID faculty were paid, on average, approximately 12 percent below the average salaries of the benchmark group.

A compromise was reached whereby NTID faculty were converted from twelve-month contracts to ten-month contracts without a commensurate reduction in annual salary. Working conditions were thus brought more closely in line with the rest of RIT. However, when salaries were standardized to the ten-month contract term, NTID salaries were higher than the benchmark group by nine percent. To counter the resulting inequity, annual salary increases for NTID faculty were kept slightly below those for RIT until 1987 when average salaries were equal to the average of the benchmark group.

In March 1985, the General Accounting Office released a report, Educating Students at Gallaudet and the National Technical Institute for the Deaf: Who are Served and What are the Costs? This report contained data on average salaries by rank for 1983-84. GAO found that NTID average salaries for each rank were higher than the median salaries for two year vocational-technical institutions in New York State and the five benchmark community colleges selected by NTID as similar institutions. However, total compensation was lower because of benefits. The GAO report pointed out that the average compensation package, with benefits, was $2,700 lower than RIT's, $1,500 lower than two year vocational-technical schools in New York, and $6,100 lower that its self-selected peer group.

The following table shows average salaries and percentage of personnel in each category for RIT and NTID for 1988-89:

	NTID		RIT	
Rank	Personnel	Salaries	Personnel	Salaries
Professor	6%	$48,290	30%	$45,215
Associate	34%	40,321	38%	38,062
Assistant	42%	30,779	28%	32,829
Instructor	18%	24,349	4%	27,561
Average	100%	31,476	100%	36,173

LEGAL CONTEXT

The Department has reviewed the Agreement and the Policies, Guidelines, and Procedures. Based on an analysis of these documents, the Department believes that the provisions in these documents indicate an intention that salaries at NTID be set in accordance with the standard rates and policies of RIT. It is also clear that this has not always been the case. However, we do not interpret these provisions as obligating NTID to strictly adhere to RIT's salary policy in all cases or provide salary increases in lockstep with RIT. Paragraph IX of the Agreement requires RIT to furnish to the Secretary, "if requested by him, justifications for such variances from the Sponsor's normal fiscal practices because of the special nature of the Institute or the special types of services rendered." This provision clearly contemplates circumstances where RIT and NTID would not be obligated to have identical policies on employee compensation.

In addition, Section XX of the "Policies, Guidelines, and Application Procedures" states that:

> "The Secretary may with respect to the agreement impose additional conditions prior to or at the time of any payment when in his judgment such conditions are necessary to assure or protect advancement of the Institute, the interests of the Institute, or the conservation of Federal funds" (emphasis added).

This provision allows the Secretary flexibility to require NTID to reduce general or specific expenditures to conserve Federal funds or maintain expenditures for specific educational and support programs if a general reduction in funding were to occur. The Secretary, therefore, could alleviate NTID of its obligation to provide comparable salaries if doing so would prevent an allocation of resources that adversely affected the overall quality of the program at NTID. For example, in the case of a general sequester, it may not be in the best interest of students at the Institute if funding for student services were cut in favor of salary increases for faculty and staff. Such an action might be necessary to ensure that funds are used to provide the best educational program possible at NTID. In addition, in developing the request for NTID, the Secretary may determine, based on an analysis of NTID's needs and the need to conserve Federal resources, that an increase different from that projected for RIT would be justified.

DEPARTMENT POLICY

It is evident that the two institutions are not comparable in many ways. NTID was created by an Act of Congress and is maintained under a contract between the Federal Government and RIT. The sources of revenue and budgets of the two institutions are different and distinct. For example, school year 1989-90 tuition for undergraduate students at RIT is $3,384 per quarter or $10,152 for a three quarter term. Tuition for NTID students is a total of $3,084 for the three quarter term. The salaries, educational programs, degrees conferred, services provided, and functional levels of students served at NTID and RIT are different in many ways.

Following is a history of average percentage merit increases provided by the Rochester Institute of Technology. The RIT increases are compared to the Higher Education Price Index (HEPI) and data from the Annual Report on the Economic Status of the Profession by the American Association of College and University Professors (AAUP):

School year	RIT	HEPI	AAUP
1989-90	6.0%	6.0%	6.0%
1988-89	5.5%	5.5%	5.8%
1987-88	4.0%	4.4%	5.8%
1986-87	7.5%	4.2%	5.9%
1985-86	3.0%	4.4%	6.1%
1984-85	6.0%	6.7%	6.6%
1983-84	5.0%	5.4%	4.7%
Cumulative	43.3%	42.8%	47.5%

NTID provided the comparison percentages to show that increases provided by RIT are not out of line with those provided elsewhere in the field. However, the Department's primary concern is not whether the increases have been reasonable. It is whether the RIT increases are always necessary and appropriate for NTID and that a strict policy of comparability may result in adverse effects on students. The University is a private entity which determines salary levels and increases based on internal financial considerations. In order to maintain a policy of strict equality in increases at NTID, programs might be reduced or projects such as maintenance may be deferred for prolonged periods resulting in dangerous conditions or the need for major renovations. For fiscal year 1990, NTID requested and Congress provided funding for renovations to remedy safety and security hazards that had accumulated in its dormitories. Conversely, it is possible that RIT could suffer a downturn that would allow no increase or a very low salary increase in a given fiscal year. However, NTID might have sufficient resources to provide a higher increase. It is also possible that, following the start of the fiscal year, declining enrollments would indicate the need for a decrease in personnel, providing savings that could be used for other purposes such as compensation improvements. Should NTID's ability to increase faculty salaries and compete in the marketplace be restricted unnecessarily?

The increases anticipated by RIT are important and valid factors to be considered in developing the request for this account. However, the Federal appropriations process cannot be held hostage to agreements over which it has no control. NTID has made great strides in making its compensation package competitive with RIT and its benchmark schools and is fully capable of making a case for why it needs to make further gains. For example, NTID is concerned with increasing its competitiveness in recruitment and retention of faculty. In recognition of this, the President's budget for fiscal year 1991 includes an 8.2 percent increase for NTID operations. This level was determined on the basis of the submission from NTID and other information available to the Department, including the most recent information on RIT's plans regarding salaries and benefits.

CONCLUSION

It is our conclusion that the agreement between RIT and the Federal Government indicates that NTID employees are to be compensated in a manner that is comparable to RIT. Within the confines of available resources, it was the intent of the Agreement to provide comparable salaries, benefits, services, and equipment. However, the agreement provides the Secretary and NTID with a basis for deviating from absolute parity in salaries if doing so is justified by the need to protect the educational program or efficient use of Federal funds. The Department of Education believes that it would not be good policy, or in the best interest of the Institute, to require NTID to provide comparable personnel compensation and benefit levels with RIT in all cases. Since we believe that the Agreement provides sufficient latitude to permit exceptions from the general practice, we conclude that the Institute and RIT did not violate the Agreement in the past, and it is not necessary to change the provisions to increase our latitude in the future.

The historical context indicates that NTID's average compensation package has differed from that of RIT. For the most part, it was lower. It is understandable that NTID would want to provide compensation and give increases consistent with RIT since they are located on the same campus and share many of the same facilities.

However, RIT is a private, independent university. The Department cannot control RIT's personnel compensation policy. At the same time, RIT policy should not dictate appropriations policy for the National Technical Institute for the Deaf.

EFFECT OF AGREEMENT WITH RIT ON SALARIES

Mr. NATCHER. Now briefly, Doctor, the Department agrees that the original intent was for salary comparability, but they indicate that various circumstances can and do allow for differences.

Would you like to comment on the Department's conclusion, Dr. Castle?

Dr. CASTLE. We believe the conclusion of the Department to be incorrect. We believe that there are three basic considerations that we have to keep in mind as we look at maintaining pay parity with the rest of the host institution.

First, we have a legal consideration. The contract that exists between the Rochester Institute of Technology and the Department states that policies regarding operations will conform to those of the host Institute. The second is a political concern. We believe it would be out of order for the staff of NTID to be dealt with in a manner different from the staff of RIT.

This could create a massive morale problem, particularly if the difference is in a negative direction. We have had that problem in our history, and we would not like to have a repetition of it.

The third consideration is maintaining our level with other markets, that is, maintaining competitiveness with other institutions. It is the same rationale that Gallaudet offers for its interest in proposing salary increases for faculty and staff.

Mr. THOMPSON. With respect to remaining competitive in the market place, right now we are faced with a situation whereby our faculty salaries at the assistant professor level are approximately $1,000 less than the market to which we compare ourselves.

Our professional staff are roughly 6 percent below that market and our clerical staff are somewhere in the neighborhood of 10 percent below that market.

So we at least want to keep up with what RIT is recommending for increases. I know they plan possibly next fall to add some additional monies to help catch up. So the overall salary increase may be greater than 6 percent.

Mr. NATCHER. Mr. Vader or Ms. Cichowski, do you desire to make a statement?

Mr. VADER. I am unfamiliar with that issue. I will ask Ms. Cichowski to respond.

Ms. CICHOWSKI. In developing the report, we asked our Office of General Counsel to review the agreement that the Department has with the Rochester Institute of Technology, and their findings are reflected in our analysis.

As our report notes, the agreement by its very terms anticipates circumstances where the Secretary may want to make allowances or may want to permit NTID to deviate from RIT policy to protect the interests of the Institute, the advancement of the Institute, or to conserve Federal funds.

The Department concluded that by the very terms of the agreement, it anticipated the need for the Secretary to allow NTID, in special circumstances, to deviate.

This might be necessary in the case where Congress imposed a sequester, for example, and the Secretary determined that it was in the best interests of the students to allow the Institute not to impose a comparable salary increase in order to maintain programs and protect services for students.

Along the same lines, there could be a situation where, given fiscal constraints and what the Secretary determines to be in the best interests of the Institute, that it was not necessary for NTID to remain competitive to adhere to an increase that RIT was proposing for its faculty.

Although we certainly plan to be sensitive to NTID's interest in keeping up with RIT, I think it is important to take into account the particular interests of NTID in any given year in determining what the appropriate level of increase should be. Finally, I would emphasize that it is hard to imagine that the Department would have entered into an agreement that essentially holds the Federal appropriation hostage to salary policies that are determined by an organization that is not within our control.

It is hard to imagine that we would enter into an agreement that would require the Department, no matter what RIT was proposing, to request an appropriation for NTID that was sufficient to accommodate the proposed increase.

EFFECT OF AGREEMENT WITH RIT ON SALARIES

Mr. **Thompson**. May I comment on that?

Mr. **Natcher**. Go ahead, Mr. Thompson.

Mr. **Thompson**. Never in our history have we held the appropriations hostage to our salary increases. When we received a 1.9 percent appropriations reduction, we still granted a 5 percent increase to our faculty to keep us consistent with the Rochester Institute of Technology.

The way we did that was to reduce our staff by 35 people because of the declining enrollments that you mentioned earlier. We felt it would be political suicide for us to sit there as employees of NTID and receive increases less than RIT employees in bad times and perhaps receive greater ones than the host institution in good times.

It just doesn't follow to me.

Ms. **Cichowski**. If I could respond to that, what we are saying is that, as a matter of law, from our perspective, NTID cannot argue that either the Congress is required to appropriate a certain amount or that the Department is required to request a certain amount because that is what is required to keep pace with RIT.

We would agree that, as a matter of policy, it may be prudent for NTID to stay in line with RIT. However, based on our legal interpretation of this agreement, the Department does not believe that we or Congress are required, no matter what the RIT proposal is, to accommodate it through the appropriations process. That is all we are saying here.

Mr. **Natcher**. Mr. Stokes, I yield to you.

AFFIRMATIVE ACTION PROGRAM

Mr. **Stokes**. Thank you, Mr. Chairman.

I will submit my questions. I want to take a moment and express my appreciation to Dr. Castle and Mr. Thompson. I visited the campus and had an opportunity to view the facility, see the classrooms and meet with faculty and staff. I also had an opportunity to meet with the affirmative action committee that they have appointed there.

I enjoyed the visit. I want to thank you for the many courtesies extended to me. I want to congratulate you on the many successes you are having in affirmative action.

I am sorry I have to leave because of another commitment. I will submit my questions for the record.

Mr. NATCHER. Thank you. Mr. Conte.

Mr. CONTE. I would like to take this opportunity to welcome the representatives of the National Technical Institute for the Deaf, especially my good friend Bill Castle.

Bill, every year you come up here you have promised to tell me—but you have not—the name of your haberdashery. I want to put this on the record. Who is your haberdashery?

Dr. CASTLE. I will submit that information for the record.

[The information follows:]

WARDROBE MANUFACTURER

The items to which you refer are made by Mode Elegant, Peninsula Hotel, Hong Kong.

Mr. CONTE. Does he charge you a premium for working in color?

Dr. CASTLE. Sometimes.

Mr. CONTE. I saved this card I received in the mail. I wanted to say how ready NTID was to receive its first international student. Can you translate the Japanese on this card?

Dr. CASTLE. I think it says Merry Christmas or Happy Holidays.

Mr. CONTE. You know how I feel about NTID—I am very supportive.

Dr. CASTLE. Thank you, very much.

MAINTENANCE OF FACILITIES

Mr. NATCHER. Dr. Castle, the fiscal 1990 appropriation included $476,000 in construction funds to address an emergency safety violation. What is the status of that project?

Mr. THOMPSON. We originally asked for $3,000,000 for a variety of improvements in the dormitories, but that amount was subsequently reduced to $932,000 by the Department. Then after negotiations with Congress on the budget last year, it was determined that $476,000 was needed for safety and security projects. I guess the fundamental point here is that the $476,000 will, in fact, allow us to complete the safety and security projects that are needed immediately.

The students will not be in any danger, because we will install the smoke hatches and strobe lights in the dormitories which were our top two priorities.

After that, we have some other renovations to make, but these projects have been put on hold because the host institution has an asbestos problem in its dormitories. We do not have that problem at NTID. Our dormitories need to be used by RIT in the summer; therefore we cannot get into them to make some of the renovations we need to make.

We may be coming back to the Committee asking for a few additional dollars at some point, but we are working to establish a long-range maintenance plan and hopefully will not hit you with anything major in the future.

Mr. NATCHER. Over what period of time do you think this will exist, generally?

Mr. THOMPSON. The particular concerns to be addressed by the $476,000 will be taken care of this year.

Mr. NATCHER. As far as the renovation is concerned in regard to asbestos, what period of time is involved?

Dr. CASTLE. This coming summer will be the second summer of RIT's having to work with that problem.

We would not be able to begin additional work until 1992.

Mr. NATCHER. The budget justification states that the Institute plans an in-depth review of the institution to develop a long-range maintenance schedule. When will this be completed?

Dr. CASTLE. This is what Mr. Thompson was alluding to a moment ago.

Mr. NATCHER. We have just a few questions, Dr. Castle, that will be submitted to you for the record. It has been a good hearing, Dr. Castle. Thank you very much. The committee will now adjourn until 10 o'clock tomorrow morning.

[The following questions were submitted to be answered for the record:]

LOW FUNCTIONING DEAF ADULTS COMPETITION

Mr. Natcher: Last year the Congress appropriated $900,000 to establish a consortium whose primary focus would be to provide educational and vocational rehabilitative services to low-functioning adults who are deaf. What is the status of these awards?

Dr. Castle: Congress directed that the competition for these funds be administered by the Department through the Special Projects and Demonstrations Program of the Rehabilitation Services Administration. The expertise for this program lies beyond the scope of NTID, so we will not apply directly for any of these funds. However, we stand ready to help others who may wish to apply. We are pleased that we were able to play a catalytic role in the development of the Consortium concept, and will play whatever advisory role is necessary in the future.

Mr. Vader: The Office of Special Education and Rehabilitative Services is responsible for administering this program within the Department of Education. A proposed priority notice has been prepared outlining the scope of the projects and the requirements for potential applicants. The purpose of the priority is to expand and improve educational and rehabilitative services to maximize the vocational potential of deaf adults who are low functioning. The notice is entering the final stage of the clearance process and should be published in late March.

Mr. Natcher: No funds are requested in the fiscal year 1991 budget to continue the consortium. Why is this?

Dr. Castle: This program is the responsibility of the Department of Education. They developed the request for this program and it is their decision not to fund it for fiscal year 1991. Personally, I think it is too soon to terminate the program before any tangible results are realized from the first appropriation.

Mr. Vader: We believe it is premature to commit additional funding to this project. The Department is in the process of establishing a new Research and Training Center under the National Institute on Disability and Rehabilitation Research that, as part of its mission, will determine the best methods for meeting the needs of these individuals. In addition, the Department has requested $500,000 under Special Institutions for the Handicapped -- Evaluation Studies to conduct a comprehensive evaluation of postsecondary education opportunities for persons who are deaf. The low-functioning deaf competition is a one-year demonstration project. The results of this study, the NIDRR center on low functioning deaf, and the demonstration projects funded under this competition should be assessed prior to committing ongoing funds toward a particular service approach.

MEDICAL RECORDS TECHNOLOGY

Mr. Natcher: Gallaudet University recently requested funds to begin a two-year program in Medical Records Technology. The

Department did not approve the request. Would NTID have concerns about this because of duplication of program?

Dr. Castle: To answer your question directly, the program would be duplicative of the program at NTID. In addition, we believe there are several constraining factors in the Washington, D.C. area, as well as changes in the profession, that would not bode well for a another two year program in that region. There are several existing medical record technology programs for hearing students in the Washington, D.C. area. These programs might be open to developing the capacity to serve deaf students. However, most young deaf people have few choices in terms of postsecondary academic environments, therefore, a certain amount of duplication by Gallaudet and NTID is to be expected and may even be desirable in order to afford young deaf people with some degree of choice regarding academic environment and location. We suggested to Gallaudet as early as October of 1987 that, if they did pursue this option, it would be in their best interest and NTID's if they pursued a four year program rather than a two year program like ours. This would provide students who graduate from our two year Medical Records Technology degree with the opportunity to continue their education at the B.S. level. It would further provide deaf students entering college a choice of either a two year medical records technology or a four year medical records administration degree.

COMPETITION WITH GALLAUDET FOR STUDENTS

Mr. Natcher: Does the fact that NTID students have access to Rochester Institute of Technology degree programs mean that NTID and Gallaudet are in competition for the same students?

Dr. Castle: We believe it does not occur to a great extent. Gallaudet University is reputed for its Liberal Arts education. The Rochester Institute of Technology (RIT), by virtue of its name and mission, is a technological university. It offers nearly 150 degree options in its network of nine colleges, including NTID. There is the College of Applied Science and Technology offering programs in Computer Science, Packaging Science, Food and Hotel Management, Manufacturing, Civil, Electrical and Mechanical technology; the College of Business offering Accounting, Finance, Management, Marketing and Human Resource Management; the College of Engineering offering programs in Microelectronics and all basic engineering options; the College of Fine and Applied Art offering programs in Graphic Design, Painting, Ceramics, Woodworking and Metalcraft; the College of Graphic Arts and Photography offering programs in Photography, Imaging Science, and Printing; the College of Science offering programs in Biotechnology, Clinical Chemistry, Diagnostic Medical Sonography, Mathematics and Physics; the College of Liberal Arts, which also offers programs in Criminal Justice, and Social Work and provides courses necessary to meet the liberal arts requirements of the other degree programs; and the College of Continuing Education which offers many of the programs listed above on a part time basis in the evening.

Mr. Vader: The Department does have some concern in this area. For example, both institutions have schools of business. There also is a high transfer rate back and forth between the two institutions. This may indicate that students find they wish to pursue a different career path after they have tried one of the schools or they may just want a different location or social environment. There is bound to be some duplication because of the need to fulfill liberal arts requirements. However, Congress created NTID as a technical school alternative to the liberal arts education offered at Gallaudet. The Department believes that it is important that the two institutions maintain their distinct missions.

SKILL LEVELS OF STUDENTS FROM MAINSTREAM AND RESIDENTIAL SCHOOLS

Mr. Natcher: According to the justification, hearing impaired students who received their secondary education at mainstream schools comprised 67% of students admitted to NTID in 1989. Is there a measurable difference in the skill levels these students bring to the Institute compared to the skill levels of students educated in schools for the hearing impaired?

Dr. Castle: NTID maintains records on the academic preparation for postsecondary education of all entering students. We have found no significant difference in mathematics ability. Both groups average just above the 10th grade level on the Stanford Achievement Test's mathematics subtests. On the reading subtest, their is a difference which comes to slightly more than one grade level. The average score for mainstreamed students is just above the 8th grade level, while the average score for students from schools for the hearing impaired is just above the 7th grade level. On the Michigan Test of Language Proficiency, a test used to determine academic qualifications in use of the English language, there is an 8 percent difference in the scores in favor of mainstreamed students.

There are also statistically significant differences between the entry oral/aural skills of deaf students receiving their secondary education in mainstream schools and those students educated in schools for the hearing impaired. The oral/aural communication skills of the mainstreamed students are generally better: they score 12 percent higher on a test of their ability to understand speech; 18 percent higher on a test of speechreading ability; and 20 percent higher on a test of speech intelligibility.

It certainly appears that deaf students entering NTID from mainstreamed environments have better oral/aural communication skills and better English language skills than students entering from schools for the hearing impaired. However, we must stress that these differences should not be used to assess the general quality of education in either type of educational setting. Since assignment to the educational setting is not random, one cannot account for environmental and individual differences that would exist in students attending either of the program types. It could be that students with better English language and oral/aural skills are assigned, at an early age, to mainstreamed environments, while those with poorer oral/aural and English skills are referred to schools for hearing impaired students. Also, we do know whether the educational background of parents of mainstreamed students is significantly higher than parents of students from schools for the hearing impaired. Differences among individual students exist despite the educational environment. These variables could account for much of the difference. Therefore, while students from mainstreamed educational settings have better skills in these areas, these differences should not be used alone to make judgments concerning the quality of education within these environments.

CONSOLIDATED ACCOUNT

Mr. Natcher: The Administration has again proposed consolidating the accounts for the Institute, Gallaudet, and the American Printing House for the Blind. Dr. Castle, how do you feel about it?

Dr. Castle: We do not feel it is in our best interests to be consolidated into one account called Special Institutions for the Handicapped, with Gallaudet and the American Printing House for the Blind. The three institutions now enjoy the privilege, the appropriate attention, and the accountability that goes with being a line item in the President's budget. We are different institutions with different priorities and needs which cannot be accurately reflected in a consolidated financial presentation. I do not think the time saved by the Department by consolidation will make up for the reduction in clarity.

UNEMPLOYMENT RATES AMONG THE DEAF

Mr. Natcher: The unemployment figure of 4% from NTID's class of 1988 is below the national average for all Americans. How does this figure compare to unemployment rates for students from other postsecondary schools for the deaf?

Dr. Castle: As of this point in time, 155 of the 224 graduates in fiscal year 1988, or 69 percent, have chosen to enter the labor market. Of those in the labor force, 146, or 94 percent, are employed. NTID does not routinely collect data about the employment conditions of graduates from other postsecondary schools for the deaf. Some data are available from the Secondary School Follow-Up of Graduates. Through this survey, NTID annually assists 26 secondary programs for the deaf to gather employment information about their graduates. From 1985 to 1989, data are available for 402 individuals who went on to achieve a postsecondary degree from programs other than NTID. During this period, 86 percent of these 402 graduates were in the labor force, and they had an unemployment rate of about 16 percent. We must point out that this number does not represent a random sample of deaf postsecondary graduates and a much larger percentage chose to enter the labor market. However, it does indicate the relative success NTID has had in educating and placing students in the world of work.

EMPLOYMENT HISTORY OF NTID GRADUATES

Mr. Natcher: Has NTID taken a longitudinal look at the employment history of its graduates?

Dr. Castle: NTID annually administers an Alumni Feedback Questionnaire (AFQ) to all its graduates. The questionnaire has included similarly constructed questions about labor force participation, employment, occupation, and earnings since 1982. As a result, NTID has been able to build a data base that includes some 1,517 graduates, approximately 50 percent of a total of over 3,000 graduates.

In 1989, an analysis was undertaken that examined the employment conditions of all graduates who had responded to both the 1982 and 1988 AFQs. This longitudinal analysis of mobility indicated that labor force participation remained constant at 91.2 percent. Unemployment, however, dropped from 7.3 to 2.3 percent. Earnings increased by just over 10 percent per year, substantially faster than the rate of inflation. Though the percentage of White Collar workers remained constant (87.4 percent), the number of those in Managerial/Professional positions increased from 34.3 to 41.1 percent.

In addition to the AFQ, NTID has collaborated for the past four years with the Statistics of Income Division of the Internal Revenue Service to analyze the earnings of deaf adults in the United States. Results of this research effort has clearly shown that deaf individuals who complete postsecondary education have a significant earnings advantage over deaf individuals who do not complete a postseconadry education.

Mr. Natcher: Have studies been done that look at employment rates for hearing impaired students educated in mainstream institutions versus those educated by institutions such as NTID, Gallaudet, and the other postsecondary schools for the deaf?

Dr. Castle: To our knowledge, no such studies have been conducted. The Secondary School Follow-Up provides some limited information on unemployment rates with graduates of other postsecondary institutions, but the labor force participation rates and types of postsecondary training received are not really comparable. However, we would hasten to point out that NTID and the Regional Postsecondary Programs for the Deaf are all mainstreamed to an extent because students may take classes with hearing students in the sponsoring institutions.

MINORITY AND DISABLED EMPLOYMENT

Mr. Natcher: Tell the Committee about your efforts to recruit minorities and handicapped employees.

Dr. Castle: Over the past four years, NTID's focus on recruiting and hiring people who are deaf and/or from minorities has resulted in significant progress toward creating a diverse work force. In 1985, 12.7 percent of all NTID employees were minority or disabled people. That figure now stands at 23.7 percent. We have increased representation of racial minority employees by 147 percent, from 17 in fiscal year 1985, to 42 as of September 30, 1989. Representation of black employees has grown by 200 percent, from 8 to 24. The number of disabled employees has grown from 54 to 85, a 57 percent increase, while the number of deaf employees has increased from 47 to 78, a 66 percent increase.

Nearly 30 out of 55 employees newly hired this past year, or 55 percent, are either members of minorities or disabled. Twenty of these persons are hearing impaired. Recruitment strategies, such as advertising and networking, are targeted directly to minority and deaf communities and organizations to ensure that protected-class prospective applicants are aware of NTID job opportunities. To ensure that searches are conducted fairly and follow established guidelines, all hiring departments and committees work in consultation with NTID's Training and Affirmative Action Office. In addition, job descriptions are reviewed carefully to be certain that qualifications listed are necessary and not exclusionary.

NTID's Affirmative Action Advisory Committee, made up of 15 faculty and staff members who serve staggered terms of up to three years, continued to initiate and support Institute efforts. During fiscal year 1989, the committee produced a periodic affirmative action employee newsletter; co-sponsored RIT's Black History Month celebration in February; began work on an annotated bibliography on affirmative action for NTID's Staff Resource Center; and participated in the planning of a Lawful Employment Practices Seminar for managers and chairpersons. The seminar was presented three separate times and included presentations from several advisory council members of the New York State Division of Human Rights. All 65 administrators of NTID have now been through the program.

STUDENT PARTICIPATION IN RIT PROGRAMS

Mr. Natcher: What percent of NTID students participate in the educational programs available through the Rochester Institute of Technology?

Dr. Castle: In the fall quarter of 1989, 22 percent of NTID students were matriculated in one of the other eight colleges of the Rochester Institute of Technology (RIT). In addition, 46 percent of students matriculated in the college of NTID were registered for at least one course at RIT. Taken as a whole, 59 percent of the NTID student body were registered for at least one course in programs available through the Rochester Institute of Technology.

CAREER DEVELOPMENT OUTREACH NETWORK

Mr. Natcher: Your statement says that a network of postsecondary programs and rehabilitation agencies serving deaf people has been established. What is the primary focus of the network? How often will it meet?

Dr. Castle: As a way of expanding the impact of outreach activities for deaf adults, NTID recently initiated a network of postsecondary programs and rehabilation agencies serving deaf people. This network, the Council of Directors, is composed of the heads of California State University at Northridge, Gallaudet University, NTID, the Postsecondary Consortium at the University of Tennessee at Knoxville, Seattle Central Community College, and St. Paul Technical College. In addition, the president of the American Deafness and Rehabilitation Association, the executive director of the National Association of State Directors of Special Education, and the chairperson of the subcommittee on deafness of the Council of State Administrators of Vocational Rehabilitation serve as ex-officio represeentivies.

This cooperative effort allows each institution or organization to greatly enhance the effects of its own mandate to reach out to a variety of audiences and enables each to call upon the collective expertise of the group. A major effort this past year was to develop a proposal responding to some of the recommendations made to the U.S. Senate Subcommittee on the Handicapped by the Commission on the Education of the Deaf (COED). As a first response, and at the request of a congressman, a senator and the chairman of the COED, the Council of Directors established a task force made up of experts from across the nation to study and develop a proposal to make an immediate impact on the lives of low-functioning deaf adults.

As of this date, Congress has set aside funds under NTID's fiscal year 1990 budget to support a demonstration program based on the Council's proposal for a network of services and has designated the Department of Education to administer this program. Thus, the Department will evaluate applications for demonstration projects submitted by members of the Council of Directors as well as other interested and qualified parties across the Nation.

FOREIGN STUDENTS

Mr. Stokes: NTID is experiencing a decline in enrollment. To compensate for this, you are employing an aggressive marketing strategy to enroll new students, transfer students and previous drop outs. You are also planning to admit foreign students for the first time beginning with the summer 1990 session and that this will boost your enrollment. How many foreign students do you anticipate will enroll in the summer session?

Dr. Castle: We are expecting somewhere between 15 and 20 international students to enroll in the summer of 1990.

Mr. Stokes: Will a more diverse student body enrich the NTID experience for all of the students?

Dr. Castle: We believe this will be a win-win situation for all deaf students, be they American or foreign. This has always been the most important aspect of our efforts to gain permission to admit foreign students. I would like to emphasize that no US student will be denied entry as a result of this policy. Now, we can focus on the real benefit which is the cultural enrichment that is sure to enhance the lives of all deaf students at NTID. Having international students will give deaf RIT students a unique opportunity to learn firsthand about other cultures. Students will certainly develop lasting friendships and also may seek cooperative work experiences abroad. Communication technology is clearly making the world a global village and students who are prepared to celebrate diversity in a social and economic environment will likely be the most successful.

Mr. Stokes: What amount of tuition will foreign students pay? Will the imposition of a 50 percent surcharge hinder your effort to recruit foreign students? Would a larger surcharge be an impediment?

Dr. Castle: The 50 percent surcharge will result in a tuition rate of $5,001 for foreign students for fiscal year 1991. The total charge for tuition, room, board, and fees will be $9,495. We have no way of knowing if this level will have a negative impact as we have absolutely no experience to go by. Therefore, we think the imposition of a higher surcharge at this point would be unwise. We need to develop some experience before we can rationally address a rate increase.

Mr. Vader: As we have previously pointed out, public colleges and universities charge foreign students an average of 135 percent more than in-State students. Private colleges and universities have much higher tuition rates than public institutions and do not provide any subsidies to foreign students. Yet, many of these schools enjoy high enrollments of foreign students despite the tuition levels. NTID provides intense support services which are not always available at these other schools, but they come at a cost. Most of that cost is being borne by the Americal taxpayer. The Department endorses a gradual increase in the tuition surcharge for new foreign students until the 135 percent level is reached. We intend to pursue discussions with NTID and Gallaudet University related to this matter in the summer of 1990 and hope to arrive at a reasonable strategy for dealing with the issue of foreign students.

AFFIRMATIVE ACTION

Mr. Stokes: You seem to be continuing to make progress in meeting your affirmative action goals. Please tell me what additional efforts you have undertaken in this area. Have you been able to address the problem of retaining minorities once you have recruited them?

Dr Castle: As I described previously to Mr. Natcher, we have made considerable progress and have a number of programs in place to assure continued success. Regarding retention, I feel that we have done about as well as can be expected, though we have lost quite a few minority and disabled employees. Over the last four years, we have hired 92 (33 percent of all hires) protected class individuals, while we lost 43, which is nearly 16 percent of all terminations. The protected class termination rate is slightly higher than our total termination rate of 12 percent, but not really out of line. With minorities in particular, the turnover has been considerably higher. We started with 17 minorities in fiscal year 1985, hired 42 over the same period, but then lost 20 individuals. I have personally investigated the 20 cases and cannot find any evidence that people are leaving for wrong reasons. Typical reasons for leaving are that they are relocated with their spouse, received a promotion within RIT, found a better paying job, are going back to school to further their education, or, in a few cases, had substandard performance.

However, I am not so myopic to think that no problem exists. For this coming year, I have asked our Affirmative Action Committee to look beyond the normal boundaries of affirmative action and to begin to look at ways to capitalize on our cultural diversity. Over the last few years, a great deal of effort has been focused on establishing and pursuing goals for equitable representation of minority and disabled persons among the faculty, staff, and students of NTID. It is now time to look at more than recruitment and begin to examine the conditions, values, beliefs and behaviors operating within our environment. My hope is to foster a collegiate atmosphere that is conducive and welcoming to a diversity of cultures and opinions and one that ultimately puts a premium on it. We must advance our educational enterprise to one that truly "values" the attributes and contributions of a diverse pool of students, faculty, and staff.

I will keep you informed of our progress. Aggressive and creative recruitment strategies have resulted in significant progress toward our affirmative action goals. I am optimistic that we will accomplish what we have set out to do, and we will become a stronger institution for it.

CONSTRUCTION PLANS

Mr. Stokes: The request does not contain funds for construction. Last year $476,000 was appropriated for construction. The justification states that NTID is developing a long-range plan for construction that will involve the Department of Education. What is the timetable for developing this plan?

Dr. Castle: It is expected that a long range plan for major capital projects will be completed and submitted to the Department during this fiscal year. To the extent necessary, it will be incorporated into our 1992 budget request.

Mr. Stokes: Did NTID submit a request for construction funds to the Department as part of development of the fiscal year 1991 budget? If so, what amount was requested?

Dr. Castle: NTID did not request funding for construction and renovation for 1991. A major two-year project to correct a problem with asbestos in other buildings on the RIT campus is resulting in the delay of many other projects relating to facility needs. Time-frames associated with projects planned for completion in fiscal year 1990 are currently being delayed. Some projects will be delayed into 1991. If additional funding is needed, it will be considered as part of the fiscal year 1992 request.

POSTSECONDARY CONSORTIUM

Mr. Stokes: Did NTID request funding for the consortium in fiscal year 1991? Why or why not?

Dr. Castle: NTID did not request funding for this program for 1991. The initiative is being administered by the Department of Education, not NTID. Since the funding and the authority now lie within the Department, it is up to them to determine if additional funding is desirable.

BUDGET REQUEST FOR 1991

Mr. Conte: Bill, as I understand it, the request is for your operating budget to increase from $34.4 million to $37.2 million, an 8 percent increase, while appropriations for construction and the consortium totalling $1.3 million would drop out. In the past you've indicated that requests have not anticipated full pay increases for staff and faculty. Is that taken care of in this year's budget request?

Dr. Castle: Yes, we feel we have that covered in this year's request. At the same time, I want to assure you and the Committee that the 8.2 percent is not a windfall. Though we will be giving our employees an average merit increase of only 5.5 percent, less than the 6 percent anticipated at the time of the request, we also have important needs in other areas.

COMPETITIVE SALARIES

Mr. Conte: Are you satisfied with where salaries are compared with comparable institutions?

Dr. Castle: RIT recognizes that it is behind the marketplace in some faculty ranks, at the lower levels in some professional staff categories, and below at all levels of clerical staff. As a result, we have been advised by RIT that in the fall of 1990 they may provide additional increases of approximately 2 percent for faculty, and 3 percent for professional and clerical staff. RIT is a private institution very much concerned with the bottom line, and we believe it has given increases that put its pay in a less than competitive position. However, NTID will not use additional funds for this purpose in 1990 unless the September enrollment is sufficient to produce the revenue necessary to cover the additional increases.

EFFECT OF THE SEQUESTER

Mr. Conte: What, if any, is the effect of sequester, to which you lost $483,000, being felt? Is sequester a good thing?

Dr. Castle: The primary effect of the sequester, which amounted to $462,000 for operations, was to curtail our equipment expenditures and limit our outreach efforts. While these are important areas for us, they get short-changed when funds are scarce. I feel confident, however, that we have rearranged some of our priorities to allow us to accomplish what we need to in 1990.

Regarding your second question, we believe sequester is not a good thing. We are current funded, so we had to take the cut right in the middle of the school year. The students are already enrolled, the faculty and staff are already under contract, and many projects are committed. This leaves us with little flexibility to find the dollars necessary to recover from the sequester. In addition, the uncertainty causes us to go through a lot of extra planning scenarios which involve the time of many people. We understand the problems associated with the deficit, but because of the timing, sequesters put us under enormous pressure.

COMPETITIVENESS OF TUITION LEVELS

Mr. Conte: In terms of tuition, room and board for all students, the tuition is expected to be $7,828 in 1991. How do you regard that amount--is that high enough to discourage students, low enough to attract students, or competitive with other schools?

Dr. Castle: The total package, including tuition, room, board, and fees is expected to be $7,828 in 1991, just $114 more than at Gallaudet, but well below the level for matriculated students at the Rochester Institute of Technology. As you know, in terms of tuition, NTID compares itself to land grant colleges and universities. We anticipate that this level will maintain NTID at the same relative level, within the fourth quartile, as compared to these institutions in 1991.

POSTSECONDARY CONSORTIUM

Mr. Conte: As I understand it, as part of this consortium, was the idea of coordinating among NTID, Gallaudet and other programs for the deaf. Will this be possible as the consortium is now being planned?

Dr. Castle: Yes, it will. This effort is not contingent upon the Department's plans to establish a consortium to meet the vocational rehabilitation needs of low-achieving deaf people. NTID, Gallaudet University, and the four regional programs for the deaf have reconstituted the Council of Directors and will continue to cooperate on joint ventures and share expertise. Our current emphasis is on the career development needs of deaf adults.

FUNDRAISING PROGRAM EFFORTS

Mr. Conte: On your endowment, tell us about how your outside fundraising is going. Who have you gotten as major supporters?

Dr. Castle: NTID is still in the early stages of developing a comprehensive fundraising program which seeks to attract support from alumni, corporations, foundations and other interested parties on an ongoing basis. Fiscal year 1989 concluded the second full year of NTID's development program. During that year, $962,851 in total gifts were received. This represented a sizable increase in total gift income over the $399,799 contributed during 1988 and includes $250,000 for a new International Center for Hearing and Speech Research which is being totally supported by non-Federal funds.

During fiscal year 1989, contributors designated $252,671 to endowed funds at NTID that qualify for matching amounts from the Federal Matching Grant Program. All $198,000 of Federal endowment funds available in 1989 were matched, and the remaining $54,671 has been designated toward matching the 1990 appropriation for the Endowment Matching Program. We are confident that the entire appropriation of the $322,000 designated for this program in 1990 will be matched this year.

The listing of significant donors includes Citicorp/Citibank, the Ralph M. Parsons Foundation, IBM, and the Ira W. DeCamp Foundation. The larger number of major givers reflects the growing appreciation of the contribution NTID is making to young deaf men and women.

ENDOWMENT MATCHING GRANTS

Mr. Conte: The justifications indicate that you originally requested an increase in the endowment appropriation to $500,000 but that the Department is requesting $336,000. You are now in favor of the endowment program?

Dr. Castle: NTID is now very much in favor of the endowment program. We feel that a great deal of our early success in this effort is directly tied to the fact that contributors are able to "double" the impact of donations they make. It is without question the cornerstone of the overall fundraising program we are building.

It is true that the endowment request is reduced from the amount originally requested. It must be pointed out, however, that in view of the fact that this program is still in its infancy, we are unsure what our true potential is for raising funds. We are confident that we will be able to match the $336,000, and should we be fortunate enough to exceed that amount, we will simply carry it over to the following year. The impact and benefit of this effort will not be diluted by the reduction from the original request which was made to the Department by NTID.

Mr. Conte: Are you putting any excess unmatched outside funds into the endowment, or is most of your outside funding put into operations?

Dr. Castle: As stated previously, excess unmatched funds in any year will be matched in the following year. Funds which may qualify for this program are never put into operations. The majority of funds which are raised are donor designated for endowments and scholarships. Other funds which are received are not applied against general operating expenses. They are normally given for a specific purpose, such as equipment, and offset incremental expenses associated with the particular program they are intended to support.

FUNDRAISING PROGRAM EFFORTS

Mr. Conte: To what extent are you anticipating fundraising in this 1991 budget? Does money raised from fundraising figure into planning your budget?

Dr. Castle: We are expecting to raise the full amount of $336,000 which is being recommended for the Endowment Matching Program. As our overall program begins to mature, the impact on our operating budget will be focused in two areas; one will be that of reducing the demand for internally funded grants-in-aid for our students. This will, in turn, reduce the total operations expense for NTID. Second, specific gifts which are targeted for particular programs will provide budget relief for those activities.

RESEARCH ACCOMPLISHMENTS

Mr. Conte: Can you tell us a little about your Research Program, at about $1.7 million? What kinds of things are you accomplishing with this program?

Dr. Castle: The Institute conducts applied research related to deafness in three primary areas. These are: communications, assessment, and training; education and training; and graduate accommodation. Research projects focus on issues related to persons who are deaf such as economic and occupational assimilation, academic and technical skills, communication skills, personal/social skills, effective instruction, and institutional planning, evaluation and change. NTID also evaluates the success of its programs in preparing deaf students for successful employment, and the changing characteristics of deaf students and the national job market in terms of technical education needs and the Institute's programs. I will send you a copy of our report to the Department of Education on research activities for fiscal year 1990. This report outlines our major accomplishments for fiscal year 1989 and provides a description of all research projects planned for 1990.

[SPECIAL INSTITUTIONS FOR THE HANDICAPPED]

[AMERICAN PRINTING HOUSE FOR THE BLIND]

[For carrying out the Act of March 3, 1879, as amended (20 U.S.C. 101-106), including provision of materials to adults undergoing rehabilitation on the same basis as provided in 1985, $5,740,000.]

[NATIONAL TECHNICAL INSTITUTE FOR THE DEAF]

[For the National Technical Institute for the Deaf under titles II and IV of the Education of the Deaf Act of 1986 (20 U.S.C. 4301 et seq.), and for activities under section 311 of the Rehabilitation Act of 1973, $36,553,000, of which $325,000 shall be for the endowment program as authorized under section 408 and shall be available until expended, $482,000 shall be for construction and renovation, to remain available until expended, and $900,000 shall be retained by the Secretary for the purpose of supporting a consortium of institutions to provide education and vocational rehabilitation services for low functioning adults who are deaf.]

[GALLAUDET UNIVERSITY]

[For the Kendall Demonstration Elementary School, the Model Secondary School for the Deaf and the partial support of Gallaudet University under titles I and IV of the Education of the Deaf Act of 1986 (20 U.S.C. 4301 et seq.), including continuing education activities, existing extension centers and the National Center for Law and the Deaf, $68,600,000, of which $1,000,000 shall be for the endowment program as authorized under section 407 and shall be available until expended.]

SPECIAL INSTITUTIONS FOR THE HANDICAPPED 1/ 2/

For special institutions for the handicapped, $117,979,000, which shall be available as follows: for Gallaudet University as authorized under titles I and IV of the Education of the Deaf Act of 1986 (20 U.S.C. 4301 et seq.) ("the Act"), $74,047,000, of which $1,000,000 shall be for the endowment program as authorized under section 407 and shall be available until expended, and $2,500,000 shall be for construction for the National Technical Institute for the Deaf as authorized under titles II and IV of the Act, $37,531,000, of which $336,000 shall be for the endowment program as authorized under section 408 and shall be available until expended; for the American Printing House for the Blind as authorized under the Act of March 3, 1879, as amended, $5,901,000; and for evaluation studies authorized by section 405 of the Education of the Deaf Act of 1986, $500,000. (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ The President's request for 1991 proposes one account, "Special Institutions for the Handicapped," to replace the three separate accounts in 1990 and in prior years. Language is no longer needed for the separate accounts.

2/ Earmarks are included for each supported institution in order to maintain the integrity of each activity, identify the funding provided for each, and ensure comparable funding levels with former years.

Special Institutions for the Handicapped

Language Analysis

Language Provision	Explanation
For special institutions for the handicapped, $117,979,000, which shall be available as follows:	This establishes the appropriation for the account, which includes separate earmarks for each institution.
for Gallaudet University as authorized under titles I and IV of the Education of the Deaf Act of 1986 (20 U.S.C. 4301 et seq.)("the Act"), $74,047,000,	This amount is for operations of Gallaudet University, including the Model Secondary School for the Deaf and the Kendall Demonstration Elementary School.
...of which $1,000,000 shall be for the endowment program as authorized under section 407 and shall be available until expended,	This language earmarks $1,000,000 of funds available for Gallaudet University for expanding the endowment matching program.
...and $2,500,000 shall be for construction	This language earmarks $2,500,000 of funds available for Gallaudet for construction.
...for the National Technical Institute for the Deaf as authorized under titles II and IV of the Act, $37,531,000,	This amount is for the National Technical Institute for the Deaf.
of which $336,000 shall be for the endowment program as authorized under section 408 and shall be available until expended;	This language earmarks $336,000 of funds available for the National Technical Institute for the Deaf for expanding the endowment matching program.
for the American Printing House for the Blind as authorized under the Act of March 3, 1879, as amended, $5,901,000;	This specifies the amount for the American Printing House for the Blind.

Language Analysis -- Continued

Language Provision	Explanation
for evaluation studies authorized by section 405 of the Education of the Deaf Act of 1986, $500,000.	This amount is requested for a comprehensive evaluation of postsecondary educational opportunities for persons who are deaf.

Special Institutions for the Handicapped

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
American Printing House for the Blind (APHB)	
The Committee expressed concern over the recent Inspector General audit at the Printing House which identified numerous fiscal irregularities and which indicated a lack of concern for financial management. The Committee directed the administration of the Printing House to take corrective action addressing these concerns. Appropriated funds are not to be used to repay any portion of the disallowed costs.	The Department notified the Printing House on March 23, 1989 of a program determination sustaining Office of Inspector General findings disallowing $250,370 charged to overhead for building depreciation. APHB has appealed this determination. It is being reviewed by the Department's Office of Administrative Law Judges.
The Committee remained very interested in the Printing House increasing the number of handicapped employees, particularly the blind or visually impaired. Affirmative hiring practices of the handicapped are to continue and the new President should be prepared to testify about progress during next year's hearings.	The Printing House will continue to place a priority on hiring persons who are blind for any job for which they are otherwise qualified.
National Technical Institute for the Deaf (NTID)	
Regarding construction, the Committee provided that funds for 1990 will be used only to remedy safety and security hazards to students and staff at the Institute as indicated in the budget request.	NTID intends to follow the directive as to the use of these funds and submitted a report on its plans to the Committee on November 6, 1989.
The Committee deleted the restriction against using funds to subsidize foreign students. However, the Committee supported a tuition surcharge of 50% for new foreign students at all the Special Institutions. The Committee noted that Gallaudet already adopted a 50% surcharge for 1990 and that actual authority for the Institute to admit	Please see the response to the 1990 Conference Report directive on this issue.

Special Institutions for the Handicapped

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 House Report — Continued	
foreign students is pending approval from the Department of Education.	
1990 Senate Report	
National Technical Institute for the Deaf	
The Committee directed the Department of Education to negotiate cooperative agreements with institutions specified in the bill to conduct demonstration projects to provide educational and vocational rehabilitative services to low functioning adults who are deaf, to require these projects to participate in a consortium organized by the Department, and submit a report to the Committee at the end of fiscal year 1990 on the program.	This directive was superceded by a Conference Report directive.
The Committee directed the Department to withhold approval for NTID to admit foreign students until a plan is approved by the Department for charging tuition at a rate no less than the average percentage differential charged out-of-State students by State universities and land grant colleges. The rate would be phased in over a 5-year period.	This directive was superceded by a Conference Report directive.
The Committee directed NTID to use construction and renovation funds to remedy safety and security concerns specified in the Department's budget justification and to submit a report to the Committee outlining its plan for the implementation of the repair program no later than November 15, 1989.	NTID intends to follow the directive as to the use of these funds and submitted a report on its plans to the Committee on November 6, 1989.
The Committee directed the Department to submit a report to the Committee on how the general provisions of the Federal Government's agreement with the Rochester Institute of Technology to operate NTID relate to salary increases no later than February 1, 1990.	The Department shares the Committee's concern. A report is being drafted which will be submitted by February 1, 1990.

Special Institutions for the Handicapped

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 Senate Report — Continued	
Gallaudet University	
The Committee expressed concern that the Federal Government is subsidizing a majority of the cost for foreign students to attend Gallaudet University and directed Gallaudet to work with the Department to develop a plan by October 31, 1989 for reducing the subsidy provided foreign students so that they are charged a rate no less than the average percentage differential charged out-of-State students by State universities and land grant colleges. The rate would be phased in over a 5-year period.	This directive was superceded by a Conference report directive.
1990 Conference Report	
The conference agreement modified Senate language to clarify that funds are available for a new consortium program to provide educational and vocational rehabilitation services for low functioning adults who are deaf. The conference deleted Senate earmarks for certain institutions, but clarified that the conferees intend that funds be allocated for one or more awards for demonstration projects across the country.	For 1990, the Department plans to conduct a competition for one or more projects to provide educational and vocational rehabilitation services for low functioning deaf adults. Projects must provide services through a consortium of public and private agencies.
The conferees directed the Secretary to grant approval for NTID to admit foreign students and intends that students at Gallaudet, Howard, and NTID should pay the same 50% tuition surcharge, but should have the opportunity to phase the surcharge in over a 3-year period.	The Department is reviewing the situation and expects to make a determination regarding approval within the next few weeks.

Special Institutions for the Handicapped

Account Summary

	1989 Appropriation	1990 Appropriation	1991 Request
1 American Printing House for the Blind	$5,335,000 1/	$5,663,000	$5,901,000
2. National Technical Institute for the Deaf:

Subtotal	65,998,000	67,643,000	74,047,000
4. Evaluation studies	—	—	500,000
Total	104,659,000	109,376,000	117,979,000

1/ Excludes $10,000 permanent appropriation which is repealed as of the end of fiscal year 1989.

The 1991 request would provide an overall increase in funding for the Special Institutions for the Handicapped of 7.9 percent. For operations, this represents a 4.2 percent increase for the American Printing House for the Blind (APHB), an 8.2 percent increase for the National Technical Institute for the Deaf (NTID), and a 5.8 percent increase for Gallaudet University. These increases are requested to offset the effect of inflation and carry out special projects. In addition, increased funding is requested for the endowment matching grant programs at Gallaudet University and NTID. The increase would bring the endowment program to $1,000,000 for Gallaudet and $336,000 for NTID. These programs help to provide an independent and growing source of revenue for the institutions. The sum of $2,500,000 is requested for construction to renovate instructional areas and faculty office space and

Special Institutions for the Handicapped

Account Summary — Continued

expand facilities for the research program at Gallaudet. In addition, $500,000 is requested for a comprehensive evaluation of postsecondary educational opportunities for persons who are deaf.

The budget request proposes a single new account instead of three separate accounts for these institutions. The three institutions all enjoy a similar special relationship with the Federal Government. All three serve handicapped students, and all three receive the major part of their funding through these appropriations. A single account would simplify budget presentation, analysis, and administration. Each institution would be considered a separate activity within the account. This ensures the integrity of each activity since funds could not be moved among the institutions without congressional approval.

The Department of Education is placing increased emphasis on program accountability and effectiveness for all education programs. This is consistent with other important events in recent years. The Education of the Deaf Act greatly expanded the monitoring and evaluation responsibilities of the Department of Education. The Commission on Education of the Deaf recommended that the Department conduct evaluations of Gallaudet University, the National Technical Institute for the Deaf, and the Regional Postsecondary Education Programs for the Deaf on a five-year cycle. Each of these programs has received substantially higher funding over the course of the last decade and has expanded program and activity scope. The level of Federal funding associated with these programs establishes a clear Federal interest in their activities and operations.

The Department has taken several actions to improve accountability in the Special Institutions for the Handicapped. Data have been solicited in greater detail to enable the Department to track expenditures and improve accountability. The Office of the Inspector General completed an audit of the American Printing House for the Blind in 1989. Site visits are being made to each of the Institutions. The Department has also increased oversight in such areas as tuition and fee charges for American and foreign students, indirect cost charges, and research coordination. To assist the Department in carrying out its monitoring and evaluation responsibilities, a number of evaluations are being conducted with funding from the departmental salaries and expenses account. These include studies related to Model Secondary School for the Deaf and Kendall Demonstration Elementary School, American Printing House for the Blind, and Gallaudet University.

The Department has requested funds for a new activity under the Special Institutions for the Handicapped account for 1991. This activity is Evaluation studies. Evaluation funds are not available for this purpose within the Office of Special Education and Rehabilitative Services, and it is not possible to conduct large scale studies with general departmental funds of the type needed to fully carry out the oversight responsibilities for these institutions. The Department is proposing to conduct a study of postsecondary educational opportunities for the deaf in 1991 under this new activity.

Special Institutions for the Handicapped

---

1. American Printing House for the Blind (20 U.S.C. 101 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$5,663,000	**$5,901,000**	**+$238,000**

Purpose and Method of Operation

The purpose of the appropriation for the American Printing House for the Blind (APHB) is to assist in providing quality educational materials to legally blind persons enrolled in formal educational programs below the college level. The Printing House administers funds authorized under the Act to Promote the Education of the Blind for this purpose. With these funds, APHB manufactures and maintains an extensive inventory of special materials. It distributes these materials free of charge to schools and States across the Nation through proportional allotments based on an annual census of the number of blind students in each State. The bulk of the appropriation is used by the Printing House to cover the cost of operations to produce these special items. In addition, APHB conducts research and undertakes field activities to inform educators about the availability of materials, how to order them, and how to use them.

The list of items to be produced and distributed is reviewed and approved by APHB's advisory committees. The Printing House has two advisory committees: the first establishes the need for new publications and the second oversees research and development. The members of these committees are chosen from ex officio trustees as defined by the Act. The purpose of these committees is to ensure that all educational materials produced and research undertaken meet the needs of blind students. Availability of these materials promotes equal opportunity and increases the quality of education for blind students.

In the research and development category, the Printing House develops new educational materials for the blind and conducts basic and applied research necessary for such development. Instructional materials are developed in areas such as: braille reading, science, mathematics, and social studies. Special materials are developed for use in areas such as serving the severely multi-handicapped blind student; early childhood and prevocational training; educational applications of microcomputers; and the functional use of residual vision. Research and development is conducted on a national basis and the direction reflects advice from educators and consumers.

This is a current funded grant-in-aid program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations. The Education Department appropriation

---

Purpose and Method of Operation -- Continued

represents approximately 39 percent of the Printing House's total sales income. Funds from Federal research grants and contracts from Federal agencies such as the Library of Congress and the Internal Revenue Service represent about another 34 percent of APHB's sales income. Revenue from unsubsidized product sales to State and local agencies and individual blind persons, donations, and endowment and investment income provide the Printing House's remaining funding. The States are required to provide a free appropriate public education, including appropriate related materials and supplies, to all handicapped students under the Education of the Handicapped Act. They may, and most do, make additional purchases to supplement their allocation under this appropiation. The Handicapped Programs Technical Amendments Act of 1988 (P.L. 100-630) terminated the authority for a $10,000 permanent appropriation established in lieu of interest income from an 1879 trust fund, effective October 1, 1989.

Accomplishments

The American Printing House for the Blind served 44,821 persons in 1989, an increase of 1,676 from the 1988 level. However, this was still 1,109 less than the number served in 1987. The fluctuation is attributed to a change in policy by the Board of Trustees that went into effect with the 1987 registration. At that time, the American Printing House for the Blind implemented a policy limiting eligibility to those students enrolled in educational or vocational training programs of 20 or more hours of instruction per week. This change primarily affected older disabled persons enrolled in essentially recreational programs. The number of persons is expected to increase above the 1987 level in fiscal year 1990. Students counted in the annual APHB census primarily attend public schools (83 percent). However, 9 percent are enrolled in residential programs, 3 percent in programs for the multihandicapped, and 5 percent in rehabilitation programs.

APHB conducts an ongoing program of applied research. A portion of the Federal appropriation supplements this effort. Printing House revenues and grant income make-up the rest of the budget for this activity. Projects funded from government grants received in addition to the appropriation include a grant from the Department's Office of Special Education Programs. This grant provided partial support for the development of a braille language program to parallel APHB's "Patterns" series. The National Library Service for the Blind and Physically Handicapped funded technical research on digital audio sound as an archival medium, a live recording medium, and a method for enhancing and reclaiming technically inferior, older tape and disc recordings. Types of materials developed by the APHB include educational tests and measures, educational software and peripheral hardware for microcomputer applications, and specialized materials for blind children below the age of three. In 1989, priority areas included development of early childhood, multi-handicapped, and braille training materials and microcomputer related software and hardware. Examples of new products released in 1989 include the following:

Accomplishments -- Continued

1. APHB PocketBraille accessories:
    Cassette tape interface device
    External memory module
    6-foot parallel printer output cable
2. APHB Speaqualizer upgrade kit
3. Braille keyboard overlay for the Apple II GS
4. Sliwa Enterprises, Inc. educational software series (conversion of 29 new programs)
5. Minnesota Educational Computing Corporation program "Food Facts" (talking version)
6. Handi-Cassette carrying case
7 Brigance Diagnostic Comprehensive Inventory of Basic Skills (tactile supplement)
8. "Patterns" prebraille instruction program

In 1989, the Printing House introduced APH-DOTS (Disk Operating Transcribing System). This system uses software programs to transcribe text into braille. APH-DOTS is being offered as a pilot program. Eight agencies are participating in the pilot. Under this program, agencies or publishers will be able to send APHB books transcribed onto computer disks. These disks are then converted into braille. This method is much faster than manual braille production and makes it possible to produce individual copies on demand. Problems with consistency and reliability are being studied and evaluated by APHB staff.

On March 23, 1989, the Assistant Secretary for the Office of Special Education and Rehabilitative Services (OSERS) notified the Printing House that OSERS had made a program determination concerning a review of appropriations awarded to APHB for the period from July 1, 1986 through June 30, 1987. The determination was based on an audit conducted by the U.S. Department of Education's Office of Inspector General (OIG). OSERS sustained the OIG recommendation regarding $250,320 in disallowed costs related to building depreciation and directed APHB to restore these funds as credits to the educational agencies and institutions participating in the program or to refund the amount to the Federal Government. The Secretary also directed APHB to take corrective action regarding assignment of labor cost not associated with the Federal program. APHB has appealed the monetary portion of this determination. The Secretary has designated the Office of Administrative Law Judges (ALJ) to hear this appeal. Briefs have been submitted by the respective parties and the ALJ has directed the Department and APHB to agree on a joint stipulation of facts in law by January 26, 1990. A tentative hearing date has been set for March 29, 1990.

The Printing House continuously attempts to upgrade its operations and equipment to increase efficiency. Over the past few years, operations have been computerized or automated, jobs combined, new equipment purchased or developed, and new materials employed. For example, a xerox management system

---

Accomplishments -- Continued

is being implemented that provides forecasting information necessary to adjust work processes to maximize resources in a cost-effective manner. The combination of production work into families of work units resulted in a smaller, more flexible work force. In 1989, the plant was air conditioned, improving work conditions and decreasing sick leave taken during the summer months. A dual vacuum form machine and cassette loader were developed in-house. As an efficiency measure, a number of wooden parts for educational kits were replaced by plastic parts last year to reduce in-house processing of these materials. In previous years, APHB computerized the annual census process, established a national educational materials data base for tracking allocations, and eliminated low volume sales items from the inventory. These measures have all added to general increases in productivity.

1991 Budget Proposal

The Department requests $5,901,000 for the American Printing House for the Blind (APHB), an increase of $238,000 above the 1990 appropriation. In keeping with the Secretary's priority on programs that increase opportunity for handicapped children, the 1991 budget proposes an increase to cover the costs of inflation. The fiscal year 1991 request would provide approximately 39 percent of APHB's total sales income, the remainder coming from other Federal programs, product sales to State and local agencies, individual purchases, private donations, and endowment income. The 1991 request reflects the passage of the Handicapped Programs Technical Amendments Act of 1988 (P.L. 100-630), which terminated the Printing House's $10,000 permanent appropriation.

Of the additional $238,000 requested, $216,000 would be used to increase the availability of educational materials for visually impaired students. APHB estimates that 48,180 students will be served in fiscal year 1991. The Printing House estimates that 31 percent of this group are visual (enlarged print) readers, 12 percent braille readers, 15 percent auditory readers, 10 percent pre-readers, and 32 percent non-readers. Under the Act to Promote the Education of the Blind, the Printing House produces special educational materials for legally blind students enrolled in formal educational programs below the college level. These include textbooks in braille and large type, educational tools such as braille typewriters and microcomputer software and hardware, teaching aides such as educational tests and performance measures, and other special supplies. The bulk of the appropriation and increase requested is targeted toward the educational materials activity because our priority is on increasing the programmatic resources which most directly benefit students.

A $7,000 increase is requested for advisory services. This activity supports 2 meetings each of the advisory committee on selection of textbooks and the advisory committee on research and development, a nominations committee meeting, the annual census of blind students, production of catalogs of educational materials, and field services such as consultation and in-service training to inform administrators and teachers about available materials and

---

1991 Budget Proposal — Continued

how they are used. The advisory committees are selected from ex officio members of APHB's Board of Trustees.

The request for educational and technical research represents an increase of $15,000 over the 1990 appropriation level. This level will provide sufficient funds to continue current research operations and explore new promising areas for product development. Examples of priority areas for materials under development include:

Early Childhood

- Developing Literacy: Basic Skills, Concepts, and Early Experience
- Infant Skills Project
- Preschool Learning Activities
- Early Childhood Microcomputer Applications
- Parents and Visually Impaired Infants

Braille

- Braille Language Program
- Grade 2 Braille Cards
- Braille Line Length Study
- Linguistic Analysis of American Literary Braille, Grade 2
- Braille Writing Program
- New Programmed Instruction in Braille

Microcomputer Applications

- APH PocketBraille Enhancements
- BASIC Programming
- Speaqualizer Improvements
- Talking Literacy Kit (TALK): Apple II Computers
- Talking Typer
- Telecommunications

Federal funds augment funds which APHB receives from other sources to conduct research. APHB uses these funds to conduct applied research and has developed a wide variety of new and adapted educational materials. In 1991, the Printing House plans to place a priority on the development of new materials to serve children birth through age 3.

The Department of Education initiated a study of the Printing House and the provision of educational materials for the blind in October 1989. The purpose of the study is to obtain data on the operations of the Federal quota program at APHB, the effect of the program on the education of persons who are visually impaired, and the context under which it operates. The Federal Government has not previously conducted a study of the Printing House, though

Special Institutions for the Handicapped

1. American Printing House for the Blind

1991 Budget Proposal — Continued

APHB has received a Federal appropriation for the purpose of producing and distributing educational materials for persons who are blind for 121 years. The study will address a number of questions related to APHB. For example, how well are the materials produced meeting the needs of consumers? How does the per-pupil allotment relate to the needs of visually impaired students? Can the current method for determining the allotment to States for distributing products under the Federal program be improved? How does the Printing House coordinate with or complement other producers of materials for persons who are visually impaired? Are there emerging issues likely to affect the educational needs of students who are visually impaired? The Department is also aware of concerns raised by the National Federation of the Blind regarding the effectiveness of the Federal quota program at APHB. This study will examine these concerns.

The study will also examine several general issues related to the provision of educational materials for visually impaired students. These include the average cost of supplying students with educational and related materials per year and how this cost varies by age, severity of disability, and type of student placement. The Education of the Handicapped Act (EHA) has had a significant impact on the education of persons who are blind by requiring a free, appropriate public education for all students with disabilities. As a result, the number of visually impaired children served through the Act has greatly increased. The significance of the EHA or changes in technology on the services provided and need for materials for visually impaired students has not been assessed since the passage of the Act. This study should provide a better understanding of the services provided to and emerging needs of APHB's target population. The Department made a presentation of the goals and objectives of the study at the Annual Meeting of the Ex Officio Members of the Board of Trustees of the Printing House in October 1989.

Impact Data	1989	1990	1991
Distribution of funding:			
Educational materials......	$4,860,000 1/	$5,149,000	$5,366,000
Advisory services..........	144,000	153,000	159,000
Educational and technical research.................	341,000	361,000	376,000
Total, APHB..............	5,345,000	5,663,000	5,901,000

2. **National Technical Institute for the Deaf: a) Operations** (20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$34,384,000	$37,195,000	+$2,811,000

Purpose and Method of Operation

The National Technical Institute for the Deaf Act authorized the creation of a residential facility for postsecondary technical training and education for deaf individuals in 1965. The purpose of the Act was to promote the employment of the deaf by providing technical and professional education for the Nation's deaf young people. The Secretary of Education was authorized by the Act to contract with an institution of higher education located in a metropolitan industrial area. Such a contract is maintained with the Rochester Institute of Technology (RIT) in Rochester, NY. The purpose of the special relationship with the host institution is to provide the National Technical Institute for the Deaf (NTID) with facilities and core services which would not otherwise be available to an institution of NTID's size. RIT provides curriculum and faculty expertise from eight other colleges; health and counseling services; library, physical education and recreation facilities; and reduced overhead for services such as food, maintenance, grounds, and security due to economies of scale.

The National Technical Institute for the Deaf Act was superceded by the Education of the Deaf Act of 1986. This Act continues the authority of the Department of Education to contract with a host institution and provide a Federal subsidy to NTID so the Institute may continue to provide postsecondary educational options for individuals who are deaf. This appropriation represents about 83 percent of NTID's total budget. The remaining funds come from tuition and fees. The appropriation is a current funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

NTID offers a variety of technical programs at the certificate, diploma, and associate degree level. These include majors in business, engineering and science, and visual communications. NTID students may also participate in approximately 200 educational programs available through the other eight colleges of the Rochester Institute of Technology. RIT offers advanced technological studies at the bachelor's and master's degree levels. The association of NTID with the Rochester Institute of Technology provides deaf students with a far wider choice of career preparation options than could be provided by a national technical institute for the deaf standing alone. NTID augments the technical and professional education programs with support services and special programs. These services include tutoring, counseling,

Purpose and Method of Operation -- Continued

notetaking, interpreting, the provision of special educational media, and programs such as cooperative work experience and specialized job placement.

NTID also conducts applied research and provides training in occupational and employment-related aspects of deafness, communication assessment, demographics of NTID's target population, the characteristics and flow of students through the postsecondary environment, learning development, and the education process. Research findings, education techniques, and products are disseminated through publications and training seminars. NTID helps train professionals in the field of deafness through the University of Rochester Graduate Program for Education Specialists, an Associate in Applied Science program in interpreting, a tutor/notetaking program, and an internship program for graduate students and other professionals.

Accomplishments

The number of applicants to the National Technical Institute for the Deaf continued to decrease from 735 in 1987 to 692 in 1988 and 646 in 1989. Acceptances declined from 551 in 1987 to 476 in 1989 and registrations fell from 419 to 372 during this period. The total enrollment of deaf students at the Institute dropped from 1,288 in 1987 to 1,096 for 1990. However, the current enrollment is still 103 higher than it was in 1983, prior to the rubella bulge. NTID attributes the decreases to a decline in the number of rubella students and a declining pool of eligible high school students. The Institute is employing aggressive marketing strategies to enroll new students, transfer students, and previous dropouts to help increase NTID's enrollment. NTID also hopes to admit foreign students for the first time with the Summer 1990 session. The Institute anticipates that the addition of these students will help reverse the overall decline in enrollment in recent years.

During 1989, 174 degrees were granted to 172 graduates, 52 less than the record set in 1988. Forty-nine of the graduates received bachelor's or master's degrees through the other colleges of RIT. This compares with 51 in 1988, 36 in 1987, and 32 in fiscal year 1986. While the total number of bachelor's and master's degree graduates is slightly lower than last year, the percentage this number represents of total graduates was much higher, 28 percent as compared to 18 percent in 1988. Enrollment of deaf students in RIT's other colleges remained high in 1989. Two hundred and thirty-nine deaf students were enrolled in RIT programs along with RIT's 13,000 full-time and part-time hearing students. The percentage of deaf students admitted from mainstreamed schools also continued to be very high which reflects a national trend to educate students with handicaps in classes with their non-handicapped peers. Students who received their secondary education at mainstreamed schools comprised 67 percent of students admitted in 1989. The remaining students came from public schools for the deaf (30 percent), and private schools for the deaf (3 percent). Students came from 40 States, the District of Columbia, and Puerto Rico.

Accomplishments -- Continued

NTID does not yet have figures on the employment status of 1989 graduates. However, 155 of the 224 graduates from 1988, or 69 percent, have chosen to enter the labor market. Of those, 146 persons, or 94 percent, are employed. Consistent with past records, the majority of these graduates, or 82 percent, were employed in business and industry. Of the remaining graduates, 15 percent are employed in government and 3 percent in education. The majority of those not entering the labor force chose to continue their education. According to figures collected by the Institute, unemployment among NTID alumni seeking work was approximately 4 percent in 1989, well below the national average. To facilitate the employment of persons who are deaf, the National Center on Employment of the Deaf at NTID continued to provide training to persons concerned with employment of deaf individuals. Approximately 350 persons participated in ongoing programs of the Center in 1989.

In fiscal year 1988, program review guidelines were developed by the NTID curriculum committee to assist departments in curriculum evaluation. These guidelines were adopted in 1989. Using these guidelines, schools and divisions can obtain formative information about how well they are doing. Reviews of the data processing program and counseling services in the School of Business Careers and the manufacturing processes program in the School of Science and Engineering Careers currently are in progress using the new guidelines. In fiscal year 1989, a new degree option was offered in Business Technology for an Associate in Occupational Studies degree. In addition, an associate degree in manufacturing processes was approved by the School of Science and Engineering Careers, curriculum options were proposed in the field of electronic document production through the School of Visual Communication Careers, and an associate degree was proposed in custom photographic laboratory services by the photo/media technologies department. Two of three courses for third-year NTID students were adopted as part of an integrated mathematics sequence, and the third course is being developed.

Since renewing its commitment to affirmative Action (AA) and Equal Employment Opportunity (EEO) in 1985, NTID has increased both its employment of minority and handicapped people. The number of racial minority employees has grown from 17 in fiscal year 1985 to 42 in fiscal year 1990. The number of disabled employees has increased from 54 to 85 during the same period. Deaf persons accounted for 47 of these employees in 1985 and 78 in 1990. Significantly, nearly 55 percent, or 30 out of 55, of the employees hired in the past year were either minorities or disabled. Twenty of these persons were hearing impaired. In addition, of the 372 new students enrolled at NTID for 1990, 14.5 percent are members of minorities, the highest representation in NTID's history. The number of incoming minority students jumped from 36 in 1989 to 54 for 1990. This number is 50 percent higher than the number of minority students in any previous incoming class.

NTID's joint study with the Internal Revenue Service was initiated in 1985 and compares the earnings of deaf graduates with those of hearing people with

---

Accomplishments -- Continued

similar skills. The project was expanded in 1989 to include the four federally funded Regional Postsecondary Education Programs for the Deaf. The addition of these programs enabled NTID to study the earnings of over 16,000 deaf and hearing persons who completed some postsecondary education. Findings from this study indicate that deaf individuals without a college degree earn nearly 32 percent less than their hearing counterparts, but those with bachelor's and master's degrees earn only 11 to 17 percent less than their hearing peers. This is consistent with the previous year's study that showed that NTID bachelor degree graduates earned only 8 percent less that a matched sample of Rochester Institute of Technology bachelor degree graduates who are hearing. NTID also completed its 10th year of the Secondary School Follow-up Program. In 1989, the follow-up was expanded from 2,500 students to nearly 5,000 alumni of 26 high schools. Respondents provided information on their educational, social, and occupational activities. The survey indicated that the transition from high school to the world of work is particularly difficult for individuals who do not pursue some form of postsecondary education. In addition, college graduates secure better jobs and experience lower unemployment than deaf individuals that do not complete college.

The Institute's Department of Educational Research and Development has several projects to enhance the personal and career development of deaf students. For example, deaf students in postsecondary education have a high drop-out rate. The Early Alert System for Education, which completed its fourth year in 1989, was developed to help retain students at NTID. The system uses student surveys and teacher referrals to identify students who show signs of potential academic or adjustment problems. The information is collected in the first three weeks of the student's first academic quarter so that it can be analyzed promptly and reported to the student's counselor in case intervention is needed. The Department also completed a multiyear study on mainstreaming at RIT entitled, "Academic and Social Mainstreaming: Deaf Students' Perspectives on their College Experiences." This study was complemented by a September 1989 paper, "Integrating Hearing and Deaf Students on a College Campus: Successes and Barriers as Experienced by Hearing Students." Another project with significant potential is the Real-Time Graphic Display Alternative. Rather than using interpreters and notetakers, this system uses a stenographer to translate instruction into print during class. Students also receive a hard-copy printout of the lecture afterward. Research is continuing to identify systems for converting speech to print that would not involve the training of a stenographer. This project is of particular benefit to students who use oral communication.

1991 Budget Proposal

The Department is requesting $37,195,000 for the National Technical Institute for the Deaf (NTID), an increase of $2,811,000 over the 1990 appropriation. This amount represents an 8.2 percent increase above the 1990 appropriation level. This increase would provide substantial funding to help meet increased costs. The request includes $1,942,000 for compensation increases. This

---

1991 Budget Proposal -- Continued

level would provide sufficient funds for an across-the-board increase of 6 percent above NTID's 1990 salary base. To offset the effect of inflation, a general increase of 4.2 percent, or $369,000, is requested for non-personnel compensation and benefit activities. The remaining $500,000 would be used for chargebacks from the Rochester Institute of Technology that are increasing at a higher rate than the inflation rate provided, the acquisition of new equipment, and for program improvement. In addition to the increase in appropriations, NTID will receive increased revenue from tuition which is increasing by $250 per student in 1991. The Institute estimates that the tuition increase will generate approximately $300,000 in new revenue.

The Federal Government, through its support for NTID, has demonstrated a strong commitment to the education of the deaf over the years. Over the past 10 years, funding for the direct operations of the Institute increased from $17,349,000 in 1980 to $34,321,000 in 1990. This represents an increase of 97.8 percent. Prior to 1987, NTID did not conduct fundraising activities because it did not want to take away from the fundraising efforts of the Rochester Institute of Technology. However, the Department strongly encouraged NTID to solicit private contributions and introduced the endowment matching program as an incentive for it to do so. The Institute concluded the second full year of its new development program in 1989. A total of $962,851 in gift income was contributed by more than 500 individuals, corporations, and foundations. This represents an increase of 141 percent over the 1988 level of $399,779. The total included $252,671 in endowed funds eligible for the Federal matching program and $422,536 in state-of-the-art equipment for academic programs. Of the remaining funds, $250,000 was used to establish a new International Center for Hearing and Speech Research, whick is a joint venture between NTID and the University of Rochester Medical Center funded solely through private sources.

The Administration's request for 1991 includes funds specifically targeted toward providing an across-the-board 6 percent salary and benefit increase for all personnel. The Institute would like to provide a 7 percent increase in salaries and benefits to faculty and staff to increase NTID's competitiveness in the higher education employment market. While sufficient funding would be available in the request to fund such an increase, a 6 percent increase is consistent with increases currently planned for employees of the host institution, the Rochester Institute of Technology (RIT). NTID has claimed in the past that they are required by the agreement between the Department of Education and RIT to provide the same increases as RIT. However, 7 percent would be greater than that planned by RIT. The Senate Committee directed the Department of Education to investigate this issue and submit a report to the Committee no later than February 1, 1990.

The conference report to the 1990 appropriation bill also directed the Secretary to grant approval for NTID to admit foreign students and that such students should pay a 50 percent tuition surcharge which could be phased-in over a three-year period. The Department plans to reach a decision on this

1991 Budget Proposal -- Continued

matter, including possible conditions that might be placed on such approval, prior to the 1991 appropriation hearings.

A proposal for a new associate degree program in manufacturing processes was accepted by the NTID Curriculum Committee and will be implemented for school year 1990-91. The program will involve the development of four new courses. NTID plans to submit a new associate degree program proposal for custom color lab services to the curriculum committee for approval in 1990 and expand the basic interpreter training program within the Department of Support Service Education to address the need for continuing education for interpreters by establishing a summer institute program for professional interpreters. NTID is also planning to implement and evaluate a pilot program in "distance learning" for a liberal arts course using computer conferencing as the primary instructional medium. The program would be jointly sponsored by the Rochester Institute of Technology College of Liberal Arts, NTID, and Gallaudet University. All six academic departments (Audiology, Speech-Language, English, Technical and Integrative Communication Studies, Sign Communication, and Research) within the Division of Communication Programs have established program review committees in preparation for 5-year departmental program reviews scheduled for 1991.

1/ A three-year tuition plan was agreed upon by the National Technical Institute for the Deaf, Gallaudet University, and the Department of Education in September 1988. The levels in this plan were subsequently approved by the RIT Board of Trustees.

2/ Includes estimate of 25 applications from foreign nationals based on an expectation that NTID will be permitted to admit foreign students for school year 1990-91.

3/ Includes estimate of 50 applications from foreign nationals based on an expectation that NTID will be permitted to admit foreign students for school year 1991-92.

Special Institutions for the Handicapped

2. National Technical Institute for the Deaf: b) Endowment
(20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$322,000 1/	$336,000	+$14,000

Purpose and Method of Operation

Section 408 of the Education of the Deaf Act of 1986 created the authority for an endowment matching program for the National Technical Institute for the Deaf (NTID). The endowment matching grant is designed to assist in meeting future needs of the Institute and to reduce long-term Federal funding requirements by stimulating private contributions. The Secretary, subject to the availability of appropriations, makes payments to the endowment program equal to sums contributed to the program from non-Federal sources (excluding transfers from other endowment funds that may be held by the Institute or host institution). NTID receives matching contributions for non-Federal funds raised up to the amount of funds appropriated by the Congress for this purpose. Funds appropriated for this program are available until expended.

The endowment program corpus, which is invested in federally insured bank savings accounts and other low-risk investments, may not be withdrawn for a twenty-year period running from the August 4, 1986 enactment of the Education of the Deaf Act. The Institute may spend up to 50 percent of the income of the fund for expenses necessary to the operation of NTID such as construction and renovation, personnel, special equipment, community and student services, technical assistance, and research.

Accomplishments

In 1988, the first year for which funds were available, NTID matched the entire $191,000 appropriated for this program. In 1989, contributors designated $252,671 to endowed funds at NTID which qualify for the Federal program. All $198,000 of Federal endowment funds available in 1989 were matched, and $54,671 is available for matching the $322,000 appropriated for 1990.

1991 Budget Proposal

The Department is requesting $336,000 for this program for fiscal year 1991, an increase of $14,000 above the 1990 appropriation level. The 1991 request represents a 4.2 percent increase for inflation to demonstrate our support for this program. NTID requested $500,000 for the endowment program for 1991. However, the Department believes that a larger increase is not warranted at this time. The 1990 appropriation represented a significant

---

1991 Budget Proposal -- Continued

increase over funds previously made available for this purpose. Future requests will be adjusted to reflect the Institute's progress toward meeting the 1990 and 1991 levels. Funds are requested in order to promote the financial independence of the Institute and give NTID a permanent and increasing source of funds for enrichment activities and special projects. The Federal matching provision creates a strong incentive for potential contributors to donate funds to NTID.

---

2. National Technical Institute for the Deaf: c) Construction
(20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$476,000	---	-$476,000

Purpose and Method of Operation

The Education of the Deaf Act of 1986 authorizes the Secretary to establish and continue an agreement with an institution of higher education for the establishment and operation, including construction and equipment, of a National Technical Institute for the Deaf. The Agreement for Establishment and Operation of the National Technical Institute for the Deaf defines construction, in part, as construction of new buildings; expansion, remodeling, and repair of existing buildings; acquisition of land including the improvements thereon and appurtenances thereunto; and initial equipment essential to the operation of the Institute, including all necessary building fixtures and utilities, furnishings, and instructional equipment.

Accomplishments

In 1990, $476,000 is available for construction. Following is a plan summarizing the projects and estimated funding allocation for each project. NTID anticipates that these projects will be completed by September 1990.

- Installation of Smoke Hatches in Dormitory Stairwells - These hatches are required to allow an escape path for smoke in stairwells. The New York Dormitory Authority found that NTID was out of compliance with the New York State Uniform Fire Prevention and Building Code, Title 9, Volume B, Section 739.4.8. by not having these smoke hatches and recommended that automatic hatches be installed. The Rochester Institute of Technology, NTID's host institution, also planned to undertake a campus-wide program to install automatic smoke hatches in 1990. NTID has been able to take advantage of bulk discounts because of the larger contract. A cost review and project redefinition to allow the use of existing roof openings has further reduced the cost for this project. The original $75,000 estimate has been reduced to an actual project cost of $18,000.

- Strobe Lights - These lights are used as a substitute for fire and other emergency alarms in the dormitories. The original strobe lights installed by the Institute are no longer manufactured and are difficult to replace. In addition, they do not meet Underwriters Laboratories standards currently required by the National Electrical Code, articles 100 and 110. Standards had not been adopted at the time this system

Accomplishments — Continued

was installed. The Institute proposes to replace all such lights to increase safety and lessen potential liabilities in the event of a disaster. Estimated cost: $458,000.

1991 Budget Proposal

No funds are requested for construction for 1991. In 1990, $476,000 was appropriated for the repair of emergency items associated with safety and security. The Institute indicated in its November 6, 1989 report to Congress on the 1990 repair program that funds set aside for the maintenance of facilities within NTID's operating budget would be sufficient to cover additional priority areas. These include smoke detectors to replace heat detectors in the dormitories, additional strobe lights for non-NTID dormitories, and the replacement of smoke doors in the dormitory basement tunnels.

The National Technical Institute for the Deaf did not request funds for construction for 1991. The Institute has undertaken in-depth reviews of facilities to determine areas in need of major renovations. NTID is developing a long-range plan, and has indicated that it intends to involve the Department of Education in the development of this plan. To the extent the facility reviews indicate needs which cannot be addressed within the ongoing maintenance plan of the Institute, they will be considered as part of the budget requests for future fiscal years.

Special Institutions for the Handicapped

---

2. National Technical Institute for the Deaf: d) Consortium (Rehabilitation Act of 1973, Title III, Part B, section 311))

1991 Authorization: $19,675,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$888,000 1/	---	-$888,000

1/ Authorization amounts shown for this activity represent the total authorization for all activities under section 311 of the Rehabilitation Act of 1973 which are otherwise funded under the Rehabilitation Services and Handicapped Research Account.

Purpose and Method of Operation

The 1990 appropriation for the National Technical Institute for the Deaf included funds to be used by the Secretary for one year grants under section 311 of the Rehabilitation Act of 1973 (the Act) for the purpose of supporting a consortium of institutions to provide education and vocational rehabilitation services for low functioning adults who are deaf. Section 311 of the Act authorizes the provision of financial assistance to projects for expanding or otherwise improving vocational rehabilitation services and other rehabilitation services for individuals with severe disabilities. States and public and other nonprofit agencies and organizations are eligible for assistance under this program. Projects for persons who are deaf must demonstrate innovative methods of providing the specialized services needed to rehabilitate and make maximum use of the vocational potential of these individuals or conduct coordinated activities with other public and nonprofit agencies administering programs for deaf persons in the same area in order to expand or improve rehabilitation services for individuals who are deaf.

For 1990, the Department plans to give absolute preference to applicants that would provide educational and vocational rehabilitation services to maximize the vocational potential of low functioning adults who are deaf, including those who are deaf and have additional handicapping conditions. Applicants must coordinate with and provide services through a consortium of public and private agencies to address the general education, counseling, vocational training, work transition, supported employment, job placement and follow-up, and community outreach needs of low functioning adults who are deaf. Applicants must propose projects that can be replicated, in whole or in part, by other service providers.

1991 Budget Proposal

No funds are requested for the Consortium for fiscal year 1991. The Department believes that it is premature to commit additional funding to this

1991 Budget Proposal — Continued

project. The Department continues to have a number of serious concerns about this project. It is not clear that this is the best mechanism to provide services to this population. We are concerned that the Federal Government not commit itself to a particular course until all avenues are investigated. In 1990, the Department will establish a new Research and Training Center under the National Institute on Disability and Rehabilitation Research for low functioning persons who are deaf. This center will conduct research on how best to meet the needs of the low functioning deaf population. The activities and findings of the Research and Training Center and demonstration programs funded under this program should be evaluated prior to targeting additional resources towards the service needs of the low functioning deaf population.

3. Gallaudet University: a) Operations
(20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
University programs...	$45,899,000	$48,799,000	+$2,900,000
Model Secondary School for the Deaf.........	13,368,000	14,005,000	+637,000
Kendall Demonstration Elementary School....	7,390,000	7,743,000	+353,000
Total..........	66,657,000	70,547,000	+3,890,000

Purpose and Method of Operation

Gallaudet University is a private, nonprofit educational institution providing elementary, secondary, college preparatory, undergraduate, and continuing education programs for deaf persons. In addition, the school offers graduate programs in fields related to deafness for deaf and hearing students, conducts a wide variety of basic and applied deafness research, and provides public service programs for deaf persons and professionals who work with deaf persons.

Gallaudet University serves deaf people throughout the Nation through a wide variety of educational opportunities, public outreach activities, and research programs. It offers a traditional liberal arts curriculum and graduate programs on its main campus and a preparatory program on the satellite campus in Northwest Washington. In addition to these instructional programs, the University provides special communications training, counseling, and other supportive services to its students.

The Model Secondary School for the Deaf (MSSD) provides secondary education to deaf students from the District of Columbia, five neighboring States, and other States based on need and available space. MSSD serves as a laboratory for educational experimentation and development; disseminates working models related to the education of deaf persons to educational programs and professionals serving deaf students; prepares deaf adolescents for postsecondary academic and/or vocational pursuits; and provides students with skills considered necessary to becoming well-adjusted, contributing members of society.

The Kendall Demonstration Elementary School (KDES) operates as a model elementary school for deaf children. Its purpose is to provide exemplary educational programs for hearing-impaired children who reside in the greater Washington metropolitan area. The instructional program provides learning activities and on-site instruction for children from infancy through age 15. Support programs provide services to instructional personnel and students'

Purpose and Method of Operation — Continued

families in areas such as educational technology, social services, family education, speech, audiology, student counseling, educational assessment, occupational therapy, medical services, and evaluation. Like MSSD, it also develops and disseminates educational techniques and strategies it believes would be effective for teachers and professionals working with deaf children. Both MSSD and KDES are located on the main campus of Gallaudet University.

The Federal appropriation represents about 73 percent of total income for the University, including income from restricted and unrestricted sources. The appropriation comprises 100 percent of the funding for the Model Secondary School for the Deaf (MSSD) and Kendall Demonstration Elementary School (KDES) and about 65 percent of the funding for college level instructional, research, and outreach programs. The University derives its remaining revenue from a combination of student tuition and fees, Federal research grants and contracts, private research contracts and grants, auxiliary services revenue, private donations, endowment income, and interest income from investments. This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The University had a significant increase in enrollments in school year 1988-89. This may be attributed to the increased awareness and positive publicity resulting from the appointment of Dr. I. King Jordan, the first deaf president of Gallaudet University. Enrollment leveled off slightly in the fall of school year 1989-90, but this level is still higher than the enrollment of 1987-88. Enrollment at MSSD continued to decline for the sixth consecutive year. These decreases may be attributed to a number of factors, including increasing mainstream options for deaf students, a decrease in the available pool of deaf students following the passing of the influx of students deafened as a result of the rubella epidemic of 1964-65, and a nationwide decline in the number of secondary school age students. The University created the Postsecondary Enrichment Program to help fill the excess capacity, but enrollments in the high school program have continued to decline. The University is very concerned about the loss of enrollment in the MSSD program and, as a part of a comprehensive enrollment planning process which began this fall, is considering various options for the program. KDES anticipates that enrollment will remain relatively stable in fiscal year 1990.

During 1989, Gallaudet served 259 preparatory students, 1,602 undergraduates, 151 non-degree credit students, and 379 graduate students through University programs. The Model Secondary School for the Deaf served 296 high school students and 48 preparatory students, and the Kendall Demonstration Elementary School served 192 students. In addition, the University developed numerous research publications, provided public service programs, and hosted students, professionals, dignitaries, members of the general public, and international visitors who visited the campus to observe programs and meet with Gallaudet staff.

Accomplishments -- Continued

In 1989, Gallaudet initiated a study of the institution's organizational structure. Major goals of the organizational study included: streamlining of the organizational structure, decentralization of responsibility and authority, identification of the provost as the senior vice president, integration of academic programs, better coordination of outreach efforts, increasing the emphasis on private fundraising, and reduction of the number of functions reporting to the president. As a result of this study, the number of vice presidents was reduced from five to three. These are the Provost, Vice President for Administration and Business, and Vice President for Development. The positions of Vice President for Institutional Research, University Relations, and Pre-College Programs were eliminated. Additional programs were consolidated, and the Provost was designated the chief academic officer. Gallaudet expects that there will be substantial savings due to elimination of these administrative positions, and that the funding supporting these positions will be reallocated into program and program support areas.

On July 10-14, 1989, Gallaudet University hosted a major international conference and festival on deafness titled "The Deaf Way." More than 500 papers, performances, and exhibits were presented during this period. The conference focused on four areas: deaf culture, history, language, and art. Each area included two major plenary sessions, daily symposia, and many smaller presentations. The conference attempted to set a new direction for the world deaf community by focusing on ability and diversity rather than the limitations of deafness. Over 5,000 persons attended, including representatives of 81 countries.

The General Accounting Office (GAO), in its 1987 evaluation of Gallaudet's elementary and secondary schools, was highly critical of the University's recordkeeping regarding pre-college research and demonstration funds. The University believes that it has made progress and is now complying with GAO's recommendations. The University determined that separate accounting for national mission costs would be excessively expensive and time consuming. Gallaudet is implementing an alternative reporting system that it believes will produce more reliable and valid information. This should result in more precise estimates of the pre-college programs' national mission costs. Gallaudet is currently developing instruments and procedures for putting this system into operation. A review of the literature in this area has been completed and interviews are being conducted with representative faculty and staff to assist in the development of an appropriate design for data collection. The University anticipates that the new system will be fully operational by the close of fiscal year 1990.

The Education of the Deaf Act mandates that the Secretary conduct monitoring and evaluation activities of the education programs and activities and administrative operations of Gallaudet University. The Commission on the Education of the Deaf also recommended that the Department conduct program evaluations of Gallaudet. In 1989, the Department conducted a planning study to determine priorities for evaluation related to Gallaudet University. The

---

Accomplishments -- Continued

results of this study are discussed in the narrative for Evaluation Studies. In addition, the Department is conducting a study of the Model Secondary School for the Deaf and Kendall Demonstration Elementary School. The purpose of this study is to determine the impact of these 100 percent federally funded, tuition-free schools on the placement decisions of local school districts and how the per pupil cost of these schools compares to per pupil costs of other placements. Originally scheduled for completion in 1989, this report from this study has been delayed for additional data gathering and analysis. The Department anticipates completion during fiscal year 1990.

The Commission on Education of the Deaf issued its report, Toward Equality, in February 1988. The report contained several recommendations related to Gallaudet University. Gallaudet has made progress toward meeting a number of the recommendations. For example, during the past year, four new members joined the Gallaudet Board of Trustees, all of them persons who are deaf. Gallaudet also developed concrete research plans which were shared with the Department of Education in 1989. The Department is requesting an update of this plan for fiscal years 1990 and 1991. The data provided include the nature and rationale for the research, where it is housed organizationally, the cost and funding source for each project, and a description of all new initiatives. The Department plans to review and comment on the plans received.

1991 Budget Proposal

The Department requests $70,547,000 for Gallaudet University operations, an increase of $3,890,000, or 5.8 percent, above the 1990 appropriation. This amount represents a 6.3 percent increase for the operation of University programs and 4.8 percent increase for the operations of the Model Secondary School for the Deaf (MSSD) and Kendall Demonstration Elementary School (KDES). These increases are proposed to provide salary improvements for faculty and staff and programmatic improvements for University programs.

The University's main priority for operations in fiscal year 1991 continues to be increasing its competitiveness in faculty and staff employment markets. Over the past several years, Gallaudet has given salary increases to faculty in excess of inflation in order to increase its competitiveness with area and other national institutions. Gallaudet faculty and staff must not only be well qualified in their fields, but also be trained to meet the special needs of deaf students, clients, and co-workers. For this reason, the University plans to put $2.9 million of the $3.9 million operations increase for University programs, MSSD, and KDES into salary and benefit increments. This level would provide sufficient funds for an across-the-board 5 percent increase in salaries and benefits.

Gallaudet anticipates that higher expenses in other areas would be covered through increases in non-appropriated revenues, primarily tuition and fees. A three-year plan for incremental tuition and fee increases was established during discussions among the Department of Education, Gallaudet University,

---

1991 Budget Proposal -- Continued

and the National Technical Institute for the Deaf held in September 1988. An agreement reached at that time includes a school year 1990-91 tuition increase of $250 per United States student above the tuition to be charged in school year 1989-90, a 50 percent surcharge above this rate for foreign students, and an increase of $439 in room and board charges for all students. This will result in additional revenue of approximately $1,285,000 in 1991.

Gallaudet University is placing increasing emphasis on training professionals to serve deaf persons in the areas of mental health and social services. A lack of communication and understanding between the deaf client and the professional has constituted a major obstacle to high quality service and care. To help address this need, Gallaudet introduced a new master's degree program in social work in school year 1989-90. This program is continuing to be developed and will be phased in during fiscal years 1990 and 1991. A new doctoral program in clinical psychology is accepting students and will commence full operations in school year 1990-91. Because the deaf population is relatively small and widely dispersed, the new programs will lead to certification of graduates as general practicioners in their fields, with a specialty in deafness. The Department is requesting $475,000 to develop and support these programs in 1991.

In 1987, the University opened a new school of management. Gallaudet used $150 thousand of the 1989 appropriation to support the expansion of the School of Management. However, enrollment and interest in these programs have continued to grow. The Department is requesting an additional $50 thousand to support increased program offerings at the School of Management for 1991.

For 1991, the University proposes to augment programs in professional development for faculty and staff and enhance efforts to assess student educational outcomes. The Department has expressed a strong interest in assessing student outcomes at Gallaudet, consistent with the Administration's emphasis on program accountability. The Department is requesting $450,000 for these programs for 1991. The program would consist of the following five components:

1. A Centralized Program to Improve Learning and Teaching. This program is designed to provide a central organization for enhancement and expansion of academic support services and instructional and curriculum development. Examples of services include: tutorial services, support for faculty curriculum development, and student outcome assessment services. ($150 thousand)

2. School of Preparatory Studies Assessment Program. Funds are requested to support the expansion of existing efforts aimed at identifying the factors that lead to enhanced student achievement, especially at the preparatory level. ($50 thousand)

1991 Budget Proposal — Continued

3. School of Education and Human Services Student Outcomes Assessment Program. This program is required for accreditation of teacher training programs and is designed to provide follow-up information on and assistance to students after graduation and during their first year on the job. ($50 thousand)

4. Sign Communication Diagnostic Center. This program is needed to further implement Gallaudet's new system for assessing student and employee sign communication proficiency. The Center will provide assessment and diagnostic information to faculty, staff, and students seeking assistance. ($100 thousand)

5. Academic computing. In recent years, there has been exponential growth in computing technology and its academic applications. Funds are needed to provide professional development for faculty and training for students to make optimal use of this technology, both in the curriculum and in future employment. ($100 thousand)

The University has requested $125 thousand in 1991 for a new program to offer an associate of applied science degree in Medical Records Technology (MRT). The MRT program is designed to provide options for students who do not elect to pursue a bachelor's degree. The Department questions the need for this program. The National Technical Institute for the Deaf has a very successful ongoing MRT program, and there are several existing MRT programs in the Washington metropolitan area. The Department is also concerned that the addition of associate degree programs of this type would constitute a shift from Gallaudet's mission as a liberal arts institution. The National Technical Institute for the Deaf (NTID) and four federally funded Regional Postsecondary Programs for the Deaf offer alternatives for students for whom completion of a four year program is not feasible. The Department does not believe this is a priority area for the expansion of Gallaudet's programs, or that the Federal Government should be funding programs at Gallaudet to compete with programs it funds at NTID. Funds are not requested for this purpose.

In addition to efforts described above related to student assessment, the University is planning to form committees to develop evaluation tools that will measure student skill levels and progress in curricular and communication areas. Specific skills to be examined will vary on a program by program basis, but at minimum will include communication, analytical reasoning, and problem solving. Based on the assessment of skill levels, the curriculum will be revised to enable students to more effectively achieve desired outcomes. In addition, faculty will be trained in the principles and practices of performance assessment.

The Department continues to strongly believe that the Federal Government should not be subsidizing the cost of educating foreign nationals. This practice results in substantial operational and capital expenditure costs for the American taxpayer. For example, as discussed in our request for

1991 Budget Proposal — Continued

construction, Gallaudet is asking for Federal participation in a major renovation and expansion project because University enrollments have increased to a point near full capacity. These funds might not be necessary if not for foreign students who currently comprise almost 13 percent of the total enrollment at the University. In 1989, foreign student enrollment increased by 31 percent and accounted for 65 percent of the increase in enrollments. The practice also results in the United States helping foreign governments to avoid the responsibility for educating their citizens.

The Department supports adoption of a surcharge for these students based on the charges assessed by public universities against out-of-state and foreign students. Virtually all State universities, land grant colleges, and public four-year institutions of higher education charge substantially higher fees for out-of-State and foreign students. Sixty-nine of the seventy State university and land grant colleges used as the comparison group for setting tuition levels at Gallaudet and the National Technical Institute for the Deaf charge significantly higher tuition for these students. A review of public four year colleges and universities in the 1987-88 data base of the Integrated Postsecondary Education Data System found that 429 of 443 schools reporting data, or over 96.8 percent, charged significantly higher tuition to out-of-state students. The average out-of-state undergraduate tuition charges were 135 percent more at both the land grant colleges and universities and public four-year institutions. Foreign students were charged the same tuition as out-of-state students at these schools. The relationship of these State funded schools is analogous to that of Gallaudet to the Federal Government. They receive substantial funding from their State governments while charging significantly lower tuition to State residents. Foreign students are the equivalent of out-of-state students for the State-associated institutions.

In an attempt to respond to these concerns, Gallaudet raised the surcharge from 20 percent in school year 1988-89 to 50 percent for school year 1989-90. The Department and Gallaudet plan to meet in the latter part of 1990 to assess the impact of this change and feasibility of further increases. The Department intends to continue to pursue a phase in of tuition surcharge increases until the 135 percent surcharge level is reached. The Department believes a differential pricing policy for foreign students is justified by the very high level of public subsidy involved.

Impact Data	1989	1990	1991

3. Gallaudet University: a) Operations

Impact Data — Continued

1/ A three-year tuition plan was agreed upon by Gallaudet University, the National Technical Institute for the Deaf, and the Department of Education in September 1988. The Gallaudet University Board of Trustees approved the level for school year 1990-91 adopted in this plan at their October 1989 meeting.

2/ This category includes a credit bearing sign language program which does not lead to a degree and students enrolled in credit bearing courses who have not satisfied entrance requirements.

3/ The method for calculating these ratios has been changed from that used in prior years. The student ratios for MSSD and KDES in this display represent the total enrollment divided by budgeted faculty positions. This is the same method as used for calculating the ratio for the university faculty programs. Previously, the ratios were calculated as average class size.

Special Institutions for the Handicapped

---

3. Gallaudet University: b) Endowment
   (20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$986,000	$1,000,000	+$14,000

Purpose and Method of Operation

The Education of the Deaf Act of 1986, section 407, created the authority for an endowment matching program for Gallaudet University. The program is designed to assist in meeting future needs of the University and reduce long-term Federal funding requirements by stimulating private contributions. The Secretary makes payments to the endowment program equal to sums contributed to the fund from non-Federal sources. Matching funds may not include transfers from other endowment or restricted funds of the University.

The endowment fund corpus, which is invested in federally insured bank savings accounts and other low-risk investments, may not be withdrawn for a twenty-year period running from August 4, 1986. Gallaudet University may use up to 50 percent of the income of the fund for expenses necessary to the operation of the University such as personnel, construction and renovation, community and student services, technical assistance, and research. Federal contributions are subject to the availability of appropriations.

Accomplishments

The Department received funding for the Endowment Matching Grant program for the first time in fiscal year 1988. Gallaudet matched the entire $957,000 appropriated in 1988 and $988,000 in 1989. Gallaudet has worked to expand and improve its development program. For example, a new director for fundraising was hired in 1988, and development was elevated to the vice-presidential level in 1989.

1991 Budget Proposal

The Department is requesting $1,000,000 for the endowment matching program for Gallaudet University for 1991. The Federal matching program has created a strong incentive for potential contributors to donate funds to Gallaudet which should be continued. The Department supports the endowment program because it helps promote the financial independence of the University and gives Gallaudet a permanent and increasing source of funds for enrichment activities and special projects.

3. Gallaudet University: c) Construction
(20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$2,500,000	+$2,500,000

Purpose and Method of Operation

The purpose of the construction activity is to maintain and expand Gallaudet University facilities as necessary to support the instructional and other programs of the University. The term construction includes construction and initial equipment of new buildings, and expansion, remodeling, and alteration of existing buildings and equipment, including architect's services, but excluding off-site improvements. The Education of the Deaf Act provides that all financial transactions and accounts of the University in connection with the expenditure of appropriated funds for construction shall be settled and adjusted in the General Accounting Office.

1991 Budget Proposal

The Department is requesting $2.5 million in construction funds for Gallaudet University for 1991. This request is part of a three-year project to be funded jointly by the University and the Federal Government.

The University's request is based upon a space utilization study completed in 1989. This study found that conditions of overcrowding occurred primarily due to growth in the student population, an inappropriate distribution of space, and a configuration of space within Gallaudet buildings which does not allow the most efficient use of space. Gallaudet has conducted an audit of space assignments and redistributed space, as indicated, to help alleviate the problem. Gallaudet's use of space is similar to that of other schools, as indicated in a North Carolina study of private colleges and universities, with the exception of office space, which was much higher. This may be attributable to the high faculty/student ratio, large public service/community outreach program, and size of the in-house research staff. Reconfiguration of existing space in the older classroom buildings and the addition of new space requires special funding.

Gallaudet's priority for construction and renovation is the Hall Memorial Building (HMB). This building is the University's major classroom facility. The project would involve two steps, the first of which would be the construction of an additional 40 thousand feet of classroom and office space. The new addition would ultimately house the Research Institute. However, the space would initially be used to provide swing space for the College of Arts and Sciences during the second stage, which is the renovation of the original HMB structure. This would involve:

Special Institutions for the Handicapped

3. Gallaudet University: c) Construction

1991 Budget Proposal -- Continued

1. The complete remodeling of the building, excluding the structural components;
2. The installation of enhanced heating and ventilation equipment, electrical and communication systems; and
3. The installation of energy efficient windows.

Renovation work would be completed in three stages in order to permit the continued use of the facility for academic purposes. The completed renovation would improve the overall efficiency of the building and allow for the consolidation of the College of Arts and Sciences and Research Institute programs in one building. In addition, aging classrooms and science laboratories will be remodeled and brought up to date with changes in technology and teaching methodology. Gallaudet is currently developing an architectural and engineering design for the addition. The University plans to be ready to place a bid for a contractor by October 1990, if funds are approved.

Gallaudet proposes to share the costs of this project with the Federal Government on an equal basis. The University plans to raise funds using the Federal contribution as an incentive. This is similar in concept to the Federal funding for the Endowment Matching Grant Program. The University estimates that the total package will cost approximately $15 million. The Federal Government would provide one half of this amount over a three year period, beginning with 1991. The University would raise equal amounts through fundraising. Debt financing and reallocation of non-Federal funds might also be considered if fundraising efforts are not sufficient to reach the University's commitment. Approximately $6.6 million of the total projected cost would be associated with the addition to house the research program and $8.5 million for the renovation of the instructional facilities and faculty offices.

The University differentiates funding for this project from that needed for ongoing maintenance. The University funds normal repairs and renovations from its physical plant fund. As of September 30, 1988, the University had a balance of $4.7 million in unexpended physical plant funds. These funds are accumulated through the reallocation of excess non-Federal funds at the close of each fiscal year. The funds are used for the replacement of major equipment, act as an emergency reserve to protect against disasters, and fund deferred maintenance projects. An example of a deferred maintenance project is the chapel on the Kendall Green campus. The University is considering use of some of these funds to restore the stone facade of this building.

4. Evaluation
(20 U.S.C. 4301 et seq.)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$500,000	+$500,000

Purpose and Method of Operation

The Department of Education provides substantial funding to Gallaudet University and the National Technical Institute for the Deaf (NTID). In 1990, this amounted to $102,848,000 for operations. This amount is exclusive of funds for endowment matching grants, research contracts and grants, the Consortium, and Federal student financial aid. These sums provided approximately 75 percent of the funding for Gallaudet University operations and 83 percent of the funding for NTID operations. While funding for these schools has substantially increased in the past decade, there has been little oversight pertaining to how efficiently these funds are spent and whether the funding is accomplishing the objectives for which it was appropriated.

Currently, the Institutions are required to obtain annual audited financial statements, make annual reports to the Secretary, and submit annual budget requests. However, these documents do not provide sufficient information for the Department to fully satisfy the monitoring and evaluation mandates of the Education of the Deaf Act. These reports also do not address issues of efficiency or effectiveness, whether the programs accomplish the objectives for which they are funded, and whether the programs are appropriate for the populations they serve.

In addition, the Commission on Education of the Deaf made several recommendations related to the postsecondary education of persons who are deaf. For example, the Commission recommended that the Department of Education conduct program evaluations of Gallaudet University, NTID, and the other federally funded programs for the deaf on a 5-year cycle. Reports on these evaluations would be submitted to Congress with recommendations, including specific proposals for legislation. They recommended that evaluation teams consisting of outside experts in the field of deafness, program evaluation, education, and rehabilitation, including persons who are deaf, be used to conduct these evaluations. The Commission recommended that the Department of Education's liaison office coordinate the activities of Gallaudet University, the National Technical Institute for the Deaf, and the Regional Postsecondary Education Programs for the Deaf to ensure high quality in programming and to avoid unnecessary duplication. They further recommended that the Department review and comment on workplans related to research, demonstration and evaluation activities, technical assistance, and the development of instructional materials.

4. Evaluation

1991 Budget Proposal

The Department requests $500,000 to pursue a comprehensive evaluation of postsecondary education opportunities for persons who are deaf. This is proposed in order to fulfill the Department's responsibility for monitoring and evaluating the Federal postsecondary education institutions for the deaf.

In 1989, the Department of Education funded a small planning study to develop guidelines for a programmatic evaluation of Gallaudet University. The purpose of the study was to convene a panel of experts to assist in drafting guidelines for such a study. As recommended by the Commission on Education of the Deaf, the study used a panel of experts in deafness, higher education, and program evaluation, including persons who are deaf. The panel, consisting of nine experts in the various fields, met on May 17, 18, and 19, 1989 at the Department of Education to advise the Department on how to set the direction for the evaluation, point out problems and choices to be made, and recommend an appropriate methodology for the Department to employ in conducting the study. The panel was asked to identify priority issues, critical questions, unique characteristics of deaf persons that must be considered in such evaluations, strengths and weaknesses of various evaluation designs and research methodologies, how to distinguish this evaluation from accreditation reviews and accounting audits, and feasible and appropriate student instructional outcome measures. Recommendations were made regarding a number of evaluation areas. However, there appeared to be strong general interest in gathering more detailed baseline data on the postsecondary education experience of exiting high school students and students at all the Federal postsecondary programs for the deaf before a comprehensive programmatic evaluation is conducted.

The proposed study would build upon the results of the planning study described above. The study would gather baseline data on the deaf population that would qualify for entry into postsecondary institutions, the attendance trends of this population, factors contributing to choice of postsecondary institution, and demographic, academic, and functional data. The data generated from this study would give the Department an understanding of the market in relation to the strengths of each school. The data also would be helpful in determining the appropriate mix and level of programs that should be offered by Gallaudet, NTID, and the Regional Programs and to assess institutional and student outcomes at each school, given the unique characteristics of deafness. As recommended by the Commission, the study would use a panel of experts in deafness, higher education, and program evaluation, including persons who are deaf, to assist in conducting the study. The evaluation contract would be competitively awarded.

THURSDAY, FEBRUARY 22, 1990.

SCHOOL IMPROVEMENT PROGRAMS

WITNESSES

DANIEL F. BONNER, ACTING ASSISTANT SECRETARY FOR ELEMENTARY AND SECONDARY EDUCATION

CHRISTOPHER T. CROSS, ASSISTANT SECRETARY FOR EDUCATIONAL RESEARCH AND IMPROVEMENT

ALICIA CORO, DIRECTOR, SCHOOL IMPROVEMENT PROGRAMS, OFFICE OF ELEMENTARY AND SECONDARY EDUCATION

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

THOMAS M. CORWIN, DIRECTOR, DIVISION OF ELEMENTARY, SECONDARY, AND VOCATIONAL ANALYSIS, OFFICE OF PLANNING, BUDGET, AND EVALUATION

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION, AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET, AND EVALUATION

INTRODUCTIONS

Mr. NATCHER. At this time we take up the budget request for the Department of Education and the School Improvement Program. We have before the committee, Mr. Bonner.

Mr. Bonner, before you give us your statement, tell us who you have with you there at the table, please.

Mr. BONNER. I would first like to introduce, Mr. Chairman, Mr. Christopher Cross, who is the Assistant Secretary for the Office of Educational Research and Improvement. On my right, Alicia Coro, Director of School Improvement Programs in the Office of Elementary and Secondary Education; and from the Office of Planning, Budget and Evaluation, Sally Christensen and Tom Corwin; on Chris' left, Carol Cichowski from the Division of Special Education, Rehabilitation and Research Analysis, Office of Planning, Budget and Evaluation.

Mr. NATCHER. We are delighted to have you all before the committee.

As I understand it, you are prepared to go right to answer the questions we have.

Mr. BONNER. Yes, sir.

Mr. NATCHER. Your entire statement will be placed in the record.

[The information follows:]

DEPARTMENT OF EDUCATION

Statement by

Daniel F. Bonner
Acting Assistant Secretary for
Elementary and Secondary Education

on

School Improvement Programs

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to appear before you to present the fiscal year 1991 budget request for School Improvement Programs.

Programs in this account reward excellence and success, promote choice and flexibility, strengthen the quality of teaching and school administration, and support educational reform. Taken together, these programs contribute measurably to the goal of improving educational achievement -- one of the major themes of the Department's 1991 budget.

Summary of Budget Request

For School Improvement Programs, the request totals $1.7 billion, a $258 million, or 17.9 percent, increase over the 1990 level. These funds will support programs that help school districts demonstrate successful ways to reduce dropout rates, increase the quality of instruction in mathematics and science, provide school officials with tools to overcome problems associated with alcohol and drug use among students, train and reward teachers, and promote school reform.

Under our request, most programs in this account would be funded at approximately their 1990 levels, because the amounts are adequate to support continuing activities or because the programs are at their fully authorized levels. Small increases are proposed for Chapter 2 Block Grants, Arts in Education, Inexpensive Book Distribution, and Christa McAuliffe Fellowships, to continue current services under these important programs, and for the Leadership in Educational Administration program, to complete the mandated sixth and final year of funding for all grantees. For six programs, the budget includes reduced or no funding, because these programs have met their objectives or support activities that can be supported under other authorities.

Finally, the budget includes first-time funding or sizeable increases for several high priority programs. These are:

- o Controlled demonstrations in dropout prevention;
- o Drug-Free Schools and Communities;
- o Eisenhower Mathematics and Science Education;

- Magnet Schools of Excellence;
- Alternative Certification of Teachers and Principals; and
- Presidential Awards for Excellence in Education.

I would like now to describe briefly our proposals for these six priority programs.

Dropout Prevention Demonstrations

The Department's budget includes $50 million for an initiative in dropout prevention. Of that amount, $45 million is requested under this account to conduct a controlled demonstration program to test and evaluate promising strategies in dropout prevention and recovery. To complement this demonstration effort, an additional $5 million is requested under the Research, Statistics, and Improvement of Practice account for research and development activities designed to provide useful information about how to improve the academic performance of secondary school students and reduce the number of dropouts.

The $45 million demonstration program will employ a two-pronged approach. At least half the funds will be reserved for specified, comprehensive dropout prevention and recovery models. The models will be based on the latest research, developed in consultation with an independent panel of experts, and published in the Federal Register as proposed funding priorities. The remainder will support locally developed, but also research-based, dropout prevention and recovery projects. These projects will be required to address the published priorities, but grantees will be given the flexibility to adapt them to address the specific needs of their target population.

Drug-Free Schools and Communities

The illegal use of alcohol and other drugs in many of our communities constitutes a serious impediment to learning among young people and is a major cause of violence in our Nation's schools. For 1991, the Department is requesting $593.3 million for Drug-Free Schools and Communities, a 10 percent increase over 1990. These funds are used for grants to States for drug prevention education in schools and communities and to institutions of higher education for programs on campus. They are also used to train school personnel in the implementation of drug prevention education techniques and for numerous other activities to help young people understand why they must reject drugs.

While the scourge of drugs is found in neighborhoods throughout the country, the problem can be particularly acute in certain areas. We are very pleased that President Bush's proposal for an Emergency Grants program was authorized by the Congress as part of the recent amendments to the Drug-Free Schools and Communities Act. In 1990, we will distribute $24.7 million among the Nation's Governors for Emergency

Grants to a limited number of the most seriously affected school systems to develop and test comprehensive approaches for achieving a solution to their drug problems. For 1991, we are requesting $25 million -- the fully authorized amount -- to conduct this activity as a national discretionary program, as specificed in the authorizing statute.

Eisenhower Mathematics and Science Education

The budget includes $230 million, a 70 percent increase, for the Eisenhower Mathematics and Science Education program. Improvement of mathematics and science education is one of the Administration's highest priorities for education. Secretary Cavazos has repeatedly spoken out on the need to raise educational achievement levels in mathematics and science and to open up opportunities in those fields to women and minorities. This program supports formula grants to States and national discretionary grants to a variety of recipients to upgrade the level of instruction in mathematics and science, areas in which improved performance is critical for keeping America competitive in an increasingly technological world.

Magnet Schools of Excellence

The budget contains $100 million -- double the amount contingently appropriated in 1990 -- for Magnet Schools of Excellence, a program proposed by President Bush in the Educational Excellence Act. Under this program, the Department would award funds on a competitive basis to school districts for magnet schools, without regard to the presence of desegregation plans. The Department currently supports magnet schools as an aid to desegregation. We believe this approach should be available to all school districts as a means of achieving educational improvement goals as well. Magnet schools increase parental choice, expand opportunities for children, and ultimately improve the quality of all schools in a district.

Alternative Certification of Teachers and Principals

The budget includes $25 million for the Alternative Certification of Teachers and Principals program. Under this new program, which is included in the Educational Excellence Act, the Department would award one-time grants to States to help them develop and implement systems to allow recruitment of teachers and principals from among the large pool of talented professionals who have demonstrated subject area competence and leadership qualities in fields outside education.

Presidential Awards for Excellence in Education

President Bush believes that improvement in the schools depends most heavily on teachers, and that excellent teachers deserve tangible recognition on a national level. In support of this principle, the budget contains $7.6 million for Presidential Awards for Excellence in Education -- a program that is also included in the Educational Excellence Act. Under this program, awards of up to $5,000 would be given to teachers in every State who meet the highest standards of excellence. The number of teachers receiving awards in each State would vary with the size of the State.

Mr. Chairman, this concludes my prepared remarks. My colleagues and I will be happy to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Elementary and Secondary Education

Biographical Sketch

NAME : Daniel F. Bonner

POSITION : Acting Assistant Secretary for Elementary and Secondary Education

BIRTHPLACE AND DATE : Bronx, New York, August 10, 1937

EDUCATION : Fordham University, B.A.
New York University, M.A.

EXPERIENCE

Present : Acting Assistant Secretary for Elementary and Secondary Education, Department of Education
1988 - 1989 : Acting Deputy Assistant Secretary for Elementary and Secondary Education
1988 : Acting Director, State and Local Educational Programs, Office of Elementary and Secondary Education
1983 - 1988 : Associate Director, Domestic Anti-Poverty Operations, ACTION Agency
1983 : Director, Volunteers in Service to America (VISTA), ACTION
1982 : Special Assistant, Office of Volunteer Liaison, ACTION Agency; Director, ACTION/White House Regional Conferences on Voluntarism
1981 : Associate, Ethics and Public Policy Center, Washington, D.C.
1981 : Associate, Law and Economic Center, Emory University, Atlanta, Ga.
1973 - 1980 : Philanthropic Activities Associate, Education and Health Programs, Chase Manhattan Bank, New York, N.Y.
1970 - 1973 : Management Development Programs, Chase Manhattan Bank, New York, N.Y.
1960 - 1969 : Classified Advertising Specialist, New York Times, New York, N.Y.
1959 - 1960 : Bookkeeper, Loans and Discounts, Irving Trust Co., New York, N.Y.
1957 - 1959 : Company Clerk, U.S. Army, France, USAREUR
1955 - 1957 : Bookkeeper, Loans and Discounts, Irving Trust Co., New York, N.Y.

CATEGORICAL GRANTS

Mr. **Natcher**. Mr. Bonner, the President's budget proposes a $308,000,000, 22 percent increase for the school improvement account. This includes a $94,000,000 increase for math and science, a $54,000,000 increase for drug-free schools, $45,000,000 for dropout prevention, and $133,000,000 for new programs.

As you know, in the past the Department has favored a policy of putting funds into broadly based programs, such as Chapter 1 and Chapter 2. The 1991 school improvement budget seems to shift to a strategy of expanding narrow categorical grants which are focused on a specific problem, such as math and science or dropouts.

Mr. Bonner, is this the road we should be traveling? How do you feel about it?

Mr. **Bonner**. The road we are traveling now, Mr. Chairman, is consistent with our educational outlook. We are committed to programs like Chapter 1 and Chapter 2 because they allow some flexibility. We feel that to meet the emerging needs of the time, we should be committed to looking at some categories of special assistance as well.

Ms. **Christensen**. Mr. Chairman, I just was going to add that there has been a proliferation of categorical programs over the past ten years or so since we streamlined under the block grant—from about 120 to about 210 programs. And we are concerned about this in a number of areas.

The Administration has not generally supported the authorization of categorical programs, and we have traditionally not proposed appropriating funds for them.

This budget, in fact, does propose eliminating some of them. We would look at that again, though, when we get into the reauthorization over the next couple of years.

PROGRAMS THAT ARE NOT AUTHORIZED

Mr. **Natcher**. As I understand now, the new programs and the dropout program are not currently authorized, isn't that correct?

Ms. **Coro**. That's correct.

Mr. **Corwin**. However, the reauthorization of dropouts has passed both houses of the Congress, and we are expecting it to become law very shortly.

EISENHOWER MATH AND SCIENCE PROGRAM

Mr. **Natcher**. How long has the Eisenhower Math and Science Program been funded and how much money has been invested in these grants?

Can you give us any figures along that line?

Mr. **Bonner**. The total funding is $615,000,000 since 1985. In 1988, under the Hawkins-Stafford amendments, it was renamed the Dwight D. Eisenhower Mathematics and Science Education Program.

Mr. **Natcher**. Your statement, as you know, talks about measurable results. Have we seen any measurable results from our investment in these math and science grants?

Ms. CORO. This is primarily a teacher training program, and there are many activities that are conducted at the State and local levels. It is a very popular program.

The States like it because it is very flexible. They can design the training activities to meet the particular needs of the localities, so there are many activities going on all the time. One thing that happens with the Eisenhower program is that sometimes it doesn't get its due credit. I have an example here of a program that was sponsored by the Tucson school district and the National Science Foundation.

There is no mention of the Eisenhower Program. This happens all over the country. We are trying to work with the State coordinators to make sure, when Federal funds support any of these local programs, that they mention the fact that teachers are participating in this training because of the Eisenhower Program. There are many activities that are not being considered in terms of the effectiveness, but we believe that the program is very effective in meeting the needs of the particular areas.

The States have to include an assessment of need in their applications. They are very thorough in determining what kinds of programs they need, primarily for in-service training.

Mr. NATCHER. What standards should our committee use in judging the effectiveness of the investment in the Eisenhower Program? Are test scores the bottom line?

Ms. CORO. No. It is difficult to judge the effectiveness of this program by student achievement test scores because we are training teachers. It would be difficult to assess what effect this training had on the school children that they are working with.

We believe that the evaluation study will tell us more when it is completed in the fall of 1990. We will have more information then.

Mr. NATCHER. Now, if test scores are not to be considered the bottom line, what system should we use now?

As far as our committee is concerned, what should we use?

Ms. CORO. Well, I think we should look at the population that we are serving through this program, which is primarily teachers, and what the States can do to evaluate results, but I think we will get some data through our evaluation which is currently under way. This study will be completed in the fall of 1990, and will address the effectiveness of the program.

Mr. BONNER. I would also add that the math and science program is intended to aid students and to help improve their competency in math and science. We could certainly look to an increased number of students in the future taking up studies more seriously in that field.

Mr. CORWIN. We also hear from the States that there are a good number of teachers, in science in particular, who are not certified, who are not fully qualified in the areas in which they are teaching. We would hope that the States are using our funds to bring more of these teachers up to full certification in their fields and that over time we could find data to show that that is being accomplished.

Mr. NATCHER. We understand that your evaluation of the math and science program will not be completed until next fall.

Shouldn't we wait until we get these results before we approve a 70 percent increase for the Eisenhower Program?

Mr. **Bonner**. That is the increase, sir. I do believe that in the current context, which we are all aware of, and in light of the heightened concern drawn to this issue by the President and the Governors at the Summit and in the aftermath, we have to give heightened attention to the issue here and now.

Mr. **Corwin**. After the Summit, the governors and the President came up with their goals, and a few of them are directly related to the math and science area. One is that the U.S., by the year 2000, will rank first in the international competitions in these areas. Another one that all students attain a reasonable level of proficiency in content areas.

If we are to achieve these goals, I think we need to get started here with the 1991 budget.

Mr. **Bonner**. Not only that, sir, I think it is important to underscore that part of the Dwight D. Eisenhower Mathematics and Science Education program deals with trying to identify underserved minorities and women, to give them better opportunities in these fields.

OVERALL BUDGET FOR EDUCATION

Mr. **Natcher**. As you know, on this subcommittee we are very much concerned about all of the education programs, more so this year than last year, and the reason why I say that partly is due to the fact that every once in a while we go back and find out how much has been expended in the last nine years on defense and education and all these other programs, and when my friend Louis Stokes sits here on my left and I find out that in Defense for the last nine years there is $2,300 million in defense, $199 billion in education, that causes us to stop and wonder just a little bit.

We believe on this subcommittee that when you take care of the health of your people and educate your children you are living in the strongest country in the world. Here we have a request now before the committee for $24,661,000,000, a total for education for 1991.

The current fiscal year budget is $24,073,000,000 for education for 1990. If I had my way and Louis Stokes had his way and the other members on this subcommittee, it would be $40,000,000,000 today. They speak of a peace budget. I guess the word we should be using now is caution.

If we heard a year ago that six satellite countries of the Soviet Union would have freedom, that 13 of 16 independent countries that make up the Soviet Union are in the position they are in, no one would have believed it. They wouldn't have believed it. But this is the time more than at any time in the last 20 years when more money should be placed in this bill for education.

We are concerned about all these programs. Mr. Conte and all of us, we are very much concerned about them. We are concerned about the overall figure in education. It should be considerably more than is in this bill.

We want to make the President, President Bush the education president. We are going to send him a good bill. We hope he is the education president.

Go right ahead. Do you want to answer that argument?

Ms. **Christensen**. Mr. Chairman, I assure you the Administration is just as committed to education as you are. We appreciate all you have done for our bill over the years. I would just like to make a couple of points, though, and one is that in total the Nation is spending $353,000,000,000 in the current school year on education. As opposed to defense, where the total amount for defense is spent at the Federal level, the Federal expenditures for education are only 6 percent.

But more important than that, I think, is the fact that over the years the amount for education has totaled more and has grown much more dramatically than the amounts for defense. In fact, right now if you compare education and defense as a percent of GNP, education is 6.4 percent, and our expenditures for defense are only 5.3 percent.

So I think it is important to take that into account, the Federal role in defense versus the Federal role in education.

Mr. **Natcher**. Yes, we don't deny those figures, but keep in mind this: Of the total budget that is presented to the Congress for fiscal year 1991, $1,230,000,000,000, about 26 percent of that is for defense.

I don't know of anyone in this country that wants to impair the security of our country, but I know of thousands of people who want to educate our children, and they are concerned about the health of our people. So when you take that budget now and you cut the pie and you square it out of there, it is about 26 percent comes out.

This is the year that we ought to put more money in this bill for education. Now, you agree with that, don't you? Don't you agree now, either on the record or off the record, don't you agree we ought to put more money there for education this year? You know, the Secretary came in here the other day, and he is a fine man. I said to him, "Mr. Secretary, is your budget sufficient?" He says, "Absolutely. Certainly it is." "What did you ask for OMB?" Well, he dropped his head and kind of smiled. He said, "We asked for about $1,600,000,000 more, but we didn't get it."

We are talking in terms of $2,000,000,000 more just to start with. You were here.

Ms. **Christensen**. But that was assuming a higher base for 1990 at the same time.

Mr. **Natcher**. You all help us now. We will bring out a bill you like. You may not be able to talk about it too much. Mr. Conte, I yield to you.

SCHOOL IMPROVEMENT PROGRAMS ACCOUNT STRUCTURE

Mr. **Conte**. Thank you, Mr. Chairman. A number of programs funded under the School Improvement account are administered in the Office of Educational Research and Improvement, for instance the Fund for Innovation in Education.

Mr. Cross, that is the reason for you being here, right?

Mr. **Cross**. That's correct.

Mr. **Conte**. Can you name for us exactly which school improvement programs are administered by OERI?

Mr. Cross. Which ones in this account? We have the Blue Ribbon Schools Program, which is funded through our Programs for Improvement of Practice unit, the Alternative Certification Program, for which there is a request this year. We administer part of the Drug-Free Schools program, that part that relates to national activities such as the recognition of drug-free schools.

The FIRST Program, the Fund for Innovation in Education, the Javits Gifted and Talented Program, and the LEAD Program, which is a program for school administrators. We also administer the national part of the Eisenhower Math-Science Program, the National Diffusion Network, a new program which was authorized by the Trade Bill to encourage education partnerships between school districts, businesses, and the community, the Star Schools Program, Territorial Teacher Training, and the publishing activities of the Women's Educational Equity Act. These programs are all administered by OERI.

Mr. Conte. Is there any reason why these programs are not proposing funding under OERI?

Mr. Cross. If you are asking which ones are not, we are not asking for funding for Star Schools.

Mr. Conte. Why aren't they funded under OERI?

Mr. Cross. Oh, I see what your point is.

Ms. Cichowski. I think your question is why the funds for these programs aren't requested under the Research, Statistics and Improvement of Practice account?

Mr. Conte. Right.

Ms. Cichowski. I think it is just a matter of history. Congress has historically appropriated funds for these programs under the School Improvement Programs account. We have looked at options for improving the account structure here and would be happy to discuss with the committee a better way of presenting these programs.

This is an awkward way to present the budget with two Assistant Secretaries involved in administering the programs.

Mr. Conte. Technically, shouldn't these programs be listed as a comparative transfer to OERI?

Ms. Cichowski. No, the funds are appropriated under School Improvement, and it is appropriate for us to present the request this way. What we could do is revise the account structure to present the budget in a way that would be more consistent with the way the programs are administered by the Department. As I said, we would welcome a change here because this account is, I think, much too big, and it is awkward to have a hearing with two Assistant Secretaries and all their accompanying witnesses.

One of the difficulties with changing the account structure is that a couple of the OERI programs have very close ties to programs administered by OESE. For example, in the Eisenhower Math and Science Program, OESE administers the State grant portion and OERI administers the set-aside portion for discretionary grants.

The same is true of the national programs under Chapter 2. OERI administers two of the small national programs for which funds are set aside under the Chapter 2 block grant. The Chapter 2 block grant, of course, is administered by OESE. Were we to split the account in accordance with our administration of the programs, we would be separating set-asides from the larger programs.

Ms. **Christensen.** Mr. Conte, we did propose an account restructuring to OMB this year. Because of the timing, though, there was not enough time to put the budget together and work that out with them. We plan on going back to them next fall and doing precisely what you are suggesting.

I think if the committee could do it in advance, that would even be more helpful, because it does cause problems not only in putting the budget together, but in presenting it to you, and it also causes problems in administering the programs within the Department.

Mr. **Conte.** Could you, Sally, submit some bill language that allows us to do that?

Ms. **Christensen.** We will be happy to.

Mr. **Conte.** Help us out there. Thank you.

SLOW LEARNER INITIATIVE

Dr. Bonner, with respect to the slow learner initiatives, it is my understanding that under the Fund for Innovation in Education, we assigned you more tasks than we gave you money to carry out, but you will commit to spending at least $2,500,000 or so to the slow learner initiative; is that right?

Mr. **Bonner.** The Fund for Innovation in Education is OERI's.

Mr. **Cross.** That is correct, Mr. Conte, we will make the commitment. We have the plans underway.

Mr. **Conte.** You are committed?

Mr. **Cross.** Yes, we are.

Mr. **Conte.** Can you tell us how you plan to spend those funds?

Mr. **Cross.** We will have an open competition. We are in the process of having those grant announcements with the priorities cleared now, and the announcement will be out shortly. We are using funds from the Innovation in Education part of FIE in order to do this; these amount to $2.4 million.

Mr. **Conte.** You said competition. Is it absolute that you are going to have compete these funds?

Mr. **Cross.** Will we have competition? Yes, we will. We will have invitational priorities within the grants announcement in this area, and we expect to have grants in the range of $200,000 to $400,000.

Mr. **Conte.** Invitational priorities?

Mr. **Cross.** Right.

Mr. **Conte.** What is that?

Mr. **Cross.** Invitational priorities are those that we want the field to respond to, but that they are not legally obliged to respond to. We cannot establish binding or absolute priorities without taking about a year to go through the rulemaking process. By the time we could finish the clearance process for this competition, we wouldn't have the time to make awards this year. This is the reason we decided to use invitational priorities. Our past experience has been that virtually always the people from the field respond to the invitational priorities because they understand that the priorities specify the types of activities we want to fund.

Mr. CONTE. I just want to spend a minute telling you how I view the program. I think that there are many students who don't achieve to their full potential in the classroom because they don't get that extra one-on-one attention that might be all they need to blossom and excel.

They are not reached by Chapter 1 or PL 94-142. In the worst case they are passed along from grade to grade. That happens too often. They end up finishing school without the skills they need to succeed in life.

I believe they may be the most important unaddressed group of kids in the public school system. Do you agree with that, Mr. Cross?

Mr. CROSS. I believe that you are correct in this. I think there is an enormous problem out there with these children who fall between the cracks.

They don't qualify for the gifted programs where they exist, they do not qualify for Chapter 1 or special education, and there are a mass of individuals to which proper attention is not given. Furthermore, as we have seen schools grow and impersonalization set in, it is all too easy for them to lose identity and to just be passed along by number or as part of a group. I think schools need to do much more.

You may be familiar with the work of Ted Sizer of the Coalition for Essential Schools, out of Brown University. Part of what he is doing in trying to capture a school-within-a-school climate and be sure that that sort of isolation doesn't happen, to be certain that students have identities, that there is a community of interest between the teachers and the students, and that you can't just ignore the fact that these are students who are not being tended to.

Mr. CONTE. Last year I asked the Secretary of Education if maybe we should have a demonstration project on underachievers. I am really concerned about underachieving students. You can't believe the mothers who come in to see me. They are really frustrated. They know their child has the ability but is not getting the special attention he/she needs to succeed in school.

DISTRIBUTION OF DRUG-FREE SCHOOLS FUNDS

My local district educators come in and they want to know how the Drug-Free Schools Program works. They don't think the local school districts are benefiting from that program.

Can you explain to me, anyone here, how the distribution formula under Drug-Free Schools works, and on the average how much a school district can expect to get either on the 1989 level of $287,000,000 or the 1990 level of $462,000,000?

Is part of the problem that the States may take their time distributing the funds to the local governments?

Mr. BONNER. The process has been working pretty well. There were some initial difficulties, but the process has been working well. The money has gotten from the States to the local education agencies and to the schools in pretty good order, certainly in good order for 1987 and for 1988-1989, as we have reviewed the information.

There should be no undue complication that would prevent the local education agencies from making a complete application to the State for the funds along the lines required in the statute. Therefore, the difficulty that the local school may be encountering may be one that requires some technical assistance, and the State Department of Education should help to provide some of that. We can also be of assistance.

We feel that there is no impediment to a timely use of the funds. The States get their funds on time and then they allocate funds to the LEAs. Now, you asked about the amount of funding to the LEAs. On average, funding for 1990 is $6.95 per pupil.

Mr. CONTE. For the year?

Mr. BONNER. Yes, for the year.

Mr. CORWIN. I could follow up a little bit.

The formula that we use to get the money from the Federal level to the States has been complicated a bit as a result of the amendments that passed late last year, but most of the money goes out on the basis of school-age population, and a small portion on the basis of allocations under Chapter 1.

At the State level, roughly 30 percent is held by the governor for statewide programs, particularly those focusing on what are called in the statute "high-risk youth;" roughly 70 percent goes to the State education agency and then is passed along by formula to the school districts.

Again, it is a little bit complicated, but the bulk of the funding goes out on an enrollment basis, the remainder on the basis of Chapter 1 shares.

Mr. CONTE. Excuse me. Let me interrupt you there. By a formula basis, you say? Don't they have to make application?

Mr. CORWIN. They do have to submit an application and provide the State education agency with an annual report, but it is automatic once they get the application in. We did some rough estimations of how much local school districts get across the country. In your own district, and these are estimates for the current year, 1991-1990, Pittsfield would be getting about $108,000. Of course the smaller school districts in your congressional district would get less—North Adams, about $60,000, the Lee Public Schools, about $9,000.

Mr. CONTE. I suppose the Governor would announce those amounts.

Mr. CORWIN. The State education agency. They are formula grants within the State.

Mr. CONTE. Thank you, Mr. Chairman.

Ms. CORO. I would like to make one more point about the money going to the local school districts. Because of the amendments of 1989, the local schools have 120 days to submit an application once they know how much money they are getting. In other words, the State has 120 days to get the money out. Once they get their monies, around July first, they are limited to 120 days to get the money to the local school districts. This requirement could make the money available sooner than it had been in the past.

Mr. CONTE. Wouldn't it have been better, Tom, if we had sent the money to the local districts directly from the Federal Government rather than going through another layer of government?

Mr. CORWIN. The problem is it is hard in our Department, with our limited staff, to handle applications from 15,000 to 16,000 school districts. Ms. Coro would need many more staff then she has. To use the State as an intermediary, I think, is usually more efficient.

They are closer to the locals, and can give them the help that they need.

Ms. CORO. They have more focused technical assistance.

Mr. NATCHER. Mr. Stokes, I yield to you.

DROPOUT PREVENTION DEMONSTRATIONS

Mr. STOKES. Mr. Bonner, you are proposing in the budget, a new dropout prevention demonstration type of program for fiscal year 1991. Last year the Department proposed eliminating the same type of a program in the budget. Can you tell us how this new program is going to be any different from the one that was proposed in the budget last year that you proposed eliminating?

Mr. BONNER. I would like to invite my colleague to answer.

Mr. STOKES. Certainly, Ms. Coro.

Ms. CORO. The program that was funded in 1988-1989 was a two-year demonstration program, so there was no authorization to fund the program in fiscal 1990. We did not ask for funds for fiscal 1990.

However, as Tom Corwin said earlier, the two Houses have passed a reauthorization bill. We would hope to have the reauthorization to administer this program for fiscal 1991, and we are proposing $45,000,000 to run these two-prong approaches on dropout demonstrations. We are also asking for $5 million for research.

Mr. BONNER. We are attempting to develop more comprehensive and more carefully tailored strategies to elicit better information about the causalities of dropouts. We feel the structure of the $45,000,000 plus the $5,000,000 for research will help us to do that.

Ms. CHRISTENSEN. If I could just add a little bit, Mr. Stokes. We will build on those projects that were conducted during the last two years, but the new projects will be more carefully structured.

Between that and what we learned over the last two years, we think we will come up with a really very good combination of models that we will be able to disseminate around the country for local school districts to pick up and replicate. It is one of the most effective ways that we can use the Federal dollars, we feel, to make a real impact on the money that is being spent already out there.

Mr. STOKES. Well, I support the initiative. I just wanted to get some feel for what you were proposing to do in that area.

MAGNET SCHOOLS OF EXCELLENCE

Now, the President's budget proposes $100,000,000 for the Magnet Schools of Excellence initiative. In your justifications you described this program as one that also supports the establishment and expansion or enhancement of magnet schools without regard to the presence of desegregation plans.

You expect this program would increase parental choice, expand opportunities for children, and also would improve the quality of all schools in the district. What criteria do you plan to use to select the awards?

Mr. BONNER. We have a fairly well-developed approach to identifying, through the grant process, school districts that will implement effective educational programs. When students enroll in these schools, they know they are going to be subjected to rigorous programs.

Do you want to add to that?

Ms. CORO. Yes. Well, it is important to look at the quality of the proposal. We always do that in terms of how they propose to implement their project. The purpose of the program is to attract students from varied backgrounds—racial, ethnic, socioeconomic, and so forth—though it would be the innovativeness of the proposal and how they would implement the magnet school approach that we would evaluate.

Participation can be throughout the school district or in selected areas. We believe that the magnet school concept is very well-liked, that the communities like it very much. And the President and the Secretary would like to extend this concept.

We get a lot of questions from school districts that are not under court-ordered desegregation plans about how to apply for magnet school funds. Yet many of them are not eligible. The President's proposals would provide the opportunity for these school districts to participate in this innovative approach.

Mr. BONNER. We are certain there would be inner-city school districts applying.

Mr. STOKES. That is one of my concerns. That is, how would schools in poor school districts actually compete?

Mr. BONNER. A poor district with a well-developed plan will be able to stand on the same footing as any other district.

Mr. CORWIN. I think in the current program the great majority of the grant recipients are center-city districts. There is no matching requirement. They don't have to put up money up front. We do like to see them provide in their plan for some mechanism so that they will take the program over after the Federal money runs out, so it is not just a temporary magnet school program. But I think in this new program, as well, Magnet Schools of Excellence, we would see poor districts submitting applications.

Mr. STOKES. Okay. Now, the amount requested for 1991, $100,000,000, expect to support 50 awards, that is 25 new and 25 continuation awards. This means the average award would be about $2,000,000. Can you tell us why the Department has chosen this strategy of making only a few very large awards? Wouldn't it be better to spread the money around under this type of concept?

Mr. CORWIN. In our current Magnet Schools Program, the maximum award is $4,000,000, and that is by statute. We found that the average is about $2,000,000, and have made a projection that that would likely be the case for this new program. Depending on the size of the district and what they want to do, you can have a large variety of grant sizes.

Four million dollars funds a number of magnet schools across a district, but we have had some that are only a couple hundred thousand and they are effectively doing one elementary school or one middle school.

Ms. CORO. This program also allows for hiring teachers. In other words, the supplement, not supplant requirement doesn't apply with this program. The school districts have more freedom, more flexibility to do very innovative programs, and we believe that they do.

For example, when you set up an arts in education program, it is quite expensive if you think of all the things that go with arts in education. If you have music, for example, you have to buy the instruments. You have to bring in the experts, the musicians and so forth. So these are expensive programs.

BLUE RIBBON SCHOOLS

Mr. STOKES. Let me ask you this: The Department recently sent a reprogramming request of $379,000 that would have increased funding for Blue Ribbon Schools and taken it out of other national programs such as National Diffusion Network, Law Related Education, and Inexpensive Book Distribution.

The Committee turned down this request. Additional funds would have been used to increase the number of reviewers. Is that correct?

Mr. CROSS. That's correct.

Mr. STOKES. Tell us why the Department felt that additional reviewers were needed.

Mr. CROSS. We are currently operating on a budget of $494,000, which was the amount in the bill for this year. At that level of funding we can only afford a single reviewer at each school, and we felt that that was inadequate because with the single reviewer basically we have to have an administrative person alone do the review.

Where we have two people, the second person might be a specialist. If we are emphasizing things like geography or the arts, the second person can be a specialist in that area and help bring some depth to that review. At the level of $494,000, we are going to have to revert to having a single reviewer in each of the schools.

Mr. STOKES. Does the fiscal year 1991 budget request funds to support the additional reviewers?

Mr. CROSS. Yes, it does.

Mr. STOKES. Okay. Thank you very much. Thank you, Mr. Chairman.

EISENHOWER MATH AND SCIENCE PROGRAM

Mr. NATCHER. What is the average size of an individual school district's grant under the current math-science program and how are these funds typically used?

Ms. CORO. The average grant, I think, is about $5,000. The funds are used for a variety of teacher training activities, either pre-service, in-service, or retraining of teachers. Small school districts can enter into consortia to develop a program. These funds are readily available and are flexible to use. The funds are available on a formula basis from the State, as opposed to programs that might take more time to plan and to design.

Also, the funds support programs for grades K through 12 and for higher education. I visited a program in Dade County, for example, just about three weeks ago, where they had classroom elementary school teachers in the early grades working with the Museum of Science. The Miami Museum of Science had set up a two-day workshop. I sat down with them for an hour. They were teaching the teachers how to teach the little ones and how to get them interested in science, because that is part of the problem. Unfortunately, some of the curriculum in our schools—and I am speaking in very general terms—do not devote enough time for science in the early grades, so you begin to lose the interest of the kids at an early age.

INTERAGENCY COORDINATION OF MATH AND SCIENCE ACTIVITIES

Mr. NATCHER. We have been told that NASA, the National Science Foundation, and the Department of Energy all have programs to improve math and science skills. How do you divide up responsibilities in this area?

Mr. CROSS. Mr. Chairman, one of the things I think that has to be kept in mind here is that the programs of those other agencies you mentioned, NASA, the Energy Department, and others are all related to the mission of those agencies. For example, at NIH, where you have the picture over here on the wall, the NIH Science Program is aimed at activities directed to improving the lot of people, for example, in the biological sciences.

It is not aimed at general improvement of math and science education across the board. NASA, obviously, is aimed at promoting the space program in various ways. The Energy Department is doing a good job in using the national laboratories, which the Energy Department owns. The Energy Department has more scientists on their rolls probably than any other place in the Government, but all they can do is use those facilities as NIH does to bring in people for things like part-time work, summer programs, some mentoring and the like.

They aren't attacking the problem of the curriculum. They aren't attacking teacher training in general, and they are not looking across the board with respect to the whole education agenda. They are looking at a specific niche of the problem.

Mr. NATCHER. When will the committee receive the report on coordination of your math and science activities with those in the National Science Foundation and in the other federal agencies? As you know, this report is overdue.

Mr. CROSS. That report has been finished. It is in clearance now within the Department. You should be receiving it within a matter of days. The President's science advisor, Mr. Bromley, is also in the process of submitting a report which is due next Thursday to the HUD and Independent Agencies Committee on coordination with respect to the Department and the National Science Foundation. So you will be seeing at least two reports dealing with this area within the next week or so.

Mr. NATCHER. You will insert in the record at this point a consolidated table showing math, science spending at each of the agencies for 1989, 1990, and 1991 and also, if you will, please, include a short description of each agency's program, just a short description there.

[The information follows:]

SCIENCE AND MATHEMATICS EDUCATION FUNDING
(In thousands of dollars)

	1989	1990	1991
Department of Education	$175,811	$179,827	$292,416
National Science Foundation	302,000	357,000	463,000
National Aeronautics and Space Administration	28,000	42,000	51,000
Department of Energy	5,950	17,000	25,000
National Institutes of Health	257,000	287,000	292,000
Total	768,761	882,827	1,123,416

National Science Foundation programs provide support for elementary and secondary, undergraduate, and graduate and professional education and human resource development programs. For 1991, while NSF's request shows increases at all levels, the largest are for undergraduate programs. NSF's investment in K-12 programs represents about 36 percent of its total request for education and human resources, which in turn is about 20 percent of NSF's total request for 1991.

Research career development funds support graduate research fellowships to some of the most promising graduate students in science and engineering, and provide enrichment activities for talented high school students.

Funds for materials development, research, and informal science education support the development of instructional materials for both students and teachers in elementary and secondary schools, and the development of informal science education programs using the media (including broadcast educational television shows), museums, and other out-of-school organizations.

Teacher preparation and enhancement programs focus on upgrading the quality of faculty and the teaching of science and mathematics. Funds support pre-professional programs, continuing education, and professional development of teachers, and Presidential Awards for Excellence in Science and Mathematics teaching. Funds are also used for the development of resource centers at institutions with significant minority enrollment, and other model programs for women, minorities, and the handicapped.

Studies and program assessments funds support studies and analyses to provide a systematic and current understanding of the condition of science and mathematics instruction in the United States.

The undergraduate science, mathematics, and engineering program including instrumentation, curriculum development, faculty revitalization, comprehensive regional centers for minorities, and research experiences for undergraduates in both 2- and 4-year colleges and universities.

National Aeronautics and Space Administration activities involve over 1.8 million students and teachers, and include "Spacemobile" presentations to elementary and secondary schools, workshops for teachers, teacher internships at NASA research centers around the country, grants for undergraduate and graduate research, and special efforts to ensure minority participation in science and engineering education.

Department of Energy funds support research fellowships for over 6,000 graduate and undergraduate students, as well as high school and university faculty. The fellowships provide research support for these individuals at DOE laboratories or at other locations. Activities at six of the national laboratories, designated as Laboratory Science Education Centers, include a variety of national, regional, and local science education programs for high school students and teachers, in addition to undergraduate and graduate students. The increase proposed for 1991 would enable DOE to implement a new program, with assistance from the private sector, to train high school faculty at DOE's national laboatories in state-of-the-art science, which the teachers can then bring back to their students.

The National Institutes of Health research training grant program supports almost 12,000 graduate trainees in research laboratories throughout the nation. Training grants are provided to institutions and are in addition to the many thousands of graduate and post-graduate students supported through research grants to faculty researchers.

The following table provides a detailed listing of Department of Education programs in science and mathematics education.

DEPARTMENT OF EDUCATION
SCIENCE AND MATHEMATICS PROGRAMS

(In thousands of dollars)

	1989	1990	1991
Chapter 1 Basic and Concentration Grants	1/	1/	1/
School Improvement Programs: Eisenhower Mathematics and Science Education State Grants	$128,440	$126,837	$220,800
Research and Development Center in Mathematics	500	---	700
Research and Development Center in Science	500	500	800
Star Schools	8,100	8,100	---
Eisenhower Mathematics and Science Education National Programs	8,892	8,781	9,200
Fund for the Improvement of Postsecondary Education -- Comprehensive Program	2,900	2,900	2,900
Minority Science Improvement	5,307	5,416	5,633
Special Programs for the Disadvantaged: TRIO -- Upward Bound	---	3,000	12,500
National Science Scholars	---	---	5,000
Patricia Roberts Harris Graduate Fellowships	8,328	8,500	9,400
Graduate Assistance in Areas of National Need	12,844	15,793	25,483
Total	175,811	179,827	292,416

1/ The total 1990 appropriation was $4,593,258,000. Approximately 47 percent of students served by Chapter 1 receive remedial assistance in mathematics, sometimes combined with reading. Therefore, a specific estimate of math and science expenditures is not available.

HIGH SCHOOL COMPLETION RATE

Mr. **Natcher**. What is the current high school completion rate in this country if you count returning students and equivalency diplomas?

Mr. **Cross**. Mr. Chairman, one of the issues with dropouts is there are so many different ways to define "dropout". If you define it as the number of 19-year-olds who have received a high school diploma, we are talking about roughly 72, 72.5 percent. If you move to the age cohort of 25 to 29 and ask how many of those have either received a high school diploma or an equivalency thereof, then you move up to about 86 percent. What happens is that about half of those who do not receive a high school diploma in the normal course of things, through 12 grades and by means of the regular pattern, do come back and receive a high school diploma or an equivalency at some later point.

Mr. **Natcher**. As you know, the President has just set a goal of 90 percent high school completion rate. How will this be measured and how far do we have to go to reach this 90 percent?

Mr. **Cross**. The intention of the goal of which you speak, which was adopted by the President and the Governors, is to look at those who leave school with a diploma in the regular course of things; in other words, at about age 18 or 19. So that means we are talking about that roughly 72.5 percent rate. We have to bring that rate up to about 90 percent.

Now, there are some States that are already at 90 percent or above. There are a half dozen States in the Middle West, in particular the upper Middle West, who are at that rate already. However, the completion rate ranges down as low as 58 percent in Florida. So we have an enormous amount of work to do in many of those States.

It is an ambitious goal, but it is a goal which if not set, we will never be able to strive for.

Mr. **Natcher**. Mr. Bonner, the committee has been told that this country already has one of the highest high school completion rates in the world. We know that the data of this type is often quite soft, but is this basically an accurate statement?

Mr. **Cross**. Yes, Mr. Chairman, that basically is correct, we do have one of the highest rates. But there are other countries, Japan, Canada, and the Netherlands, for example, who have higher rates than we do, and West Germany also has a rate that is up in that area.

And to repeat an earlier point, because we have so many students who return to complete a high school diploma after not having received one in the normal course of things; students who come back for a high school equivalency exam, get a diploma through the Armed Services or in some other fashion, that the rates you find in several other countries are in fact higher than the U.S. for the age cohort of 18 or 19.

I would think it is fair to say we are in the highest ranges, but we are not the highest in the world in that category.

MAGNET SCHOOLS OF EXCELLENCE

Mr. **Natcher**. According to the justifications, each new magnet school of excellence grant would average about $2,000,000. What would you buy with this amount of money?

Ms. **Coro**. The monies are available to pay teachers, to plan, for outreach, to make sure that the community knows about the program, and to buy the necessary materials, including equipment, to implement the program, so there is a wide array of costs.

The school districts like the infusion of funds through this program, because it provides the opportunity to extend the magnet school concept.

Mr. **Natcher**. Last year, as you will recall, your office testified that there were already more than one thousand magnet schools in this country. Why should we invest $100,000,000 in a concept that is already proven and accepted? Why not let this money go into elementary and secondary education and to Chapter 1? What do you say about that?

Mr. **Bonner**. Well, I think our magnet proposal will enable many public schools, especially in inner cities and hard-hit areas of the country where we simply cannot blink at the great need, to benefit from the program, notwithstanding the numbers of schools that are already participating.

Ms. **Coro**. Mr. Chairman, our proposal is in keeping with the concepts of choice and open enrollment that the Secretary is talking about, and that the President is talking about. These magnet schools will provide the opportunity to children beyond the immediate school boundaries to attend their schools of choice. We believe they would be very useful for the school districts to have.

Mr. **Corwin**. I think as Ms. Coro noted earlier, magnet schools tend to be a little higher cost than a regular school program. She mentioned the example of an arts school. A magnet school focused on science is another good example where you have equipment costs. That is a very popular kind of magnet school to institute.

In addition, because these schools tend to draw students from a wider attendance area, they will have higher transportation costs. Clearly, districts around the country are very interested in this concept, but particularly your poorer districts may not have the wherewithal to accomplish it on their own.

DRUG-FREE SCHOOLS

Mr. **Natcher**. On page 57 of the justifications, you state that the Department does not yet have any documented evidence of the effectiveness of the Drug-Free Schools Program. On top of this, Mr. Bonner, both Director Darman and Ex-Secretary Bennett have made public statements which expressed skepticism about whether this money will do any good.

Now, Mr. Bonner, this is not very strong support statement for a budget request of almost $600,000,000. Is this a worthwhile investment?

Mr. **Bonner**. We certainly feel it is. The Secretary of Education is, as I am sure you know, on record stating that it is a useful expenditure. If you take recent stories, for example, that have broken in the press, especially the National Institute on Drug Abuse surveys indicating that there has been a considerable drop in drug use amongst high schoolers in recent years. I would think you would have to be taking a very narrow look at measurable outcomes to hold to the proposition that that funding had no effect.

I think you have to recognize that a significant drop in use could very definitely be attributable in part to the funding that we have already provided and because it is recognized that it is a scourge that needs to be eradicated from the schools. The funding is justified.

Ms. CORO. Mr. Chairman, I think I would like to add, and I won't attempt to speak for either Dr. Bennett or Mr. Darman, that I think that the concept is that, in addition to drug education and prevention programs, schools must have strong no-use policies.

In other words, just education and prevention programs alone will not do it. There has got to be endorsement of very strong messages for young people. And I think that is what was meant.

Mr. NATCHER. All right, Mr. Conte, I yield.

Mr. CONTE. Thank you, Mr. Chairman. I read in the New York Times that Mr. Bennett said, "If ignorance is the problem, knowledge is the cure." I don't believe that for a large number of kids who use drugs that, "ignorance is the problem." What do you think?

Ms. CORO. That is what I was referring to. Just having education is not enough. You have to have very strong no-use policies and enforce those policies at the school level.

Mr. CONTE. To what do you attribute the downward trend in drug usage among teenagers that was reported by the National Institute on Drug Abuse this month?

Mr. BONNER. It is a composite of things. First of all, the tremendous drive for public awareness from all sectors of society, including the federal effort, has got to have an educational impact. Creating a different culture in the schools, for example, has helped to bring about this turnabout.

Mr. CORWIN. I would totally agree with that. I think the society in general has turned against drugs in the last ten years. The media is helping out, parents are probably more concerned about this than just about anything else.

The schools, I guess, are doing their share, the churches, the youth groups, et cetera. On the issue of ignorance versus knowledge, I read recently that if you went back to about 1981, the majority of high school students thought that cocaine wasn't harmful.

Well, we have learned a lot more about cocaine since then. I think the high school students have as well. It is very hard to attribute the decline to our program, which we have had only for a few years, at $6 per kid. You can't do that. I think we are doing our share here, and it is probably working.

FUND FOR THE IMPROVEMENT AND REFORM OF SCHOOLS AND TEACHING

Mr. CONTE. Under the Fund for the Improvement and Reform of Schools and Teaching, one of the few programs that actually funds school reform, you have already published the notice inviting applications for new awards. Under the school level projects the notice indicates availability of $1,800,000 for new grants out of a total of

$3,900,000 in appropriation, while the justification indicates only 13 carry over projects in 1990.

Why is $1,800,000 going for 36 new projects and $2,100,000 for 13 continuing projects?

Mr. CROSS. Getting back to your earlier point, the amount of money available for new projects is determined by subtracting continuation costs of projects begun in prior fiscal years from the total appropriated.

These are only estimates, and of course, the final number of projects will depend on how far the dollars will go in supporting the highest ranked projects.

I think we have to just wait and see. You see in the announcement that we are talking about grants ranging from $5,000 to $125,000, so there is a wide range allowable for funding. Under the rules followed by the Department, we publish an estimated number of grants and a range. You have to extrapolate from that, and you can be either on the mark or you can be off significantly depending on what the field chooses to apply for.

Mr. CONTE. So maybe the new projects were something like the automobile rebates.

Mr. CROSS. Buy two, and we will give you $1,000 off.

Mr. CONTE. Right. The notice includes absolute priorities, competitive preference, and invitational priorities. If I were applying for this grant I wouldn't know what you are looking for. Can you describe what you are looking for under the FIRST school level projects?

Mr. CROSS. First of all, let me see if I can find the listing of the absolute priorities.

Mr. CONTE. Why can't we make things a little more simple?

Mr. CROSS. Just one second.

Mr. CONTE. In the Federal Register, maybe I can find them for you. Page 32-49.

Mr. CROSS. We forgot our Register.

Mr. CONTE. That is all right. My point is that these programs need to be simplified.

Mr. CROSS. OK, I appreciate your comment, and we will do that.

[The information follows:]

1990 APPLICATION NOTICE FOR THE FIRST PROGRAM

The following is the application notice for the Fund for the Improvement and Reform of Schools and Teaching program, published in the Federal Register on January 31, 1990.

[CFDA No. 84.211B]

Fund for the Improvement and Reforms of Schools and Teaching: Schools and Teachers Program—School-Level Projects; Notice Inviting Applications for New Awards for Fiscal Year 1990

Purpose: To support school-level Schools and Teachers projects that improve educational opportunities for, and the performance of, elementary and secondary school students and teachers.

Deadline for Transmittal of Applications: 3/23/90.

Deadline for Intergovernmental Review: 5/20/90.

Applications Available: 2/9/90.

Available Funds: $1,800,000.

Estimated Range of Awards: $5,000–$125,000.

Estimated Average Size of Awards: $50,000.

Estimated Number of Awards: 30.

Project Period: Up to 36 months.

Applicable Regulations: (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, and 85; and (b) The regulations for this program in 34 CFR part 757 as published in the Federal Register on May 2, 1989 (54 FR 18840).

Priorities:

Absolute Priorities: Under 34 CFR 757.4 (b) and (k) and 757.5 (a) and (c), and 34 CFR 75.105(c)(3), the Secretary gives an absolute preference to applications for school level projects conducted at an individual school or consortium of schools under the direction of a full time teacher or administrator that propose to conduct one or more of the following activities:

(a) Improve educational opportunities for, and the performance of, elementary and secondary school students and teachers by providing incentives for improved performance.

(b) Improve educational opportunities for, and the performance of, elementary and secondary school students and teachers by promoting individual responsibility and involvement in civic activities.

Under 34 CFR 75.105(c)(3) the Secretary funds under this competition only applications for school-level projects that meet one or both of these absolute priorities.

Competitive Preference: Within the absolute priorities, the Secretary gives competitive preference to applications that—

(a) Benefit students or schools with below-average academic performance;

(b) Lead to increased access to all students to a high quality education; and

(c) Develop or implement a system for providing incentives to schools, administrators, teachers, students or others to make measurable progress toward specific goals of improved educational performance.

Under 34 CFR 75.105(c)(2)(i), 34 CFR 757.5(b) and 757.20(d), the Secretary awards up to 25 points to an application that meets one or more of the competitive priorities in a particularly effective way. These points are in addition to any points the application earns under the selection criteria for this program (34 CFR 757.21).

Invitational Priorities: Within the absolute priorities, the Secretary is particularly interested in projects that—

(a) Build on the promising results of initial school-level restructuring efforts to which teachers and administrators have made demonstrable commitment;

(b) Reflect the involvement of parents, teachers, and administrators in the targeted school(s) in the planning, implementation and evaluation of the proposed project;

(c) Build collaborative relations between the elementary or secondary school and an institution of postsecondary education;

(d) Improve the school's capacity to serve more children in the regular classroom, rather than fragmenting services by providing special assistance only by referral outside the regular classroom or building; and

(e) Demonstrate the applicant's financial commitment to the proposed project and that show evidence of plans to continue the project after the grant ends.

In addition, for applications that address the second activity described in the Absolute Priorities section of this notice, the Secretary is particularly interested in applications that propose innovative approaches to character education.

However, under 34 CFR 75.105(c)(1) an application that meets one or more of the invitational priorities does not receive competitive or absolute preference over other applications that address the absolute priorities.

For Applications or Information Contact: Jennifer Mills, U.S. Department of Education, Fund for the Improvement and Reform of Schools and Teaching, 555 New Jersey Avenue, NW., room 522, Washington, DC 20208–5524, Telephone: (202) 357–6496.

Program Authority: 20 U.S.C. 4811–4812.

Dated: January 25, 1990.

Christopher T. Cross,

Assistant Secretary for Educational Research and Improvement.

COMPREHENSIVE SCHOOL HEALTH EDUCATION

Mr. Conte. We directed the Department in fiscal 1990 to establish a separate Office of Comprehensive School Health Education. Why hasn't this office been set up?

Mr. Cross. Mr. Conte, the language suggested that that office be within the Office of the Secretary. There are no grant programs, no operating offices within the Office of the Secretary.

This has been the case over time as far as I can remember, some 20 years, where the Congress has from time to time directed that offices be established within the Office of the Secretary.

Frankly, to establish an office there is to make them an orphan because there is no superstructure. There is no one for them to relate to, no way for them to get services, no way for them to be cared for and fed, if you will. So the Department decided to put that Office for Comprehensive School Health, that responsibility, within the FIRST program office where it resides today. We do have staff there.

We also have a very good grants program. I believe that you will find that the awards we have made in that area have been very well received, and we think that the program is working fine. Frankly, I think it works better to administer it there than to have a separate office that would stand out by itself and not have the kind of support which it does in its current location.

Mr. Conte. Is there currently an individual with experience in health education running the School Health Grant Program?

Mr. Cross. There are several staff there. One of them at least, I know, Dr. Alan Schmeider, does have experience in that area, and there are others on the staff. I will be glad to provide for you information on the rest of the staff.

STAR SCHOOLS

Mr. Conte. I think that is a very important area. Let's talk about the Star Schools Program. The budget again proposes to zero out the Star Schools Program. Meanwhile, the Office of Technology Assessment has published a report, "Linking for Learning," that identifies distant learning as a positive development and further identifies the Star Schools Program as the major existing Federal funding source.

Wouldn't it be a mistake to cut off the major Federal funding source and a very important and positive trend in education?

Mr. Cross. Mr. Conte, I believe that one of the things that has to be looked at here is whether or not that is truly a demonstration program. It was conceived to be that. There were grants awarded for two years. Those grants have been quite successful in getting things off the ground, and serving about 40 States now.

I don't know if you had a chance to see this morning's *Washington Post,* but here is an article in this morning's *Post* called Learning From Afar, which I will be glad to leave for you. But one of the points that it makes is that full motion video, which basically is what these projects are based upon, is very expensive.

In fact, our estimates are they cost between $1,000 and $1,400 per student served in a year, and that does not count equipment costs. It costs from $10,000 to $15,000 for equipment per site. This article mentions something called the Pennsylvania Tele-Teaching Program, which uses computers, monitors, and telephones to connect teachers for distance learning at a cost per classroom of $5,200. In short, you are talking about a cost of about one-fifth to one-sixth of that of the Star Schools Program, and the article says basically that it is just as effective, that the only thing you don't get is being able to see the teacher.

A new round of grants in this area would have the effect, frankly, of having providers competing for service to the same number of schools and the same constituencies. This moves the program out of the demonstration program strategy and it becomes a sustaining program.

I will be glad to leave this article for you.

ASBESTOS

Mr. Conte. Okay. Who in the Department is advising schools on the latest thinking with respect to asbestos, especially on the issue of whether to remove asbestos or leave it in place and contain it?

Mr. Bonner. To my knowledge, no one advises them, because I think it is a Department of Labor concern.

Ms. Christensen. It is the Environmental Protection Agency.

Mr. Cross. EPA, I believe, has an office that specifically deals with it.

Mr. Conte. You don't have anything to do with it?

Mr. Cross. No.

Mr. Conte. Okay. We will talk to EPA, then. School districts are really confused about the asbestos laws. And on top of that there are studies saying more harm is caused by ripping the walls down, because asbestos is spread around and it gets into the air.

FOLLOW THROUGH

Can you state your authority for arguing the Follow Through Progam is not covered by general education provisions, automatic 1-year extension of authorization?

Mr. Corwin. That is an interpretation from our General Counsel's Office. I prefer to place that in the record. Is that okay?

[The information follows:]

FOLLOW THROUGH AUTHORIZATION

The one-year GEPA estension of authorization does not apply to programs that have been specifically repealed by law. The 1986 reauthorization of Follow Through in the Human Services Reauthorization Act of 1986 (P.L. 99-425) repeals the Follow Through Act effective October 1, 1990.

HAWKINS-STAFFORD AMENDMENTS TO CHAPTER 2 BLOCK GRANT

Mr. Conte. For the record, the Hawkins-Stafford amendments place greater emphasis in the Chapter 2 block grants on innovative activities and effective school programs. When will you be able to provide us with information on the changes made to the state block grants under these amendments?

[The information follows:]

INFORMATION ON STATE BLOCK GRANTS

Information on effective schools and other innovative activities funded under the block grant will be forthcoming from several sources. States are now required to report annually on the use of funds, the types of services furnished, and the students served under Chapter 2. A summary of these reports will be available next January. States are also required to conduct an evaluation of the effectiveness of their Chapter 2 programs. The Secretary will submit to the Congress a report summarizing these evaluations by October 1, 1992. Later this year, the Department will contract for a study of effective schools programs. This study will produce three reports: (1) State administration of Chapter 2 programs (due in early 1992); (2) State-level effective schools activities (due in fall 1992); and (3) local-level effective schools programs (due in early 1993). Finally, the Department has requested $1 million for 1991 to extend this study to examine the full range of programs supported by Chapter 2. If funded, the final report of this study is expected in fall 1993.

NUMBER OF SCHOOL IMPROVEMENT CATEGORICAL PROGRAMS

Mr. CONTE. Under the School Improvement Program, if I were a school district looking at it, I would feel overwhelmed by the number of programs and applications for funding that would have to be completed without any assurance of receiving funds at the end. Doesn't the current structure of the School Improvement Program give the advantage to those who can hire grant writers?

Ms. CORO. We have a combined application notice that lists the programs that will be available in a given fiscal year. We had that combined application notice issued in September 1989. I believe we are moving that up now so there will be a comprehensive notice in the Federal Register soon.

Mr. CORWIN. I think to a great extent you are preaching to the choir here. We have been strong supporters of the block grant because it takes grantsmanship out of the process. It gets everybody some funding for school improvement activities.

Meanwhile, we have watched new categoricals proliferate since 1981-82. As Sally said earlier, we have gone from 120 programs to 210, and clearly grantsmanship now has a lot to do with it and who has the better consultant and who has the good federal grants writer on board and things like that. I think it is a problem.

GRANTS AND CONTRACTS IN MASSACHUSETTS 1ST CONGRESSIONAL DISTRICT

Mr. CONTE. For the record, will you provide a list of all the grants and contracts in the first congressional district of Massachusetts under the School Improvement account.

[The information follows:]

FY 1989 GRANTS AND CONTRACTS TO THE FIRST DISTRICT OF MASSACHUSETTS

Christa McAuliffe Fellowship to Susan Mitchell of Amherst, Massachusetts: $14,786.

Drug-Free Schools and Communities discretionary grant to Simon's Rock of Bard College: $115,173.

Drug-Free Schools and Communities discretionary grant to North Adams State College: $91,158.

Drug-Free Schools and Communities State grants to local educational agencies: $269,247.

Math and Science State grants to local educational agencies: $175,231.

Math and Science State grants to institutions of higher education: $185,067.

Chapter 2 State block grants to local educational agencies: $1,306,593.

Mr. CONTE. Thank you, Mr. Chairman.

Mr. Natcher. This completes the hearing on school improvement. It has been a good hearing and thank you very much.

[The following questions were submitted to be answered for the record:]

DRUG-FREE SCHOOLS

Mr. Natcher: Over the last 3 years the Drug-Free Schools program has grown very rapidly. Almost $1.1 billion has been appropriated during that time including $180 million last fall. Have local school systems been able to absorb and use this money?

Mr. Bonner: We do not know of any instances where school systems have been unable to absorb the increased funds. To the contrary, school systems have welcomed the additional funds to expand and enhance their drug education and prevention efforts.

Mr. Natcher: Insert in the record at this point a table showing drug education funding at the Department by activity from 1987 to 1991.

Mr. Bonner: The table on the following page displays this information:

DRUG EDUCATION FUNDING HISTORY

Budget Authority	1987 Actual	1988 Actual	1989 Actual	1990 Actual	1991 Request
Drug-Free Schools and Communities Act of 1986:					
State grants	$161,046,000	$191,480,000	$287,730,000	$437,881,000	$487,619,000
School personnel training	---	---	7,000,000	14,554,000	14,554,000
National programs:					
Grants to institutions of higher education	15,560,000	17,812,093	27,800,000	28,371,000	28,371,000
Federal activities	12,307,500	7,792,791	12,162,500	12,413,000	17,413,000
Prorams for Indian youth	1,945,000	2,226,512	3,475,000	3,653,000	3,653,000
Programs for Native Hawaiians	389,000	445,302	695,000	731,000	731,000
Regional centers	8,752,500	10,019,302	15,637,500	15,959,000	15,959,000
Emergency grants	---	---	---	24,688,000	25,000,000
Anti-Drug Abuse Act of 1988:					
National Commission on Drug-Free Schools	---	---	---	988,000	---
Elementary and Secondary Education Act of 1965:					
Innovative Alcohol Abuse Education (Fund for Innovation in Education)	---	---	---	1,975,000	1,975,000
Education Consolidation and Improvement Act of 1981:					
Alcohol & Drug Abuse Education	3,000,000	---	---	---	---
TOTAL	203,000,000	229,776,000	354,500,000	541,213,000	595,275,000

Mr. Natcher: How many staff are assigned to the Drug-Free Schools program and how has this changed between 1988 and 1990?

Mr. Bonner: The full-time equivalent staff associated with Drug-Free Schools programs throughout the Department has increased from 32.5 in 1988 to 38.5 in 1989 and 42.0 in 1990. Most of these FTE have been assigned from existing allocations. More resources are needed, especially travel funds to monitor projects, and have been requested under the Program Administration account.

STAR SCHOOLS

Mr. Natcher: The Committee has heard that the per pupil cost of some of these Star Schools courses may be very high. Do you have any data on the total cost to provide a typical course like Japanese or advanced calculus?

Mr. Cross: The cost per pupil varies by project and by enrollment. Three of the four Star Schools projects use full-motion interactive video for instruction, and deliver complete courses. For these, the approximate average annual cost per two-semester course per student is:

TI-IN United Star Network	$1,062
Midlands Consortium	$1,357
Satellite Educational Resources Consortium (SERC)	$1,368

Costs for Japanese language and advanced calculus courses are about the same as for other courses.

These estimates do not take into account all the expenditures involved in the delivery of interactive student courses through telecommunications. For example, the estimates do not include the cost of on-site supervision and proctoring by a local professional staff member during satellite instruction. Such monitoring of students at the school site during satellite instruction is a feature of all three of the Star Schools projects that deliver such courses. Nor do the estimates include amortization of equipment costs.

The fourth project, funded through Technical Education Research Centers (TERC), permits students, communicating with computers linked by telecommunications, to collect data and participate in large-scale experiments (such as studying concentrations of acid in rainwater in different geographic areas) as part of courses provided by their schools. Cost data from this project are not comparable to the costs of providing full-motion video and complete courses.

Mr. Natcher: Are the 1990 Star Schools grants one-year projects?

Mr. Cross: The 1990 Star Schools awards have not yet been made, so we cannot say with certainty what their term will be, although it is likely that applicants will request the longest term allowable. The authorizing statute for the Star Schools program permits awards for a second year. If funds are appropriated for 1991, awards to those 1990 grantees who requested multi-year awards would be made as non-competing continuations.

NATIVE HAWAIIAN PROGRAMS

Mr. Natcher: The President's budget would also eliminate support for the Native Hawaiian programs. What can you tell us about the educational needs of this population?

Mr. Bonner: The Hawaiian State educational agency estimates that there are about 38,000 Native Hawaiian students enrolled in its public schools. Of this number, the SEA estimates that about 4,000 are eligible for special education programs. On many social indicators (e.g., family income, employment rates, poverty rates), Native Hawaiians rank higher than other minorities, but below the national average. Educationally, 68.2 percent of Native Hawaiians have completed high school. This rate is virtually the same as the 68.8 percent completion rate for whites and higher than the national average of 66.5 percent. Hispanics rank lowest in this category, with a high school completion rate of 44 percent. The median years of schooling completed among Native Hawaiians is 12.4, about the same as for whites (12.5) and the national average (12.5). Again, Hispanics rank lowest in this category, with 10.8 median years of school completed.

Mr. Natcher: The program received $6.4 million in 1990. What portion of these funds are earmarked in the law for specific private organizations?

Mr. Bonner: The Kamehameha Schools/Bernice P. Bishop Estate is the only private organization specifically named in the authorizing statute. The 1990 awards have not yet been made; however, in 1989, the Bishop Estate received about $3.1 million, or 62 percent, of the total amount appropriated. Of that amount:

- $0.4 million is for the Model Curriculum program. The authorizing statute lists several other recipients -- the State, the SEA, the University of Hawaii -- but the Bishop Estate is the only private organization listed and was the only applicant, so it receives all the funds. The authorizing statute directs that the funds be used only to implement, in public schools, a curriculum developed by the Kamehameha Schools/Bishop Estate.

- $1.2 million is for the Family-Based Centers program. The authorizing statute specifies that Native Hawaiian organizations are to be the recipients, but does not specifically name the Bishop Estate. In 1989, there were two applicants and two grantees. The Bishop Estate received $1.2 million and Aha Punana Leo, Inc. received $0.6 million.

- $1.5 million is for Higher Education fellowships and programs. The authorizing statute specifies the Bishop Estate as the only recipient.

The authorizing statute also directs funds to the University of Hawaii at Hilo. This amounted to $790,000 in 1989.

FOREIGN LANGUAGE PROJECTS

Mr. Natcher: The President has not requested that funds be provided for foreign language projects under title II-B. As you know, this program has never been funded, but it is supported by a number of Members who see this as part of our effort to become more competitive in global markets. Why no funds for this program, Mr. Bonner?

Mr. Bonner: We certainly agree that it is very important for American children to learn foreign languages. However, Federal categorical support for foreign language courses, or for any regular classroom courses in elementary and secondary schools, does not seem to us to be an appropriate expenditure of Federal dollars. State and local educational agencies have the responsibility for determining the curricula in their schools, and it is appropriate that they use State and local funds to pay expenses associated with regular school courses. Subject to "supplement, not supplant" provisions, States could devote a portion of their Chapter 2 block grant funds for this purpose.

STAR SCHOOLS

Mr. Natcher: Provide a table showing the allocation of Star Schools funds over the years by recipient and by year.

Mr. Cross: The following table is provided for your information.

SUMMARY OF STAR SCHOOLS FUNDING
(in millions of dollars)

	1988	1989
TI-IN United Star Network	$5.6	$4.1
Midlands Consortium	$5.5	$4.1
Satellite Educational Resources Consortium (SERC)	$5.6	$4.1
Technical Education Research Centers (TERC)	$2.4	$2.0

A competition to select new grantees will be held in 1990.

EDUCATIONAL TELEVISION PROGRAMMING

Mr. Natcher: How much money does the Federal Government contribute toward educational television programming and how are these funds awarded?

Mr. Cross: The following table provides our estimates of the amounts provided by the Federal Government in fiscal year 1989 for educational television.

FEDERAL FUNDING FOR EDUCATIONAL TELEVISION
(in millions of dollars)

Department of Education	$1.0
Corporation for Public Broadcasting	6.0
National Endowment for the Arts	6.1
National Endowment for the Humanities	9.8
National Science Foundation	6.2
Total	29.1

For the purpose of making these estimates, we defined educational television as broadcast television shows frequently taped for use in classrooms, or aimed at a K-12 audience and having educational purposes. Thus, activities under the Star Schools program or Defense Department interactive training programs are not included, since they are primarily interactive instruction, and programs like NOVA would be included, even though they are aimed at an adult audience, because they are so frequently used in classroom instruction. NOVA itself did not receive funding from these sources in 1989. Funds not directly related to production, such as the Corporation for Public Broadcasting's support for classroom materials related to broadcast shows, or the Department of Education's funding for closed captioning, are not included.

Awards are made as competitive grants or contracts. In the case of the Endowments, applicants frequently must meet matching requirements as well.

HOLOCAUST EDUCATION PROJECT IN NDN

Mr. Natcher: What was the final outcome of the disagreement regarding Federal funding of a holocaust education project last year? If funded, please indicate the amount and duration of the grant.

Mr. Cross: A four-year grant was awarded to Facing History and Ourselves in fiscal year 1989. The amount awarded for the first year was $59,367.

EMERGENCY DRUG FUNDS

Mr. Natcher: What criteria will be used in allocating emergency drug funds among school districts?

Mr. Bonner: To be eligible for a Drug-Free Schools and Communities Emergency Grant, a school district must have a significant number or concentration of Chapter 1-eligible children and serve an area: (1) in which there is a large number or percentage of arrests for, or while under the influence of, drugs or alcohol or convictions of youths for drug or alcohol-related crimes; (2) in which there is a large number or high percentage of referrals of youths to drug and alcohol abuse treatment and rehabilitation programs; and (3) that has a significant drug and alcohol abuse problem, as indicated by other appropriate data.

Beginning in 1991, this program is authorized as a Federal discretionary grant program. Applications for this special assistance will be evaluated based on the need and quality of the proposed program. The Secretary will publish regulations later this year that include the specific evaluation criteria against which applications will be selected for funding.

SCHOOL IMPROVEMENT ACCOUNT STRUCTURE

Mr. Natcher: How much of this request in the School Improvement account is not administered by the Office of Elementary and Secondary Education?

Mr. Bonner: The Office of Educational Research and Improvement (OERI) administers the following programs in the School Improvement Programs account: the National Diffusion Network (NDN), Blue Ribbon Schools, Eisenhower Math and Science Education National Programs, the Fund for the Improvement and Reform of Schools and Teaching (FIRST), Territorial Teacher Training, LEAD, Mid-Career Teacher Training, the Fund for Innovation in Education (FIE), Javits Gifted and Talented Students Education, the WEEA Publishing Center, Star Schools, and Educational Partnerships. OERI will also administer the proposed program for Alternative Certification of Teachers and Principals. The requests for these OERI programs in 1991 total $95.1 million. Several of the Drug-Free Schools National programs activities are also administered outside the Office of Elementary and Secondary Education. The request for these activities in 1991 is $26.6 million. In addition, the Office of Postsecondary Education and the Office of Special Education and Rehabilitative Services administer portions of the Education for Native Hawaiians Act, for which no funds are requested in 1991. The remaining programs, for which the 1991 requests total $1.6 billion, are administered by the Office of Elementary and Secondary Education.

Mr. Natcher: Could these programs be transferred to other appropriation accounts where they are actually administered, such as research and statistics?

Mr. Bonner: Yes, we would favor moving some of these programs to the Research, Statistics, and Improvement of Practice account and would be happy to work with the committee on how best to accomplish the transfer.

CLAUDE AND MILDRED PEPPER SCHOLARSHIPS

Mr. Natcher: What is the status of proposals to provide funding to the Claude and Mildred Pepper Scholarships which was discussed last year?

Mr. Cross: A grant competition was held in fiscal year 1989 under the Fund for Innovation in Education's Innovation in Education Program. Applications were invited in a number of priority areas. Applicants interested in proposing projects to carry out the Claude and Mildred Pepper Scholarship program were also eligible to compete. Over 300 applications were received and 20 awards were made. The single application to carry out the Claude and Mildred Pepper Scholarship program, from the Washington Workshops Foundation, did not rank high enough to warrant funding.

NEW DRUG AND ALCOHOL PREVENTION REQUIREMENTS

Mr. Natcher: What actions have been taken to ensure compliance by State and local education agencies with new requirements for drug and alcohol prevention programs? Will the Department use financial sanctions in order to enforce this law?

Mr. Bonner: Under the new requirements, which take effect October 1, 1990, all State educational agencies (SEAs), local educational agencies (LEAs), and institutions of higher education (IHEs) must adopt and implement drug and alcohol abuse prevention programs and policies for their students and employees. The Department will publish regulations this spring to implement and enforce these requirements. The regulations will provide for annual review of a representative sample of programs and for a range of responses and sanctions, including termination of Federal funding, for SEAs, LEAs, and IHEs that fail to implement their programs or to enforce their sanctions.

SCHOOLS WITHOUT DRUGS

Mr. Natcher: How many copies of the pamphlet Schools Without Drugs have been printed and circulated and what did this cost?

Mr. Bonner: Approximately 3.4 million copies of Schools Without Drugs have been printed and distributed at a cost of $2.7 million, or only 80 cents per copy. Copies are distributed free of charge as are all of our drug prevention materials.

CHAPTER 2 ANNUAL REPORTS

Mr. Natcher: The Hawkins-Stafford Amendments of 1988 require the Department of Education to submit a report annually to the Congress on the use of Chapter 2 education block grant program funds. Has the Department developed a model system that States can use to report comparable data for use by the Congress and others in preparing evaluations on the effectiveness of this program?

Mr. Bonner: The Department, in consultation with the States, has developed a model form that States may use for the required annual submission of data on the use of funds, the types of services furnished, and the students served under Chapter 2. States are positive about the use of the form. The Department also has issued formal guidance to States on evaluating the effectiveness of Chapter 2 programs to facilitate evaluations that yield comparable kinds of information that can be summarized meaningfully at the national level.

CATEGORICAL PROGRAMS

Mr. Natcher: In 1981, at the urging of the Administration, the school improvement block grant program was enacted to consolidate more than 40 categorical programs into a single set of grants to the States. How many additional categorical programs have been proposed by the Administration since 1981, and how many of these have been enacted and funded? How many have been originated and enacted by the Congress?

Mr. Bonner: Since 1981, the Administration has proposed eight new elementary and secondary education categorical programs, including the five programs contained in the Educational Excellence Act proposed last year by President Bush. One of these programs -- Drug-Free Schools Emergency Grants -- has been enacted. The Senate has passed its version of the Educational Excellence bill and the House will be taking it up in March. Since 1981, Congress has originated and enacted 54 new elementary and secondary categorical programs. A list of these programs follows.

ELEMENTARY AND SECONDARY EDUCATION CATEGORICAL PROGRAMS PROPOSED BY THE ADMINISTRATION SINCE 1981

Program	Statute	First Funded
1983		
Science and Mathematics Teacher Development Act		
1986		
Teacher Training and Improvement Act		
1987		
Chapter 1 Demonstrations		
1989		
Educational Excellence Act[1]:		
Presidential Merit Schools		
Magnet Schools of Excellence

CHAPTER 2 FUNDS -- ADMINISTRATIVE EXPENSES

Mr. Natcher: How much of the Chapter 2 funds can be spent on administrative expenses at each level and how strict are the definitions on what can be counted as an administrative cost?

Mr. Bonner: A State educational agency (SEA) may spend no more than 5 percent of the State's Chapter 2 grant on program administration, which includes: (1) supervision of the allocation of Chapter 2 funds to local educational agencies; (2) planning, supervision, and processing of Chapter 2 funds received by the SEA; (3) monitoring and evaluation of Chapter 2 programs and activities; and (4) operations of the State advisory committee. Local educational agencies may spend Chapter 2 funds for administration only in an amount that is reasonable and necessary to implement their programs. Chapter 2 funds may not be used for administrative costs that are not directly associated with the Chapter 2 program.

PRESIDENTIAL AWARDS FOR EXCELLENCE IN EDUCATION

Mr. Natcher: The President has again submitted his proposal for cash awards to excellent teachers. Who would select these recipients and what criteria would be used?

Mr. Bonner: Winners of Presidential awards would be selected by statewide panels, appointed by Governors from nominations made by local educational agencies, private schools, parents, associations of parents and teachers, businesses, business groups, and student groups. In making selections, the panels would use selection criteria described in the State application and subject to approval by the Secretary. Each State would be permitted to use up to 5 percent of its allocation for administration, including the cost of convening the statewide panel.

OBJECT CLASS SCHEDULE

Mr. Natcher: The object class schedule on p. C-15 shows a large drop in both 1990 and 1991 in contracts. What is the reason for this change?

Mr. Cross: We do not anticipate any substantial reduction in the amount of funds awarded for contracts in 1990, as compared to 1989. Our contract plans for 1990 anticipate the continuation of awards to provide technical support for the Blue Ribbon Schools program, to provide technical assistance to potential applicants to the National Diffusion Network, to support the Women's Educational Equity Act publishing center, to conduct studies of magnet schools, effective schools, and the Minnesota choice program, to support activities under the Javits Gifted and Talented Students Education program, and to provide technical assistance and dissemination services to grantees under the FIRST program. These account for slightly more than half of the planned awards. The rest are for activities under the Drug-Free Schools and Communities Act. These include support for the Network for Drug-Free Colleges and Universities, mandated early childhood drug education materials, the Drug-Free School Recognition program, an evaluation of activities under the Drug-Free Schools and Communities Act, and a transfer to the HHS National Clearinghouse for Alcohol and Drug Abuse Information to assist in the distribution of educational materials.

The amount listed for 1989 in the Justifications is the amount reported by the Department's financial reporting system. Because no significant changes are anticipated in the level of activity planned for 1990 and 1991, we believe the discrepancy is attributable to differences in the way estimates were developed for 1990 and 1991 and the way contract amounts were reported for 1989. We will clear up this discrepancy in future years' budget justifications.

FOLLOW THROUGH

Mr. Natcher: According to the budget documents (p. C-5), the Follow Through program is not authorized for 1991 and is not covered by section 414 of the General Education Provisions Act (GEPA). Why doesn't GEPA apply?

Mr. Bonner: The one-year GEPA extension of authorization does not apply to programs that have been specifically repealed by law. The 1986 reauthorization of Follow Through in the Human Services Reauthorization Act of 1986 (P.L. 99-425) repeals the Follow Through Act effective October 1, 1990.

UNDERACHIEVERS PROGRAM

Mr. Natcher: Include in the record at this point a short description with budget data on the new "underachievers" program mandated in the 1990 appropriation bill.

Mr. Cross: The Department announced a competition in the March 8, 1990 Federal Register inviting applications under the Fund for Innovation in Education for projects designed to validate program models for underachieving students and projects to demonstrate school or district strategies for serving underachieving students. We have set aside $2.4 million for this competition. Applications are due July 3, 1990, and awards will be made by September 30, 1990.

CHAPTER 2 SUPPORT FOR DROPOUT PREVENTION AND MATH-SCIENCE

Mr. Natcher: Could Chapter 2 funds be used for dropout prevention and math and science improvement if the block grant were increased rather than expanding the categorical grants?

Mr. Bonner: Yes. Chapter 2 specifically authorizes "programs to meet the educational needs of students at risk of failure in school and of dropping out" and "programs of training and professional development to enhance the knowledge and skills of educational personnel," as well as programs to enhance student achievement and the educational program of the school. Of course, there is no guarantee that States and school districts would use increased block grant funds for either mathematics and science activities or dropout preventon.

BERNICE P. BISHOP ESTATE

Mr. Natcher: We have been told that one of the principal recipients of the Native Hawaiian funds is a private foundation worth hundreds of millions of dollars. This is the Bernice P. Bishop Estate. What can you tell us about this organization and its financial situation?

Mr. Bonner: According to a 1969 letter designating the Bishop Estate as an educational organization (as described in section 503(b)(2) of the tax code), the Internal Revenue Service described the Bernice P. Bishop Estate as "a trust created under the will of the late Bernice Pauhi Bishop for the purpose of erecting and maintaining in the Hawaiian Islands, two schools for boarding and day scholars. The schools, one for boys and one for girls, were to be known as the Kamehameha Schools. The boys' school was established in 1887, and the girls' school was established in 1894. Preference was to be given to students of Hawaiian or part Hawaiian ancestry." The 1969 letter goes on to say: "The information on file shows that the primary function of the Bernice P. Bishop Estate is the maintenance and operation of the Kamehameha Schools. The Schools are large, well-established educational institutions which have a regular faculty and curriculum and a regularly enrolled body of students in attendance at a place where their educational activities are regularly carried on. It has been clearly shown that the Kamehameha Schools are an integral part of the Bernice P. Bishop Estate." The letter also concluded that [d]onors may deduct contributions to the Bernice P. Bishop Estate, as provided by section 170 of the Code."

In the November/December 1989 issue of Common Cause Magazine, an article on Hawaii names the Bishop Estate as the largest of six private landowners that own 25 percent of the land in the State. Common Cause estimates that the Estate owns 8 percent of the land, worth about $2 billion. The 1989 article also contends that: (1) the Kamehameha Schools have a larger endowment than any pre-college facility in the country; (2) the Kamehameha Schools enroll 6.4 percent of the eligible (Native) Hawaiian students; and (3) trustees of the Estate, who are selected by the State Supreme Court, were paid $648,000 apiece last year and nearly $1 million the year before.

The Department has requested additional information from the Bishop Estate, and will forward that information to the Committee when it receives it.

READING IS FUNDAMENTAL

Mr. Natcher: Why is the RIF program operated as a sole source contract? Is this required by law?

Mr. Bonner: Technically we could award the funds through either a grant or a contract, but the law requires us to award the funds to Reading Is Fundamental.

ALLIANCE FOR THE ARTS

Mr. Natcher: According to your budget documents, Federal funds were used by the Alliance for the Arts program to sponsor a cultural exchange program to Hong Kong and China. Who went on this exchange, what did it cost, and why was it eligible for Federal support?

Mr. Bonner: Federal funds did not provide direct support for the cultural exchange. The participants in the exchange, including university professors, State educational agency staff, members of State arts councils, artists, and school principals and teachers, all paid their own way.

COMPREHENSIVE SCHOOL HEALTH PROGRAM

Mr. Natcher: Are any of your school health education funds used to support school-based clinics which actually provide health services?

Mr. Cross: The Comprehensive School Health Education program is not authorized to provide health services. Its purpose is to improve elementary and secondary education about matters related to health, such as fitness, nutrition, and the prevention and control of communicable diseases, and to improve programs to provide comprehensive school health education at the elementary and secondary levels. An examination of abstracts from funded projects indicates that nearly all educational services are provided in classrooms, and that no services are being provided through school-based clinics. However, nothing in the statute prohibits the provision of comprehensive school health education through school-based clinics.

CLOSE UP FOUNDATION

Mr. Natcher: Your budget states that Close Up should be able to continue at its 1990 level as a result of private funds. What evidence do you base this on?

Mr. Bonner: We base it on the fact that the non-Federal share of the Close Up Foundation's budget has increased by several million dollars in recent years.

Mr. Natcher: What is the total budget of Close Up and how has this changed in recent years?

Mr. Bonner: The information is as follows:

Close-Up Foundation Budget ($ millions)	Program Year 1988-89	Program Year 1989-90	Program Year 1990-91[1]
Non-Federal	$20.9	$23.3	$27.9
Federal	2.6	4.4	5.9
Total	23.5	27.7	33.8

DROPOUT PREVENTION PROGRAM

Mr. Roybal: How does your Dropout Prevention program address the special needs of Hispanic students?

Mr. Bonner: Through our Dropout Demonstration program proposed for 1991, we hope to fund a number of programs that will specifically address the severe dropout problems being experienced by school districts that enroll large numbers of Hispanic children. Grants will be awarded on a competitive basis to applicants proposing the most promising approaches to dealing with dropout problems. A survey of our existing (1988-1989) dropout prevention projects shows that for the 75 grantees reporting, Hispanic students account for 19 percent of all the students being served.

Mr. Roybal: What bilingual components are included as part of the program?

Mr. Bonner: The authorizing statute specifically authorizes the use of funds for the development and implementation of activities designed to address language deficiencies. Local projects are supporting these activities as they are needed to assist students at risk of dropping out of school and to help dropouts reenter school.

MAGNET SCHOOLS

Mr. Roybal: What role are private corporations playing in assisting magnet schools through the provision of personnel and equipment? Is this a proper role for corporations to play?

Mr. Bonner: Some of the 1989 magnet schools grant recipients have entered into collaborative arrangements with private corporations to spark social and economic development in their communities. Corporate partners are providing personnel, resources, student internships, mentoring, tutoring, and field trips, and have taken particular interest in reaching "at risk" students. For example, the Long Beach Unified School district is working with several aerospace technology firms to expand its aviation technology program and to prepare students for jobs and continuing education in high technology and aerospace. The participating corporations are providing training specifications, equipment, materials, and other resources to the school district. The program's graduates will be qualified for entry-level production positions; may enter Long Beach Community College for two years of additional training that is also designed to fill existing positions; or may enter California State University and obtain employment in the industry after receiving a degree. We believe that collaborative programs benefit both the students, by providing them with training and employment opportunities, and the participating corporations, by providing them with a qualified workforce.

---

[1] Estimate.

THE SCIENCE CONSORTIUM

Mr. Roybal: The Science Consortium, composed of the Lawrence Berkeley Laboratory, Jackson State University, and the Ana G. Mendez Foundation focuses on directing gifted minority students into science and engineering. The funding for this consortium comes primarily from the Department of Energy. What role does your office play in programs such as the Science Consortium and other similar programs designed to direct students into science and math curriculums?

Mr. Cross: There is a great deal of direct and indirect support for such efforts in OERI. For example:

- Eisenhower National Program funds are used to support a consortium involving the National Science Teachers Association, the California State Department of Education, the City of Houston, and about 25 local educational agencies. The purpose of the consortium is to restructure the entire science curriculum, and one specific objective is to attract more females and minorities to the study of science.

- In another effort supported by Eisenhower National Program funds, the City College Workshop Center in New York City is working with a number of community school districts in Harlem and the Bronx to increase substantially the participation of all their students in science and mathematics.

- For the 1990 Eisenhower National Programs competition, applications were invited for projects to train teachers to serve better those underrepresented and underserved in mathematics and science, projects aimed at diminishing the high rate of mathematics and science avoidance that begins in the elementary grades, and projects for increasing the achievement and college readiness of students, particularly those in inner-city and rural schools. These applications are currently being reviewed.

Efforts are also being made elsewhere in the Department. For example, under the Eisenhower State Grants program, which is administered by the Office of Elementary and Secondary Education, several State and local educational agencies provide funds for the Mathematics, Engineering, and Science Achievement (MESA) program, which is especially directed at increasing the participation of Hispanic youth in mathematics and science. At the postsecondary level, the Patricia Roberts Harris graduate fellowships program supports fellowships for graduate and professional students from groups traditionally underrepresented and underserved in higher education in areas of high national need. The top four areas of national need in 1989 were the life sciences, law, the physical sciences, and engineering.

COORDINATION OF MATH AND SCIENCE PROGRAMS

Mr. Roybal: Is there any coordination between the Department of Education and other Departments and agencies in the area of improving science and math capabilities among our students? If not, why not?

Mr. Cross: There has been significant coordination among agencies on science and math issues, and increased attention is being paid to improving science and math capabilities among our students. Coordination has not only occurred among agencies in Washington, but has been strongly encouraged by the Department among programs operating in the States and in local educational agencies. Our immediate plans call for enhancing and expanding coordination in several ways. First, I have been designated as the liaison with NSF. For the first time, the Department has designated a senior officer as an official contact. Secondly, a number of agencies are being contacted to participate in the Department of Education's Math and Science Task Force, which was established to coordinate math and science policy in the Department. Already, Energy, HHS, and NASA have participated, and others are expected to join in shortly. Third, the Department has been named to a new Committee on Education and Human Resources of the Federal Coordinating Council on Science, Engineering and Technology (FCCSET) under the White House Science Advisor, which was formed to coordinate policy across the Executive Branch. This is the first time that the Department has served on FCCSET.

CHAPTER 2 BLOCK GRANT PROGRAM

Mr. Early: The 1990 language provided for a one-time evaluation study of the Chapter 2 Block Grant Program. The Administration for FY 1991 ~~wants to~~ include language that would provide funds to continue and broaden the study of the block grant. What will this expanded study accomplish?

Mr. Bonner: The 1990 Appropriations Act earmarked funds for a study of effective schools programs mandated by section 6206 of P.L. 100-297. The 1991 request includes additional funds to extend that study to provide comprehensive information on the entire range of State and local programs supported by Chapter 2 to inform the next reauthorization, and to determine if the 1988 amendments to the program have had their intended effect.

Mr. Early: Funding for Chapter 2 State block grants, after the FY 1990 sequester, fell below the FY 1989 appropriations amount. What impact did this lower funding have on the children served in FY 1989? How many children were served in FY 1989? How many children will be served in FY 1990?

Mr. Bonner: The Department does not currently have an estimate of the number of children served by Chapter 2. However, beginning this year, States are required to submit an annual report to the Department that includes this information. In all likelihood, the $7.3 million decrease in 1990 caused the elimination of some State and local programs and a reduction in scope of others, and thereby a reduction in the number of students served.

NDN FUNDING LEVEL FOR 1991

Mr. Early: The National Diffusion Network has proven to be effective in identifying and disseminating information about programs that work. However, the Administration asked to reprogram $205,000 of the NDN's appropriation for FY 1990. The request was rejected by this committee. Is the Administration still going to request funding for NDN at $12,632,000, which is $205,000 less than last year's appropriation?

Mr. Cross: Yes, the Administration's request for $12,632,000 will stand. At that level, funds would still be available for new awards.

Mr. Early: What impact will this lower funding have on the activities supported by NDN?

Mr. Cross: It will have no impact on the total number of projects reported in our 1991 budget.

Mr. Early: How many new awards will be able to be made for FY 1991?

Mr. Cross: We expect to make 8 new awards in 1991-- 5 developer/demonstrators and 3 dissemination process projects -- as well as 80 continuation awards.

INEXPENSIVE BOOK DISTRIBUTION

Mr. Early: The Administration requested reprogramming $21,000 of the Inexpensive Book Distribution FY 1990 appropriations. The request was rejected by this committee. Is the Administration still going to request funding for the Inexpensive Book Distribution program at $8,555,000, which is $21,000 less than last year's appropriation?

Mr. Bonner: Our 1991 request for the Inexpensive Book Distribution program is not a decrease. The request remains at $8,914,000, which is $338,000 more than the 1990 appropriation of $8,576,000.

Mr. Early: What impact will this lower funding have on this program for FY 1991?

Mr. Bonner: Again, our 1991 request of $8,914,000 is an increase, not a decrease. The requested funds will support the distribution of approximately 6,690,000 books to 2,230,000 children.

Mr. Early: It has come to my attention that when the RIF program comes to a local school to distribute books, teachers are not allowed to interfere with the choice of books a child makes. If this is true, what other steps can be taken to prevent children from picking books that are inappropriate for their age and abilities?

Mr. Bonner: Local book distribution (RIF) projects have book selection committees consisting of parents, teachers, and librarians that order the books to be distributed at their site. These Committees order a range of books appropriate for the age and abilities of the children participating in the program. The children are then allowed to choose freely among these books. No other steps need to be taken.

BLUE RIBBON SCHOOLS

Mr. Early: The Administration requested reprogramming of $379,000 from funds appropriated for other national programs for Blue Ribbon Schools. This request was rejected. What impact did the inability to reprogram funds have on this program?

Mr. Cross: The most serious impact of reduced funding has been the need to cut back from two site visitors to one visitor for each of the 243 elementary schools selected for a visit this year. Three years ago, the number of site visitors was increased from one to two to ensure a more thorough and fair review of each school. The role of site visitors is to verify that information in a school's nomination form is accurate and to gather first-hand information on the quality of classroom instruction and the school climate. Site visitors thus provide the necessary quality control to ensure that schools recognized nationally are indeed exemplary schools.

Mr. Early: Since the request was denied for the reprogramming of funds, is the Administration still going to request funding for this program at $873,000, an increase of $379,000 over FY 1990 appropriation? How will this extra money be used?

Mr. Cross: The Administration is requesting $873,000 for this program in 1991. The additional $379,000 will allow the reinstatement of two site visitors and avoid the need for; (1) reducing again the initial number of schools each State and the Council for American Private Education can nominate; and (2) setting a limit on the number of schools that can be visited. Since the Blue Ribbon Schools Program is an important school improvement strategy, we would like to encourage rather than constrain participation.

DRUG-FREE SCHOOLS AND COMMUNITIES PROGRAM

Mr. Early: A total of $354,500,000 was appropriated for FY 1989 for Drug-Free Schools and Communities. For that amount, what specific accomplishments were achieved?

Mr. Bonner: The specific accomplishments achieved by the Drug-Free Schools and Communities program include, but are not limited to, the following:

- o Formula grants to every State and Territory, which supported drug prevention education programs in 80 to 90 percent of the Nation's school districts;

- o Formula grants to the Nation's Governors, which supported community-based drug prevention programs, including programs directed at "high-risk" youth;

- o Fifty-six grants averaging $125,000 to establish, expand, or enhance programs and activities for the training of teachers and other educational personnel in drug and alcohol abuse education;

- o Fifty-six grants averaging $248,000 to provide training for law enforcement officials, judicial officials, community leaders, parents, and government officials in drug abuse education and prevention to benefit students in elementary and secondary schools;

- o One hundred seventy-six grants averaging $78,000 to develop, implement, operate, and improve programs of drug abuse education and prevention for students enrolled in institutions of higher education;

- o Direct support for alcohol and drug abuse education and prevention programs for Indian children on reservations served by the Department of the Interior;

- o Support for alcohol and drug abuse education and prevention programs for the benefit of Hawaiian Natives;

- o Cooperative agreements with five regional centers to provide training and assistance to, and coordination among, State and local educational agencies and institutions of higher education; and

- Support for a broad range of discretionary Federal activities including:
  - Forty-two grant awards averaging $145,000 for exemplary programs of drug and alcohol abuse education and prevention;
  - The Drug-Free School Recognition program;
  - The Network of Drug-Free Colleges and Universities;
  - A descriptive study of the implementation of State and local programs funded under the Drug-Free Schools and Communities Act;
  - A study of promising substance use education and prevention programs funded or identified by the Department;
  - The Department's bimonthly newsletter, The Challenge;
  - The National Clearinghouse for Alcohol and Drug Information (in cooperation with the Department of Health and Human Services);
  - A new handbook for parents entitled, Growing Up Drug Free: A Parent's Guide to Prevention;
  - A revised, second edition of the Department's handbook Schools Without Drugs (including a Spanish edition); and
  - Beginning the development of drug abuse education and prevention curricula, programs, and training materials for use in early childhood education.

IMPACT OF DRUG-FREE SCHOOLS PROGRAM ON CHILDREN

Mr. Early: How much of an impact does a school drug program have on a child who is in school for only six hours a day, five days a week, yet faces the drug world everyday and every hour they're not in school?

Mr. Bonner: In all likelihood a drug program that is isolated at the school level will have less impact than a comprehensive program that is community-wide and involves schools, parents, youth, law enforcement, local business, and other broad-based support. However, a school-based component of such a program is important. Schools can establish and enforce strong policies against drug use, teach that drug use is wrong and harmful, and reach out to the community for support and assistance in making the community's anti-drug program work.

EISENHOWER MATHEMATICS AND SCIENCE EDUCATION

Mr. Early: The appropriation for the Eisenhower program for both State grants and national programs for FY 1990 was less than the appropriation for FY 1989. What impact did this lower funding have on the Eisenhower program?

Mr. Bonner: For the State Grant program, the decrease in funding from $128.4 million in 1989 to $126.8 million in 1990 resulted in a reduction of nearly $31,000 in the average State grant. The appropriation for the National Programs was reduced by $111,000.

FUND FOR THE IMPROVEMENT AND REFORM OF SCHOOLS AND TEACHING

Mr. Early: How many new awards will be awarded for FY 1991 for FIRST Family-School Partnerships?

Mr. Cross: We estimate that sufficient funds would be available to support about 14 new awards in 1991. The remaining funds would be used to continue about 18 awards begun in 1989 or 1990.

Mr. Early: Is there any coordination between FIRST Family-School Partnerships and the Even Start program?

Mr. Cross: The staff of both the Even Start Program and the Family-School Partnerships Program have worked closely to coordinate the implementation of the two programs. We will continue to encourage contact and coordination between grantees from the two programs.

Mr. Early: If so, could you give me any details on how the coordination between these two programs works?

Mr. Cross: Staff of the Family-School Partnerships Program and the Even Start Program have met on a regular basis to discuss areas of mutual interest. Information on Even Start was shared with representatives of funded projects at the Family-School Partnerships Project Directors' meeting in December 1989. A representative from Chapter 1 shared information about Even Start with the FIRST Board when they met to discuss priorities for 1990 competitions.

As a result, the FIRST Board recommended that the following invitational priorities be included in the Notice Inviting Applications for New Awards for 1990 for the Family-School Partnerships Program, which was published in the Federal Register January 31, 1990.

"The Secretary is particularly interested in projects that:

-- Demonstrate close cooperation with the Chapter 1 Program in participating schools and with its parent involvement component; and

-- Build on existing innovative family involvement programs in order to further develop, evaluate and disseminate these programs."

LEADERSHIP IN EDUCATIONAL ADMINISTRATION (LEAD) PROGRAM

Mr. Early: The Administration is requesting a change in the language for the LEAD program. Does this change have anything to do with the Administration's desire to discontinue this program when it expires in September of 1993?

Mr. Cross: The six Insular Area LEAD centers were first funded a year after the other 51 LEAD awards were made, and they will continue operation one year later. The change of language will permit funding their fifth and sixth (final) years, along with the sixth (final) year of the other 51 awards, from a single appropriation, and avoid the need for a very small fiscal year 1992 appropriation for just those six centers. The Administration is committed to administering the LEAD program according to the provisions of law, which now call for grants of up to six years, with the final three years funded at a reduced level. The Administration believes the intent of the LEAD Act will have been met at the conclusion of these awards.

MAGNET SCHOOLS

Mr. Early: The Administration is requesting level funding for FY 1991 at $113,189,000 for Magnet Schools in Desegregating Districts, and then requests $100 million for Magnet Schools of Excellence, which do not require any desegregation plan. Is this a shift by the Administration away from using magnet schools as a means for desegregation?

Mr. Bonner: The proposed Magnet Schools of Excellence program does not represent a lessening of the Administration's support for the existing Magnet Schools Assistance program, which supports magnet schools for desegregation purposes. However, many school districts have also used magnet schools to improve educational quality, increase both students' and parents' choices, and enhance the reputation of their schools. Federal funds should, therefore, be made available for magnet school programs not only to further school desegregation, but also to enable school districts to design and implement magnet school programs that promote open enrollment and that focus on academic excellence in disciplines that are of critical importance to the Nation's economic competitiveness.

Mr. Early: How many schools will be funded under Magnet Schools in Desegregating Districts for FY 1991?

Mr. Bonner: For 1991, we are requesting $113.2 million for Magnet Schools in Desegregating Districts. At this funding level, we estimate that approximately 54 school districts would receive average awards of just over $2 million under a new competition. It is not possible to estimate the number of individual schools that would be funded in 1991.

Mr. Early: How many schools will be funded under Magnet Schools of Excellence for FY 1991?

Mr. Bonner: For 1991, we are requesting $100 million. We estimate that 50 school districts would receive awards averaging $2 million each. Again, it is not possible to estimate the number of schools within these districts that would be supported.

HOMELESS CHILDREN AND YOUTH

Mr. Early: What data does the Department have on the number of school age children who are homeless?

Mr. Bonner: The Department will be submitting a report to the Congress in March of 1990 showing that for 1989, States estimated they had about 273,000 homeless school-aged children. Of this number, the States estimated that, at the time of the count, about 28 percent of these students were not attending school. I should emphasize that the process of counting children who are homeless is fraught with problems and, while the States have done an admirable job, these numbers should be seen as estimates only.

Mr. Early: Is the Administration's request of $5 million for grants for State activities enough to have any real impact on getting these children the education they need?

Mr. Bonner: The $5 million State grant program for Education for Homeless Children and Youth does not provide direct educational services for these children. However, every State educational agency receives funds from this program to gather data on the number and location of homeless children in the State, document problems these children are having with access to public education services and facilities, mediate jurisdictional disputes among local school districts, and implement their State plans to remove barriers and ensure that homeless children have full access to public education. We believe this program provides a needed service for homeless children and youth.

The new program of Grants for Exemplary Programs, first funded in 1990, will provide direct benefits for those children through projects funded at the school district level and dissemination activities that will inform State and local agencies about successful practices.

I would also like to point out that the $5 million requested for State grants and the $2.5 million requested for exemplary programs represent full funding for the elementary and secondary education programs authorized by the Stewart B. McKinney Homeless Assistance Act.

DROPOUT PREVENTION

Mr. Early: The dropout rate in some cities has reached almost 50 percent. What specific programs have been successful in alleviating this problem?

Mr. Bonner: While researchers agree that different combinations of strategies are likely to be effective with the diverse groups of at-risk students, there are a number of promising exemplary models for dropout prevention. For example:

- The Model School Adjustment Program in Florida provides middle school students with peer tutoring, counseling, and family counseling on effective parenting skills.
- The Peninsula Academies in California are three-year school-within-a-school programs that integrate academic and vocational education and include school/business partnerships that provide employment opportunities.
- Project COFFEE in Massachusetts is an alternative school that includes an individualized academic component, a vocational education component, and work-related experience with local businesses and the community.
- Operation Rebound in Illinois serves dropouts 16 to 21 years of age, providing individualized academic remediation, counseling, tutoring, attendance incentives, work experience, and services for the criminal offender.

However, we need to replicate these and other models to verify that these promising strategies will work in different educational settings and with students who are at risk of dropping out for varying reasons.

Mr. Early: If the Dropout Prevention reauthorization is not passed, what effect will that have on the current dropout prevention programs?

Mr. Bonner: The Congress has passed and the President has signed a bill to reauthorize the Dropout Prevention Demonstration program. Projects funded under the previous authorization received funding for two years only, 1988 and 1989. Our request for funds under the reauthorized program will support a new competition in 1991.

FOLLOW THROUGH

Mr. Early: The Administration is proposing no funding for the Follow Through program and is proposing no new authorizing legislation, even though this program has been proven effective in maintaining the gains made in programs such as Head Start. Is the Administration proposing any new initiatives to replace this program? If not, why should we invest money in Head Start if the gains made are going to be lost?

Mr. Bonner: No new initiatives are needed. Activities to improve educational programs for children in early elementary grades can continue under broader programs such as Chapter 1 grants to local educational agencies (requested at $5 billion for 1991) and Chapter 2 State block grants (requested at $474.4 million). Also, the Department requests doubling the size of the Even Start program, which addresses the same goals as Follow Through, to $48 million for 1991. These continued investments should help sustain the gains made by the Head Start program.

The Department believes that the basic objectives of the Follow Through program have been met. Outstanding model programs have been developed, refined, and disseminated. In fact, the National Diffusion Network has disseminated Follow Through projects and can continue to do so when the program is terminated as a separate categorical grant program.

MAGNET SCHOOLS

Mr. Hoyer: What is the authorization level for the current Magnet Schools Assistance program, and do you at any time anticipate a need for increasing the requests for that appropriation?

Mr. Bonner: The Magnet Schools Assistance program currently has an indefinite authorization level. For 1990, $113,189,000 was appropriated. For 1991, the Administration has requested level-funding for the program. Future budget requests will be determined through our internal budget formulation process in conjunction with the Office of Management and Budget.

Mr. Hoyer: The Prince George's magnet program is regarded as among the best in the country, and one of the reasons for its success is the fact that they have learned from their experience of using magnets as lab schools. They have dealt with the inevitable problems that arise when massive resources are "diverted" to a few programs within a system.

I understand the need to support new programs through the magnet program, but isn't it the case that experience is penalized in the competition for these funds?

Mr. Bonner: Under the statute, as reauthorized by the Hawkins-Stafford Amendments, no consideration may be given to whether a school district has previously received funds under the program in competing for the first $75 million appropriated for the Magnet Schools Assistance program. However, for funds appropriated in excess of $75 million, the Secretary is required to give preference to school districts that did not receive awards in the previous fiscal year. In 1989, the first competition under which these new provisions applied, 28 grantees had been previously funded under the program. Of these, 14 school districts received preference, having received awards in the first (1985-86) competition, but not in the second competition (1987-88). In addition, 26 school districts were first-time grant recipients.

We believe that the preference given to new districts, for amounts in excess of $75 million, provides a needed focus for the program on spreading the magnet school concept and building the capacity of school districts to operate magnet schools on their own. We do not believe the program should be structured so as to fund the same magnet schools, year after year, in the same districts.

Mr. Hoyer: Shouldn't the Federal Government use and disseminate the experience of systems like Prince George's which have become more adept at handling very serious sometimes divisive equity issues that arise when implementing a magnet program?

Mr. Bonner: In 1990, the Department will conduct a comprehensive assessment and evaluation of magnet school programs including the identification of successful projects. The results of this study, which are expected in 1992, will be disseminated widely.

STATE BLOCK GRANTS

Mr. Hoyer: Although the justification includes information that indicates that local education programs generally have no particular focus or target student population or grade level, aside from the area of curriculum development there appears to be no effort for system-wide reform (one of the Secretary's priorities). Is the program design not really applicable for systems reform?

Mr. Bonner: The accomplishments data included in the justification are based on Chapter 2 as it was authorized and implemented under the Education Consolidation and Improvement Act of 1981. The program has since been reauthorized as part of the Elementary and Secondary Education Act and is more focused than was the case under the previous law. State educational agencies are now required to use a portion of their 20 percent set-aside funds for "effective schools" programs as defined in the legislation, and programs designed to carry out schoolwide improvement, including "effective schools," are specifically authorized as a use of local funds as well. The program is a good vehicle for systemic reform;

however, several other school improvement activities are authorized under Chapter 2, and State and local educational agencies have the discretion to choose among these activities.

Mr. Hoyer: What is the percentage increase in the State block grant program for FY 1991?

Mr. Bonner: The 1991 request of $475,405,000 would be a 4 percent increase over the 1990 level of $457,198,000.

Mr. Hoyer: Does the Education Department have any data on how much of the 20 percent of State grants that may be retained by States is actually passed through to local education agencies and whether it is being used for systems reform?

Mr. Bonner: Later this year the Department will contract for a study to examine the extent to which the Chapter 2 program has supported "effective schools" programs. In addition, funds are requested in the 1991 budget to extend this study to examine the full range of State and local programs funded under Chapter 2. Data currently available to the Department on the use of Chapter 2 State set-aside funds are several years old and based on a five-State study of the program as it was authorized under the Education Consolidation and Improvement Act. According to these data, many States passed a portion of their set-aside on to local educational agencies (anywhere from 1 to 63 percent of the 20 percent the State may retain) for specific projects. No data are available on the extent to which these funds were used for systemic reform.

FUND FOR INNOVATION IN EDUCATION

Mr. Hoyer: Under the Fund for Innovation in Education, there is only $3.7 million for innovation in education in FY 1991, the same as for FY 1990. Could you explain whether these funds are available for more systematic reform efforts, and if so why there is no increase requested for these projects?

Mr. Cross: In 1989, we placed a high priority on supporting educational reform at the State and local level and supported several projects that will continue through 1991. In addition, we will conduct one or two competitions in 1991 and make about 15 new awards. Level funding of the program would provide enough funds for a substantial new effort in 1991, but only if funds are not earmarked for the five distinct programs under the Fund for Innovation in Education.

NDN AND SCHOOL REFORM

Mr. Hoyer: Several Prince George's county schools have adopted programs disseminated by the National Diffusion Network, and system officials in the State of Maryland have had a very positive reaction to the program. The President's budget zeroes the Follow Through program and indicates that one of the reasons is that the NDN can disseminate the programs that were developed under Follow Through.

Since there appears to be so little in the way of resources at the Federal level for school reform, I am curious as to why the NDN isn't a higher priority?

Mr. Cross: It is always difficult to establish priorities among programs when funds are limited. However, given the 16 percent increase provided to NDN in 1990, we think that there are adequate funds available in 1990 and 1991 for the dissemination of new projects. In 1990, we will have about $3.4 million available for new awards and will support 51 new developer/demonstrators. This, coupled with about $630,000 for 8 new awards in 1991, constitutes a large infusion of funds for new projects in a short period of time. Another factor to be considered is the limited number of new projects coming into the system with evaluation data sufficient to demonstrate proven effectiveness and gain certification by the Program Effectiveness Panel.

MERIT AND BLUE RIBBON SCHOOLS

Mr. Hoyer: Blue Ribbon Schools are authorized at $1.5 million as a Chapter 2 set-aside under the Secretary's discretion. The program appears to reward schools that are achieving genuine success in reaching goals for student achievement. What is the difference between the Blue Ribbon Schools and the merit schools concept which I fear may not be an appropriate use of Chapter 1 funds?

Mr. Cross: Although funding for Presidential Merit Schools is requested under the same account as the Chapter 1 programs, Chapter 1 funds would not be used for this new program. The Presidential Merit Schools program would be a State-administered program providing monetary awards to schools successful in helping large numbers of disadvantaged students achieve academically. The Blue Ribbon Schools Program is a national program that identifies a wide variety of public and private schools that are effective in educating their students.

Major differences between Blue Ribbon Schools and the proposed Presidential Merit Schools program include:

- Unlike Blue Ribbon Schools, Presidential Merit Schools would provide a financial reward, and thus a major incentive, for improved educational performance at the school level. Blue Ribbon Schools receive no monetary award.

- The Blue Ribbon Schools program recognizes both schools that have already succeeded, and those that are making significant improvements. Presidential Merit Schools would target exclusively on schools

that are making improvement, often under the most trying of circumstances, in such areas as significantly reducing the dropout rate, ridding campuses of drugs, or greatly increasing student achievement and test scores.

- Blue Ribbon Schools focuses on educational effectiveness generally and, within that context, identifies schools that have especially good programs in annually selected priority areas, such as geography or reading. Presidential Merit Schools would focus on specific key areas -- improvement in student achievement, success in lowering the dropout rate, and progress in creating a safe and drug-free environment -- that are central to our national goals for elementary and secondary education.
- The Blue Ribbon Schools program, while it recognizes a broad variety of schools, does not concentrate exclusively on schools serving disadvantaged populations. Presidential Merit Schools -- through its use of the Chapter 1 formula, its tie-in with the Chapter 1 goal-setting process, and its encouragement for States to give special consideration to schools serving large numbers or concentrations of low-income children -- would target those schools and would thus be a natural complement to Chapter 1.

Mr. Hoyer: Why is the Department requesting less than $900,000 for Blue Ribbon Schools?

Mr. Cross: The $873,000 the Department is requesting represents our best estimate of the cost of operating the 1990-91 Secondary School Recognition Program effectively and efficiently.

ALTERNATIVE TEACHER CERTIFICATION

Mr. Hoyer: The President's Alternative Teacher Certification proposal provides $25 million (or grants of between $2.5 million and $480,000 per State) for States to develop alternative certification for recruiting talented professionals outside the teaching profession. The idea has merit.

Can you explain why it is that the Department is opposed to the National Board for Professional Teaching Standards, a $5 million program that would help establish broad-based voluntary standards of teacher performance and certification that would help us ensure competence among those already working in our schools?

Mr. Cross: We are pleased that you support our alternative certification proposal. We believe that such programs can be instrumental in attracting more individuals and more minorities who are well qualified in their subject areas, particularly in mathematics and science, where there is a critical need. Our $25 million request is not a large amount, given that all of the States could participate.

We would like to see the National Board for Professional Teaching Standards accomplish its stated mission. We believe it could have an important role to play, if handled effectively, and, in time, stimulate important improvements in American education. It could perhaps also raise the standards of the profession as a whole, help stimulate changes and improvements in the preparation of teachers, lead to higher salaries for excellent teachers, and thereby create incentives for teachers to excel. It could perhaps even lead to greater numbers of talented individuals pursuing teaching as a career.

The Board, as it is presently constituted, is a private organization that operates with total independence from the Federal Government, and we believe that that is the way it should remain. We support the Board's stated objectives; however, we believe it would be highly inappropriate to support its funding in the manner proposed. We have three major concerns about Federal funding for the Board. First, the Department, as a rule, opposes sole source contracts, particularly when the recipient of Federal dollars does not have an established track record and the money is to be used for unspecified research and development activities. Second, the proposal under consideration lacks accountability to the Secretary of Education. Third, the funds requested by the Board ($25 million) are excessive, and the research would likely duplicate research activities that are currently under way or that are planned by the Department.

NATIONAL DIFFUSION NETWORK

Mr. Porter: I am disappointed that the Administration is requesting level funding for the National Diffusion Network (NDN). Last year I asked about the effectiveness of NDN programs. The Department replied that NDN developer/demonstrator and dissemination process projects are at least as effective at adoption sites as they are at the developer sites. In addition, I was told that 80 percent of adopting schools continue their NDN programs for at least four years.

Clearly, NDN gets a lot of bang for the buck. Although the Administration is requesting an 18 percent increase for School Improvement Programs, most of this money is going to new, untested categoricals. By contrast, NDN, with a track record of demonstrated effectiveness, is level funded. That represents a 4 percent real cut in funding, and will result in a reduction of 13 developer/demonstrator grants.

How will these cuts affect developer/demonstrator and dissemination process projects?

Mr. Cross: Compared with the 1990 impact data, we estimate a decrease of 16 developer/demonstrator grants and an increase of one dissemination process project in 1991. Although these numbers alone appear to reflect a program decrease, they do not take into consideration our proposed increase for NDN's technical assistance contract, which is vital to the successful operation of the program. This contractor not only is the major source for bringing high-priority projects into NDN but also strengthens the working relationships between NDN program staff, developer/demonstrators, and State facilitators. Our 1991 request would provide over $800,000 for technical assistance, compared to the $142,000 we plan to spend on this activity in 1990.

Mr. Porter: Does this request allow for any increases in allocations to current grantees?

Mr. Cross: We have no plans to increase the awards for continuation grantees in 1991, although some of the funds designated for new projects could have been designated for that purpose.

Mr. Porter: How many validated projects were unfunded in 1989? How many are unfunded in 1990? How many do you predict will go unfunded in 1991 under this request?

Mr. Cross: In 1989, there were 39 validated projects in NDN which were unfunded, and we estimate there will be 45 in 1990 and 50 in 1991. However, over half of these projects have received NDN funding in prior years and, therefore, have already disseminated their programs widely. All of these projects, along with the funded ones, are included in the catalog, "Educational Programs That Work," and many are actively disseminating information even without Federal aid.

Mr. Porter: How many grants went for new projects in 1990? How many were for continuation of previous projects?

Mr. Cross: All grant awards have not been made for 1990. It is estimated that 51 new and 52 continuation grant awards will be made to developer/demonstrators and dissemination process projects this year.

Mr. Porter: Please submit information showing how many grants were new, and how many were for continuing projects for each of the last five years.

Mr. Cross: The information follows:

Year	New Awards	Continuations	Total
1985	15	81	96
1986	16	65	81
1987	24	60	84
1988	36	40	76
1989	29	52	81

DISSEMINATION OF FOLLOW THROUGH PROJECTS

Mr. Porter: Last year I asked about the Follow Through program, and the potential for developing a dissemination structure for Follow Through similar to the one used by NDN. The Department replied that the NDN dissemination structure could accommodate Follow Through projects once Follow Through is terminated as a categorical. However, this year you propose to zero out Follow Through and to cut 13 NDN developer/demonstrator grants. How do you reconcile these positions?

Mr. Cross: It is true that NDN can accommodate Follow Through programs that have been rigorously evaluated and have current Program Effectiveness Panel (PEP) approval for dissemination by the NDN. About ten years ago, more than a dozen Follow Through programs were disseminated by NDN with joint funding by Follow Through and NDN.

To remain eligible to receive NDN grant awards for dissemination, a program must submit new evaluation data to the PEP every six years and obtain approval. At present, there are six Follow Through programs that have current PEP approval and are eligible to compete for NDN funding.

These six programs may receive NDN grant awards in fiscal year 1990 or 1991 if they successfully compete in their content areas. We expect to make 51 new developer/demonstrator awards in 1990 and another 5 in 1991.

NDN PROGRAMS IN ILLINOIS

Mr. Porter: Please provide a list of school districts in Illinois that have installed NDN programs in 1989-1990.

Mr. Cross: Data for this school year are not available; however, 701 public and 91 non-public schools in Illinois installed NDN programs during the past year. I will provide you with a list of these schools, including the districts in which they are located.

SCHOOL IMPROVEMENT PROGRAMS

For carrying out the activities authorized by chapter 2 of title I[,] and titles II, III, IV, V, and [part B[1/] of title] VI[2/] of the Elementary and Secondary Education Act of 1965, as amended; the Stewart B. McKinney Homeless Assistance Act; the Civil Rights Act of 1964; title V of the Higher Education Act, as amended; part B of title III [and title IV][3/] of Public Law 100-297; [section 5051 of Public Law 100-690;[4/] section 6115][5/] and chapter 5 of subtitle A of title VI of Public Law 100-418[; and the Follow Through Act,[6/] $1,232,895,000], $1,704,916,000, of which [$899,494,000] $1,193,039,000 shall become available on July 1, [1990] 1991, and remain available until September 30, [1991, and $2,500,000 shall be for evaluation studies] 1992, and $370,000 shall become available on July 1, 1991, and remain available until September 30, 1993.[7/] Of the total amount appropriated, $1,000,000 shall be for an evaluation study of the [magnet schools and] chapter 2 block grant [programs] program;[8/] [$8,892,000 shall be for national program activities under section 2012 and $128,440,000 shall be for State grants under part A of title II of the Elementary and Secondary Education Act;[9/] $3,964,000] $3,915,000 shall be for grants for schools and teachers under subpart 1 and [$4,500,000] $4,443,000 shall be for family-school partnerships under subpart 2 of part B of title III of Public Law 100-297;[10/] [and $31,084,000] $31,215,000 shall be for national programs under part B and [$461,477,000] $474,405,000 shall be for State and local programs under part A of chapter 2 of title I of the Elementary and Secondary Education Act[.]; and, under title V of the Elementary and Secondary Education Act of 1965, $483,584,000 shall be for State grants under part B, $4,035,000 shall be for grants to Outlying Areas under part B, $14,554,000 shall be for school personnel training under part C, $66,127,000 shall be for national programs under part D, of which $28,371,000 shall be for section 5131, $17,413,000 shall be for section 5132, $3,653,000 shall be for section 5133, $731,000 shall be for section 5134, and $15,959,000 shall be for section 5135, and $25,000,000 shall be for emergency grants under section 5136.[11]

For carrying out a new program of Presidential Awards for Excellence in Education to provide awards of up to $5,000 each to excellent public and private elementary and secondary school teachers in every State, selected during annual competitions in accord with criteria established by the Secretary of Education, $7,600,000: Provided, That these funds are not available until specifically authorized.[12]

For carrying out a new program of grants to local educational agencies to establish Magnet Schools of Excellence, in accord with criteria established by the Secretary of Education, to foster schools with specialized curricula that are open to students beyond their immediate school attendance areas, that give special recognition to the potential benefits to children from low-income families, and without regard to whether the local educational agency within which such school is to be located is presently implementing a plan for desegregation of minority group segregated children or faculty in the elementary and secondary schools of such agency, $100,000,000: Provided, That these funds are not available until specifically authorized.[13]

For non-renewable grants to States for the additional costs of testing, establishment, implementation, evaluation, or other activities related to alternative teacher and principal certification systems that open entry to teacher and principal positions to individuals with demonstrated knowledge of subject areas and proven administrative competence, in accord with criteria established by the Secretary of Education, $25,000,000: Provided, That these funds are not available until specifically authorized.[14] (Department of Education Appropriations Act, 1990.)

[To ensure a drug free learning environment for American students by carrying out the Drug-Free Schools and Communities Act of 1986, as amended, part F of title IV of the Elementary and Secondary Education Act, as amended, and the Department of Education Organization Act, $183,500,000: Provided, That of this amount $170,000,000 shall be for State grants under part B, which shall become available on July 1, 1990 and remain available until September 30, 1991; $2,000,000 shall be for innovative alcohol abuse programs under section 4607; $7,500,000 shall be for teacher training under part C; $2,000,000 shall be for national programs under part D; and $2,000,000 shall be transferred to "Departmental Management, Program Administration" for administrative costs: Provided further, That of the amounts available for part B, not less than $25,000,000 shall be for section 5121(a) for urban and rural emergency grants:[15] Provided further, That funds available under the "Department of Education Appropriations Act, 1990" for "Rehabilitation Services and Handicapped Research" shall also be available for activities under title II of Public Law 100-407;[16] funds available for "School Improvement Programs" shall also be available for activities under title IX of the Education for Economic Security Act, as amended;[17/] and funds available for "Student Financial Assistance" shall be administered without regard to section 411F(1) of the Higher Education Act of 1965 (20 U.S.C. 1001 et seq.), and the term "annual adjusted family income" shall, under special circumstances prescribed by the Secretary of Education, mean the sum received in the first calendar year of the award year from the sources described in that section.][18/] (Department of Transportation and Related Agencies Appropriations Act, 1990.)

Explanation of Language Changes

1/ This reference to the Secondary School Basic Skills Demonstration program is removed because the program is no longer authorized and funds for it are not included in the budget.

2/ This reference is to the Dropout Prevention Demonstration program. Although Title VI of the Elementary and Secondary Education Act is no longer authorized, legislation to reauthorize the Dropout Prevention program is pending in Congress, and funds for it are included in the budget.

3/ This reference to the Education for Native Hawaiians programs is removed; the budget does not include funds for these programs because they provide services that duplicate those supported under other authorities.

4/ This reference to the National Commission on Drug-Free Schools is eliminated because the Commission will have completed its work by fiscal year 1991.

5/ This reference to Technology Education Demonstrations is removed because funds for the program are requested under the Vocational and Adult Education account.

6/ The reference to the Follow Through Act is removed; the budget does not include funds for this program because it has already accomplished its objectives.

7/ An additional year of availability is provided to cover the final year of funding for the Leadership in Educational Administration program.

8/ The reference to the magnet schools evaluation study is removed, because the study will have been fully funded by fiscal year 1991. However, the budget does include $1,000,000 to continue and broaden the Chapter 2 block grant evaluation that was begun with fiscal year 1990 funds.

School Improvement Programs

Explanation of Language Changes — Continued

9/ This language was needed to provide fiscal year 1990 funds for the Eisenhower Mathematics and Science Education National Programs in excess of the 4 percent allowed by the authorizing statute. The language is not needed in 1991.

10/ This language overrides percentages in the authorizing statute to specify amounts for Grants to Schools and Teachers and Family-School Partnerships, under the Fund for the Improvement and Reform of Schools and Teaching, that differ from percentage allocations specified in the authorizing statute.

11/ This language overrides percentages in the authorizing statute to specify amounts for State Grants, School Personnel Training, the various National Programs, and Emergency Grants under the recently amended Drug-Free Schools and Communities Act. The language is needed to ensure that the increase proposed for Drug-Free Schools and Communities is earmarked for State Grants, Federal Activities, and Emergency Grants.

12/ This language is needed to provide funding for President Bush's initiative of Presidential Awards for Excellence in Education.

13/ This language is needed to provide funding for President Bush's initiative of Magnet Schools of Excellence.

14/ This language is needed to provide funding for President Bush's initiative of Alternative Certification for Teachers and Principals.

15/ This language from the 1990 Department of Transportation and Related Agencies Appropriatons Act is deleted because comparable language requesting funds for programs authorized by the Drug-Free Schools and Communities Act and Title IV, Part F of the Elementary and Secondary Education Act is included in the regular approprations language being proposed for 1991. Funds sufficient to provide for the administration of these programs are requested under the Department's Program Administration account.

16/ This language is deleted because it does not apply to programs in this account. Similar language is included for 1991 under the Rehabilitation Services and Handicapped Research account.

17/ The reference to Star Schools is removed; the budget does not include funds for this program because it has met its objectives and duplicates activities that are allowable under other authorities.

18/ This language is deleted because it does not apply to programs in this account. Similar language is included for 1991 in the Student Financial Assistance account.

School Improvement Programs

Language Analysis

Language Provision	Explanation
... of which [$899,494,000] $1,193,039,000 shall become available on July 1, [1990] 1991, and remain available until September 30, [1991, and $2,500,000 shall be for evaluation studies] 1992...	This language provides for forward funding for the following programs: Chapter 2 State Block grants, Drug-Free Schools and Communities State Grants, Eisenhower Mathematics and Science Education State Grants, Leadership for Educational Administration, Education for Homeless Children and Youth Grants for State Activities, and Ellender Fellowships. The bracketed language also refers to studies conducted with 1990 funds of magnet schools and the chapter 2 block grant.
...$370,000 shall become available on July 1, 1991, and remain available until September 30, 1993.	An additional year of availability is provided to cover the final year of funding for the Leadership in Educational Administration program.
Of the total amount appropriated, $1,000,000 shall be for an evaluation study of the [magnet schools and] chapter 2 block grant [programs] program;...	The 1990 language provided for a one-time evaluation study of magnet schools and for a study of the Chapter 2 Block Grant program. For 1991, the language provides funds to continue and broaden the study of the Block Grant.
...[$8,892,000 shall be for national program activities under section 2012 and $128,440,000 shall be for State grants under part A of title II of the Elementary and Secondary Education Act;...]	This language was needed to provide 1990 funding for the Eisehnower Mathematics and Science Education National Programs in excess of the 4 percent allowed by the authorizing statute.

School Improvement Programs

Language Analysis -- Continued

Language Provision	Explanation
[...$3,964,000] $3,915,000 shall be grants for schools and teachers under subpart 1 and [$4,500,000] $4,443,000 shall be for family-school partnerships under subpart 2 of part B of title III of Public Law 100-297;...	This language earmarks funds for the two programs authorized by the Fund for the Improvement and Reform of Schools and Teaching in a manner that differs from the break-out specified in the authorizing statute.
...[and $31,084,000] $31,215,000 shall be for national programs under part B and [$461,477,000] $474,405,000 shall be for State and local programs under part A of chapter 2 of title I of the Elementary and Secondary Education Act[.];...	This language provides funding for the Chapter 2 National Programs in excess of the 6 percent allowed by the authorizing statute.
...and, under title V of the Elementary and Secondary Education Act of 1965, $483,584,000 shall be for State grants under part B, $4,035,000 shall be for grants to Outlying Areas under part B, $14,554,000 shall be for school personnel training under part C, $66,127,000 shall be for national programs under part D, of which $28,371,000 shall be for section 5131, $17,413,000 shall be for section 5132, $3,653,000 shall be for section 5133, $731,000 shall be for section 5134, and $15,959,000 shall be for section 5135, and $25,000,000 shall be for emergency grants under section 5136.	This language overrides the percentages in the authorizing statute to specify amounts for programs under the Drug-Free Schools and Communities Act so that the increase proposed for the Act is earmarked for State Grants, Federal Activities, and Emergency Grants.

NOTE: Amounts in the 199C appropriation column are the actual appropriations to this account. Amounts in all other columns are comparable to 1991.

Explanations of 1990 Revisions

1.b. Reflects a proposed reprogramming of $379,000 in fiscal year 1990 to Blue Ribbon Schools.

3.f. In 1990, funds for Mid-Career Teacher Training were appropriated in the Higher Education account.

4.b. In 1990, funds for Magnet Schools of Excellence were appropriated on a contingency basis in the Compensatory Education Account.

6. The 1990 Revised and 1991 Request columns exclude funding for Technology Education Demonstrations, which is proposed for funding in the Vocational and Adult Education account in 1991.

1/ A total of $610,000,000 in 1990 and $640,000,000 in 1991 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. The remainder is available for State Block Grants.

2/ Subject to the availability of funds under the set-aside for Chapter 2 National programs, the statute requires that the National Diffusion Network be funded at no less than $11,200,000.

3/ Reflects a proposed reprogramming of $205,000 to Blue Ribbon Schools.

4/ Subject to the availability of funds under the set-aside for Chapter 2 National Programs, the statute requires that the Inexpensive Book Distribution program be funded at no less than $8,200,000.

School Improvement Programs

Authorizing Legislation -- Continued

5/ Reflects a proposed reprogramming of $21,000 to Blue Ribbon Schools.

6/ Subject to the availability of funds under the set-aside for Chapter 2 National Programs, the statute requires that the Arts in Education program be funded at no less than $3,500,000.

7/ Reflects a proposed reprogramming of $39,000 to Blue Ribbon Schools.

8/ Subject to the availability of funds under the set-aside for Chapter 2 National Programs, the statute requires that the Law-Related Education program be funded at no less than $3,200,000.

9/ Reflects a proposed reprogramming of $114,000 to Blue Ribbon Schools.

10/ Within the set-aside for Chapter 2 National Programs, the Secretary is authorized to make available up to $1,500,000 for Blue Ribbon Schools.

11/ Reflects a proposed reprogramming of $379,000 from funds appropriated for other National programs.

12/ Excludes Part C and Sections 5136, 5137, and 5146, which have separate authorizations.

13/ Of the total amount appropriated for Title V, except for Part C and Sections 5136, 5137, and 5146, 17.2 percent of the first $347,500,000 appropriated and 1.2 percent of any amount appropriated above that level is reserved for National Programs under Part D. The remainder is available for State Grants.

14/ No funds are authorized unless the amount appropriated for Title V (except for Part C and Sections 5136, 5137, and 5146) is at least $215,000,000.

15/ For 1990, these funds are included in the State grants and are allocated to the Governors to carry out Section 5136. Beginning in 1991, funds are authorized for the Secretary to carry out Section 5136.

16/ Section 2004 of ESEA reserves 4 percent of the amount appropriated for Mathematics and Science Education for National Programs. The remainder is available for State Grants.

17/ Of the total funds appropriated for FIRST, one-third is reserved for Family-School Partnerships and $150,000 is reserved for dissemination and reporting. Remaining funds are used for Grants for Schools and Teachers.

School Improvement Programs

Authorizing Legislation -- Continued

18/ Fiscal year 1990 funds were provided in the Compensatory Education for the Disadvantaged account contingent upon enactment of authorizing legislation by March 1, 1990.

19/ The GEPA extension applies through September 30, 1991.

20/ The authorization expired September 30, 1989. Reauthorizing legislation is pending.

21/ No funds are authorized unless sufficient amounts are appropriated to carry out activities under Subpart 1 at the level established during fiscal year 1989.

22/ The authorization expires September 30, 1990. The GEPA extension does not apply, and no new authorizing legislation is proposed.

23/ Title IX of EESA authorizes a total of $100,000,000 for the period beginning October 1, 1987, and ending September 30, 1992. No appropriation in excess of $60,000,000 may be made in any of the fiscal years. A total of $48,360,000 has been appropriated for fiscal years 1988, 1989, and 1990.

24/ The GEPA extension expires September 30, 1990. No reauthorizing legislation is proposed.

25/ No funds are authorized to be appropriated unless the appropriation for the Magnet Schools Assistance Program in Title III of ESEA is equal to or exceeds $165,000,000.

26/ Section 5137 authorizes a total of $2,000,000 for the life of the Drug-Free School Zones Demonstration program.

1990 Sequester				-17,653,000
1991	1,704,916,000			

1/ Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

School Improvement Programs

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Drug-Free Schools and Communities	
The Committee will expect a formal report on obligations and expenditures at the State and local level prior to next year's hearing.	The Department will provide the requested report.
Eisenhower Mathematics and Science Education	
The Committee requests a report prior to the fiscal year 1991 hearings on efforts to coordinate math and science programs with those of the National Science Foundation.	The Department will provide the requested report.
Fund for Innovation in Education (FIE): Comprehensive School Health	
The Committee directs the Secretary to establish, staff, and operate an Office of Comprehensive School Health Education in the Office of the Secretary.	Staff to administer the Comprehensive School Health Education program have been located in the Office of Educational Research and Improvement.
Underachieving Students 1/	
The Committee included $3,000,000 for a new program to improve the educational performance and employment opportunities of underachieving students.	In its 1990 grant competition, the Department will invite applications for projects to demonstrate ways to improve the performance of underachieving students. However, since funding must first be provided for the continuation of awards made in 1989, an amount less than $3,000,000 will be available for new awards.

1/ Also included in 1990 Conference Report.

School Improvement Programs

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 Senate Report	
Education for Native Hawaiians	
The Committee requests that the Department include in its 1991 budget submission more detailed information on the number of Native Hawaiians, what portion are receiving assistance, relative educational disadvantage, and types of service provided.	The requested information is contained in the 1991 Congressional Budget Justification.
Chapter 2 State Block Grant Evaluation	
The Committee expects the Secretary to report on how, if at all, the use of block grant funds has changed at the State and local level as a result of the Hawkins-Stafford amendments.	The 1990 funds for Block Grant evaluation are specifically for study of the "effective schools" portion of the program. The information requested by the Committee can be gathered in the study proposed by the Department for 1991.
National Diffusion Network (NDN)	
The Commitee expects that $750,000 of the additional funds provided above the fiscal year 1989 level will be used to disseminate additional exemplary projects in mathematics and science education through the NDN and support additional developer demonstrator activities to facilitate adoptions of mathematics and science projects. The Committee further expects that $250,000 of the additional funds will be used for enhanced dissemination of exemplary programs in special education.	Two competitions for new Developer Demonstrator projects are planned for 1990 to ensure that $750,000 of the additional funds will be used to fund about 11 new mathematics and science Developer Demonstrator projects. The Department will use $250,000 to support up to four more projects and to provide evaluation assistance for possible validation of additional special education programs.

Item	Action taken or to be taken
1990 Senate Report -- Continued	
Arts in Education	
Of the total appropriated for the Arts in Education program, the Committee specifies that $966,264 be awarded to the Kennedy Center for the performing Arts and $2,933,736 to the Very Special Arts organization.	The Department plans to award $966,264 to the Kennedy Center and $2,845,736 to Very Special Arts, pending approval of a proposed reprogramming to Blue Ribbon Schools.
Eisenhower Mathematics and Science Education National Programs	
The Committee directs the Department to give priority consideration to proposals that demonstrate the viability of a regional network system for providing identification, adaptation, dissemination, and implementation services to local school districts and other appropriate educational agencies and institutions in conjuction with mathematics and science curriculum reform.	The Department has invited applications for projects to undertake system-wide curriculum reform, and has placed a strong emphasis on collaboration. A network system could be proposed.
The Committee directs the Department to strengthen cooperation with the National Science Foundation and other Federal mission agencies involved in bettering achievement in mathematics and science, and to report on these coordination efforts prior to the 1991 hearings.	The Department is attempting to improve coordination with other agencies and will report on its activities as requested by the Committee.
Fund for Innovation in Education	
The Committee earmarks $5,000,000 for Programs for Computer-Based Education, $1,000,000 for the development of educational television and radio materials under the Technology Education Program, $4,000,000 for comprehensive school health programs, and, subject to pending authorization, $250,000 for Claude and Mildred Pepper Scholarships.	The Secretary will allocate funds for the Fund for Innovation in Education as specified in the conference report, less the reduction required for the sequester.

School Improvement Programs

Significant Items in Congressional Appropriations Reports -- Continued

Item	Action taken or to be taken
1990 Senate Report -- Continued	
The Committee requests that the the Secretary establish, staff, and operate an Office of Comprehensive School Health Education.	The staff has been established in the Office of Educational Research and Improvement, where the Comprehensive School Health Education program is administered.
Ellender Fellowships	
The Committee earmarks $3,000,000 for the fellowship program for students and teachers and $500,000 for the program for older Americans and recent immigrants.	At the final appropriation level, the Department plans to allocate $3,084,000 to the fellowship program for students and teachers and $619,000 for the program for older Americans and recent immigrants.
Star Schools	
The Committee intends that the four existing telecommunications partnerships that received 1988 and 1989 funds be allowed to compete for a third and final year of funding at a reduced level in order to provide them with more time to arrange alternate sources of funding to continue their projects in the future. These existing grantees should be allowed to compete on an equal basis with applicants for first-year funding, but even if successful in the competition, should receive in total no more than 25 percent of the funds available.	This directive was superseded by conference action. In the absence of bill language to the contrary, the authorizing statute limits recipients to two years of funding. Therefore, the previously funded partnerships will not be eligible to apply for 1990 funds.
Educational Partnerships	
The Committee directs that the Secretary use not more than 7.5 percent of the total amount available for evaluation and dissemination activities.	The Department will comply with this directive.

School Improvement Programs

1990 Senate Report -- Continued	
Drug-Free Schools and Communities	
The conferees expect that within the amount made available for federal activities, $500,000 will be used for innovative alcohol abuse education programs and administered as if appropriated in section 4607 (Fund for Innovation in Education).	Since the funds were appropriated under the authority of the Drug-Free Schools and Communities Act, the Secretary must administer them under that Act. However, the Secretary has the authority to spend Drug-Free Schools and Communities Federal Activities funds for programs such as those authorized under section 4607, and plans to use a portion of the Federal activities funds for this purpose in 1990. The Secretary will, in addition, administer the $1,975,000 appropriated for Section 4607 in the Department of Transportation Appropriations Act under the authority of Section 4607.
1990 Conference Report	
Fund for Innovation in Education	
The conferees direct that funds be allocated as follows: Discretionary activities (Sec. 4601)..............$6,928,000 Technology education (Sec. 4603 and Sec. 6115). 2,250,000 Computer-based education.... 5,000,000 Comprehensive school health................... 4,000,000	The Department will fund the programs authorized under the Fund for Innovation in Education at the directed levels, less the amount required for the sequester.
Training and Advisory Services	
The conferees expect that grants under title IV of the Civil Rights Act will be made to 10 regional desegregation assistance centers and to civil rights units in State educational agencies.	The Department plans to award grants to 10 regional centers and to all State educational agencies that submit applications.

Item	Action taken or to be taken
1990 Conference Report -- Continued	
Star Schools	
The conferees expect the Secretary, in making new awards, to adhere to the provisions of section 905(c)(3) of the Star Schools Act and give a priority to telecommunications partnerships that serve schools with a significant number of students eligible for Chapter 1 services.	The Department will comply with this directive.
Education for Native Hawaiians	
The Conferees expect the following distribution to be used for the $6,500,000 appropriated: Model curriculum implementation project............ $500,000 Family-based education centers.................... 2,800,000 Higher education demonstrations .... 1,700,000 Gifted and talented demonstration program.......... 750,000 Special education program... 750,000	The Department will fund these programs at the directed levels, less the amount required for the sequester.

1/ Assumes a reprogramming of $379,000 in fiscal year 1990 to Blue Ribbon Schools.

2/ Adjusted for comparability. Fiscal year 1990 funds were provided in the Compensatory Education for the Disadvantaged account contingent upon the enactment of authorizing legislation by March 1, 1990.

3/ Adjusted for comparability. Excludes $988,000 for Technology Education Demonstrations shown under the Vocational and Adult Education account.

4/ Reauthorizing legislation is pending in Congress.

Programs in the School Improvement Programs account reward excellence and success, promote choice and flexibility, strengthen the quality of teaching and school administration, and support educational reform. Taken together, these programs contribute measurably to the goal of improving educational achievement -- one of the major themes of the Department's 1991 budget.

For School Improvement Programs, the request is $1.7 billion, a $258 million, or 17.9 percent, increase over the 1990 level. These funds will support programs that help school districts demonstrate successful ways to reduce dropout rates, increase the quality of instruction in mathematics and science, provide school officials with tools to overcome problems associated with alcohol and drug use among students, train and reward teachers, and promote federally targeted as well as State and locally administered efforts in school reform. Included in this account are four programs first proposed last year in the President's Educational Excellence Act -- Drug-Free Schools Emergency Grants, Presidential Awards for Excellence in Education, Magnet Schools of Excellence, and Alternative Certification of Teachers and Principals.

Funding for most School Improvement programs would be kept at or close to their 1990 levels, because the amounts are adequate to support continuing activities or because the programs are at their fully authorized levels. Small increases are proposed for the Chapter 2 Block Grant, Arts in Education, Inexpensive Book Distribution, and Christa McAuliffe Fellowships, to compensate for rising costs directly associated with continuing current services under these programs, and for LEAD to complete the mandated sixth and final year of funding for all grantees.

School Improvement Programs

Account Summary -- Continued

In addition to the programs in the Educational Excellence Act, the budget includes sizeable increases for the following high priority programs:

- The Eisenhower Mathematics and Science Education program, which helps increase the quality of mathematics and science instruction generally, and contributes needed resources for training teachers in an area of great national need.
- Drug-Free Schools and Communities, to provide States and localities with additional funds to use in their fight against drugs and to support additional nationally significant activities.
- Magnet Schools of Excellence to provide support to approximately 25 additional local educational agencies to establish magnet schools.
- Dropout Prevention Demonstrations, to run controlled demonstrations to test and demonstrate effective approaches to dropout prevention and reentry, and provide evidence on model programs that produce results in reducing dropout rates.

For the remaining six programs, the budget includes reduced or no funding, because these programs have met their objectives or support activities that can be supported under other authorities.

1. Educational improvement: a. State block grants
(Elementary and Secondary Education Act of 1965, Title I, Chapter 2, Part A)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$457,198,000	$475,405,000	+$18,207,000

1/ A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. The remainder is available for State Block Grants.

Purpose and Method of Operation

Chapter 2 Block Grants are used by State and local educational agencies to operate programs that improve elementary and secondary education for students in public and private schools. These programs are designed in accordance with State and local needs and priorities. In addition, the programs are carried out with a minimum of administrative requirements and paperwork, thereby freeing State and local school officials to concentrate on the education of children.

This is a forward-funded program. Funds are available for obligation to the States from July 1 of the fiscal year in which they are appropriated through September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

From the total amount of funds appropriated for Chapter 2, up to 1 percent is reserved for block grants to the Outlying Areas and up to 6 percent may be reserved for National Programs. The remainder is distributed to the 50 States, the District of Columbia, and Puerto Rico on the basis of population aged 5 to 17. No State receives less than 0.5 percent of this remainder.

The State educational agency (SEA) may keep up to 20 percent of its block grant for activities at the State level and must distribute at least 80 percent to its local school districts. This distribution is based primarily on public and private school enrollment; however, each State must devise further criteria to give additional weight for children whose education imposes a higher than usual cost to a school district.

School Improvement Programs

1. Educational improvement: a. State block grants

Purpose and Method of Operation -- Continued

Block grant funds may be used in any of six priority areas: (1) programs for students at risk of failure or dropping out; (2) acquisition of educational materials; (3) innovative programs for schoolwide improvement; (4) training and professional development; (5) programs to enhance personal excellence; and (6) other innovative projects. SEAs may use up to 25 percent of their set-aside funds for administration of the program, and must use at least 20 percent of their set-aside for "effective schools" programs, unless the State is already spending, from State funds, the equivalent of 40 percent for this purpose.

To receive a grant, a State must submit an application, for up to a three-year period, to the Secretary. The application describes the criteria the State will use to distribute funds among local school districts and how it will allocate its 20 percent State set-aside among the six priority areas. Each local school district desiring to participate must submit an application to its SEA, describing the programs it intends to support and including provisions for serving private school children.

While the basic responsibility for administering the block grant rests with the SEA, each local school district has complete discretion (subject to the broad provisions in the law) to determine how it will spend its funds.

Accomplishments

The ninth annual block grant awards will go out to all 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas in July 1990.

The Department contracted for two major studies of the block grant program carried out under Chapter 2 of the Education Consolidation and Improvement Act -- the antecedent of the current program. A national study of local operations under the Chapter 2 program, completed in 1986, found that Chapter 2 had achieved its statutory goals of contributing to educational improvement, reducing administrative burden for district administrators, providing districts discretion over the use of these Federal funds, and increasing the participation of private school students. Following are highlights of the findings of that study.

In school year 1984-85:

- Ninety-nine percent of the Nation's school districts received Chapter 2 funds.

- State educational agencies, applying distribution formulas they developed, allocated over $350 million to school districts; of this total approximately $330 million purchased services for public school students and $20 million was used for private school students.

Accomplishments -- Continued

- Chapter 2 allocations received by districts averaged $7 to $9 per child; 42 percent of the Nation's districts received less than $5,000, and only 20 districts received more than $1 million.

- Nationally, Chapter 2 activities tended to serve all students, focusing neither on particular grade levels nor on particular student groups.

- Districts spent Chapter 2 funds in six general activity categories: computer applications, libraries/media centers, curriculum development, staff development, instructional services, and student support services.

- Chapter 2 had fully or partially supported the introduction of computer technology into three-quarters of the Nation's school districts.

- Forty-two percent of all districts had eligible private schools, and 88 percent of these districts were providing services to private school students. Services provided to private school students fell predominantly into the libraries/media centers and computer applications categories.

- Interactions between districts and SEAs were usually trouble-free and mainly involved procedural matters.

- Direct parent and citizen involvement in Chapter 2 decision-making had not been fully achieved, although community preferences did influence district program decisions.

The second major study concerned the use of block grant funds withheld by SEAs (about $93 million in 1989). At the request of the House Appropriations Committee (report #100-256, page 131), the Department contracted in 1987 for case studies of five SEAs to examine the uses of these State set-aside funds in detail. Following is a summary of the findings contained in the contractor's report, *An Evaluation of the ECIA Chapter 2 Set-Aside*.

Overall Findings:

- The five SEAs studied generally used the set-aside funds in two ways: (1) to provide support for the day-to-day operations of the SEA; and (2) to provide services to school districts. Three of the five States spent at least half of their set-asides supporting basic SEA operations such as staff, office rent, and supplies.

- Two of the States spent more than two-thirds of the set-aside for services to districts. Overall, four of the five States spent more than half their set-asides for SEA staff salaries.

Accomplishments -- Continued

- The Chapter 2 set-aside served as a funding source, not as a program or project. SEAs generally did not treat the Chapter 2 set-aside as a separate program with attendant planning, goal setting, or evaluation of accomplishments.
- Oversight of set-aside uses was limited; Chapter 2's accountability mechanisms for set-aside uses did not facilitate review at either the Federal or State level.

Specific Uses of Funds:

- Chapter 2 Administration -- The five SEAs spent between 3 and 12 percent of their set-asides on the administration of Chapter 2, for such activities as operation of the application process for formula funds, distribution of funds to districts, monitoring, and preparation of the State application and evaluation.
- Educational Reform -- The five States committed 12 percent or less of their set-asides to educational reform programs.
- Internal SEA Functions (e.g., bookkeeping, data processing, legal affairs, and systems management) -- The States spent from 2 to 35 percent of their set-asides on these functions.
- External SEA Functions (e.g., school district auditing, curriculum development, subject specialists, and administration of Federal and State programs) -- The States spent between 17 and 53 percent of their set-asides on these functions.
- Discretionary Grants -- Four of the five States used between 1 and 63 percent of their set-asides for discretionary grants. These grants supported software development, consultation and assistance in the area of early childhood/parent education, competitive mini-grants to address virtually any subject area, and a variety of services for school districts.
- Operating Expenses -- All of the five States charged operating expenses to Chapter 2, ranging from 9 to 43 percent of the set-asides.

The current Chapter 2 program, as reauthorized by the 1988 Hawkins-Stafford Amendments, does not permit funds to be used merely for "strengthening" SEAs; with the exception of the 5 percent available for State administration, all of the State set-aside must now be used for "effective schools" programs and to provide other services in the six priority areas.

School Improvement Programs

1. Educational improvement: a. State block grants

1991 Budget Proposal

For fiscal year 1991, $475,405,000 is requested for State Block Grants, an increase of 4.0 percent over the 1990 funding level to cover increased costs due to inflation. Chapter 2 is the largest of the Department's programs that support the Secretary's priority of school reform and improvement. Unique in that it is not limited to serving a target population, it continues to be the most flexible, creative vehicle for providing Federal support of reform and improvement efforts at the State and local level.

As stated above, a national study of local operations under the Chapter 2 program found that Chapter 2 has largely achieved its statutory goals of contributing to educational improvement, reducing administrative burden for district administrators, providing districts discretion over the use of these Federal funds, and increasing the participation of private school students. The 1988 reauthorization has made the program more accountable by focusing the use of these Funds on educational reform and improvement and strengthening reporting and evaluation requirements.

Of the total requested, $474,405,000 would be for grants to States and Outlying Areas. The remaining $1,000,000 would be earmarked in appropriations language to provide funding for a comprehensive national study of the program. The foundation for this study will be the study of Chapter 2 effective schools mandated by Section 6206 of P.L. 100-297 and funded at $1,481,000 in 1990. The additional evaluation funds are needed to extend that study to provide information for the next reuthorization and to determine if the 1988 amendments to the program have had their intended effect on State and local operations.

Impact Data	1989	1990	1991
Average State award	$8,803,000	$8,698,000	$9,055,000
Minimum State award	2,296,000	2,262,000	2,354,000
Largest State award	48,723,000	48,717,000	50,715,000

1. Educational improvement: b. National programs: (1) National Diffusion Network (NDN)
(Elementary and Secondary Education Act of 1965, Section 1562)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$12,632,000 2/	$12,632,000	---

1/ A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. Subject to the availability of funds under this set-aside, the statute requires that the National Diffusion Network be funded at no less than $11,200,000.

2/ Reflects a proposed reprogramming of $205,000 to Blue Ribbon Schools.

Purpose and Method of Operation

The National Diffusion Network (NDN) was established to capitalize on successful investments in research, development, and demonstration programs that were not being used outside districts where they were first developed. NDN facilitates school improvement by identifying and disseminating information about programs that work, bringing alternatives to the attention of educators throughout the Nation who are interested in improving their education programs, and providing training and follow-up technical assistance for those who decide to adopt a particular program.

Grants are awarded to local school districts that are identified as developers of exemplary educational programs so that they may present their programs, provide materials, and conduct training for school staffs who are interested in improving education through the adoption of these programs. This district-to-district communication is a key factor in NDN's ability to disseminate information in a form useful to potential users.

Grants are also awarded to public or nonprofit private agencies, organizations, or institutions that have an established procedure that has been judged effective for providing information, instructional materials, and services nationwide concerning specific content areas, bodies of research, or fields of professional development. These dissemination process grantees select and approve the individual programs that they disseminate.

In order to disseminate information on available programs, grants are also awarded to State educational agencies and other public and private nonprofit

---

Purpose and Method of Operation -- Continued

organizations to serve as intermediaries to link up developer/demonstrators having exemplary programs, products, and practices with prospective adopters of these exemplary projects. There is one such facilitator providing these services in each State, and one private school facilitator whose purpose is to ensure that private schools receive equitable services through the NDN program.

Technical assistance contracts are awarded to organizations that provide dissemination expertise to developer/demonstrators and State facilitators as well as to school districts that have developed programs that show promise of being approved for dissemination. These contractors also search for projects in priority content areas to meet the changing needs of the education community.

Approval by the Program Effectiveness Panel must be obtained for projects to be included among those disseminated by the NDN, a means of quality control based on demonstrated effectiveness. If a program submits valid evidence of its success to the Department, a panel of reviewers will approve the program for dissemination. Only then do these approved programs become eligible to compete for NDN funding as developer/demonstrators or as dissemination process projects.

The approval of projects is mandated by statute, which requires a single external review that is to focus only on the efficacy and transferability of a program. The statute also sets out the criteria for determining which programs applying for dissemination assistance receive funding. These criteria focus not only on the quality of an applicant's dissemination plan, but also on whether the program to be disseminated is innovative, accurate, and up-to-date.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

During school year 1988-89, approximately 28,000 schools adopted and implemented exemplary projects disseminated by the National Diffusion Network, and in the process more than 76,000 educational personnel received training. The 1989 program included funding for 29 new and 49 continuation developer/demonstrator awards, along with 56 State facilitator awards, one each in the 50 States, the District of Columbia, and Puerto Rico, plus three areas that are participating in the program for the first time (American Samoa, Guam, and the Northern Mariana Islands), and the Virgin Islands, which re-entered the program. Palau is expected to have a successful applicant in 1990. Three dissemination process projects were continued, as was the private school facilitator project. Technical assistance was provided to these grantees through a contractual arrangement.

School Improvement Programs

1. Educational improvement: b. National programs: (1) National Diffusion Network (NDN)

1991 Budget Proposal

In 1991, level funding is proposed for the National Diffusion Network program at $12,632,000. With these funds, the Department would continue to seek out and attempt to have validated projects that could be funded as developer/demonstrator and dissemination process projects. The funds would also support the continuation of some of the developer/demonstrator and dissemination process grants initiated in prior years, including those additional math and science and special education projects initiated in 1990 with funds made available for that purpose. The State facilitators, private school facilitator, and dissemination expertise provided by technical assistance contractors would also be continued.

Impact Data	1989	1990	1991
Number of grants:			
Developer/demonstrators	78	97	84
Dissemination process projects	3	3	4
State facilitators	56	57	57
Private school facilitator	1	1	1
Technical assistance contracts	1	1	3

1. Educational improvement: b. National programs: (2) Inexpensive book distribution
(Elementary and Secondary Education Act of 1965, Section 1563)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$8,555,000 2/	$8,914,000	+$359,000

1/ A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. Subject to the availability of funds under this set-aside, the statute requires that the Inexpensive Book Distribution program be funded at no less than $8,200,000.

2/ Reflects a proposed reprogramming of $21,000 to Blue Ribbon Schools.

Purpose and Method of Operation

The purpose of this program is to provide, through aid to local nonprofit and public groups, reading motivation activities that encourage reading both in and outside school and to make it possible for youngsters to choose books to keep and have at home. The program is operated through a sole source contract awarded to Reading Is Fundamental, Inc. (RIF), a private nonprofit organization associated with the Smithsonian Institution. RIF allocates funds for book purchases and provides technical guidance to more than 3,000 local groups that bring services to youngsters in more than 11,000 locations. A key element in the program is community support through the volunteer activities of parents, librarians, educators, and business and community leaders. Parental involvement is also stressed; about 37 percent of the volunteers are parents.

Federal funds provide up to 75 percent of the costs of books and leverage the remainder from private and local sources. Migrant and seasonal farmworker programs may receive up to 100 percent of the costs of books. This is a current-funded program, for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

With 1989 funds, 6.7 million books are being distributed to more than 2.2 million children. There are local projects in all 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, and Guam. These

---

Accomplishments — Continued

projects are being run by approximately 106,000 volunteers who conduct the reading motivation sessions at which books are distributed and money is raised to pay the local share of the cost of the books. One hundred thirty-eight book publishers and 213 distributors provide discounts on books. The use of volunteers and local support, plus book supplier discounts, result in an average cost to the Federal Government of about $1.24 per book, or $3.73 per child. These figures do not include books distributed and children served with local funds in excess of the Federal share and 25 percent required match. Many local projects raise additional funds to distribute more books and serve more children. On average, this has the effect of reducing these costs to the Federal Government.

Voluntary surveys conducted by RIF of educators, librarians, parents, and others working directly with program participants, as well as reports and unsolicited comments from these same groups, studies of individual programs, and a 1980 Department of Education study stress the program's effectiveness in motivating children to read, improving students' frequency of and attitudes toward reading and learning, increasing library circulation, involving parents in their children's reading, and contributing to increased reading achievement.

1991 Budget Proposal

For 1991, $8,914,000 is requested for the Inexpensive Book Distribution program, a 4.2 percent increase over the 1990 level to offset increased costs. This program is part of the Administration's strategy to address the problem of illiteracy through prevention and to improve the basic skills of children. Recent Government and academic studies emphasize the importance of books in the home, motivation, parental involvement, and leisure reading as significant factors in improving reading abilities. These are all key elements of the Inexpensive Book Distribution program. Additionally, at a projected average cost to the government of only $1.33 per book distributed, this program is cost-effective.

Impact Data	1989	1990	1991
Number of awards	1	1	1
Books distributed	6,763,000	6,690,000	6,690,000
Children served	2,254,000	2,230,000	2,230,000
Federal share per child (average)	$3.73	$3.84	$4.00
Federal cost per book	$1.24	$1.28	$1.33
Books per child (average)	3	3	3

School Improvement Programs

---

1. Educational improvement: b. National programs: (3) Arts in education (Elementary and Secondary Education Act of 1965, Section 1564)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,812,000 2/	$3,972,000	+$160,000

1/ A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. Subject to the availability of funds under this set-aside, the statute requires that the Arts in Education program be funded at no less than $3,500,000.

2/ Reflects a proposed reprogrammming of $39,000 to Blue Ribbon Schools.

Purpose and Method of Operation

The Arts in Education program was designed to encourage and support programs that recognize and stress the essential role the arts can play in elementary and secondary education, conduct demonstration programs encouraging the involvement of disabled people in the arts, and foster greater awareness of the need for arts programs for the disabled. Two awards for activities of national significance are made. One is to the John F. Kennedy Center for the Performing Arts, the other to Very Special Arts (VSA).

The Kennedy Center grant provides support for the Alliance for Arts Education, a national network of State arts education committees whose focus is on the advancement, quality, and integration of the arts into basic education programs. Funds are given to these committees to operate and develop programs to meet the arts education needs of their States. The Kennedy Center grant also provides partial support for the Center's Theater for Young People, which promotes the expansion of opportunities for children and youth to participate in the arts as performers or as audience members at live performances. The Kennedy Center is also permitted to use its grant to support the American College Theater Festival and the National Symphony Orchestra education program. It has used its grant for those purposes in the past, but in 1989 and 1990 has chosen not to do so, because it has obtained funding from other sources.

The award to VSA supports the development of quality programs to integrate the arts into the general education of disabled children and the lives of disabled adults. Through the Very Special Arts Festival program, VSA provides programs of performances, workshops, technical assistance, and training for disabled children, parents, educators, and others. Local

Purpose and Method of Operation — Continued

festivals are assisted through a program of awards and training at the local level. The program enlists the support and interest of the arts, disabled, and education communities, as well as the public at large, to stimulate general interest in and support for arts programs designed for disabled persons. To promote the development and growth of VSA programs across the country and to meet the unique needs of each State, VSA has established individual not-for-profit VSA organizations in every State and in New York City. Other VSA activities include research projects, curriculum development, and teacher training.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the Kennedy Center received $966,264 in Federal funds in partial support of its education programs. These funds were used primarily for the 47 State committees in the Alliance for Arts Education (AAE). Through the Alliance, 4 arts educators were awarded Kennedy Center Fellowships for Teachers of the Arts, and 23 school principals and superintendents received AAE School Administrator Awards for fostering the arts in their schools and school districts. In addition, awards and citations of excellence were given to several boards of education for their support of arts education.

In addition, the Alliance sponsored a cultural exchange to Hong Kong and the People's Republic of China and produced the Concert Hall presentation and performance of 12 Presidential Scholars in the Arts. More than 750,000 young people, teachers, and other adults participated in the Kennedy Center "Imagination Celebration," the national children's arts festival, in 13 U.S. cities as well as in Australia and the People's Republic of China. In total, the number of people directly served by the network of AAE organizations in the States increased to 4.6 million in fiscal year 1989, more than double the number of the previous year. The Kennedy Center Theater for Young People (formerly Programs for Children and Youth) provided 200 free or low-cost performances and events to audiences of more than 90,000. It also offered classes in acting to approximately 750 Washington-area young people, some of whom also were offered performance opportunities at the Center.

In 1989, VSA received $2.5 million for its programs, which included 650 Very Special Arts Festivals held throughout the country. A variety of "special project" programs, including the VSA Young Playwrights program, the New Visions Dance project, and the Early Childhood project for infants and

Accomplishment — Continued

preschool children with special needs, also were implemented in hundreds of communities. VSA's Itzhak Perlman Award, which recognizes a student with a disability who has exhibited outstanding accomplishments in the performing arts, was given to Orlando Fiol, a 16-year-old pianist who has been blind since birth. VSA also provided technical assistance to the 52 VSA State organizations to aid them in the continued development of their statewide programs.

Also in 1989, VSA presented its first International Very Special Arts Festival, which drew more than 1,000 delegates from 50 States and 56 countries to Washington, D.C. for a week in June. All forms of artistic presentations by artists with physical, mental, and emotional disabilities were represented. Artists such as Michael Douglas, Marsha Mason, Jim Henson, Kenny Rogers, and Pearl Bailey joined volunteers, teachers, and others in this showcase of model programs and innovative educational techniques designed for people with special needs.

1991 Budget Proposal

Funding for this program in 1991 is requested at $3,972,000, an increase of 4.2 percent over the 1990 level to offset increased costs. The Arts in Education program is the only program in the Department that directly supports the arts. The arts have long been recognized as essential to a well-rounded education. The expression and interpretation of art provides our children with examples of the breadth, depth, and complexity of human nature and enriches their perceptions of themselves and society — thus contributing to their character and values.

Impact Data	1989	1990	1991
Very Specials Arts	$2,491,736	$2,845,736	$2,965,000
Festivals	650	650	650
Participants	875,000	875,000	875,000
John F. Kennedy Center for the Performing Arts	$966,264	$966,264	$1,007,000
Theater for Young People: Participants	90,000	90,000	90,000
Alliance for Arts Education: "Imagination Celebration" participants	750,000	750,000	750,000
Other program participants	3,850,000	3,850,000	3,850,000

1. Educational improvement: b. National programs: (4) Law-related education
(Elementary and Secondary Education Act of 1965, Section 1565)

1991 Authorization: [1]

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,824,000[2]	$4,824,000	---

---

[1] A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. Subject to the availability of funds under this set-aside, the statute requires that the Law-Related Education program be funded at no less than $3,200,000.

[2] Reflects proposed reprogramming of $114,000 to Blue Ribbon Schools.

Purpose and Method of Operation

The purpose of this program is to provide students with knowledge and skills pertaining to the law, the legal process, the legal system, and the fundamental principles and values on which these are based. Competitive grants are awarded to State and local educational agencies or other public or private agencies, organizations, or institutions. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the Department made 32 awards in its annual law-related education competition. Most grantees are bar associations, institutions of higher education, school districts, or a combination of entitites working in partnership. Of the 32 projects, 1 is national, 10 statewide, 2 regional, and 19 local in scope. The national project includes a summer institute in which the participants developed and disseminated, nationwide, a lesson plan book that incorporates promising practices developed by law-related education programs throughout the country. One of the statewide projects was developed to further institutionalize a law-related education partnership among a university, a State department of education, all local school districts in the State, the State Attorney General's office, the Governor's office, and the State Bar.

School Improvement Programs

1. Educational improvement: b. National programs: (4) Law-related education

---

Accomplishments — Continued

Priorities for this program are announced annually in the Federal Register. For 1990, the Secretary invited applications for projects to develop, test, demonstrate, and disseminate new approaches or techniques in law-related education that can be used and eventually institutionalized by other agencies and institutions. In particular, the Secretary sought applications for projects to (1) show the significance of moral and ethical choices in the making and following of laws, or (2) increase knowledge and understanding of the differing jurisdictional authorities and functions of local, State, and Federal court and legal systems in the United States. Awards will be made in spring 1990.

1991 Budget Proposal

Funding for this program in 1991 is requested at $4,824,000, the same as the 1990 level; no additional funding is requested because the program has already received a 152 percent increase since fiscal year 1986.

The Law-Related Education program makes a contribution to civic education at the elementary and secondary school levels through the support of projects that foster student citizenship and character development. These projects serve large numbers of teachers and students and have an impact on curriculum development, teacher training, and a variety of special programs and projects related to law-related and civics education. Grantees report that the program has been successful at institutionalizing law-related education into the curriculum in school districts, and that children involved in law-related education develop a greater respect for the law.

Impact Data	1989	1990	1991
Number of awards	32	39	39
Average award	$123,500	$123,500	$123,500

School Improvement Programs

1. Educational improvement: b. National programs: (5) Blue ribbon schools (Elementary and Secondary Education Act of 1965, Section 1566)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$873,000 2/	$873,000	---

1/ A total of $640,000,000 is authorized for Chapter 2. From the amount appropriated, a maximum of 6 percent may be set aside for National Programs. Within this set-aside, the Secretary is authorized to make available up to $1,500,000 for the Blue Ribbon Schools program.

2/ Reflects a proposed reprogramming of $379,000 from funds appropriated for the other National programs.

Purpose and Method of Operation

The Blue Ribbon Schools program provides the Secretary with the authority to recognize schools and school programs for their high quality. Schools or programs are selected solely on merit. Those recognized need not be representative of the States. The program, first authorized for 1989, continues the elementary and secondary school recognition programs, which have been conducted by the Department in alternate years since 1983.

Applications from schools that wish to be considered and have been nominated by their State are reviewed by a panel of experts, which selects schools for on-site examination by other non-Federal experts. Reviews focus on philosophy, goals, organization, leadership, curriculum, instruction, student achievement, community relations, and efforts to maintain high quality programs and make improvements. Following the on-site reviews, final selections are made, and the winners are invited to Washington, D.C. to a ceremony celebrating their accomplishments.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, 218 public and private secondary schools were selected from among the 629 that were nominated and the 263 that were examined on-site. Geography was designated as an area of special emphasis to highlight the need for greater

Accomplishments--Continued

attention to geography education in secondary schools and to help identify some exemplary models. Twenty-two of the 218 blue ribbon schools selected were cited as having comprehensive geography programs, and 4 of these received special certificates from the National Geographic Society at the Washington, D.C. recognition ceremony in September. Twenty-two schools received national recognition for a second time, having made substantial improvements in their local school programs since the last time they were honored.

In 1990, about 230 elementary schools will be selected for recognition from among the 525 nominated. States have been asked to limit their nominations to a number equal to the size of their Congressional delegation, in order to place more emphasis on the State role in selection and to enable the review panel to make better judgments on a more manageable number of schools.

1991 Budget Proposal

For 1991, $873,000 is requested, the same as the 1990 level following the proposed reprogramming of $379,000 from other National programs. The 1991 request provides the minimum amount necessary to defray the costs of the program's selection process. That process involves the initial review of the extensive applications submitted by the schools nominated by the States, and subsequent, on-site review of those schools recommended for further consideration. Both reviews are conducted by non-Federal personnel who volunteer their time. Federal funds cover only the expenses of the reviewers and the costs of the support contract. Costs of the recognition ceremonies are to be met through private contributions. The 1991 program will recognize exemplary secondary schools.

2. Drug-free schools and communities: a. State grants
(Elementary and Secondary Education Act of 1965, Title V, Part B)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
\$437,881,000 2/	\$487,619,000	+\$49,738,000

1/ Of the total amount appropriated for Title V, except for Part C and Sections 5136, 5137, and 5146, 17.2 percent of the first \$347,500,000 appropriated and 1.2 percent of any amount appropriated above that level is reserved for National Programs under Part D. The remainder is available for State Grants.

2/ Excludes \$24,688,000 for emergency grants, which will become a Federal discretionary program in 1991.

Purpose and Method of Operation

The purpose of the Drug-Free Schools and Communities program is to bring the Nation closer to the goals of a drug-free generation and a drug-free society. The Drug-Free Schools and Communities Act (DFSCA) includes specific authorizations of appropriations for programs of school personnel training (Part C of the legislation), emergency grants (Section 5136), a drug-free school zones demonstration program (Section 5137), and, for 1991 only, dissemination of information and technical assistance (Section 5146). The DFSCA also authorizes State grants (Part B) and National programs (Part D), for which funds are to be allocated by formula. Under amendments adopted in 1989, the distribution of appropriations for the DFSCA is to be as follows:

- Funds are appropriated directly for each of Part C, Section 5136, Section 5137, and Section 5146.
- Funds are appropriated for Parts B and D.
    - Of the first \$347.5 million appropriated for Parts B and D, 17.2 percent is reserved for Part D, 1 percent is allocated to the Territories, and 81.8 percent is distributed to the 50 States, the District of Columbia, and Puerto Rico on the basis of school-aged population, with no State receiving less than 0.5 percent of the 81.8 percent available. State and local educational agency programs receive 70 percent of each State's grant; the Governor's office of each State receives 30 percent for programs administered by that office or another office designated by the Governor.

Purpose and Method of Operation -- Continued

- If the appropriation for Parts B and D exceeds $347.5 million, the additional funds are allocated as follows:
  - One percent is allocated to the Territories (under Part B), 1 percent is reserved for programs for Indian Youth (under Part D), and 0.2 percent is reserved for programs for Native Hawaiians (also under Part D).
  - Any remaining funds up to $14.7 million are distributed among the Governors of each State on the basis of school-aged population, and added to the Governors' 30 percent share.
  - For 1990 only, a total of $25 million will be distributed among the Governors of each State on the basis of school-aged population for emergency grants to LEAs as authorized by Section 5136.
  - All additional funds (other than those appropriated for Part C and Sections 5136, 5137, and 5146) are distributed to the States, half on the basis of school-aged population and half on the basis of funds received for the preceding year under Part A of Chapter 1 of Title I of the Elementary and Secondary Education Act (ESEA). No State receives less than 0.5 percent of this additional amount.

This is a forward-funded program. Funds are available for obligation to the States from July 1 of the fiscal year in which they are appropriated through September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

State and Local Educational Agency Programs

State and local educational agency programs are administered as follows:

- Up to 10 percent of the first $198,978,500 allocated to States is available to State educational agencies (SEAs) for training programs; the development, identification, dissemination, and evaluation of curricular materials; demonstration projects; special assistance to economically disadvantaged areas; technical assistance; and (subject to a cap of 5 percent of the entire grant) State administration.
- At least 90 percent of the first $198,798,500 is passed through to local and intermediate educational agencies, and consortia of those agencies, under a formula based on school-aged population. All additional State grant funds must be distributed on the basis of funds received by the local educational agencies within the State for the preceding year under Part A of Chapter 1 of Title I of

---

Purpose and Method of Operation -- Continued

the ESEA. Local activities include: the development and acquisition of curricular materials; school-based prevention programs; family-based prevention programs; counseling programs for students and parents; outreach activities for school dropouts; referral programs; training programs for teachers, school personnel, community leaders, and law-enforcement personnel; public education programs; efforts to enhance the identification and discipline of drug and alcohol abusers; special programs for student athletes; and model alternative schools that address the special needs of students with drug problems. Equitable participation of students in private nonprofit schools is required.

Governor's funds

Up to 2.5 percent of the Governors' funds may be used for program administration at the State level. Also, for 1990 only, $25 million is reserved for emergency grants to LEAs with a high incidence of drug abuse. Of the remaining funds:

- Up to 50 percent may be used for awards to parent groups, community action agencies, community-based organizations, and other public and private nonprofit entities for local drug and alcohol abuse prevention programs; training programs for teachers, parents, and law-enforcement officials; the distribution of training materials; technical assistance to local programs; intra-state drug and alcohol abuse education and prevention centers; the coordination of community efforts; and the establishment and maintenance of drug-free zones for schools within the State.
- At least 50 percent is reserved for awards to public and private nonprofit entities for innovative, community-based programs for "high-risk" youth, including juveniles in State detention facilities.

Application and Reporting Requirements

To receive a grant, a State must submit a three-year application to the Secretary. Under the State and local program, a local or intermediate educational agency or consortium must submit an application, for up to a three-year period, to its SEA for approval. For the Governor's funds, an eligible subrecipient must submit an application to the Governor's office or an office designated by the Governor. Each State must report every two years to the Secretary describing the drug and alcohol problem in the elementary and secondary schools in the State and the types of services provided and populations served with assistance from this program, including an evaluation of the effectiveness of its programs. Local and intermediate educational agencies and consortia must submit an annual progress report to their SEA on the implementation of their programs, including evaluation of their effectiveness.

2. Drug-free schools and communities: a. State Grants

Accomplishments

In April 1989, the Department held its third annual Conference on Drug-Free Schools to assist State officials in implementing their programs. Fiscal year 1989 State grant awards were made in July 1989. State and local educational agencies are using their funds for a variety of activities including teacher training, curriculum development, outreach programs, parent education, peer leadership and counseling, radio programs, intervention strategies, and workshops and conferences. The Governors awarded their funds to a variety of organizations including youth and family service agencies, schools and school districts, mental health agencies, hospitals, and State departments of corrections, criminal justice, and alcohol and drug abuse. Governors in each State targeted between 50 and 100 percent of their funds on programs for high-risk youth.

In 1988, the Department contracted for a two-year implementation study of State and local programs supported by the Drug-Free Schools and Communities Act to examine how these programs are being planned, implemented, administered, and evaluated. The study, due for completion in winter 1991, will provide descriptive information on topics such as the kinds of programs and services being implemented; the nature of collaboration among Governors' offices, State departments of education, and State alcohol and drug abuse agencies; and ways to measure the effects of these new programs.

1991 Budget Proposal

For fiscal year 1991, $487,619,000 is requested for Drug-Free Schools and Communities State grants, an increase of almost $50,000,000, or 11.4 percent over the 1990 appropriation (excluding funds for emergency grants), to provide increased support for drug abuse education activities at the State and local levels. The Department regards this program as an essential component of a comprehensive strategy to reduce the demand for and use of drugs throughout the Nation, and as particularly essential in getting drugs out of the Nation's schools. While the Department does not yet have documented evidence of its effectiveness, site visits to the States have found that State and local officials are making a good-faith effort to implement the best programs possible and consider these funds critical to their efforts to fight drug abuse. Overall drug use by youth appears to be declining, as evidenced by the most recent survey of high school seniors conducted by the Institute for Social Research, University of Michigan, and the National Household Survey conducted by the National Institute on Drug Abuse, but there is clearly more to do. The Administration believes that efforts focusing on education and prevention will ultimately provide the key to winning the war on drugs.

School Improvement Programs

2. Drug-free schools and communities: a. State Grants

1991 Budget Proposal — Continued

Fiscal year 1991 will mark the fifth year of funding for the Drug-Free Schools and Communities program. Since the program began, a great deal has been learned and disseminated about what educational approaches are most effective in preventing drug use. Consequently, we view the program as having even greater potential over the next several years to contribute to a reduction in drug use by our Nation's youth and to help ensure a drug-free environment in our Nation's schools and communities.

Impact Data	1989	1990	1991
Grants to States:	$284,255,000	$434,343,000	$483,584,000
Amount to SEAs and LEAs	198,979,000	335,614,000	383,608,000
Amount for Governors	85,277,000	98,729,000	99,977,000
Average State award	5,466,000	8,828,000	9,300,000
Smallest State award	1,421,000	2,128,000	2,374,000
Largest State award	30,008,000	46,023,000	51,065,000
Total for Outlying Areas	3,475,000	3,538,000	4,035,000

2. Drug-free schools and communities: b. School personnel training (Elementary and Secondary Education Act of 1965, Title V, Part C)

1991 Authorization: $35,000,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$14,554,000 2/	$14,554,000	---

1/ No funds are authorized unless the amount appropriated for Title V (except for Part C and Sections 5136, 5137, and 5146) is at least $215,000,000.

2/ Excludes approximately $9,000,000 appropriated for training grants to institutions of higher education under Section 5131(b) of the Elementary and Secondary Education Act (ESEA). Under the Drug-Free Schools and Communities Act Amendments of 1989, funds appropriated for training grants under Section 5131(b) must be expended under the authority of Part C.

Purpose and Method of Operation

Under this program, funds are made available to establish, expand, or enhance programs and activities for the training of teachers, administrators, guidance counselors, and other school personnel concerning drug and alcohol abuse education and prevention. Such programs must be coordinated, as appropriate, with the State agency for higher education, the State educational agency, and the regional alcohol and drug abuse education centers operated under Drug-Free Schools National Programs.

Funds are awarded competitively. Eligible grantees are limited to State, local, or intermediate educational agencies, institutions of higher education, and consortia thereof.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

This program was enacted as part of the Anti-Drug Abuse Act of 1988 and funded for the first time in 1989. In 1989, invitational priorities were announced for projects to operate summer training institutes, training programs for educational personnel who work with high-risk youth, and training programs for educational personnel that emphasize the involvement

Accomplishments

and cooperation of the family, school, and community in drug and alcohol abuse prevention education and intervention. Fifty-six grants were awarded for a variety of projects, including the development of new training models for elementary and secondary school teachers.

1991 Budget Proposal

For fiscal year 1991, $14,554,000 is requested for Drug-Free Schools and Communities School Personnel training grants, the same as the 1990 appropriation. Funding for this program more than doubled from 1989 to 1990. The requested amount will enable the Department to contribute significantly to the training of teachers and other school personnel in the area of drug and alcohol abuse education and prevention. Additional school personnel training is provided under the Drug-Free Schools and Communities State Grant and Regional Centers programs.

Impact Data	1989	1990	1991
Number of awards	56	116 1/	116
Average award	$125,000	$125,000	$125,000

1/ Excludes an estimated 72 awards under this program made with approximately $9,000,000 available for Section 5131(b) of ESEA.

2. Drug-free schools and communities: c. National programs (Elementary and Secondary Education Act of 1965, Title V, Part D)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$61,127,000	$66,127,000	+$5,000,000

1/ Of the total amount appropriated for Title V, except for Part C and Sections 5136, 5137, and 5146, 17.2 percent of the first $347,500,000 appropriated and 1.2 percent of any amount appropriated above that level is reserved for National Programs under Part D. The remainder is available for State Grants. Authorization levels for Sections 5136, 5137, and 5146 are $25,000,000, $2,000,000 and $500,000, respectively.

National Programs

Drug-Free Schools and Communities National Programs provide funds for a wide variety of programs designed to combat drug abuse in schools and communities, primarily through education and prevention activities. The Drug-Free Schools and Communities Act establishes set-asides for grants to institutions of higher education, Federal activities, programs for Indian youth, programs for Hawaiian natives, and regional centers. In addition, the Drug-Free Schools and Communities Act Amendments of 1989 created new authorizations for programs of emergency grants, drug-free school zone demonstrations, and dissemination of information and technical assistance. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Programs for Students Enrolled in Institutions of Higher Education

Purpose and Method of Operation

Eight percent of the first $347.5 million appropriated for the Drug-Free Schools and Communities Act (not including appropriations for Part C and Sections 5136, 5137, and 5146) is reserved for grants to institutions of higher education (IHEs). At least half this amount must be used to develop, implement, operate, and improve programs of drug abuse education and prevention for students enrolled in IHEs. Programs may include referral for rehabilitation.

Accomplishments

In 1989, the Department held 4 competitions under this program. The principal competition was for IHEs to develop, implement, operate, and improve comprehensive institution-wide programs of drug and alcohol abuse prevention and education; 110 awards were made. Under a second competition, awards were made to four national student organizations for activities designed to increase and facilitate the success of comprehensive drug prevention programs. The third competition commissioned four papers to formulate new approaches in campus drug prevention programs. Under the fourth competition, 58 awards were made for projects designed to develop, implement, operate, or improve networks of higher education professionals to develop and improve their own comprehensive, institution-wide programs of drug education and prevention. Similar competitions will be held again in 1990, in addition to two new competitions for the analysis and dissemination of successful institution-wide projects supported with 1987 and 1988 funds.

Demonstration Programs Conducted by Institutions of Higher Education

Purpose and Method of Operation

Up to half of the 8 percent reserved for grants to institutions of higher education is available for demonstration programs in drug abuse education and prevention. Demonstration programs include projects coordinated with local elementary and secondary schools for the development of quality drug abuse education curricula through the practical application of the findings of educational research and evaluation and the integration of such research findings into drug abuse education and prevention programs. Prior to enactment of the Drug-Free Schools and Communities Act Amendments of 1989, training programs conducted by IHEs were also authorized under this set-aside. As required by the 1989 Amendments, funds appropriated for training programs in 1990 are being expended under the authority of the Part C School Personnel Training program.

Accomplishments

In 1989, under the training authority in place at that time, the Department funded 56 projects to provide training for law enforcement officials, judicial officials, community leaders, parents, and government officials in drug abuse education and prevention for use in elementary and secondary schools. These projects undertook such activities as teacher training, programs for secondary schools parents in low-income housing projects, and programs for other community members. In 1990, in accordance with the 1989 Amendments, approximately 72 training grants funded by this set-aside will be administered under the Part C training authority. No new training grants will be awarded under this set-aside.

Federal Activities

Purpose and Method of Operation

Three and one-half percent of the first $347.5 million appropriated for the Drug-Free Schools and Communities Act (not including appropriations for Part C and Sections 5136, 5137, and 5146) is reserved for Federal Activities. These funds are used for communicating to students at all educational levels the dangers of alcohol and drug abuse; developing and disseminating curriculum materials; providing technical assistance to SEAs, LEAs, and intermediate educational agencies in selecting and implementating curricula, approaches, and programs; and evaluating programs funded under the Act. In addition, the Secretary is required to use at least $1,000,000 during the period 1989 to 1993 for the development and dissemination of drug abuse education and prevention curricula, programs, and training materials for use in early childhood development programs.

Accomplishments

In 1989, Federal Activities funds supported a wide variety of drug prevention activities. Three invitational priorities for grants were established for projects designed for students in grades kindergarten through eight: one for awards for projects implementing cooperative programs with law-enforcement, judicial, and government officials; another for projects that are designed to educate parents and school personnel about substance abuse and how it may be prevented, detected, and treated; and another for projects that communicate to students the dangers of drug and alcohol use. A total of 42 awards were competitively selected from the 405 applicants that responded to the priorities. Fiscal year 1990 grants will be used primarily for projects designed for students in grades four through eight to educate parents and school personnel on preventing the use by students of "gateway drugs" (tobacco and alcohol) and on prevention and early intervention for children of alcoholics. Grants also will be awarded for model alternative programs that address the special needs of youth with drug problems.

Also in 1989, in conjunction with the regional centers, the Department held five regional conferences to "showcase" the 47 schools honored in the Department's second Drug-Free School Recognition program and to strengthen coordination at the State level among the different agencies involved in drug prevention and substance abuse. The Network of Drug-Free Colleges and Universities, begun in 1987, continued to promote its standards for institutions to adopt in their local efforts to build comprehensive programs and policies against drug and alcohol use. The standards have received the endorsement of several higher education organizations, and, to date, over

---

Accomplishments -- Continued

1,200 colleges and universities have joined the Network. The Network also held a National Forum on Substance Abuse Issues, sponsored ten regional workshops to provide assistance to institutions of higher education in developing campus-wide action plans to combat drug and alcohol abuse, and established 20 regional networks to help institutions share ideas and resources for enhancing program and policy development.

Fiscal year 1989 funds also provided continued support for a descriptive study of the implementation of State and local programs (due for completion in 1991) supported with Drug-Free Schools and Communities funds; for a study of promising substance use education and prevention programs (also due in 1991) supported with Federal Activites grant funds or honored in the Department's Drug-Free School Recognition program, to determine whether the substance use prevention activities offered by these grantees and schools led to changes in students' knowledge, attitudes, and behaviors; for printing of a new handbook for parents entitled Growing Up Drug-Free: A Parent's Guide to Prevention (currently being distributed to parents, educators, and community groups); for printing and distributing the revised, second edition of the Department's handbook Schools Without Drugs (including a Spanish edition); for printing and distributing the Department's bimonthly drug prevention newsletter, The Challenge; and for beginning development of drug abuse education and prevention curricula, programs, and training materials for use in early childhood education. Also, as in 1987 and 1988, the Department transferred $500,000 to the Department of Health and Human Services to help operate the National Clearinghouse for Alcohol and Drug Information. The Department plans to continue all of these initiatives in 1990, as well as support the production of a new drug prevention video designed for inner-city and Hispanic youth, distribute a drug prevention curriculum model for grades kindergarten through 12, and conduct additional evaluation activities.

Programs for Indian Youth

Purpose and Method of Operation

One percent of the appropriation for the Drug-Free Schools and Communities Act (excluding amounts appropriated for Part C and Sections 5136, 5137, and 5146) is reserved for programs that support alcohol and drug abuse education and prevention programs for Indian children on reservations served by the Department of the Interior.

Since 1987, the Department of Education has maintained an agreement with the Department of the Interior under which the Bureau of Indian Affairs (BIA) operates this program. Under the agreement, at least 90 percent of the

---

Purpose and Method of Operation -- Continued

funds transferred are used for awards to BIA schools serving Indian children. Up to 10 percent of the funds may be retained by the BIA for training programs; the design and implementation of curricular materials; demonstration projects; special assistance to economically disadvantaged areas; technical assistance; and (subject to a 2.5 percent cap) administration of the program. In fiscal year 1989, funds supported curriculum implementation, inservice and preservice workshops, training of students and school teams, and drug education conferences.

Programs for Hawaiian Natives

Purpose and Method of Operation

One-fifth of one percent of the appropriation for Drug-Free Schools and Communities (excluding amounts appropriated for Part C and Sections 5136, 5137 and 5146) is reserved for alcohol and drug abuse education and prevention programs for the benefit of Hawaiian Natives. To be considered for funding, applicants must be recognized by the Governor of Hawaii.

Accomplishments

In 1987, a three-year award for this program was granted to the Kamehameha Schools/Bernice Pauahi Bishop Estate (the only applicant recognized by the Governor). Funds have been used primarily to develop a community-based K-12 substance abuse prevention demonstration program to teach parents culturally appropriate ways to identify and address substance abuse issues in their families. In coordination with the Hawaii State Department of Education, the grantee also worked on the design and execution of a Statewide prevalence survey of alcohol and drug use. In addition, the grantee developed a partnership with the Nanakuli Homestead Association to conduct an alcohol and drug education program to teach coaches identification and assessment skills within the context of organized recreational activities. The award for this program will be recompeted in 1990.

Regional Centers

Purpose and Method of Operation

Four and one-half percent of the first $347.5 million appropriated for the Drug-Free Schools and Communities Act (not including appropriations for Part C and sections 5136, 5137, and 5146) is reserved for the regional centers program. Under this program, awards are made to five regional centers to:

Purpose and Method of Operation — Continued

- Train school teams to assess alcohol- and drug-related problems confronting their schools and mobilize communities in response to those problems;

- Help local educational agencies and institutions of higher education to develop drug prevention training programs for teachers and school personnel;

- Evaluate anti-drug programs and strategies for effectiveness and disseminate information about successful programs; and

- Assist State educational agencies in coordinating and strengthening alcohol and drug abuse prevention policies and programs in schools.

A small amount of the funds for this program has been set aside for a project to provide management support for the centers. The project collects and disseminates information on exemplary programs, organizes workshops and conferences, and compiles a data base on the activities of the centers.

Accomplishments

In 1987, the Department held a national competition to select the five centers, which were awarded funds under three-year cooperative agreements. The third year of funding to these centers was awarded in summer 1989. On average, the centers have spent about half their time providing training and assistance to school teams, about a quarter of their time evaluating and disseminating information on programs and strategies, and about a quarter of their time providing assistance to LEAs, IHEs, and SEAs. A new regional centers competition will be held during 1990.

Other Authorizations

Section 5137 of Drug-Free Schools and Communities Act authorizes $2,000,000 for a program of demonstration grants to local and intermediate educational agencies, and consortia thereof, to establish and maintain drug-free school zones. Section 5146 of the Drug-Free Schools and Communities Act authorizes $500,000 for the dissemination, through the National Diffusion Network, of information and technical assistance with respect to drug abuse education and prevention programs of demonstrated effectiveness. Neither of these authorizations has been funded.

1991 Budget Proposal

For fiscal year 1991, $66,127,000 is requested for Drug-Free Schools and Communities National programs, an increase of $5,000,000 over the 1990

1991 Budget Proposal — Continued

appropriation. Appropriations language has been provided overriding the authorizing statute by earmarking the proposed increase for Federal Activities, thus enabling the Department to expand its support of nationally significant programs and projects at all levels of education. The Federal Activities authority is the most flexible and responsive of the National programs activities. With these funds, the Department has contributed substantially to the national effort to get drugs out of our schools, colleges, and communities. The increased funds are needed to support a variety of programs and projects, as well as the Department's increasing efforts to evaluate substance use education and prevention programs.

Level funding is proposed for each of the other National programs activities in order to target most of the requested increase on State grants. No funds are requested for the new programs of drug-free school zones demonstrations or dissemination of information and technical assistance, however. Drug-free school zones are an authorized activity under the State grant program and have already been enacted into law in 35 States; no new demonstration of the concept is needed. No funding is requested for the new dissemination program because of the large amount of dissemination already taking place through the regional centers and through other programs supported under Federal Activities.

Impact Data	1989	1990	1991
Federal activities	$12,163,000	$12,413,000	$17,413,000
Programs for students enrolled in IHEs	13,900,000	14,186,000	14,186,000
Demonstration programs conducted by IHEs	13,900,000 1/	14,186,000 1/	14,185,000
Programs for Indian youth	3,475,000	3,653,000	3,653,000
Programs for Hawaiian natives	695,000	731,000	731,000
Regional Centers:	15,638,000	15,959,000	15,959,000
Northeast center	3,031,000	2/	2/
Southeast center	3,149,000	2/	2/
Midwest center	3,063,000	2/	2/
Southwest center	3,043,000	2/	2/

Management support	330,000	2/	2/
Drug-free schools zones demonstrations	---	---	---
Dissemination of information and technical assistance	---	---	---

---

1/ Includes $13,900,000 in 1989 and approximately $9,000,000 in 1990 for school personnel training grants.

2/ Allocations to the individual centers are not available at this time.

2. Drug-Free Schools and Communities: d. Emergency grants
(Elementary and Secondary Education Act of 1965, Title V, Section 5136)

1991 Authorization: $25,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$24,688,000[1]	$25,000,000	+$312,000

---

[1] Appropriated under Drug-Free Schools State grants in 1990.

Purpose and Method of Operation

The Emergency Grants program, established by the Drug-Free Schools and Communities Act Amendments of 1989, provides funds to school districts that demonstrate significant need for additional assistance in combating drug and alcohol abuse. To be eligible for an emergency grant, a school district must have a significant number or concentration of Chapter 1-eligible children and serve an area: (1) in which there is a large number or percentage of arrests for, or while under the influence of, drugs or alcohol or convictions of youths for drug or alcohol-related crimes; (2) in which there is a large number or high percentage of referrals of youths to drug and alcohol abuse treatment and rehabilitation programs; and (3) that has a significant drug and alcohol abuse problem, as indicated by other appropriate data. Grants may range from $100,000 to $1 million. For 1991, this will be a current-funded program for which funds will be available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

For 1990, funds for this program are appropriated as part of the State grant program and are provided on a forward-funded basis. The funds are allocated to the Governor of each State on the basis of school-aged population for distribution through State educational agencies to local school districts. Beginning in 1991, this program is authorized as a Federal discretionary grant program.

1991 Budget Proposal

Funding for Drug-Free Schools and Communities Emergency Grants, a component of the President's educational excellence initiative, is requested at $25,000,000, the full amount authorized. The Drug-Free Schools State and local grants formula, which is based on school-aged population, school enrollment, and Federal compensatory education funding, does not fully take

1991 Budget Proposal -- Continued

into account the extreme problems faced by schools that are disproportionately affected by drug trafficking and abuse. In these communities, students frequently encounter drug sales in their neighborhoods and going to and from school. Prevention and education programs that may be effective in other communities are frequently inadequate in these areas; more concentrated and comprehensive approaches are required. The Emergency Grant program will help meet the special needs of these communities in the war against drugs.

In 1991, districts will compete for funding to support a comprehensive range of services, including educational programs, counseling programs, enhancement of school security, after-school programs, programs for parents and other community outreach efforts, and alternative programs for students with a history of drug abuse or others who are difficult to reach in the regular school setting. School officials will be given maximum freedom to propose programs providing a range of services appropriate to the needs of individual districts. Applications for this special assistance will be evaluated, based on need and quality of the proposed program, by a panel of experts.

Impact Data	1989	1990	1991
Number of awards	---	1/	37
Average award	---	1/	$676,000

1/ Emergency grants in fiscal year 1990 will be administered as part of the State grant program.

---

2. Drug-free schools and communities: e. National Commission on Drug-Free Schools
(Public Law 100-690, Section 5051)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$988,000	---	-$988,000

Program description

The Anti-Drug Abuse Act of 1988 authorizes a 26-member National Commission on Drug-Free Schools to advise the President and the Congress on strategies and criteria for achieving drug-free schools. The Commission is co-chaired by the Secretary of Education and the Director of National Drug Control Policy. Membership consists of the Secretary and the Director, 16 members appointed by them, and 8 members of Congress. The members of the Commission are representative of State and local school authorities, parent-teacher associations, education associations, community groups, law enforcement, and experts in the field of drug abuse prevention and education. The duties of the Commission are to:

- o Develop recommendations for criteria for identifying drug-free schools and campuses;
- o Develop recommendations for identifying model programs to meet such criteria;
- o Make such other findings, recommendations, and proposals as the Commission deems necessary to carry out its mission; and
- o Prepare and submit a final report of its findings and recommendations within one year of its first meeting.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Commission, which began in August 1989, is holding six regional meetings around the country between November 1989 and February 1990 (in Portland, Oregon, Boston, Detroit, Miami, San Diego, and Salt Lake City) to learn about the issue of drug-free schools. The input the Commission receives from these meetings will be used as a basis for developing its final report. In addition to the regional meetings, the Commission will hold a general membership meeting in Omaha, Nebraska, on March 21-23, 1990, to discuss the report.

2. Drug-free schools and communities: e. National Commission on Drug-Free Schools

---

Accomplishments -- Continued

Thus far, the Commission has heard testimony from dozens of persons representing a variety of schools, community agencies, and programs. In addition, the Commission has met with students, teachers, principals, superintendents, school board members, experts, and community representatives at each meeting site to discuss a range of issues, including research and evaluation; high-risk youth and special youth populations; parental involvement; curricula; overcoming community resistance to change; financial considerations; community-school partnerships; the media; school policies and programs; and postsecondary school issues.

1991 Budget Proposal

No 1991 funds are requested for the National Commission on Drug-Free Schools. The Commission is expected to submit its final report to the President and Congress in early fall of 1990 and cease operations. No additional funding, beyond the amount provided in 1990, is required.

SUPPLEMENTARY FACT SHEET

Fiscal Year 1990 Drug-Free Schools and Communities Allotment Procedure

The following procedure was used to allot 1990 funds under the Drug-Free Schools and Communities Act among authorized programs.

- o Funds appropriated under the Department of Education Appropriations Act (P.L. 101-166) and the Department of Transportation Appropriations Act (P.L. 101-164) were allocated separately under the provisions of the Drug-Free Schools and Communities Act of 1986, as amended.

- o Of the $358,315,000 appropriated for Part B (State grants) and Part D (National programs) under P.L. 101-166:

  -- The first $347,500,000 (the 1989 level) was allocated under Section 5112(c)(1) as follows: 17.2 percent for National programs, 1 percent for the Outlying Areas, and 82.8 percent for State grants.

  -- Of the reminaing $10,815,000, 1 percent was reserved for the Outlying Areas and 1.2 percent was reserved for National programs under Section 5112(c)(2)(A).

  -- The remaining $10,577,000 was allocated to the State grants (Governors' program) under Section 5112(c)(2)(B)(i).

- o Of the $172,000,000 appropriated for Parts B and D under P.L. 101-164:

  -- $170,000,000 was earmarked in appropriations language for Part B State grants, of which $25,000,000 was earmarked for Emergency grants.

  -- Of the remainder, $4,123,000 was allocated to the State grants (Governors' program) under Section 5112(c)(2)(B)(i) and $140,877,000 was allocated to the State grants (State and local educational agencies' program) under Section 5112(c)(2)(C).

  -- $2,000,000 was earmarked in appropriations language for Part D. These funds were pro-rated among the National programs activites based on their share of funds reserved under Section 5112(a).

- o Funds were appropriated directly for Part C School Personnel Training ($7,238,000 provided in P.L. 101-166 and $7,500,000 earmarked in P.L. 101-164).

- o Funds were then sequestered pursuant to P.L. 99-177 (the Balanced Budget and Emergency Deficit Control Act of 1985) and P.L. 101-239 (the Omnibus Budget Reconciliation Act of 1989) and rounded to thousands. The table on the following page displays these amounts.

DRUG-FREE SCHOOLS AND COMMUNITIES 1990 APPROPRIATION

	P.L. 101-166 ED-LABOR-HHS Appropriation	P.L. 101-164 Department of Transportation Appropriation	Presequester Total	Sequester	Total Post-Sequester

3. Strengthening teaching and administration: a. Eisenhower mathematics and science education: (1) State grants (Elementary and Secondary Education Act, Title II, Part A)

1991 Authorization: 1/

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$126,837,000	$220,800,000	+$93,963

1/ Section 2004 of ESEA reserves 4 percent of the amount appropriated for Mathematics and Science Education for National Programs. The remainder is available for State Grants.

Purpose and Method of Operation

The Eisenhower Mathematics and Science Education program provides financial assistance to State educational agencies (SEAs), local educational agencies (LEAs), and institutions of higher education (IHEs) to strengthen the economic competitiveness and national security of the United States by improving the skills of teachers and the quality of instruction in mathematics and science.

By statute, of the total amount appropriated, 95 percent is to be allotted to the 50 States, the District of Columbia, and Puerto Rico; 4 percent is to be reserved for National Programs; and 1 percent is to be allocated to the Outlying Areas and to programs for Indian children in elementary and secondary schools operated by the Department of the Interior. In recent years, appropriations language has provided a higher amount for National Programs.

Under the State grant program, 50 percent of the amount available is distributed to States according to the number of children aged 5 to 17, and 50 percent is distributed based on each State's share of the previous year's Chapter 1 LEA grant allocation. No State may receive less than .5 percent of the total amount available for the States or less than its 1988 allocation under Title II of the Education for Economic Security Act. Each State must spend 75 percent of its grant for elementary and secondary programs and 25 percent for higher education programs.

This is a forward-funded program for which funds become available on July 1 of the fiscal year of the appropriation and remain available for obligation until September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

Purpose and Method of Operation — Continued

Each State submits an application to the Department that covers a three-year period and includes a projection of the supply and demand for teachers within the State in all of the mathematics and science subject areas and an assessment of current elementary and secondary mathematics and science curriculum needs. An LEA that wishes to receive a grant under this program must submit an application to the State that covers a three-year period and includes a summary assessment of the needs of its current mathematics and science teachers and whether a shortage of qualified teachers exists or will exist within five years; the current levels of mathematics and science student achievement in the LEA; and the curricular needs of the LEA in mathematics and science.

Elementary and Secondary Education Programs (75 percent)

Each SEA is required to distribute at least 90 percent of the amount it receives for elementary and secondary programs to its LEAs. Of the amount distributed to LEAs, 50 percent is allocated to LEAs based on relative school enrollments and 50 percent is allotted based on shares of Chapter 1 LEA grant allocations to be used for teacher training, instructional equipment and materials, historically underrepresented and underserved persons and gifted and talented students, and dissemination. SEAs may use up to 5 percent for technical assistance, administration, and evaluation.

LEAs may use funds for expansion and improvement of preservice and inservice training and retraining of teachers in the fields of mathematics and science; recruitment or retraining of minority teachers to become mathematics and science teachers; training in and instructional use of computers, video, and other telecommunications technologies as part of a mathematics and science program; integrating higher-order analytical and problem-solving skills into the mathematics and science curriculum; or projects for individual teachers to improve their teaching ability or improve instructional materials. LEAs with at least a 50 percent low-income population may use program funds to purchase computer or telecommunications equipment.

Higher Education Programs (25 percent)

Each State must use at least 95 percent of its higher education funds for competitive grants to IHEs, and may use no more than 5 percent for the State assessment, administration, and evaluation.

IHEs may use higher education funds for establishing traineeship programs for new secondary school mathematics and science teachers; retraining secondary school teachers in the fields of mathematics and science; and inservice training for elementary, secondary, and vocational teachers in mathematics and science.

School Improvement Programs

3. Strengthening teaching and administration: a. Eisenhower mathematics and science education: (1) State grants

---

Accomplishments

In 1989, the Department contracted for a two-year national study of the Eisenhower Mathematics and Science Education State Grant program. The purpose of the study is to determine what activities have been funded and to assess the impact of expenditures under the program. The final report is expected to provide a systematic national profile of activities supported by the program, demonstrate typical practices, and illustrate exceptional uses of funds. The final report is due in the fall of 1990. Preliminary findings indicate that, although Eisenhower projects resemble teacher preparation and enhancement projects supported by NSF, there are several key differences between the programs. Eisenhower projects tend to be smaller and far more numerous; are often more closely aligned with specific improvement priorities of a given State; and serve more teachers than NSF projects, but generally with less intensity. In addition, due to less elaborate review processes (Eisenhower projects need not satisfy national demonstration criteria), Eisenhower projects can be implemented on a shorter timeline.

In November 1989, the Department conducted the first joint national conference between State Title II program coordinators and project leadership teams from over 50 national discretionary mathematics, science, and technology programs. Other participants included representatives from national educational organizations and Federal, State, and local educational officials. The conference focused on clarifying program procedures including those required by the legislation and regulations; the President's and the Secretary's educational priorities; increasing coordination between State Grants and National programs and between the Eisenhower program and other related Federal programs; sharing program successes and future plans; and developing new networks for improving math and science education.

In addition, the Department has initiated the development of model reporting standards that will form the basis for the annual collection of data on the Eisenhower program including the number of teacher participants.

1991 Budget Proposal

For 1991, the Department is requesting $220,800,000 for the Eisenhower Mathematics and Science Education State Grant program, a 74.1 percent increase over the 1990 appropriation. Improvement of math and science education is one of the Administration's highest priorities because improved performance in science and math is critical for keeping America competitive in an increasingly technological world. Since Eisenhower program resources are available to States on an annual basis and can be used quickly to build and maintain State support networks, the Eisenhower program is very popular among potential grantees. These funds would support efforts to improve math and science teaching, raise the educational attainment levels of American students in math and science, and increase opportunities for women and minorities in these fields. The Department intends to continue efforts to coordinate math/science education activities with the National Science Foundation and other Federal, State, and local agencies and private organizations.

School Improvement Programs

3. Strengthening teaching and administration: a. Eisenhower mathematics and science education: (1) State grants

Impact Data	1989	1990	1991
Amount for States:	$127,066,000	$125,481,000	$218,500,000
Maximum State grant	13,446,000	17,738,000	22,015,000
Minimum State grant	635,000	627,000	1,092,000
Amount for Outlying Areas	687,000	678,000	1,150,000
Amount for Indian schools	687,000	678,000	1,150,000
Average State grant:	2,444,000	2,413,000	4,202,000
Elementary and secondary programs:	1,833,000	1,810,000	3,152,000
Maximum available to SEAs	183,000	181,000	315,000
Minimum available to LEAs	1,650,000	1,629,000	2,837,000
Higher education programs:	611,000	603,000	1,050,000

Minimum available for IHEs	580,000	573,000	998,000

---

3. Strengthening teaching and administration: a. Eisenhower mathematics and science education: (2) National programs
(Elementary and Secondary Education Act, Section 2012)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$8,781,000 2/	$9,200,000	+$419,000

1/ Section 2004 of ESEA reserves 4 percent of the amount appropriated for Mathematics and Science Education for National Programs. The remainder is available for State Grants.

2/ In 1990, the appropriations act made an amount greater than 4 percent available for National Programs.

Purpose and Method of Operation

This program provides grants and cooperative agreements for programs of national significance in mathematics and science instruction. Special consideration may be given to applicants proposing to offer special services to populations that have been underserved and underrepresented in the fields of science and mathematics. Projects may demonstrate not only nationally significant approaches to teaching science and mathematics, but also teacher training designed to result in such instruction.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, 29 awards were made following two competitions, one for elementary level projects (16 were funded) and another for secondary school projects (13 were funded). About two-thirds of the projects funded are concentrating on the sciences, and one-third on mathematics. Applicants responded to priorities on services to the underrepresented and underserved and on introducing new technologies to the classroom. A majority of the projects funded involve collaborative efforts among school districts, universities, and other organizations, including science museums and the business community. A number of projects are of substantial size and duration, and several build on NSF-funded curriculum development efforts.

For the first time, in the fall of 1989, directors of projects funded under National Programs met jointly with representatives of the State Grants

---

Accomplishments--Continued

program. At the meeting, projects were urged to coordinate with and use the resources of other Federal agencies. Representatives of the NSF, Department of Energy, NASA, and the White House were on hand.

For 1990, a single competition is planned with priorities on improving teacher qualifications and skills and improving curriculum in mathematics and science. Applications have specifically been invited for projects to implement new mathematics and science curricula on a large scale, involving States or entire school systems. One approach for which assistance could be sought is the provision of technical assistance through regional centers. Applications have also been invited for projects to provide inservice teacher training for teachers working with students from groups underserved and underrepresented in mathematics and science, and to undertake activities to reduce the high rate of science and mathematics avoidance that begins in the elementary grades. All applicants have been urged to build on NSF projects, use programs validated by the National Diffusion Network, base their efforts on current research, and pay particular attention to evaluation.

1991 Budget Proposal

For 1991, $9,200,000 is requested, $419,000 more than the 1990 appropriation. The amount requested for National Programs constitutes 4 percent of the total request for the Eisenhower Mathematics and Science Education program. Funds will be used to support the continuation of projects begun in 1989 and 1990 and to fund additional new awards.

Impact Data	1989	1990	1991
Number of new awards	29	42	11
Number of continuation awards	--	11	44

---

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (1) Grants for schools and teachers
(Public Law 100-297, Title III, Part B)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,915,000 2/	$3,915,000	---

1/ Of the total funds appropriated for FIRST, one-third is reserved for Family-School Partnerships and $150,000 is reserved for dissemination and reporting. Remaining funds are used for Grants for Schools and Teachers.

2/ The 1990 appropriation act specified the amount for Grants for Schools and Teachers.

Purpose and Method of Operation

The Fund for the Improvement and Reform of Schools and Teaching (FIRST), consists of two programs, Grants for Schools and Teachers, and Family-School Partnerships. The Grants for Schools and Teachers program supports discretionary grants and contracts to a variety of institutions, including individual schools, to improve educational opportunities for and performance of elementary and secondary school teachers and students. Among the activities specifically authorized are those to help educationally disadvantaged or at-risk children meet higher educational standards; provide incentives for improved school performance; provide opportunities for teacher enrichment; and improve the teacher certification process. Priority is given to projects that benefit schools or students with below-average academic performance, projects that will lead to increased access for all students to a high quality education, and projects that develop or implement systems for providing incentives to schools, principals, teachers, and students for improved performance. Each year, an amount equal to at least 25 percent of the total appropriation for FIRST must be used for school-level projects involving an individual school or a consortium of schools.

The activities of the Fund are carried out with the advice of a 15-member Fund Board. The members have extensive backgrounds in education and represent a broad range of viewpoints and experience. The Board, which meets three times a year, advises the Secretary each year of its priorities and their implications for the Fund.

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (1) Grants for schools and teachers

---

Purpose and Method of Operations--Continued

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the first year of the program, 38 awards were made, 23 for school-level projects and 15 for other Schools and Teachers projects. The 23 school-level projects funded involve a variety of efforts to restructure schools. These include using incentives and alternative curricula to improve the achievement of at-risk students, programs that focus on student outcomes and school accountability, and teacher-designed restructuring of the school day and curriculum.

The 15 other Schools and Teachers projects, generally larger in scope and conducted over as many as three years, include collaborative efforts between higher education institutions and schools to improve the education of at-risk students to enable them to meet standards for entry into college, projects providing training in mathematics and science for secondary school teachers, and projects providing education in technology to prepare students for entry into technical schools. Most of these Schools and Teachers projects begun in 1989 will continue in 1990.

Funds set aside for technical assistance and coordination were used to provide projects with advice on the evaluation and documentation necessary to address the National Diffusion Network (NDN) criteria for validating effectiveness. The goal is that successful projects will be able to document their positive effects and thus be validated according to NDN standards and included in the Network.

The FIRST Board met three times in 1989, once in a joint session with the Fund for the Improvement of Postsecondary Education Board as required by statute. A subcommittee of the Board met to advise the Director and the Secretary on projects to be funded.

A competition for new school-level awards will be held in 1990. Applications will be invited for projects to expand efforts to restructure schools; involve higher education in collaborative efforts with elementary and secondary schools; provide services for students with special needs within the regular classroom; involve parents, teachers, and administrators in projects; and undertake new approaches to character education.

School Improvement Programs

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (1) Grants for schools and teachers

---

1991 Budget Proposal

For 1991, the Department is requesting $3,915,000, the same as the 1990 appropriation. Funds will be used for additional projects and to continue projects first funded in 1989 and 1990. The Secretary will set priorities for funding after receiving advice from the Fund Board.

Impact Data	1989	1990	1991
Number of new awards	38	36	35
Number of continuation awards	--	13	18

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (2) Family-school partnerships
(Public Law 100-297, Title III, Part B)

1991 Authorization: Indefinite 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,443,000 2/	$4,443,000	---

1/ Of the total funds appropriated for FIRST, one-third is reserved for Family-School Partnerships and $150,000 is reserved for dissemination and reporting. Remaining funds are used for Grants for Schools and Teachers.

2/ The 1990 appropriation act specified the amount for Family-School Partnerships.

Purpose and Method of Operation

The Fund for the Improvement and Reform of Schools and Teaching (FIRST), consists of two programs, Grants for Schools and Teachers and Family-School Partnerships. The Family-School Partnerships program supports demonstration grants to local educational agencies that are eligible for funding under Chapter 1 of Title I of the Elementary and Secondary Education Act of 1965 for the development of innovative family-school educational partnership activities. Activities for which funds may be used include training programs for families and teachers (including Chapter 1 teachers); the development of new school policies and practices to meet the changing demographic characteristics of families with school-age children and to involve parents of special groups of students (including the disadvantaged and handicapped) in the schooling of their children; the hiring and training of educational personnel specifically to coordinate family involvement activities; and the development or purchase of educational materials for parents to use at home to reinforce classroom instruction of their children.

The activities of the Fund, including Family-School Partnerships, are carried out with the advice of a 15-member Fund Board. The members have extensive backgrounds in education and represent a broad range of viewpoints and experience. The Board, which meets three times a year, advises the Secretary each year of its priorities and their implications for the Fund.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (2) Family-school partnerships

---

Accomplishments

In 1989, the Family-School Partnerships program made its first 14 awards. The grants, awarded to local educational agencies eligible for Chapter 1, support a variety of school and home activities. These include providing portable computers for parents and students to use at home, training for parents and English for Speakers of Other Languages programs specifically designed to help them assist their children with homework, operating an automated homework information system used in conjunction with training for parents, classroom use of parents as tutors, and a school-operated work-study program for students. All of the projects serve disadvantaged or at-risk students and their families, many operate in conjunction with other programs, and at least one supports parent involvement in restructuring the school's organization and curriculum.

Funds set aside for technical assistance and coordination were used to provide projects with advice on the type of evaluation that must be done and the type of documentation necessary to demonstrate effectiveness so that, if successful, projects can be validated for inclusion in the National Diffusion Network. Similar assistance will be provided in 1990.

The FIRST Board met three times in 1989, once in a joint session with the Fund for the Improvement of Postsecondary Education Board as required by statute. A subcommittee of the Board met to advise the Director on the projects to be funded.

In 1990, two competitions will be held to select additional projects for support. Under a general competition, applicants may propose any authorized activity, but will be invited to propose activities to involve parents in school-site management and choice programs. For the second competition, applicants will be limited to activities responding to specific priorities, including projects to assist parents in working with their children to improve achievement; projects to train families, teachers, and other school personnel to work together; and projects to design changes in school practices to meet the changing needs of families.

1991 Budget Proposal

For 1991, $4,443,000 is requested, the same as the amount available in 1990. Funds will be used for the continuation of projects begun in previous years that require more than a single year of support, and for new awards. This program demonstrates how parents, especially low-income parents of educationally deprived children, can become involved not only in improving their children's achievement, but in changing the school itself.

School Improvement Programs

3. Strengthening teaching and administration: b. Fund for the Improvement and Reform of Schools and Teaching (FIRST): (2) Family-school partnerships

Impact Data	1989	1990	1991
Number of new awards	14	32	23
Number of continuation awards	--	2	8

3. Strengthening teaching and administration: c. Territorial teacher training
(Elementary and Secondary Education Act of 1965, Section 4502)

1991 Authorization: $2,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,762,000	$1,762,000	---

Purpose and Method of Operation

Under this program, funds are awarded to the Outlying Areas to train elementary and secondary school teachers. Activities must be directed at teachers who work with students in kindergarten through grade 12 in public and private schools. All activities must be directly related to teaching and may include: inservice teacher training in basic skills development and specific subject areas, curriculum development, use of instructional materials and equipment, classroom management, or training for teachers to achieve full certification under the appropriate Territorial requirements. The earning of college credits and degrees has always been the major activity funded under the program.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1988-89, this program assisted the Outlying Areas in meeting their teacher training needs in the following ways:

- In American Samoa, more than 200 teachers were involved in the program. Three teachers acquired teaching certificates and received bachelor degrees.
- In Guam, assistance was provided to 96 full-time teachers hired on a limited-term basis who were seeking full certification. Sixty of these teachers completed their requirements.
- In the Northern Mariana Islands, 361 of the Commonwealth's 398 public school teachers took at least one training course. In addition, 38 of 88 private school teachers participated in the program. Fifteen teachers recieved full certification.

Accomplishments — Continued

- In the Republic of Palau, 133 teachers received continuing training necessary for minimum teacher certification; 16 completed their degree requirements.

- In the Virgin Islands, the program served a total of 262 teachers, of whom 12 became eligible for certification.

Similar program accomplishments are being achieved in 1989-90. In addition, the Department has sought to improve program accountability by arranging for technical assistance to the Territories in grants management, including budgeting, monitoring, assessment, evaluation, and reporting. This assistance, which is being provided under contract with the Northwest Regional Education Laboratory, will also address coordination among TTTAP, SEA, and IHE personnel in the Territories so that they share information and bring about more efficient and effective teacher training operations.

1991 Budget Proposal

For 1991, the Department proposes to fund the Territorial Teacher Training Assistance program (TTTAP) at $1,762,000, the same as the 1990 appropriation.

There are still significant numbers of non-degreed or non-certified teachers in the Territories. For example, the Virgin Islands reports that 23 percent of its school teachers are either non-degreed or non-certified. In the Commonwealth of the Northern Marianas, over half of all public school teachers have yet to attain a Bachelor's degree, and in the Republic of Palau, the comparable figure is 22 percent. In American Samoa, 58 percent of the Education Department's professional staff have an Associate degree or less. While the Department has no quantitative measure of the loss of educational achievement attributable to the lack of training of Territorial teachers, it can reasonably be assumed that such low levels of teacher educational attainment have a limiting effect on student learning.

An evaluation of the program conducted in 1989 for the Department confirms the need for the program but suggests that more attention be given to activities such as hands-on training in the classroom and assistance from master teachers. The evaluation also includes several specific recommendations for improving the effectiveness of the program in such areas as local and Federal administration, the role of institutions of higher education, and teachers' lack of English proficiency as a barrier to completing postsecondary couses. The Department is now considering specific actions to take in response to this report.

School Improvement Programs

3. Strengthening teaching and administration: c. Territorial teacher training

---

1991 Budget Proposal -- Continued

As a result of these efforts and recommendations, the program is being strengthened and will further assist the Territories in upgrading the academic status and skills of their teachers.

Impact Data	1989	1990	1991
Continuation grants:	$1,568,000	$1,762,000	$1,762,000
American Samoa	320,000	1/	1/
Guam	315,000	1/	1/
Northern Mariana Islands	410,000	1/	1/
Republic of Palau	213,000	1/	1/
Virgin Islands	310,000	1/	1/
Additional Activities	408,000	---	---

1/ Allocations to the individual territories are not available at this time.

3. Strengthening teaching and administration: d. Leadership in educational administration (LEAD)
(Higher Education Act, Title V, Part C, Subpart 2)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,845,000	$4,215,000	+$370,000

Purpose and Method of Operation

This program provides funding for the establishment and/or operation of training and assistance centers for upgrading the leadership skills of elementary and secondary school administrators. Projects focus on leadership, management, problem-solving, goal-setting, instructional analysis, communication, evaluation, student discipline, time-management, and budgetary skills.

All awards are made through once-renewable, three-year grants; grantees must demonstrate a commitment to continue their programs after Federal funding expires. Grantees must match the Federal contribution. In order for a grant to be renewed, the grantee must agree to provide the same level of services during the second three-year period as it provided during the first three years, but with only one-half the amount of Federal assistance it received in the first period. Higher education institutions, State educational agencies, intermediate school districts, local educational agencies, and private management and nonprofit organizations (or consortia of such) are eligible participants.

The 50 States, the District of Columbia, and all Territories are eligible to participate in the program. When the appropriation is insufficient to satisfy the mandated $150,000 minimum per State, a pro-rata reduction is computed.

This is a forward-funded program for which funds are available for obligation from July 1 of the fiscal year for which they are appropriated through September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Leadership in Educational Administration (LEAD) centers have provided services to school administrators through training, technical assistance, and dissemination of research findings and other current information. These projects are helping to reform university, preservice preparation programs, establish statewide coordination for diverse inservice training efforts, develop new curricula, and provide training to support State educational reforms. Some centers have entered into innovative partnerships with

Accomplishments -- Continued

business and industry, creating a base of support that will help maintain these centers after the scheduled expiration of Federal support.

1991 Budget Proposal

For the LEAD program, the Department is requesting funds to complete the legislatively mandated six-year grant period. Of the $4,215,000 request, $3,845,000 is required in fiscal year 1991 for the final (sixth-year) grants for the 50 States and the District of Columbia and for the fifth year of funding for Puerto Rico and the Territories. All grantees would receive the same amount as the current-year award. The remainder of the amount requested, $370,000, is needed for the final year of funding (in fiscal year 1992) for Puerto Rico and the Territories. Included in the appropriations language is a provision that allows $370,000 of the amounts made available for this program to remain available for obligation through September 30, 1993. Inclusion of these funds in the 1991 budget will relieve both the Administration and the Congress of the necessity of handling a request for a very small amount in the 1992 budget for the final year of this program.

Impact Data	1989	1990	1991	1992
Number of awards:				
First 3-year cycle	6 1/	---	---	---
Second 3-year cycle	51 1/	57	57	6

1/ The six Territories entered the program one year later than the 50 States and D.C.; they, therefore, do not begin their second 3-year cycle until 1990.

3. Strengthening teaching and administration: e. Christa McAuliffe fellowships
(Higher Education Act, Title V, Part D, Subpart 2)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,932,000	$2,013,000	+$81,000

Purpose and Method of Operation

The Christa McAuliffe Fellowship program provides fellowships to outstanding teachers for projects to improve education through sabbaticals for study, research, or academic improvement; consultation with or assistance to other school districts or private schools; development of special innovative programs; development of model teacher programs; and staff development. Full-time public or private elementary or secondary school teachers may receive fellowships for up to 12 months. A fellow may not receive an award for two consecutive years and must return to a teaching position in his or her current school district for at least two years following the completion of a fellowship.

Christa McAuliffe Fellows in each State are selected by a seven-member statewide panel appointed by the Governor acting in consultation with the State educational agency, or by an existing panel designated by the Governor and approved by the U.S. Secretary of Education. Statewide panels establish operating procedures for the fellowship process, disseminate information and application materials, and consult with local educational agencies in the evaluation of proposals from applicants.

Under the authorizing statute, if the appropriation is not sufficient to provide one fellowship award in each Congressional district, the Secretary publishes an alternative distribution of fellowships that is geographically equitable. For 1989, funds were allocated to the 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas based on the number of public school teachers, with each State or Outlying Area receiving at least $29,573 (the national average salary for public school teachers in 1987), the maximum amount authorized for each fellowship.

For 1990, funds will be distributed based on public school teacher population, provided that a minimum of $31,200 (the national average public school teacher salary in 1989) is available for teachers in each State, the District of Columbia, Puerto Rico and each of the Outlying Areas. Awards to individual teachers may not exceed $31,200, and the Department is urging that fellowships be awarded in the maximum amount whenever possible.

School Improvement Programs

3. Strengthening teaching and administration: e. Christa McAuliffe fellowships

---

Purpose and Method of Operation — Continued

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The 1987 Christa McAuliffe Fellows were required to submit verification of employment in their respective school districts by the end of the 1988-89 school year. To date, nearly 88 percent of the 1987 fellows have complied with the service requirement, and the Department will continue to follow up on fellows who are not in compliance. The 1988 Christa McAuliffe Fellows were required to return to their respective school districts for the 1989-90 school year. They must submit verification of the service requirement to the Department by June 30, 1990.

In 1989, the Department awarded 80 fellowships to teachers in 49 States, the District of Columbia, the Virgin Islands, Puerto Rico, American Samoa, Guam, the Northern Mariana Islands, and Palau. In addition, the Department issued regulations that established a minimum fellowship award equal to half the national average salary of public schools teachers. This provision resulted in fewer but, on average, larger fellowship awards.

The 1989 Christa McAuliffe Fellows are engaged in a variety of projects, including developing a Saturday Science Academy for at-risk children; building a math/science space laboratory; buying computer equipment and developing curricula; expanding a recreation program for at-risk students; developing a book on Samoan navigation; conducting a cemetery restoration project utilizing community efforts; and developing a space unit that includes preparing newsletters and attending a 3-day space camp at the Kennedy Space Center.

1991 Budget Proposal

For 1991, the Department is requesting $2,013,000, an $51,000 increase over the 1990 appropriation. This increase would enable fellowships to keep pace with increases in average teacher salaries. These funds would be used to honor and reward outstanding teachers, to encourage and enable them to continue their education or to develop innovative educational projects and programs, and to improve the education of students.

3. Strengthening teaching and administration: f. Mid-career teacher training
(Higher Education Act of 1965, Title V, Part A)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$987,000	$987,000	---

Purpose and Method of Operation

This program supports grants to institutions of higher education with schools of education to establish and maintain programs to provide teacher training to individuals who possess baccalaureate degrees and education-related job experience and wish to become teachers. Applicant institutions must demonstrate that the program they propose will ensure that students who enter the program have current subject matter knowledge and characteristics likely to lead to success as classroom teachers, and that the program offered, when successfully completed, will provide the skills and credentials needed to teach. Programs must also be developed with the cooperation of the local business community, operate under a cooperative agreement with one or more State or local educational agencies, and be designed and operate with the active participation of classroom teachers.

Funds are awarded for an initial two-year planning period, and, for institutions demonstrating successful performance, may be renewed for an additional two years. To the extent possible, at least one award is to be made in each of the ten geographic regions served by the Department.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Fiscal year 1990 is the first year of funding for this program. A competition will be held in the spring of 1990 to select the first group of grantees. They will each receive an award of up to $100,000 for two years of planning, with continuation awards, providing up to two additional years of support for successful projects, not scheduled until 1992.

3. Strengthening teaching and administration: f. Mid-career teacher training

---

1991 Budget Proposal

In 1991, $987,000 is requested, the same as the 1990 appropriation. Since the 1990 awards are for a period of two years, the funds requested would provide new, two-year planning awards to additional institutions of higher education. This program helps to broaden the pool of talented, well-qualified individuals from which teachers may be recruited. Although it will not necessarily lead to the development of alternative certification requirements, as the Administration's Alternative Certification initiative would encourage, it could complement such efforts.

Impact Data	1989	1990	1991
Number of two-year planning awards	--	10	10

3. Strengthening teaching and administration: g. Alternative certification of teachers and principals
(Proposed legislation)

1991 Authorization: $25,000,000 (proposed)

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$25,000,000	+$25,000,000

Purpose and Method of Operation

The purpose of this program is to help make the best-qualified persons available as teachers and principals in the Nation's schools. As an incentive for examining innovative ways to improve the quality of the teacher and principal workforce, one-time grants would be made to assist States to develop and implement systems for alternative certification of teachers and principals.

Under the proposed legislation, funds would be distributed among those State educational agencies that apply on the basis of each State's share of the total population ages 5 through 17 in those States seeking grants, except that no State would receive less than $100,000. Funds awarded to the States would remain available to them for a period of two years. States would be allowed to make subgrants to local educational agencies, intermediate educational agencies, institutions of higher education, or consortia of such agencies.

Authorized activities would include the design, development, implementation, testing, and evaluation of programs and strategies for the alternative certification of teachers and principals. Expansion and improvement of existing programs, as well as development of new programs, would be authorized. Grants could also support the development of reciprocity agreements between or among States for the certification of teachers and principals.

This would be a current-funded program for which funds would be available from October 1 through September 30. The level of funding would be dependent upon the availability of appropriations.

1991 Budget Proposal

For 1991, the Department is requesting $25,000,000 for this program. At this level, should all States participate, the maximum award would be just over $2,500,000, and the average award $481,000.

The very best education for children requires the very best teachers and principals. Alternative certification systems offer States an opportunity to improve the quality of their teacher and principal workforce by allowing

---

1991 Budget Proposal--Continued

school districts to recruit from a large pool of talented professionals who have demonstrated their subject area competence or leadership qualities in fields outside education. They also provide a means for addressing teacher shortages, especially shortages of competent science and mathematics teachers, as they provide access to teaching to professionals, such as scientists and engineers, without teacher training. They allow those with management experience in other areas to pursue second careers in education. Federal assistance provided under this program would provide additional impetus to States interested in developing and implementing systems of alternative certification, or in expanding and improving existing alternatives.

3. Strengthening teaching and administration: h. Presidential awards for excellence in education
(Proposed legislation)

1991 Authorization: $7,600,000 (proposed)

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$7,600,000	+$7,600,000

Purpose and Method of Operation

Under the Presidential Awards for Excellence in Education program, formula grants would be awarded to States and Outlying Areas for use in a new program of Presidential awards for elementary and secondary school teachers who meet the highest standards of excellence. After reserving up to $200,000 for expenses associated with printing award certificates and holding an annual ceremony, the Secretary would allocate the remaining funds to States on the basis of the number of full-time equivalent teachers in each State, with each State receiving at least enough funding to make one award. The amount of each award would be $5,000, and recipients would be permitted to use their awards for any purpose. Winners of Presidential awards would be selected by statewide panels, appointed by Governors from nominations made by local educational agencies, private schools, parents, associations of parents and teachers, businesses, business groups, and student groups. In making selections, the panels would use selection criteria described in the State application and subject to approval by the Secretary. Each State would be permitted to use up to 5 percent of its allocation for administration, including the cost of convening the statewide panel.

This would be a current-funded program for which funds would be available from October 1 through September 30. The level of funding would be dependent upon the availability of appropriations.

1991 Budget Proposal

For 1991, $7,600,000 is requested for a new initiative of Presidential Awards for Excellence in Education. The future of America's elementary and secondary schools depends heavily on the Nation's teachers. When teachers are highly motivated and committed to excellence, they succeed not only in imparting a knowledge of their subject matter, but also in instilling in their students an appreciation of the value and importance of education. This program is based on these principles and on the principle that teachers who meet the highest standards of excellence deserve public recognition, respect, and appropriate financial awards.

4. Magnet schools assistance: (a) Magnet schools in desegregating districts (Elementary and Secondary Education Act of 1965, Title III)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$113,189,000	$113,189,000	---

Purpose and Method of Operation

The Magnet Schools Assistance program provides grants to eligible local educational agencies (LEAs) to establish and operate magnet schools that are part of a court-ordered or federally approved desegregation plan to eliminate, reduce, or prevent minority group isolation in elementary and secondary schools. Magnet schools offer special curricula designed to attract substantial numbers of students from different social, economic, ethnic, and racial backgrounds.

Grants are awarded on a competitive basis. In selecting grantees, the Secretary evaluates the applicant's plan of operation, quality of key personnel, quality of project design, budget and cost effectiveness, evaluation plan, adequacy of resources, and commitment and capacity. Special consideration is given to applicants based on the recentness of their implementation of the approved desegregation plan; the proportion of minority group children involved in the plan; the cost or difficulty of implementing the plan; the degree to which the program is expected to achieve the purposes of the program statute; and the degree to which the program involves collaborative efforts with other institutions. Applicants are required to demonstrate how they will continue their magnet school programs after Federal assistance is no longer available. In addition, for amounts appropriated in excess of $75 million, special consideration is given to applicants that did not receive an award the previous fiscal year.

Grantees receive one-year awards and may apply for non-competitive second-year continuation awards. The Secretary approves second-year continuation awards if the applicant is making satisfactory progress toward achieving the purposes of the program. An eligible LEA may receive no more than $4 million annually. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Grants are used to support courses of instruction within magnet schools that will substantially strengthen the knowledge of math, science, history, English, foreign languages, art, or music, or the vocational skills of

---

Purpose and Method of Operation -- Continued

students attending such schools. Funds may be used for planning and promotional activities, teachers' salaries, and the acquisition of books, materials, and equipment (including computers). Approximately 43 percent of the average magnet school grant supports personnel costs, 25 percent is used to purchase or maintain equipment, and the remainder is used for fringe benefits, supplies, and other indirect costs. LEAs that receive assistance may not use funds for consultants, transportation, or activities that do not augment academic improvement. Grantees may use no more than 10 percent of the funds in any fiscal year for planning.

Accomplishments

During fiscal year 1989, 54 LEAs in 25 States received first-year awards to establish or expand magnet school programs. Awards ranged from $183,705 for Omaha Public Schools to $4 million for Chicago Public Schools. Of the 54 LEAs that were funded in 1989, 26 were first-time grant recipients under the program and 7 had received grant awards in both of the two previous competitions held in FY 1985 and FY 1987.

The FY 1989 grantees are implementing a variety of magnet school programs, with 46 LEAs operating programs offering specialized curricula in mathematics, science and technology, 36 offering programs in the humanities, 34 implementing programs in the arts, and 24 operating vocational education magnet programs. In addition, several projects involve collaborative arrangements between LEAs, and IHEs, community-based, non-profit organizations, and the private sector.

Examples of how the Magnet Schools Assistance funds are being used in individual school districts include:

- The Long Beach (CA) Unified School district is using its grant for an aerospace technology magnet program that involves a consortium of partners including three major aerospace corporations, the Long Beach State University and other colleges, NASA, and the Jet Propulsion Laboratory. Contributions being made by consortium members include materials and technical expertise to support curriculum development, staff training, student internships, and equipment.

- The Phoenix (AZ) Union High School District is using its grant to implement new programs in aerospace technology and agribusiness, and to plan for a teaching profession magnet program to begin in the fall of 1990. The project is aimed at improving student recruitment and increasing parental and community involvement in magnet schools to combat declining enrollment and to prevent or reduce minority group isolation.

Accomplishments -- Continued

In making eligibility determinations for the Magnet Schools Assistance program, the Office for Civil Rights (OCR) compares the racial composition of the enrollment of each school in the year preceding the implementation of magnet school activities with the enrollment in the most recent year for which data are available. In assessing the eligibility of the 1989 applicants for assistance under this program, OCR found that in school districts that received FY 1988 grant awards, 94 percent of the magnet schools reviewed had reduced, eliminated, or prevented minority group isolation. In those instances where it appeared that minority group isolation was increasing in a magnet school or schools of a FY 1989 grant recipient, special terms and conditions were included in the grant award that require the LEA to report enrollment data to the Department by the end of February 1990.

In December 1989, the Department held its first joint desegregation program conference bringing together representatives from State educational agencies and desegregation assistance centers funded under Title IV of the Civil Rights Act and school districts that received awards under the 1989 magnet school grant competition. The purpose of the conference was to encourage coordination and collaboration between the two programs and to increase the effectiveness of the two programs by providing a setting in which representatives could share their knowledge, experience, and expertise.

Fiscal year 1990 funds will support non-competitive, second-year continuation awards to the 1989 grantees provided they are making satisfactory progress toward achieving the purposes of the program. In addition, the Department will conduct a national evaluation of magnet school programs to assess the impact and effectiveness of magnet school programs.

1991 Budget Proposal

For 1991, the Department is requesting $113,189,000 for Magnet Schools Assistance, the same as the 1990 level. These funds would continue support for the highly competitive magnet schools program and provide first-year awards under a new grant competition to be held in 1991. Magnet schools are a popular desegregation tool and a means to increase parental choice, improve educational quality, and enhance the reputation of participating school districts.

School Improvement Programs

4. Magnet schools assistance: (a) Magnet schools in desegregating districts

Impact Data	1989	1990	1991
Number of applications	139	54	139
Number of awards	54	54	54
Evaluation	---	$988,000	---
Maximum grant award	$4,000,000	$3,950,000	$3,985,000
Smallest grant award	$184,000	$181,000	$183,007
Average grant award	$2,104,000	$2,078,000	$2,096,000
Number of awards over $3,000,000	16	16	16

4. Magnet schools assistance: b. Magnet schools of excellence (Proposed legislation):

1991 Authorization: $100,000,000 (proposed)

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$50,000,000 1/	$100,000,000	+$50,000,000

1/ Fiscal year 1990 funds were provided in the Compensatory Education for the Disadvantaged account contingent upon enactment of authorizing legislation by March 1, 1990.

Purpose and Method of Operation

The proposed Magnet Schools of Excellence program would support the establishment, expansion, or enhancement of magnet schools, without regard to the presence of desegregation plans, to promote open enrollment through parental choice and to strengthen the knowledge of elementary and secondary school students in academic and vocational subjects.

Magnet Schools of Excellence would be public elementary or secondary schools that offer the highest-quality instruction in an academic or vocational discipline, are open to students from beyond the immediate school attendance area, and are capable of attracting students from a variety of backgrounds.

Local educational agencies, consortia of such agencies, and intermediate educational agencies would be eligible to compete for funds under this program. Applicants would describe how funds would support a high-quality educational program that encourages greater parental decision-making and involvement.

Grants would be available for schools offering any aspect of the full spectrum of curriculum options. Applicants would be encouraged to submit applications for magnet schools that recognize the potential of educationally disadvantaged children to benefit from magnet school programs and that focus on a particular educational philosophy or curriculum area.

Magnet Schools of Excellence grantees would receive two-year awards; however, no grantee would receive the second year of funding unless it could demonstrate to the Secretary that the project was making satisfactory progress toward meeting the objectives outlined in its application. No Magnet School of Excellence would be supported with funds under this program for more than two years. This would be a current-funded program for which funds would be available from October 1 through September 30. The level of funding would be dependent upon the availability of appropriations.

School Improvement Programs

4. Magnet schools assistance: b. Magnet schools of excellence

---

1991 Budget Proposal

In seeking to meet the objectives of Building a Better America, President Bush proposed initiatives that advance priorities for future American growth and competitiveness through sound investment in education. The Department proposes to continue the President's 1990 budget policy by requesting $100,000,000 for Magnet Schools of Excellence, a $50,000,000 increase over the 1990 contingent appropriation. These funds would support an estimated 25 new awards in addition to an estimated 25 continuation grants.

No single method of education or single way for organizing schools and school systems is best for every community or every group of students. One of the most encouraging features of the educational reform movement is the willingness of schools and school systems to experiment with alternative approaches, especially to open the school selection process to parents. Magnet schools give parents and students a choice and generate healthy competition among schools. Magnet school programs can improve the overall quality of all schools in the participating school districts.

The Department now finances magnet schools to further desegregation. This proposed program does not represent a lessening of the Administration's support for the existing Magnet Schools Assistance program. However, many school districts have also used magnet schools to focus resources and attract students to mathematics and science, the arts, and other special curricula. Federal funds should, therefore, be made available for magnet schools programs not only to further school desegregation, but also to enable school districts to design and implement magnet schools that promote open enrollment through parental choice, and that focus on academic excellence in disciplines that are of critical importance to the Nation's economic competitiveness. The proposed Magnet Schools of Excellence program would promote excellence and upgrade the quality of education for all students in school districts in which they are established.

Impact Data	1989	1990	1991

5. Fund for Innovation in Education
(Elementary and Secondary Education Act of 1965, Title IV, Part F)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$18,939,000	$18,939,000	---

Purpose and Method of Operation

The Fund for Innovation in Education (FIE) provides authority for the Secretary to carry out programs and projects that show promise of identifying and disseminating innovative educational approaches. Activities may be carried out directly or through grants or contracts to State and local educational agencies, institutions of higher education, and other public and private agencies, organizations, and institutions.

Discretionary grant awards are made under this general discretionary authority for the Innovation in Education program. In addition, five specific discretionary programs are authorized. These include:

- Optional Tests for Academic Excellence, which provides for the development, preparation, and conduct of tests to be given on a voluntary basis to identify outstanding students in the eleventh grade of public and private secondary schools;

- Technology Education, which authorizes the development of educational television and radio programming for use in elementary and secondary schools, together with programs that use telecommunications and video technology for the instruction of elementary and secondary school students and their teachers;

- Programs for Computer-Based Instruction, which authorizes grants and contracts for the purchase of computer hardware and software for instructional purposes and teacher training to expand the use of computers in the curriculum;

- Programs for the Improvement of Comprehensive School Health Education, which authorizes educational activities and grant assistance to State and local educational agencies for a broad variety of activities related to improving health education for elementary and secondary students; and

---

Purpose and Method of Operation--Continued

- Innovative Alcohol Abuse Education Programs, which authorizes development of materials for programs of alcohol abuse education, particularly to benefit children in grades 5 to 8 who are children of alcoholics, and grants to inform educators about the special problems such children may have.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the first competitions for awards under FIE's several programs were held, and a total of 68 grants were made to a wide variety of organizations, school systems, universities, and State agencies. In 1990, once the costs of continuing multi-year projects begun in 1989 have been met, remaining funds will be used for competitions to select new grantees.

Innovation in Education program: About $3.7 million was awarded to 20 applicants for projects to reduce dropout rates, improve the achievement and college-readiness of disadvantaged students, increase the number and quality of minority teachers, encourage parent involvement, assess school-site management, provide early childhood education, improve urban school programs, and generate information on school reforms. An additional $1.5 million was used for continuing studies of early childhood education; studies of Minnesota's choice program, undertaken at the State's request; the Secretary's regional meetings on choice; and the President's Summit on Education. In 1990, the Innovation in Education program will invite applications for programs designed to improve the performance of underachieving students.

Technology Education program: The $1 million set aside for this program in 1989 was transfered to the National Science Foundation (NSF) to provide the Department's share of funding for the third season of Square One TV. These funds, together with NSF's contribution, provide full funding for the forty episodes in the season. Both ED and NSF monitor the award.

Computer-Based Education program: About $4.9 million was awarded for 29 grants, including projects to: link isolated rural students by computer to international pen pals and national bulletin boards; develop a literature-based interactive video instructional program for secondary school students who would otherwise be in remedial programs; and develop a regional student weather network. In this latter project, students access national weather data by computer.

Accomplishments--Continued

Comprehensive School Health Education program: About $3 million was awarded to 18 applicants. Well over half of the programs funded cover the full K-12 school spectrum, whereas four of the programs focus on elementary school and four on middle and high school. Although the target for most of the projects is the total student population, some priority is given to serving disadvantaged students. Similarly, although the majority of projects are directed at general statewide needs, they collectively include urban models, suburban models, and rural models. Several support innovative interdisciplinary programs. All include strong evaluation components so that program results can be shared nationwide.

Innovative Alcohol Abuse Education: This activity was funded for the first time in 1990 at $2 million. The Department is currently in the process of implementing this new program and plans to continue it in 1991.

1991 Budget Proposal

For 1991, $18,939,000 is requested, the same as the amount appropriated for 1990. Funds will be used to continue those projects initiated in 1989 and 1990 that require multi-year funding. Remaining funds will be used to support new awards.

Impact Data	1989	1990	1991
Number of new awards	68	21	15
Number of continuation awards	--	61	66

6. Javits gifted and talented students education
(Elementary and Secondary Education Act of 1965, Title IV, Part B)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$8,888,000	$8,888,000	---

Purpose and Method of Operation

This program authorizes awards to State and local educational agencies, institutions of higher education, and other public and private agencies for a variety of research, demonstration, training, and other activities designed to identify and meet the special educational needs of gifted and talented students.

A portion of the funds (not more than 30 percent) is set aside for the establishment of a National Center for Research and Development in the Education of Gifted and Talented Children and Youth to undertake research on methods and techniques for identifying and teaching gifted and talented students, and to conduct appropriate program evaluations and surveys.

Funds may be used for preservice and inservice training, including fellowships, for personnel involved in the education of gifted and talented students, and for conducting model programs for identifying and educating gifted and talented students, including summer programs and programs involving business and industry. Programs to improve leadership and assistance from State educational agencies and institutions of higher education and to provide technical assistance and disseminate information may also be undertaken.

Priority must be given to identifying and serving gifted and talented students who are economically disadvantaged, limited English proficient, and handicapped, and to statewide or regional projects.

In 1989, this was a forward-funded program for which funds were available from July 1, 1989, to September 30, 1990. In 1990 and subsequent years, it is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The Department awarded 29 grants with fiscal year 1989 funds. Almost all of the applicants proposed to identify, and design programs for, disadvantaged

6. Javits gifted and talented students education

Accomplishments--Continued

high-ability youth. A substantial number of those funded plan statewide activities, and involve extensive collaboration. Others concentrate on teacher training, and a number plan serious investigations of effective practices. A competition to establish the National Center for Research and Development in the Education of Gifted and Talented Children and Youth has been announced, and an award is expected in the early spring of 1990. The Department is charged in the authorizing statute with serving as a focal point for national leadership. To carry out this charge, a series of conferences, seminars, and publications are planned.

1991 Budget Proposal

The Department proposes to continue this program in 1991 at its 1990 level of $8,888,000. Funds will support the continuation of projects begun in 1989 and 1990, including the second year of support for the National Center.

Impact Data	1989	1990	1991
Number of new awards	29	6	--
Number of continuation awards	--	26	32

7. Education for homeless children and youth: a. Grants for State activities (Stewart B. McKinney Homeless Assistance Act, Section 722)

1991 Authorization: $5,000,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,935,000	$5,000,000	+$65,000

1/ The GEPA extension expires September 30, 1991.

Purpose and Method of Operation

This program provides assistance to States and Outlying Areas to: (1) establish or designate an Office of Coordinator of Education for Homeless Children and Youth; (2) develop and carry out a State plan for the education of homeless children; and (3) carry out other activities to ensure that all homeless children in the State have access to a free appropriate public education. In addition, participating States must collect data on homeless children and submit interim and final reports on these data to the Department of Education. No funds may be used for direct educational services to children.

The allocations for States are proportionate to State allocations under Chapter 1, except that no State receives less than $50,000. This is a forward-funded program for which funds are available from July 1 of the year the funds are appropriated through September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The first-year grants, from fiscal year 1987 funds, were awarded to States between January and May 1988. Fiscal year 1988 grants were awarded in September 1989 to the 51 States and 2 Territories that applied. All States are expected to apply for 1989 funds, which will be awarded in May 1990.

In February 1989, the Department submitted a report to Congress containing a compilation of the data all States are required to gather under the Act. Also submitted early in 1989 was the first annual report to Congress, containing a description of activities being carried out under the Act.

Accomplishments — Continued

To improve the quality of the data for the 1990 report to Congress, the Department has met with State directors for homeless programs and, with their assistance, has developed and issued guidance on data collection. This guidance was reviewed by the Interagency Council for the Homeless to ensure its consistency with efforts by other agencies.

1991 Budget Proposal

In accordance with President Bush's pledge to seek full funding under the McKinney Act, the Department requests $5,000,000 for the Education for Homeless Children and Youth State Grant program, the full amount authorized for this program. While other programs can provide direct educational services for homeless children, State educational agencies use funds from this program exclusively to gather data on the number and location of homeless children in the State, document problems these children are having with access to public education services and facilities, mediate jurisdictional disputes among local school districts, and implement their State plans to remove barriers and ensure that homeless children have full access to public education.

The Department's 1989 report to Congress found that many homeless children are not being educated in their local school systems and, at least in the past, have been denied schooling because of residency requirements or for other reasons. The McKinney Act makes States responsible for ensuring that these children receive an education and provides them with assistance in carrying out that responsibility. As such, the program provides a needed service for the benefit of a highly disadvantaged population.

Impact Data	1989	1990	1991
Number of awards	53	54	54
Average award	$91,208	$91,389	$92,593

---

7. Education for homeless children and youth: b. Grants for exemplary programs
(Stewart B. McKinney Homeless Assistance Act, Section 723)

1991 Authorization: $2,500,000 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,469,000	$2,500,000	+$31,000

1/ The GEPA extension expires September 30, 1991. Reauthorizing legislation is pending.

Purpose and Method of Operation

Section 723 of the Stewart B. McKinney Homeless Assistance Act authorizes a program of discretionary grants to State and local educational agencies for exemplary programs that successfully address the needs of homeless students in elementary and secondary schools. Section 723 also authorizes the Secretary to conduct dissemination activities designed to inform State and local educational agencies about such programs. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Fiscal year 1990 is the first year of funding for this program. The Department plans to publish an application notice in the Federal Register for a competition to be held in the spring. Awards will be for projects that will take place during the 1990-1991 school year.

1991 Budget Proposal

The Department requests $2,500,000 for the second year of Grants for Exemplary Programs. This request is made in fulfillment of President Bush's pledge to seek full funding for all programs authorized by the Stewart B. McKinney Homeless Assistance Act. For the most part, these awards will be noncompeting continuations.

There is no single, simple solution to the educational problems experienced by homeless children or by the State and local agencies responsible for providing educational services for those children. Homeless children and school officials can all benefit from the identification of and dissemination of information about successful approaches to those problems.

School Improvement Programs

7. Education for homeless children and youth: b. Grants for exemplary programs

Impact Data	1989	1990	1991
Estimated number of grants	---	18	18
Estimated average grant	---	$128,000	$129,000
Dissemination activities	---	$169,000	$175,000

8. Women's educational equity
(Elementary and Secondary Education Act of 1965, Title IV, Part A)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$2,098,000	$1,000,000	-$1,098,000

Purpose and Method of Operation

The Women's Educational Equity Act (WEEA) program provides financial assistance to enable educational agencies and institutions to meet the requirements of Title IX of the Education Amendments of 1972 and to develop educational materials and projects to promote educational equity for women and girls including those who suffer multiple discrimination, bias, or stereotyping based on sex and on race, ethnic origin, disability, or age. A national publishing center, under contract to the Department, publishes and markets products developed by the grantees.

The statute authorizes model projects of national, statewide, or general significance, and, if the appropriation exceeds $4,500,000, two-year matching grants for projects of local significance. General and challenge grants are awarded in a national competition. Special consideration is given to applicants that have not previously received funding under the program.

General grants support projects that focus on a variety of topics that include enabling institutions to meet the requirements of Title IX, encouraging girls and women who have dropped out of school to resume their education, and increasing the educational achievement of economically disadvantaged women and girls. Challenge grants of up to $40,000 support comprehensive plans for implementation of equity programs, school-community partnerships, and new dissemination and replication strategies.

Activities may include the development and evaluation of curricula, textbooks, and other educational materials that are commercially unavailable; model preservice and inservice training programs for educational personnel; research and development; guidance and counseling; development of nondiscriminatory tests; continuing education and programs for underemployed and unemployed women; and activities for women in vocational, career, or physical education and educational administration.

Purpose and Method of Operation -- Continued

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Each year the Secretary selects categories in which grants will be awarded. For 1989, these categories were: (1) model projects on educational equity for racial and ethnic minority women; and (2) projects with other purposes allowable under the statute. In addition, the Secretary invited applicants to propose projects designed to foster and promote strong instructional leadership; a safe and orderly climate in schools; frequent assessment of pupil progress; high teacher expectations for student achievement; cost effectiveness for ease of replication; or a positive impact on the family.

In 1989, the majority of WEEA projects were operated by IHEs or nonprofit organizations and involved collaborative efforts between community-based organizations and LEAs. Most of the projects were focused either on promoting careers in math, science, and other nontraditional fields for women or on providing educational equity for racial and ethnic minority women.

For 1990, priority for funding will be given to projects that seek to: (1) reduce the rate at which women drop out of formal education, or encourage women dropouts to resume their education; (2) enhance opportunities for educational achievement by economically disadvantaged women; and (3) enhance opportunities for educational achievement by women who suffer multiple discrimination on the basis of sex and race, ethnic origin, age, or disability.

1991 Budget Proposal

For 1991, $1,000,000 is requested for the WEEA program. As other programs have emerged to address educational equity needs and as the educational status of women has changed, there is a decreasing need for the WEEA program. Sex equity needs are being addressed by State and local educational agencies with funds from Chapter 2, Training and Advisory Services, the Carl D. Perkins Vocational Education Act, and other sources. The requested funding level would be used to continue supporting the publishing center -- which would ensure that products developed over the last 14 years would continue to be available to States, school districts, and colleges -- and to support grants for innovative model projects to promote educational equity for women and girls.

9. Training and advisory services
(Civil Rights Act of 1964, Title IV)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$21,451,000	$21,451,000	---

Purpose and Method of Operation

Title IV of the Civil Rights Act authorizes technical assistance, training, and advisory services to school districts to address problems associated with desegregation on the basis of race, sex, or national origin. Grants are awarded to regional desegregation assistance centers (DACs) and to civil rights units within State educational agencies (SEAs) to enable them to provide assistance to school districts, at the districts' request. SEAs are expected to take the lead in assisting local school districts. The DACs supplement and support State efforts. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

SEA program

Applicants for the SEA desegregation program propose activities to provide assistance for race, sex, and/or national origin desegregation in the State. Each SEA applicant must demonstrate leadership in facilitating desegregation; have access to its Chief State School Officer; have a plan to inform LEAs of assistance available; be familiar with the desegregation-related needs and problems of LEAs and be able to provide assistance to meet those needs; have a plan for coordination with other desegregation programs in the State; and provide a plan of operation for the proposed project. SEAs that meet these requirements receive non-competitive, one-year grant awards.

DAC program

Each DAC must provide comprehensive services for race, sex, and national origin desegregation in its geographic region. There is one DAC in each of the ten Department of Education regions. Three-year awards are made on a competitive basis. A new grant competition for DACs will be held in 1990. In selecting grantees for the DAC program, the Department evaluates the applicant's mission and strategy, organizational capability, plan of operation, quality of key personnel, budget and cost effectiveness, evaluation plan, and adequacy of resources. DAC applications are judged by panels of experts composed of Federal employees, professional educators, and community members.

School Improvement Programs

9. Training and advisory services

Accomplishments

SEA Program

Under the SEA program, fiscal year 1989 awards (for the project year beginning July 1, 1989) were issued in March 1989, enabling SEAs to plan and implement summer training programs and make commitments to school districts to provide technical assistance during the 1989-90 school year. Of the 52 SEAs participating in the program, 34 provide comprehensive programs that include assistance in desegregation. SEAs conduct district-level, regional, and statewide training sessions on race, sex, and national origin desegregation issues including: improving interaction among racial/ethnic groups and decreasing the minority dropout rate in desegregated schools; non-sexist career and vocational counseling; improving participation of female and minority students in advanced mathematics and science courses; sex-fair athletics; the requirements and options available for serving limited English proficient students; and developing strategies for involving parents and community members in school desegregation programs. SEAs provide school districts with technical assistance in revising or implementing race desegregation plans and in developing corrective action plans to address incidents of racial unrest in desegregated schools.

DAC Program

In fiscal year 1989, the Department awarded non-competitive continuation grants to the 10 regional DACs first funded in 1987, completing the three-year period for their awards. For 1990, the Department is conducting a new competition for DACs. Awards are expected to be made by March 15, 1990, to enable a full quarter phase-out of operations for any current DAC that is unsuccessful in the new competition and to provide adequate start-up time to enable new DACs to become fully operational when their awards become effective on July 1. Under the DAC program, school districts have requested assistance in areas similar to those cited for the SEA program; however, the DACs generally work more with district-level personnel, while SEAs tend to work with school-level personnel. Assistance programs planned with individual school districts are frequently designed to address a range of educational problems involving race, sex, and national origin desegregation. These activities have included development of a regional telecommunications network that enables computer-mediated conferences among LEA participants and provides an electronic bulletin board with up-to-date information about policies and practices affecting race, sex, and national origin desegregation. School districts also request technical assistance in desegregation policy development, staff training, and program evaluation.

Accomplishments — Continued

In December 1989, the Department held its first joint desegregation program conference bringing together representatives from SEAs and DACs funded under Title IV of the Civil Rights Act and school districts that received awards under the 1989 Magnet Schools Assistance grant competition. The purpose of the conference was to encourage coordination and collaboration between the two programs and to increase the effectiveness of the two programs by providing a setting in which representatives could share their knowledge experience, and expertise.

Under the Title IV program, SEAs and DACs share responsibility for the coordination of their assistance programs. At a minimum, these coordination activities are expected to prevent duplication of effort. Each DAC has held at least two regional meetings with SEA project directors to discuss plans and strategies and to develop joint activities such as conferences.

1991 Budget Proposal

For 1991, the Department is requesting $21,451,000, the same as the 1990 appropriation so that the SEAs and DACs can continue to provide training and technical services to school districts that need assistance in desegregation. This funding will provide continuing support to SEAs and the second year of funding for DACs selected in the FY 1990 competition.

10. Dropout prevention demonstrations
(Elementary and Secondary Education Act of 1965, Title VI, Parts A and C)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
---	$45,000,000	+$45,000,000

1/ The authorization expired September 30, 1989. Reauthorizing legislation is pending.

Purpose and Method of Operation

Under Title VI of the Elementary and Secondary Education Act, the reauthorization of which is pending, the Department proposes to conduct a new, controlled demonstration program to test and evaluate, under rigorous methodological conditions, the effect of promising strategies in dropout prevention and recovery.

The demonstration program will employ a two-pronged approach. At least half the funds will be reserved for specified, comprehensive dropout prevention and recovery models. The models will be based on the latest research, developed in consultation with an independent panel of experts during fiscal year 1990, and published in the Federal Register as proposed funding priorities to solicit public comment. The remainder will support locally developed, research-based dropout prevention and recovery projects. These projects will be required to address the published priorities, but will be given the flexibility to adapt them to address the specific needs of their target population.

Research and evaluation studies have identified several promising strategies in dropout prevention and recovery that should be used as components of the demonstration models. Examples are:

- Small program size. Many students who have not met with success in the regular school program have been alienated by a large, bureaucratic system that does not respond to their needs. The research suggests that these students function better in small programs where teachers can relate to students more personally.

Purpose and Method of Operation -- Continued

- Alternative instructional environment. Alternative instructional environments have been developed to provide students who have difficulty adapting to the regular school environment with educational settings more compatible with their learning styles. These alternative environments are often located in a separate facility, provide flexible class schedules, and allow for a wide range of instructional approaches.

- Teacher autonomy. In dealing with at-risk youth, teachers need to have the latitude to experiment with different instructional approaches, learning materials, and styles of interaction to determine which are most effective in meeting the academic and personal needs of individual students.

- Academic remediation. Improving basic skills of at-risk youth is essential to improving their opportunities for employment and postsecondary education. However, many dropout programs do not even include this component. Remediation would consist of: diagnosis of individual students' academic needs, development of an individualized learning program, and emphasis on basic skills.

- Counseling. Many students who drop out of school need support and encouragement to say in school and learn. Many persons could play this role, including a teacher, a counselor, peer, or an adult from the community.

- School-business linkages. School-business linkages provide students with motivation and incentives to stay in school. The linkage can take such forms as summer internships, mentors, or provision of equipment, funds, and staff to the school.

- Early intervention. For many dropouts, problems in school begin at an early age. Many project administrators of dropout prevention programs have emphasized that providing special help at the secondary school level is too late for at-risk youth. Programs at the upper elementary and middle school grades can address the problems of at-risk youth as they first develop.

All projects will be rigorously evaluated using designs and methodology similar to those used in evaluations conducted by the Department of Labor. Evaluation activities will consist of: (1) technical assistance to local projects in collecting data to validate individual programs, along with a national summary of findings from the projects; and (2) a national evaluation of selected projects to identify what approaches work best.

Purpose and Method of Operation -- Continued

The national evaluation will employ, as appropriate, an experimental design involving random assignment of applicants to treatment and control groups. If necessary, other designs such as matched comparison groups will be employed. Regardless of which evaluation design is used, students will be tracked over time to assess changes in attitudes, school behavior (attendance and discipline), test scores, and aspirations.

This would be a current-funded program, for which funds are available from October 1 through September 30. The level of funding would be dependent upon the availability of appropriations.

Accomplishments

Under the previous authorization for dropout prevention demonstrations, the Department funded a number of promising local projects at the elementary, middle, and secondary school levels in rural and urban areas. These projects, which were funded to operate during the 1988-89 and 1989-90 school years, are providing a range of services, from after-school tutoring a few hours per week to alternative schools with restructured curricula and student support services. Through an in-depth evaluation, the Department is assessing these projects, and will use relevant findings in developing models for the proposed new effort.

Although the current program will provide a basis for determining the range of dropout prevention and reentry projects currently in existence, the projects for the most part do not focus on funding comprehensive programs that provide basic skills instruction, counseling, employment preparation, parental involvement, and adult mentors. Research has suggested that comprehensive programs, involving several components, are most effective in preventing students from dropping out of school. The majority of projects funded in 1988 involve fewer than 10 hours per week of student contact.

1991 Budget Proposal

For 1991, the Department requests $45,000,000 for Dropout Prevention Demonstrations. The funds will be used to test and demonstrate effective approaches to dropout prevention and recovery and will involve rigorous evaluations similar to those used for demonstration programs funded by the Department of Labor. Projects begun in 1991 will be funded for up to four years. Up to $2,000,000 each year will be used for the evaluation activities.

Funding for this demonstration program is being requested in concert with a $5 million proposal under the Research, Statistics, and Improvement of

1991 Budget Proposal — Continued

Practice account. The $5 million requested under that account will complement the demonstration effort by supporting research and development activities designed to provide useful information about how to improve the academic performance of secondary school students and reduce the number of dropouts.

While continued efforts are needed to reduce the dropout rate, it is also essential to gain hard evidence of programs that work. The extension of the dropout demonstration assistance program, along with added rigor for local evaluations, designation of priorities and models based on research findings, and a national evaluation of selected projects, will assist in providing that evidence.

Impact Data 1/	1989	1990	1991 2/

Number of grants	7	—	7
Average award	$142,000	—	$300,000

1/ Twenty-five percent of the funding is allocated to local educational agencies (LEAs) enrolling at least 100,000 students, 40 percent to LEAs with between 20,000 and 100,000 students, 30 percent to LEAs with fewer than 20,000 students, and 5 percent to community-based organizations (CBOs). Of the funds allocated to each category of LEA, 25 percent goes to partnerships of LEAs, private businesses, CBOs, and other public and private non-profit entities. (Pending reauthorization bills in both the House and the Senate would change this set-aside to not less than 25 percent nor more than 50 percent.)

2/ Estimates of amounts allocated among different categories of school district, number of awards, and average award size are based on pending legislation. Depending on the structure of final legislation and the outcome of grant competitions, actual numbers may be very different.

11. General assistance to the Virgin Islands
(Elementary an Secondary Education Act of 1965, Section 4501)

1991 Authorization: $5,000,000

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,391,000	$4,391,000	---

Purpose and Method of Operation

Under this program, an award is made to the Virgin Islands to be used for elementary and secondary education. The authorizing legislation is very broad, limiting use of the funds only to "general assistance to improve public education." The education department in the Virgin Islands has used these funds primarily to construct, renovate, and maintain classroom and other educational facilities, and to remove asbestos and perform additional needed repairs in public education facilities. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, the Virgin Islands used funds from this program for construction, renovation, and repairs in a number of schools and classrooms; general roof repairs and replacements of gutters; and installation of security systems in schools and other educational facilities.

1991 Budget Proposal

For 1991, the Department proposes to fund the General Assistance to the Virgin Islands program at $4,391,000, the same as the 1990 appropriation. This request is based on a 1988 study, contracted for by the Department, that addressed selected issues related to the need for the General Assistance program. The findings in the contractor's report, An Analysis of Factors Relating to Federal General Assistance in the Virgin Islands, indicate a continuing need for General Assistance funds. Specifically, the report reached the following conclusions:

- In comparison with the 50 States, the Virgin Islands are low in their fiscal capacity to support education but quite high in their tax effort to support schools. In terms of fiscal capacity, measured as personal

---

1991 Budget Proposal — Continued

income per capita, the Virgin Islands rank lower than any of the 50 States or the District of Columbia. At the same time, compared with the States, the Virgin Islands ranked third highest in tax effort in 1985-86 (as measured by State and local revenues as a share of personal income).

- The Virgin Islands have a student population with an extremely high level of educational need relative to the States. On an index based on educational deficiencies including students' family poverty status, handicapping condition, limited proficiency in English, single-parent family status, and mother's low educational attainment, the Virgin Islands rank higher than any State in educational need.
- Many of the public schools in the Virgin Islands are in need of renovation to correct deficiencies in plant facilities. Some additional classroom space is still needed in certain areas to alleviate overcrowding.
- Library resources in the public schools in the Virgin Islands compare less favorably to facilities in the States in some areas and more favorably in others. Every public school in the Virgin Islands has a library, but these libraries tend to be smaller, deficient in space, and less well stocked with books than public school libraries in the States.

In addition, Hurricane Hugo had a devastating effect in the Islands, creating the need for new repairs to school buildings and other educational facilities. Funding at the requested level will provide the Virgin Islands with resources to address these special needs.

---

12. Ellender fellowships
(Elementary and Secondary Education Act of 1965, Title IV, Part C)

1991 Authorization: Indefinite 1/

Budget Authority:

	1990 Appropriation	1991 Request	Increase or Decrease
Program for students and teachers	$3,084,000	$1,000,000	-$2,084,000
Program for older Americans and recent immigrants	619,000	---	-619,000
Total	3,703,000	1,000,000	-2,703,000

1/ No funds are authorized for the program for older Americans and recent immigrants unless sufficient amounts are appropriated to carry out activities under the student and teacher program at the level established during fiscal year 1989.

Purpose and Method of Operation

This program is administered by the Close Up Foundation of Washington, D.C. The Foundation provides fellowships to students from low-income families and their teachers to enable them to participate with other students and teachers (who pay their own tuition and travel costs) in the Close Up program. Participating students and their teachers spend one week in Washington attending seminars on government and current events and meeting with leaders from the three branches of the Federal Government. Close Up also sponsors a similar program for increasing understanding of the Federal Government for older Americans and recent immigrants. Federal funding for Ellender fellowships for economically disadvantaged older Americans and recent immigrants was authorized beginning in 1989. However, no funds are authorized for this new program unless sufficient funds are appropriated to provide Ellender fellowships for students and teachers at the level established during fiscal year 1989.

This is a forward-funded program. Funds are available for obligation from July 1 of the fiscal year in which they are appropriated through September 30 of the following fiscal year. The level of funding is dependent upon the availability of appropriations.

12. Ellender fellowships

Accomplishments

In the 1989-90 school year, 2,800 low-income students, 3,000 teachers, and 1,162 older Americans and recent immigrants will receive fellowships to allow them to participate in the Close Up program. Fellowship recipients represent about 25 percent of the participants in the Close Up program. The Close Up Foundation has demonstrated an excellent capability for raising private funds to support this program, and both the number of participants and the number of activities supported by the program have grown steadily since the program began in 1971.

1991 Budget Proposal

For fiscal year 1991, $1,000,000 is requested for Ellender fellowships for students and teachers. These fellowships act as a seed mechanism and generate a substantial multiplier effect of participation in local communities that choose to participate in the Close Up Foundation's program. In addition, the fellowships facilitate a broad-based representation of students from different geographic areas and backgrounds, thereby enhancing the educational experience of all program participants. However, considering the large and increasing amount of community and private support that the Foundation and local communities have managed to generate for the Close Up program, the Federal contribution should be limited to an amount needed to leverage these additional funds from business, government, education, and parents in each community. At the requested level the Foundation should be able to maintain its program, including the fellowship component, at the 1990 operating level. No funds are requested for the program of fellowships for older Americans and recent immigrants because funding is not authorized for that program at the requested level.

Impact Data 1/	1989	1990	1991
Program for Students and teachers:			
Total Federal share	$2,964,000	$3,084,000	$1,000,000
Total participants	26,700	28,000	28,000
Total number of fellowships	5,800	6,100	6,100
Average cost of fellowships	$677	$689	$689
Federal share per fellowship	$511	$506	$164
Program for older Americans and recent immigrants:

Total participants	1,770	3,760	3,760
Total number of fellowships	1,162	2,200	2,200
Average cost of fellowships	$658	$532	$532
Federal share per fellowship	$425	$281	---

1/ Reflects full program operating level. Includes federally funded as well as non-federally funded participants and fellowships.

13. Follow through
(Follow Through Act)

1991 Authorization: --- 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$7,171,000	---	-$7,171,000

1/ The authorization expires September 30, 1990. The GEPA extension does not apply, and no new authorizing legislation is proposed.

Purpose and Method of Operation

The principal goal of Follow Through is to develop knowledge about various educational practices that can assist low-income children in early elementary grades in developing to their full potential. The intent is to sustain the gains made by preschool children through the Head Start program. Under the program, grants are awarded to two types of entities: local educational agencies and sponsors.

- Local educational agencies (LEAs) provide direct compensatory education programs and services to children from low-income families in kindergarten through grade three.
- Sponsors are universities or research organizations that have developed specific models for early childhood education and provide technical assistance to the LEA projects to implement, evaluate, and disseminate their models. A small number of LEAs are also sponsors.

Follow Through was first funded in 1968. In 1975, a longitudinal study of the program was completed. On the basis of the findings of this study, the Department concluded that the basic objectives of the program had been met and initiated a phase-out strategy for the program.

Between 1972 and 1986, participation in the program was restricted to continuing projects and sponsors, first to provide for longitudinal data collection for the above-mentioned study and later to facilitate phase-out of the program. However, the Congress continued to reauthorize and fund the program. In reauthorizing the program through 1990, the Congress made clear its intention that Follow Through become a competitive grant program and that the grant award process consider new as well as existing grantees.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

School Improvement Programs

13. Follow through

Accomplishments

In 1988, the Department held two competitions to select sponsors and LEAs for Follow Through funding. One competition was among self-sponsored local project applicants and the other among local projects affiliated with a sponsor by joint application. A total of 63 grants were awarded: 9 for self-sponsored LEA projects, 14 for sponsors, and 40 for LEAs affiliated with these sponsors. Continuation awards will be made to these grantees in early 1990 from funds appropriated for fiscal year 1990.

1991 Budget Proposal

No funds are requested for Follow Through in 1991. The basic objectives of the program have been met. Outstanding models for early childhood education have been developed, refined, and disseminated for over 20 years. The National Diffusion Network has disseminated exemplary Follow Through projects and can continue to do so after the termination of Follow Through as a categorical program. Also, in 1987, Follow Through's contributions to compensatory education were documented in a comprehensive report. Activities to improve educational programs for children in early elementary grades can continue to be carried out under Chapter 1 grants to LEAs as well as under Chapter 2 State Block Grants.

14. Star schools
(Education for Economic Security Act, Title IX)

1991 Authorization: 1/

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$14,813,000	---	-$14,813,000

1/ A total of $100,000,000 is authorized through 1992. No more than $60,000,000 may be appropriated in any fiscal year. A total of $48,360,000 has been appropriated for 1988, 1989, and 1990.

Purpose and Method of Operation

This program supports eligible telecommunications partnerships organized on a statewide or national basis to develop, construct, and acquire telecommunications equipment; develop and acquire instructional programming; and obtain technical assistance. Teacher training is also permitted. The purpose of the program is to improve instruction in mathematics, science, foreign languages, and other subjects such as vocational education, primarily by means of satellite or microwave relay between centrally located sources of instruction and students in different locations, especially students in schools eligible for Chapter 1 services or those in areas with scarce resources and limited access to science, math, and foreign language courses.

Of the funds awarded to eligible telecommunications partnerships, not less than 50 percent must be for services, equipment, or facilities for local educational agencies eligible to receive Chapter 1 funds. Not less than 25 percent of the funds must be for instructional programming. Except in cases of demonstrated hardship for which the Secretary may waive the requirement, grantees must provide a 25 percent match in funds. No grant may exceed $10 million. The Department must compile and disseminate a listing and description of the instruction made available.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The four Star Schools projects first funded in 1988 and continued in 1989 installed some 1660 receivers (downlinks) for satellite communications at

Accomplishments--Continued

local schools in 40 States, developed and piloted high school credit courses, developed hands-on science experiments involving students in different geographic areas, and trained teachers to use the programs. Projects offer high school credit courses, staff development programs, student enrichment programs, and college credit courses for teachers. In 1989, 31 courses were offered for high school credit in science, mathematics, and foreign languages. The foreign languages taught included the Romance languages, German, Japanese, Russian, and Chinese. About 15,000 high school students enrolled in credit courses. An additional 18,000 students were involved in hands-on science experiments conducted by telecommunications. For example, students from several States were afforded access to a telescope that had been provided to one high school under an NSF grant. Students can request that specific observations be made and then receive a facsimile photograph of the requested portion of the night sky the next day.

In 1990, a competition to select new partnerships to conduct Star Schools projects will be conducted, and three to five awards are expected.

1991 Budget Proposal

No funds are requested in 1991 for this program. After three years of Federal assistance and wide participation in the funded projects, instruction by means of telecommunications has been amply demonstrated, and substantial amounts of equipment have been installed in participating schools. All four, original partnerships are expected to continue to provide services on a fee basis, following the termination of grant support, and similar services are also available from a number of other public institutions. In addition, the Department has other authority, under the Fund for Innovation's Technology Education program, to support the development and delivery of instruction through the use of telecommunications.

Gifted and talented	740,685	---	-740,685
Special education	740,685	---	-740,685
Total	6,419,000	---	-6,419,000

Purpose and Method of Operation

Title IV of the Hawkins-Stafford Elementary and Secondary School Improvement Amendments authorizes five programs dealing exclusively with the education of Native Hawaiians.

Model Curriculum Implementation. Under this program, the Department is directed to make grants to the University of Hawaii, the Hawaii State Department of Education, the Kamehameha Schools/Bernice Pauahi Bishop Estate, and the State of Hawaii for specific activities associated with implementing, in public schools, an elementary school curriculum developed by the Kamehameha Elementary Demonstration School.

Family-Based Education Centers. Grants are awarded to Native Hawaiian organizations to establish a minimum of 11 centers whose activities are to include parent-infant programs, preschool programs, research and development, and a follow-up and assessment program.

Higher Education Program. Funds are awarded to the Kamehameha Schools/Bernice Pauahi Bishop Estate for graduate and undergraduate fellowships for Native Hawaiian students and for related support services.

Purpose and Method of Operation -- Continued

Gifted and Talented Program. Funds are awarded to the University of Hawaii at Hilo to establish a Native Hawaiian gifted and talented center at the University and to operate demonstration projects for gifted and talented Native Hawaiian elementary and secondary school students.

Special Education Program. Funds are awarded to the State of Hawaii or to Native Hawaiian organizations for special education projects for handicapped Native Hawaiian students.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In general, funds for the first year of this program -- fiscal year 1989 -- were awarded to grantees in the summer of 1989 for activities that are taking place during the 1989-90 school year. Activities are just getting underway, no reports have been filed by grantees, and the Department has made no monitoring visits. Therefore, the information that follows is based primarily on descriptions of anticipated activities supplied by the grantees in their applications.

Model Curriculum Implementation. The 1989 funds for this program were awarded in May 1989 to the Kamehameha Schools/Bernice Pauahi Bishop Estate, the only applicant. The grantee is using the funds to evaluate the effectiveness of an elementary school language arts curriculum that it has been working on since 1972. The curriculum is currently available for grades K-3, but is intended ultimately for use in grades K-6. The curriculum has been adopted by eight public schools in the State. These schools enroll 2,000 students, but it is not clear how many of them are Native Hawaiian or how many of those students actually use the curriculum. The grantee also provides consultant services to the Hawaii State Department of Education and, through a subcontract with the University of Hawaii, provides training to teachers to help them implement the curriculum. Although the curriculum has been evaluated several times in the past, the results have apparently been mixed and the grantee believes that previous evaluation attempts have been hampered by implementation and design problems.

Family-based education centers. Under this program, first-year grants have been awarded to the Kamehameha Schools/Bernice Pauahi Bishop Estate, which is operating eight centers, and to Aha Punana Leo, Inc., which is operating five centers. The preschool programs in the centers operated by the Bishop

---

Accomplishments — Continued

Estate are focused on fostering competencies and school readiness in English, while the Punana Leo program focuses on learning through the Hawaiian language. Early estimates were that the combined programs would reach approximately 1,600 preschool children and their families.

Higher Education Program. Fiscal year 1989 funds were awarded in July 1989 to the Kamehameha Schools/Bernice Pauahi Bishop Estate. With these funds, the Bishop estate had planned to award 300 undergraduate and 75 graduate fellowships annually. However, to date no awards have been made. The Kamehameha Schools now plans to use the 1989 funds to recruit potential fellowship recipients in the spring for awards that will start at the beginning of the 1990-91 academic year.

Gifted and Talented Program. Fiscal year 1989 funds were awarded in June 1989 to the University of Hawaii at Hilo. The University has been developing plans for activities in four general areas, most of which are scheduled to begin in spring of 1990:

- Identification and Assessment -- The University is developing a definition of "giftedness" for Native Hawaiian children and criteria that can be used to identify Native Hawaiian children as gifted and talented. The University believes that Native Hawaiian children are not adequately represented in existing State-operated gifted and talented programs -- most of which focus on academically gifted children. It is working with the State educational agency to review ways in which these programs can broaden their scope to include areas in which Hawaiians and other minority group children show particular talent. Currently, while Native Hawaiian children make up 22 percent of Hawaii's public school enrollment, they represent only 11 percent of the enrollment in gifted and talented programs.

- Teacher Workshops -- The University is planning a series of inservice training workshops for teachers, to sensitize them to the needs and potential of gifted and talented Native Hawaiian children and to train them in methods of identifying such children.

- Parent Workshops -- The University is planning a series of workshops to provide parents with information on gifted and talented programs and on how they can support their children's academic efforts.

- Program for children -- The University is planning a variety of programs including:
    - -- a 40-member children's chorus, to start in spring 1990.
    - -- a mentorship program for about 50 students in grades 7 through 12.

Accomplishments — Continued

- — After-school activities for students in grades 2 through 9.
- — A program designed to identify about 30 high school students as gifted and build their self-esteem.
- — Several small summer programs, in areas such as field geography, Hawaiian language, and aquaculture, each serving groups of about 10 high school students.

Special Education Program. The 1989 funds for this program were awarded in September 1989 to the Hawaii State Department of Education. The State estimates that there are 3,918 Hawaiian and part-Hawaiian students who are eligible for special education services. With the money from this program, the State Department of Education plans to conduct inservice and preservice teacher training, support a parent and community involvement component, and support local efforts to "mainstream" special education students into regular classrooms. As of January 1990, the Education Department has signed a memorandum of agreement with the University of Hawaii. It had not yet hired a project coordinator or started project activities, but hoped to do so by February.

1991 Budget Proposal

The Department requests no funds for these programs in 1991. Native Hawaiians, to the extent that they meet eligibility criteria that are applied to all citizens, are eligible for Department of Education services, including student financial aid programs, that duplicate many of the activities in these new programs.

In 1990, the Department received $10 million for programs that provide services exclusively to Native Hawaiians. This amounts to almost $200 for each Native Hawaiian child under age 20 in the State of Hawaii. This is in addition to formula grants that the State of Hawaii already receives from such programs as Chapter 1, Chapter 2, and Education for the Handicapped. The amount of these funds going to the State is computed taking into account all students in the State, including Native Hawaiians, who are eligible for the services.

The Department is also concerned that several other provisions of the authorizing legislation involve activities or roles that are inappropriate for the Federal Department of Education: that funds and services are made available on the basis of race; that funds for the most part must be awarded on a noncompetitive basis to specified grantees; and that the Secretary is directed to ensure that a particular curriculum is adopted by public schools in the State of Hawaii.

1991 Budget Proposal — Continued

Finally, the Department is concerned that most of the activities planned by the grantees in these five programs seem to be slipping by at least one year. It now appears that much of the 1989 funds will be used to support activities that will not take place until the 1990-91 school year, yet a sizeable increase in 1990 funds has been appropriated for that year — funds that must be obligated by September 30, 1990. This situation further calls into question the need for an appropriation in 1991.

Impact Data	1989	1990	1991

2/ Will not be awarded until the end of 1991, for fellowships during the 1991-92 year.

Supplemental Fact Sheet on Native Hawaiians

Demographic Data

In the 1980 Census, 115,500 people in the State of Hawaii, or about 12 percent of the total State population of 965,000, identified themselves racially as Native Hawaiians. (An additional 20,841 persons identified themselves as having at least some Hawaiian ancestry.) The Census also revealed that about 44 percent of the Native Hawaiians in the State were under 20 years old. According to the State Department of Education, there are currently 37,690 students of Hawaiian or part Hawaiian ancestry enrolled in the State's public schools.

Generally, Native Hawaiians living in Hawaii rank higher than other minority groups but below the national average on most social indicators. Selected measures are shown on the chart that follows.

	Native Hawaiian	National Average	White	Black	Indian Eskimo, Aleutian	Hispanic
Median years of school completed...	12.4	12.5	12.5	12.0	12.2	10.8
Percent high school graduates...	68.2	66.5	68.8	51.2	55.5	44.0
Median family income.............	$19,824	$19,917	$20,835	$12,598	$13,724	$14,712
Percentage of families with incomes below poverty level......	15.1	9.6	7.0	26.5	23.7	21.3

Source: 1980 Census of Population

Federal Programs

The State of Hawaii receives funds from many Federal education programs, just as all other States do. To the extent that Native Hawaiian children are eligible for these programs, the State is obligated to provide services without regard to race. In addition, several Federal statutes direct the Department of Education to award funds for programs that provide services exclusively to Native Hawaiians. For the most part, these statutes also prescribe the recipient of the funds. A summary of these exclusive programs follows.

1. Carl D. Perkins Vocational Education Act -- One quarter of one percent of the amount of appropriated for Titles II and IV of the Perkins Act (other than Title IV-E) and the Smith-Hughes Act is set aside for awards to "organizations primarily serving and representing Hawaiian natives which

Supplemental Fact Sheet
on
Native Hawaiians -- Continued

are recognized by the Governor of the State of Hawaii to plan, conduct, and administer [vocational education] programs...for the benefit of Native Hawaiians." Each year, the Governor has recognized Alu Like, Inc. as the only organization eligible to receive the funds. (Further information on this program is contained under the Vocational and Adult Education account.)

2. Library Services and Construction Act -- One half of one percent is set aside from the amounts appropriated for Title I (Public Library Services), Title II (Public Library Construction), and Title III (Interlibrary Cooperation) for grants to "organizations primarily serving and representing Hawaiian natives that are recognized by the Governor of the State of Hawaii." Each year, the Governor has recognized Alu Like, Inc. as the only organization eligible to receive the funds, which may be used for a wide variety of activities associated with providing public library services to Native Hawaiians. These activities have included such things as the operation of a resource van that is stocked with exhibits on Hawaiian life and culture and with books available for circulation; the van operates on each of the major islands. Another activity, books by mail, serves Native Hawaiians who live on homesteads and in remote rural areas where regular library services are not available; a catalog of resources is maintained and made available in participating communities. Other activities include extending operational hours for the non-profit Bishop Museum Library; strengthening the Hawaiian and Pacific collections in the Hawaii State Library; and supporting such things as homework centers, parent/child literacy workshops, needs assessments, and the training of Native Hawiians to become librarians.

3. Drug-Free Schools and Communities Act -- One fifth of one percent of the funds appropriated for Parts B and D of the Act is set aside for awards to "organizations primarily serving and representing Hawaiian natives which are recognized by the Governor of the State of Hawaii to plan, conduct, and administer programs, or portions thereof, which are authorized by and consistent with the provisions of [the Act] for the benefit of Hawaiian natives." Each year, the Governor has recognized the Kamehameha Schools/Bernice Pauahi Bishop Estate as the only organization eligible to receive the funds.

4. National Institute on Disability and Rehabilitation Research, Hearing Loss Assessments -- Funds are to be awarded for research and training for hearing loss assessments for Native Hawaiian children.

5. Education for Native Hawaiians (Public Law 100-297, Title IV) --

   - Native Hawaiian Model Curriculum Implementation Project. The Department awards funds to the Kamehameha Schools/Bernice Pauahi Bishop Estate to implement (in public schools) and evaulate an elementary school curriculum in language arts.

Supplemental Fact Sheet on Native Hawaiians -- Continued

- o Family-Based Education Centers. Grants are awarded to the Kamehameha Schools/Bernice Pauahi Bishop Estate and to Aha Punana Leo, Inc., for a minimum of 11 centers whose activities are to include parent-infant programs, preschool programs, research and development, and follow-up and assessment.

- o Higher Education Demonstration Program. Funds go to the Kamehameha Schools/Bernice Pauahi Bishop Estate for graduate and undergraduate fellowships for Native Hawaiian students and for related support services.

- o Gifted and Talented Demonstration Program. Funds go to the University of Hawaii at Hilo to establish a Native Hawaiian gifted and talented center and for demonstration projects for gifted and talented Native Hawaiian elementary and secondary school students.

- o Special Education Program. Funds go to the Hawaiian State Department of Education for special education projects for handicapped Native Hawaiian students.

16. Secondary school basic skills demonstrations
(Elementary and Secondary Education Act of 1965, Title VI, Part B)

1991 Authorization: — 1/

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$4,938,000	—	$4,938,000

1/ The GEPA extension expires September 30, 1990. No reauthorizing legislation is proposed.

Purpose and Method of Operation

Under this program, the Secretary is authorized to make grants to local educational agencies (LEAs) with high concentrations of children from low-income families. The grants are to be used for projects that demonstrate successful approaches to improving the achievement of educationally disadvantaged children enrolled in secondary schools. The authorizing statute also requires the Secretary to evaluate the program. This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

Funds were first made available for this program in the 1990 appropriation. The Department is designing a structured demonstration approach, in which one or two models for improving secondary school basic skill levels will be tested to determine their success. The results of these projects will be widely disseminated to school districts for use in improving basic skills achievement among disadvantaged secondary school students. Prior to holding the grants competition, the Department will publish a notice in the Federal Register asking for public comment on the proposed models for which the funds would be exclusively reserved. Implementation of the models would entail the use of random selection of students and the use of control groups. The Department expects to award project grants and a contract for the evaluation in time for projects to operate during the 1990-1991 school year.

1991 Budget Proposal

The Department requests no funds for this program, which is not authorized to operate in 1991. A major initiative involving $45 million for dropout prevention demonstrations is explained elsewhere. Secondary school students who lack basic skills will continue to be served in large numbers through the Chapter 1 LEA Grants program.

17. Educational partnerships
(Education and Training for a Competitive America Act of 1988, Title VI, Subtitle A, Chapter 5)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$3,703,000	$3,703,000	---

Purpose and Method of Operation

This program supports grants to eligible partnerships to encourage the creation of alliances between education and the private sector. Eligible partnerships are comprised of a local educational agency or an institution of higher education (or both) and one or more other organizations such as business concerns, community organizations, libraries, museums, educational television and radio stations, and appropriate State agencies. Funds awarded to eligible partnerships may be used for a variety of activities in elementary and secondary schools or in institutions of higher education, including projects to bring community and private sector resources to bear on educational needs, projects that serve educationally disadvantaged children and gifted and talented students, and projects to make students more aware of careers through contact with people pursuing them. Partnerships may also conduct statewide activities, including the development of model State statutes for the support of cooperative arrangements between education and the private sector, provide training designed to facilitate cooperative arrangements, and carry out academic internship programs.

Projects may be funded for up to four years, and the Federal share of the costs of a project declines each year, from a high of 90 percent in the first year to a low of 33-1/3 percent in the fourth year.

This is a current-funded program for which funds are available from October 1 through September 30. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1990, the first year for which funds have been appropriated for this program, a competition will be held to select grantees for multi-year projects.

1991 Budget Proposal

In fiscal year 1991, $3,703,000 is requested, the same as the 1990 appropriation. The Federal share of support for projects first funded in 1990 declines to 75 percent in 1991. At level funding in 1991, these projects will be continued and about five new projects will be funded.

1/ Up to 1 percent of the total appropriation for Chapter 2 is reserved for the Outlying Areas. An additional amount of up to 6 percent is authorized for National Programs. The remainder is distributed to the 50 States, the District of Columbia, and Puerto Rico on the basis of the 5- to 17-year-old population. No State receives less than 0.5 percent of the remainder. For 1989, 0.7 percent of the total appropriation for Chapter 2 was reserved for the Outlying Areas of American Samoa, Guam, the Northern Mariana Islands, the Republic of Palau, and the Virgin Islands. An additional amount of $400,000 was reserved for the Federated States of Micronesia under its Compact of Free Association. The Marshall Islands, under its Compact of Free Association, elected not to participate in this program in 1989. Beginning in 1990, 0.7 percent of the total appropriation for Chapter 2 will be allocated to the Outlying Areas. Under their Compacts of Free Association, the Federated States of Micronesia and the Marshall Islands no longer participate in Department of Education programs.

1/ Of the total appropriation for Title V of the Elementary and Secondary Education Act, except for Part C, 17.2 percent was reserved for National programs under Part D and 1 percent was reserved for the Outlying Areas. The remainder was distributed to the 50 States, the District of Columbia, and Puerto Rico on the basis of the 5- to 17-year-old population. No State received less than 0.5 percent of the remainder.

School Improvement Programs

Drug-Free Schools and Communities State Grants

2/ Of the total appropriation for Title V of the Elementary and Secondary Education Act, except for Part C and Sections 5136, 5137, and 5146 of Part D, 1 percent is reserved for the Outlying Areas; 17.2 percent of the first $347,500,000 and 1.2 percent thereafter is reserved for National Programs under Part D; and the remainder is allocated to the 50 States, District of Columbia, and Puerto Rico. However, for 1990, appropriatons language earmarked funds for Part D in excess of this formula, and for 1991 the request would also earmark funds for Part D in excess of the formula. Of the amount available for the 50 States, District of Columbia, and Puerto Rico: (1) The first $284,255,000 is distributed on the basis of the 5- to 17-year-old population, with no State receiving less than 0.5 percent this amount; (2) the next $14,700,000 is distributed on the same basis with no State minimum; and (3) all additional funds are distributed half on the basis of the 5- to 17-year-old population and half on the basis of funds received for the preceding year under Part A of Chapter 1 of Title I of the Elementary and Secondary Education Act, with no State receiving less than 0.5 percent of this additional amount.

3/ Includes $24,688,000 for emergency grants allocated to the States and Outlying Areas on the basis of the age 5- to 17-year-old population.

[1] Section 2004 of Title II of P.L. 100-297 reserves up to 1 percent of the total appropriation for Outlying Areas and BIA schools and 4 percent for National Programs. The remainder is distributed to the 50 States, the District of Columbia, and Puerto Rico -- 50 percent on the basis of the age 5-17 population and 50 percent on the basis of each State's share of allocations under Part A of Chapter 1 of Title I of ESEA for the previous year. No State may receive less than 0.5 percent of the amount available to the States, or less than its 1988 allocation under Title II of the Education for Economic Security Act.

[2] Fifty percent of the allocation to States is based on age 5-17 population and 50 percent is based on each State's previous year's share of allocations under Chapter 1 of the Education Consolidation and Improvement Act.

1/ The Secretary would reserve up to $200,000 of the total appropriation to cover the cost of an award ceremony and the printing of award certificates. The remaining funds would be distributed to the 50 States, the District of Columbia, Puerto Rico, and the Outlying Areas on the basis of the number of full-time equivalent public school teachers. No State or Outlying Area would receive less than $5,263.

THURSDAY, FEBRUARY 22, 1990.

EDUCATION FOR THE HANDICAPPED

WITNESSES

ROBERT R. DAVILA, ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

JUDY SCHRAG, DIRECTOR, OFFICE OF SPECIAL EDUCATION PROGRAMS, OFFICE OF SPECIAL EDUCATION AND REHABILITATIVE SERVICES

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

OPENING STATEMENT

Mr. NATCHER. At this time we take up the budget request of the Education for the Handicapped, and we have before the committee, Dr. Robert Davila. Dr. Davila, it is a pleasure to have you back before the committee.

You have appeared before us on a number of occasions. We are always glad to have you together with your associates, and before giving us your statement, if you will, please, tell us who you have with you there at the table.

Dr. DAVILA. Thank you. I have with me on my left, Dr. Judy Schrag, who is Director of the Office of Special Education Programs; Ms. Carol Cichowski, who is the Director, Division of Special Education, Rehabilitation and Research Analysis, in the Office of Planning, Budget and Evaluation, and Ms. Sally Christensen, Budget Director from the same office.

Mr. NATCHER. Thank you very much.

Now, Dr. Davila, we will be pleased to hear from you.

Dr. DAVILA. Thank you.

DEPARTMENT OF EDUCATION

Statement by

Robert R. Davila
Assistant Secretary for
Special Education and Rehabilitative Services

on

Education for the Handicapped

Mr. Chairman and Members of the Committee:

I am pleased to appear before this committee to testify on the fiscal year 1991 budget for Education for the Handicapped. The budget reflects the Department's continuing priority on the education of children with disabilities.

The fiscal year 1991 budget of over $2.1 billion includes $1.96 billion for the three State Grants programs, an increase of $82 million over the 1990 appropriation. This increase would provide additional funding to assist States in educating the children with disabilities for whom they are responsible under the Education of the Handicapped Act and in developing their statewide programs of early intervention services for infants and toddlers with disabilities and their families. The budget also includes $181.9 million for Special Purpose Funds that support a wide variety of research, demonstration, training, and other activities directed at improving the quality of early intervention and educational services for children with disabilities.

Grants to States

The budget for the Grants to States program is $1.62 billion. This budget will assist States in serving approximately 4.4 million children with disabilities. The budget provides an increase of $73 million over the 1990 appropriation to assist States in expanding services to an estimated 44,000 additional children and to help cover increases in costs. The budget would provide a Federal share of $365 for each child served, an increase of $13 over the 1990 level. It would maintain the Federal share of the excess cost of educating handicapped children at about 7 percent.

Preschool Grants

The budget for the Preschool Grants program is $257.7 million, an increase of $6.2 million over the 1990 level. The budget increases the Federal share for each 3 through 5 year old child served from $662 to $726 for an anticipated 355,000 children. This represents an increase of 4,000 children over the number expected to be served for fiscal year 1990.

Grants for Infants and Families

The budget for the Grants for Infants and Families program is $82.7 million, an increase of about $3.2 million over the 1990 appropriation. The increase will assist States in meeting increases in costs as they continue to develop their statewide programs of early intervention services for handicapped infants and toddlers and their families.

Special Purpose Funds

Special Purpose Funds programs are authorized under the General Education Provisions Act extension through September 30, 1990. There is no current authorization for fiscal year 1991. As soon as reauthorizing legislation is enacted, a budget request totaling $181.9 million will be submitted to Congress for these programs. This is slightly greater than the amount appropriated in 1990. Amounts requested for specific activities will be determined at that time.

Thank you, Mr. Chairman and Members. I will be pleased to answer any questions you may have.

DEPARTMENT OF EDUCATION

Office of Special Education and Rehabilitative Services

Biographical Sketch

NAME : Robert R. Davila

POSITION : Assistant Secretary for Special Education and Rehabilitative Services

BIRTHPLACE AND DATE : San Diego, California, July 19, 1932

EDUCATION : Gallaudet University, 1953, B.A.
Hunter College, 1963, M.A.
Syracuse University, 1972, Ph.D.

EXPERIENCE

1989 - PRESENT : Assistant Secretary for Special Education and Rehabilitative Services

1978 - 1989 : Vice President for Pre-College Programs, Gallaudet University

1980 - 1989 : Professor of Education, Gallaudet University

1974 - 1980 : Associate Professor, (Part time), Department of Education, Gallaudet University

1974 - 1978 : Director, Kendall Demonstration Elementary School, Gallaudet University

1972 - 1974 : Instructor, Department of Education, Gallaudet University

1968 - 1970 : Supervisor, Elementary Department, New York School for the Deaf

1953 - 1968 : Teacher, New York School for the Deaf

HONORS AND AWARDS

Daniel T. Cloud Leadership Award, California State University, Northridge, 1988.

Inducted to Alumni Hall of Fame, Hunter College, 1988.

Inducted to National Hall of Fame for Persons with Disabilities, Columbus, Ohio, 1987.

Alumnus of the Year, School of Education, Syracuse University, Syracuse, New York, 1986.

"Ang Puso" Award, Southeast Asian Institute for the Deaf, Philippine Islands, for long time service to programs for the deaf in the Philippines, 1985.

Member of Honor (first foreigner and first deaf person ever inducted), La Asociacion Espanola de Educadores de Sordos (A.E.E.S., Spanish Association of Educators of the Deaf), Spain, 1985.

Elizabeth E. Jackson Leadership Award, Metropolitan Chapter, Gallaudet University Alumni Association, 1983.

Man of the Year Award, Delta Epsilon Sorority, 1982.

Distinguished Foreign Lecturer, Annual Conference of Australian Teachers of the Deaf, Melbourne, Victoria, Australia, 1979.

Past President's Award, Convention of American Instructors of the Deaf, 1978.

Fellowship for Doctoral Studies, Bureau of Education for the Handicapped, 1970.

Teacher of the Year, New York School for the Deaf, 1968.

Dr. DAVILA. Mr. Chairman and members of the committee, I am pleased to appear before this committee to testify on the fiscal year 1991 budget for Education for the Handicapped. The budget reflects the Department's continuing priority on the education of children with disabilities.

The fiscal year 1991 budget of over $2,100,000,000 includes $1,960,000,000 for the three State Grants Programs, an increase of $82,000,000 over the 1990 appropriation. This increase would provide additional funding to assist States in educating the children with disabilities for whom they are responsible under the Education of the Handicapped Act and in developing their statewide programs of early intervention services for infants and toddlers with disabilities and their families.

The budget also includes $181,900,000 for Special Purpose Funds that support a wide variety of research, demonstration, training, and other activities directed at improving the quality of early intervention and educational services for children with disabilities.

GRANTS TO STATES

The budget for the Grants to States Program is $1,620,000,000. This budget will assist States in serving approximately 4,400,000 children with disabilities. The budget provides an increase of $73,000,000 over the 1990 appropriation to assist States in expanding services to an estimated 44,000 additional children and to help cover increases in costs. The budget would provide a Federal share of $365 for each child served, an increase of $13 over the 1990 level. It would maintain the Federal share of the excess cost of educating handicapped children at about 7 percent.

PRESCHOOL GRANTS

The budget for the Preschool Grants program is $257,700,000, an increase of $6,200,000 over the 1990 level. The budget increases the Federal share for each 3 through 5-year-old served from $662 to $726 for an anticipated 355,000 children. This represents an increase of 4,000 children over the number expected to be served for fiscal year 1990.

GRANTS FOR INFANTS AND FAMILIES

The budget for the Grants for Infants and Families program is $82,700,000, an increase of about $3,200,000 over the 1990 appropriation. The increase will assist States in meeting increases in costs as they continue to develop their statewide programs of early intervention services for handicapped infants and toddlers and their families.

SPECIAL PURPOSE FUNDS

Special Purpose Funds programs are authorized under the General Education Provisions Act extension through September 30, 1990. There is no current authorization for fiscal year 1991. As soon as reauthorizing legislation is enacted, a budget request totaling $181,900,000 will be submitted to Congress for these programs. This is slightly greater than the amount appropriated in 1990. Amounts requested for specific activities will be determined at that time.

Thank you, Mr. Chairman and members of the committee. I will be pleased to answer any questions you may have.

INCREASE FOR STATE GRANT PROGRAMS

Mr. Natcher. Thank you, Dr. Davila.

The Secretary testified last week, as you know, that the budget for the Department of Education reflects the goal of targeting Federal dollars to help those most in need. Yet the budget request for Education for the Handicapped provides less than a 4 percent increase.

Why such a small increase for the handicapped?

Dr. Davila. Mr. Chairman, the budget increase for 1991 for Part B is $72,000,000 over the 1990 level. That will continue to serve appropriately 4,400,000 children, including 44,000 additional children.

We believe this is a sufficient amount to meet current needs inasmuch as our information is that all children who require special education are now being served. In the Section 619 preschool program, the increase we are requesting is 2.5 percent.

This will increase the Federal share per child from $662 to $726 for preschool children age 3 to 5. These children get support from two accounts, from Section 611 and also from Section 619, for a total Federal share of over $1,000 per child.

We think that is a sufficient amount inasmuch as we see every indication that the programs are being supported appropriately at the State level. For Part H, we are requesting an increase of 4 percent.

Funds for Part H are being used primarily to develop state-wide programs. We also feel confident that by the end of 1991 all the States will be making applications to maintain the programs beyond that point, so we feel that currently we are meeting needs.

We will be monitoring the programs carefully.

DROPOUT RATE

Mr. Natcher. During the last ten years Congress has appropriated almost $16,000,000,000 for handicapped education. Have we seen a decrease in the dropout rate or an increase in achievement levels of handicapped children as a result of this investment?

What would you say about that, Dr. Davila?

Dr. Davila. I share your concerns, as well as everyone else's with respect to the drop-out rates for all American children, but especially the drop-out rate within special education.

The information we have available is that the rate for children with disabilities, young people, leaving school or dropping out before they complete the programs is twice the rate of the general population. That is a big concern to us. We are already addressing the problem in a number of ways in the secondary and transition program.

We are presently supporting around 50 projects designed to reduce the problem by providing us with information and assistance in developing model projects designed to address these concerns. For example, we have grouped these 50 projects into three different areas. One group of projects will be addressing the development of model curriculum designs that are intended to engage a student and motivate him to stay in school.

The second group of projects that we are supporting is designed to develop school continuity through inter agency collaborations that will impact on the student while he is still in school.

Third, we are doing some research to find out why students are dropping out of school and will be using that information to develop strategies to reduce the problem. We are already working on that, but we share your concerns.

GENERAL ACCOUNTING OFFICE MANAGEMENT REPORT

Mr. NATCHER. In November 1989, the General Accounting Office issued a report regarding the management of the Office of Special Education and Rehabilitative Services. A summary of that report will be inserted in the record at this point.

[The information follows:]

GAO

United States
General Accounting Office
Washington, D.C. 20548

Human Resources Division

B-222989

November 28, 1989

The Honorable Major R. Owens
Chairman, Subcommittee on
Select Education
Committee on Education and Labor
House of Representatives

Dear Mr. Chairman:

In meetings with us, you and Subcommittee staff expressed concerns over the management of the Department of Education's Office of Special Education and Rehabilitative Services (OSERS) programs and activities. You later asked us to obtain the views of OSERS managers and senior staff regarding how well key management activities were being carried out within OSERS. We briefed you, the Subcommittee's Ranking Minority Member, and Subcommittee staff on February 8, 1989. After that briefing, we did some additional work in order to clarify and expand on our survey results. We testified on OSERS management issues before the Subcommittee on September 7, 1989.

This report summarizes and expands on our February briefing and recent testimony. Our findings are divided into five major areas: (1) goal setting, (2) performance management, (3) human resources management, (4) grants management, and (5) federal/state relationships.

Our work was limited to obtaining perceptions concerning OSERS management activities. In conducting our work, we did not look at these activities from a departmentwide perspective; consequently, we are making no recommendations to the Secretary at this time. However, we plan to initiate a comprehensive review of departmental management practices in fiscal year 1990. This review will expand on our discussion in Education Issues (GAO/OCG-89-18TR, Nov. 1988) on the need to establish a secretarial management system.

Background

In fiscal year 1989, the Congress appropriated $3.7 billion to the Department of Education for federal special education and rehabilitative services programs. These programs are administered through OSERS, whose primary mission is to award grants to help disabled persons gain employment, to assist states in providing handicapped children with a free appropriate public education, and to support rehabilitation research. Program activities are carried out by OSERS' three major components: the Rehabilitative Services Administration (RSA), the Office of

Special Education Programs (OSEP), and the National Institute on Disability and Rehabilitation Research (NIDRR). The Office of the Assistant Secretary for Special Education and Rehabilitative Services (OAS) provides overall guidance and direction to these components. (See p. 10.)

In August 1988, we mailed a questionnaire to 250 OSERS headquarters and field managers and senior staff to obtain their views on OSERS management. We received 187 completed questionnaires for an overall response rate of 75 percent. In addition, we conducted structured telephone interviews with state officials who implement programs receiving OSERS funding—state directors of vocational rehabilitation and state directors of special education. After analyzing the questionnaire results, we discussed our findings with component heads and selected division directors and branch managers to gain additional insights into OSERS management practices. (See p. 12.)

OSERS Goal Setting

More than 60 percent of the OSERS questionnaire respondents said that the Office of the Assistant Secretary had done a poor job of establishing OSERS-wide goals, coordinating activities among components, and responding to program concerns raised by senior officials, regional offices, and constituents. State officials had mixed views regarding the establishment of OSERS goals. Most state special education directors believed that the Assistant Secretary did a good job in choosing broad goals on which to concentrate OSERS efforts, but state rehabilitation directors were generally dissatisfied with this effort because, among other things, their input was excluded from this process.

Between March 1984 and November 1986, the former Assistant Secretary for Special Education and Rehabilitative Services[1] established several broad areas upon which to concentrate OSERS activities—
(1) transition from school to work for students with disabilities,
(2) supported employment for adults with severe disabilities, and
(3) education of students with learning disabilities. The former Assistant Secretary informally monitored OSERS' progress in achieving these goals principally through discussions at weekly staff meetings and by tracking the timeliness of component actions in completing various tasks.

During our OSERS work, we identified management deficiencies similar to the departmentwide weaknesses on which we reported in our November

---

[1] Madeleine Will served as Assistant Secretary from July 1983 through May 1989.

1988 report. Specifically, despite efforts by the Office of the Assistant Secretary to establish broad goals and track progress in meeting these goals, OSERS lacked (1) a goal-setting process that incorporated input from each OSERS component, and (2) a formal tracking system to monitor implementation of key goals and objectives. In commenting on the development of the broad goals established by the former Assistant Secretary, the majority of OSERS managers and senior staff said the Office of the Assistant Secretary generally did a poor job in terms of involving appropriate component staff in the goal-setting process, making timely decisions, and considering alternatives. (See p. 17.)

Management of OSERS' Components

The performance of OSERS components is difficult to measure because these components do not develop componentwide strategic plans[2] with specific goals and objectives. Instead, components generally develop what we would characterize as operational plans[3] which are consistent with the broad goals established by the former Assistant Secretary, but which lack clear program objectives that can be subsequently measured to determine whether planned objectives are achieved. Only RSA had developed strategic program plans with specific goals and measurable objectives in fiscal years 1986-88, but such a plan was not developed for fiscal year 1989 because of leadership and staffing changes within RSA. (See p. 20.)

Unit Level Operational Planning

One hundred and nine of our questionnaire respondents at the organizational unit level (divisions and branches within OSERS components) were aware that their units had operating plans, of which 79 percent believed the plans helped them to better execute their day-to-day activities. However, many of these respondents cited barriers to successful implementation of unit level plans, such as insufficient staff to carry out important functions and inadequate authority to make needed decisions. Eighty-one percent of the questionnaire respondents stated that many of OSERS' operational practices had negatively affected their ability to properly manage their day-to-day activities. One example cited frequently was the former Assistant Secretary's direct involvement in approving travel for component personnel. (See p. 24.)

---

[2] Strategic plans are plans developed to (a) analyze organizational environment, (b) assess organizational strengths and weaknesses, (c) consider alternatives, (d) establish clear objectives, (e) assign responsibility, (f) link planning efforts, and (g) establish feedback mechanisms.

[3] Operational plans are annual plans prepared in support of anticipated budget expenditures.

Human Resources Management

Respondents identified a variety of human resource management problems within their components. For example, more than 75 percent of the respondents indicated that staff vacancies, staff in acting management positions, and the lack of appropriate training courses and/or access to training were problems.

With respect to filling vacancies, 55 percent of questionnaire respondents said their components seldom could fill critical vacancies when they occur. Respondents also indicated that employee turnover had decreased the number of qualified staff in their units, decreased OSERS efficiency and effectiveness, and greatly decreased employee morale. In addition to OSERS managers, many state directors for rehabilitative services (37) and state directors for special education (31) told us that vacant OSERS managerial positions and persons functioning in acting capacities were having a negative effect upon state programs because, among other things, program decisions were being postponed.

In following up on these concerns, we found some progress being made in filling vacancies. As of February 1988, 21 of 56 key OSERS positions (such as component heads, division directors, and branch managers) were vacant or being filled on an acting basis because of (a) various personnel procedures, such as the inability to pay relocation expenses for new hires, (b) limited promotion potential, and (c) uncooperative OSERS administrative staff. As of February 1989, 14 of 56 key positions remained vacant or filled with acting managers.

Inadequately trained staff was cited repeatedly as a problem by both OSERS employees and state officials. Yet, only 15 percent of the respondents said that Department-sponsored internal training and development programs were effective in improving the performance of participating employees. Respondents believed training was ineffective because training courses offered to OSERS headquarters staff through the Department's Horace Mann Learning Center in Washington, D.C., included managerial and administrative courses only; the center does not offer training in specialized subject matter. OSERS' regional staff told us they could not attend management courses at the center because funds were unavailable to pay their travel costs or per diem expenses. In addition, OSERS officials told us that travel funding to attend out-of-town seminars and training conferences was difficult to obtain because of budget restrictions. (See p. 28.)

Grants Management

Virtually all (95 percent) of OSERS' $3.7 billion fiscal year 1989 budget is devoted to the award and administration of discretionary and formula grants.[4] However, 58 of 119 questionnaire respondents with grant responsibilities identified inadequate OSERS evaluation and monitoring of grantee performance as serious problems in both discretionary and formula grants. (See p. 33.)

Discretionary Grants

OSERS awarded 2,366 discretionary grants totaling $338 million during fiscal year 1988.[5] However, only 5 percent of the discretionary grant recipients received an on-site monitoring visit by OSERS officials during the year. Telephone discussions with grantees were the most common monitoring method. Many respondents told us that telephone monitoring is used in place of site visits because of limited travel budgets. However, the disadvantage to relying on telephone monitoring is the lack of on-site verification of grantee performance. (See p. 35.)

Formula Grants

In regard to the $3.3 billion in formula grants that OSERS administers, 57 percent of the questionnaire respondents with formula grant responsibilities believed monitoring of these grants was inadequate. This problem seemed to be most prevalent in the Office of Special Education Programs, which administers the Education of the Handicapped Act program.

Grantee data (provided to us by OSERS officials) show that formula grants awarded to 13 of 51 state education agencies were not evaluated by OSERS personnel during fiscal years 1985 through 1988. Insufficient travel funds and staff vacancies were cited by respondents as the primary causes of this problem.

When monitoring visits were made, formal monitoring feedback was delayed for long periods. In fact, 22 state special education directors said it sometimes took 18 months or longer to receive a final monitoring report from OSERS. (See p. 38.)

---

[4] OSERS discretionary grants are distributed competitively based on proposals submitted by prospective grantees. OSERS formula grants are distributed to states based on statutory provisions that require allocations to be made on the basis of certain criteria, such as the number of handicapped children in each state who are receiving special education and related services.

[5] Data unavailable for fiscal year 1989.

Federal/State Relationships

State special education and vocational rehabilitation directors identified several problems regarding their states' relationship with OSERS. For example, as discussed previously, most special education directors were concerned about the level of program monitoring carried out by the Office of Special Education Programs. Vocational rehabilitation directors were critical of OSERS program direction, policy guidance, and RSA's technical assistance.

Most state vocational rehabilitation directors viewed the Office of the Assistant Secretary and RSA's central office as lacking commitment and support for rehabilitation programs. In fact, 80 percent of the state vocational rehabilitation directors stated that the partnership between their state agencies and RSA headquarters officials has deteriorated or ceased to exist in the last few years.

Written federal policy guidance provided to the states by OSEP and RSA was generally characterized as moderately useful but untimely. Of the 51 state special education directors, 33 told us that the written policy guidance received from OSEP was untimely. Similarly, 43 of 51 state vocational rehabilitation directors said RSA's policy guidance was untimely.

Both state vocational rehabilitation and special education directors were critical of OSERS technical assistance efforts. Many state vocational rehabilitation directors also said that on-site technical assistance provided by RSA staff was ineffective. Although requests for technical assistance continued to be made, OAS frequently denied such requests, primarily because of insufficient travel funds. In regard to OSEP, it was OSERS policy for headquarters personnel to limit technical assistance to sending copies of pertinent information to state officials. On-site technical assistance was supposed to be provided by the Department's regional resource centers. (See p. 41.)

Agency Comments

By letter dated September 5, 1989, the Department of Education said it generally agreed with our findings and discussed its planned actions to address the management concerns we identified. (See app. VI.)

As arranged with your office, we are sending copies of this report to the Secretary of Education, the Office of Management and Budget, and other interested parties. Please call me on (202) 275-5365 if you or your staff have any questions about this report. Other major contributors are listed in appendix VII.

Sincerely yours,

William J. Gainer

William J. Gainer
Director, Education and
Employment Issues

Mr. NATCHER. That report, as you know, identified a number of problem areas. Tell us, if you will, what is being done to address these problems.

Dr. DAVILA. The report identified a number of problems, all of which we are presently addressing. I would like to review them for you briefly. One area of concern related to management practices was that there was a lot of micromanagement occurring, and a lot of authority was centralized within the Assistant Secretary's Office. I have brought to my work, along with my colleagues, a more participatory approach to managing the programs. I do not believe that it is a continual problem now.

Second, the report suggested that the staff had not been involved sufficiently in providing input to priority setting. We have just recently entered the final stages of development of our goals and priorities, and we have taken express care to include the staff, so I believe that we are extending the opportunity for input to everyone. Additionally, we have invited input from external constituents as well; people with disabilities, advocates, parents, and professional organizations.

A third area of concern, related to human resources management, was that there were a number of key administrative positions vacant. There were a number of other staff positions that were vacant. We are making good progress in filling those positions.

Another area—related to monitoring of Public Law 94-142 in the States—was the concern that there was a huge backlog of reports. There are important changes we want to make within the monitoring process so we can make it more effective and more responsive to our responsibilities to monitor.

Lastly, there were some views shared that we needed to develop more collaborative and more positive relationships with our constituents with whom we must work together in order to serve young people with disabilities. We have spent a lot of time making that kind of contact, so I believe we have made progress.

FEDERAL SHARE OF EXCESS COST

Mr. NATCHER. The Federal Government currently contributes 7 percent of the excess cost of educating a handicapped child, although the law authorizes contributions up to 40 percent. Would increasing the Federal appropriations result in additional services to handicapped children, or would it simply allow State and local governments to reduce their contribution?

Dr. DAVILA. I think if we saw a very large Federal increase in our appropriation that it might serve as a disincentive to the States to continue to increase their own share.

Mr. NATCHER. When you get the transcript back, go into detail a little more about it. It will help us now when we reach the point of marking up the bill. Go into detail a little bit more about that, and we would appreciate it.

[The information follows:]

INCREASING THE FEDERAL APPROPRIATION FOR GRANTS TO STATES

Mr. NATCHER. Would increasing the Federal appropriations result in additional services to handicapped children or would it simply allow State and local governments to reduce their contribution?

Dr. DAVILA. The effect of increasing the Federal appropriation for the Grants to States program would depend upon the size of the increase. If a modest increase occurred, or if increases were gradual, it is likely that States and localities would use the increased Federal funds to expand or improve services for handicapped children. However, if there were a very substantial increase, it is likely that this increase would be used for costs that otherwise would have been borne by States or localities. Should the Federal share of the costs of educating handicapped children approach the authorized 40 percent of the average per pupil expenditure, it is inevitable that this significantly increased Federal contribution would displace a substantial portion of the funds provided by States and localities. In general, increases in Federal expenditures would reduce the need for State and local funds.

NEEDS OF CHILDREN

Mr. NATCHER. Mr. Conte, I yield to you.

Mr. CONTE. Thank you, Mr. Chairman. Dr. Davila, it is good to have you here today. I've reviewed your résumé and recognize what a unique set of skills and experiences you bring now to your new job.

It reminds me of the Judy Collins song titled, "I've Seen Life on Both Sides Now," and that is the case with you. You have seen all sides of the special education world, and I know you bring a tremendous amount of talent to your position.

What have you learned from your experience on both sides that will help your new post?

Dr. DAVILA. That is a good question. Life goes so fast, I have not had a lot of opportunity to sit back and reflect on the answer to that question. I believe that the special needs of children for whom I am responsible in this present position might be at risk within the context of all of education.

I believe that children are children. Some have special needs, but by and large we have the same ultimate goal to guide us, and that is helping young people to develop skills and abilities that will make them productive citizens. Guided by this conviction, my goals reflect that philosophy.

LONGITUDINAL STUDY FINDINGS

Mr. CONTE. It has been 12 years since the Education for the Handicapped Act was passed. Some children who started school with the program are now finishing school. How successful has it really been in providing a free and appropriate education in the least restrictive environment for each handicapped child? What does the longitudinal study of the Department show?

Dr. DAVILA. I believe that since Public Law 94-142 was enacted, that we have made tremendous progress in making a free appropriate public education available for every disabled child. But in recent years we have started to move past step one to step two, and that is to improve the quality of the services we are providing.

We continue to examine what we are doing. We assume a free appropriate public education is now the right of every child, and it is. Now we have to address the question of quality. A longitudinal study is being done, and it reflects some concerns that although we have made some progress, we still have some way to go. I will ask

Dr. Schrag to outline some of the initial findings of that study for you.

Dr. SCHRAG. Yes, Mr. Conte. The national longitudinal study sampled 8,000 students ages 13 to 23 and has found some interesting information about what is happening to our special education students at the secondary level.

For example, we are finding that 54 percent of our L.D. students or learning disabled students in regular schools were in at least one regular education course. This compares to a much lower figure for some of the more severely handicapped kids. The study also looked at how well students with disabilities are doing in school. Data show that of all categories of special education students studied, one in three of those students is failing in one or more classes. This tells us that there is more work to be done to help adapt the secondary curriculum so that these courses meet the individual needs of students.

This figure is higher for certain groups. For example, we find that 45 percent of the students that are emotionally disturbed are failing one or more classes.

We also found that male youth with disabilities who have exited school are more likely to be employed than females. We found that 66 percent of the males had been employed for pay during the year compared to 49 percent of the females. We also found that males were paid $4 an hour compared with $3.30 for females, so there is some difference there.

Going back to students in the high school, we found that special education students in grades nine and ten were more likely to receive a failing grade than students in grades seven and eight or eleven and twelve.

We continue to be concerned with data from this longitudinal study. We know that our handicapped students or students with disabilities are still dropping out at the rate of 2 to 1. We know that large numbers are still failing one or more classes, and we know that they are not transitioning well from high school to the world of work. We are continuing to work with the States to develop better secondary programs and better linkages between vocational education, vocational rehabilitation, developmental disabilities, special education, and of course, general education.

DESCRIPTIVE VIDEO SERVICES

Mr. CONTE. Last fall the conference committee agreed that the Secretary could use up to $1,000,000 for the development of descriptive video services for the blind.

What has the Department's study of the commercial viability of this technology found?

Dr. DAVILA. A number of studies have been completed. We currently have two studies underway. One is at the Smith-Kettlewell Institute that is doing a comparative study of the processes for descriptive video. The second study by the COSMOS Corporation is evaluating the commercial feasibility of descriptive video. We expect to give a report this spring, and we will be submitting it to Congress.

SECONDARY AND TRANSITIONAL SERVICES

Mr. CONTE. A large number of students who have received services as a result of the Education for the Handicapped Act either drop out of school, can't get jobs or don't seek additional training after high school. About 43 percent of all the handicapped children leaving school in 1985 through 1987 did not graduate from high school.

What is in your budget to address the needs of these students?

Dr. DAVILA. As I mentioned a while ago, we are already providing a lot of support in the area of completion of school. We are funding over 50 projects to study young people leaving school before they complete the program, and we will use the information we have derived from those studies to try to prevent this tragedy, to reduce the possibility of this happening.

The information we have is that the dropout rate for young people with disabilities is twice the rate of the general population and is a continuing concern. What we need here is to promote better transition services by getting cooperation going in the school sector and in the community so we can address the question of support for our young people.

Mr. CONTE. Thank you, Mr. Chairman.

Mr. NATCHER. Mr. Stokes, I yield to you.

DEVELOPMENT OF NEW TECHNOLOGY

Mr. STOKES. Thank you, Mr. Chairman. Dr. Davila, in last year's House appropriations report, the Committee requested that the Department not spend any funds to continue the subsidy of decoders for the hearing impaired because the technology is now fully developed.

The report indicated that funds should be used instead for the development of new technologies for the same population. Can you tell us what types of projects you expect to support with the fiscal year 1991 appropriation?

Dr. DAVILA. I am sorry, but I don't believe I have that information with me.

Dr. SCHRAG. Mr. Stokes, one of the areas that we just spoke about was the study of descriptive video, and we expect the information from the two studies to help us get a better feel for the feasibility of that approach. We also have a number of technology awards to look at some of the other innovations for the hearing impaired and the visually impaired.

Mr. STOKES. All right. You can feel free to further expand upon this in the record, if you will, please.

[The information follows:]

TECHNOLOGY FOR HEARING AND VISUALLY IMPAIRED PERSONS

The Office of Special Education Programs is funding a number of projects that should result in the development of new technologies for people with visual and hearing disabilities. These include a contract titled, "Examining Advanced Technologies for Benefits to Persons with Sensory Impairments," which will identify advanced and emerging technologies with the potential for affecting access of individuals with sensory impairments to media and communications. Another contract titled, "Identifying Emerging Issues and Trends for Technology in Special Education," will match new technologies, including telecommunications, to the needs of children with sensory/perceptual, physical/motor, cognitive, and affective impairments. In addition, the Department will support a number of awards to small businesses to study such areas as automatic speech recognition and adaptive computer software.

SPECIAL PURPOSE FUNDS REQUEST

Mr. **Stokes**. Now, you have not put forward specific dollar amounts for individual Special Purpose Funds programs for fiscal year 1991 at this time, and I presume it is because reauthorizing legislation is pending.

However, the total that you are requesting for all the programs is the same as the fiscal year 1990 appropriation with no adjustment for inflation.

Can you tell us why you did not request at least an increase for inflation and tell us whether you are expecting that some of the programs within the special fund account will not be reauthorized.

Dr. **Davila**. We are waiting to learn just what additional activities will be included by the Congress, and then we will be making recommendations for reallocation of funds within that program.

We don't have that computed yet.

Ms. **Cichowski**. Mr. Stokes, in all of these discretionary programs the funds are used for competitive grants. It is generally not the Department's practice to request an inflationary increase in discretionary programs where there will be money for new awards due to turnover in the grants. We also have the flexibility to provide an inflationary increase for a continuation award if that is appropriate.

But there is enough flexibility in these kinds of programs to make new awards without having to be concerned about providing additional resources for inflation. It is a general policy of the Department to provide inflationary increases in the direct service programs such as the three formula grant programs in this account.

Mr. **Stokes**. I see.

DRUG EXPOSED CHILDREN

Now, your justification indicates that the number of learning disabled children age six to 21 increased by 55,356, less than a one percent increase.

I am wondering, might we soon be seeing this number increase as children who are the victims of parental drug use reach school age?

Dr. **Schrag**. Your question asks, Mr. Stokes, if we will expect to see more students in the area of learning disabilities as children with drugs and other conditions reach school age?

Mr. **Stokes**. Particularly these children who are the victims of parental drug abuse. I would think that this is an area which we might be seeing additional children coming into schools with disabilities.

Dr. **Davila**. Mr. Stokes, we are concerned about the potential increase in the number of children, especially those children with drug problems. For example, we are currently funding five demonstrations and outreach programs that are developing and disseminating models for school children who have been exposed to drugs before birth.

In 1991, we intend to support projects that will continue to address this concern, and also in 1991, we will be establishing an early childhood research institute that will develop a field test for substance abuse in families.

In 1992, we will include projects that will provide opportunities for developing our model programs for children aged three to five. So we are concerned about it.

Mr. STOKES. With regard to these programs that you have made reference to or others within the Department, is some thought being given to how the crack epidemic may affect your programs, particularly those related to infants and families?

Dr. DAVILA. Yes, I believe that some of the activities that we are now doing are also designed to give us the information that would give us some indication of the extent of the problem. So that is in development also.

Dr. SCHRAG. I would like to add to that.

Mr. STOKES. Sure, Dr. Schrag.

Dr. SCHRAG. We have looked at a couple of surveys regarding the extent of the increase in this population.

One is a 1989 survey conducted for the Select Committee on Children, Youth and Families. They looked at 18 major hospitals and found that 15 hospitals reported that the number of drug exposed births is three to four time that of 1985.

There isn't good longitudinal data yet to tell us exactly what these children will look like and what kind of differential treatments we should have. We know that the impact of the drugs that these children are being exposed to varies.

There are at least three effects. One is the addictive effect. Some studies are showing that these children appear to grow slowly and then more normally later on. There is also the toxic effect of some drugs that shows direct damage to the child. Finally, then there is the teratogenic effect which, in fact, impacts the endocrine system, the genital-urinary system, and the central nerous system. Symptoms may not appear until later childhood or adolescence.

We also note that there are some university-affiliated programs across the United States that are doing some good research on the effects of drugs on children and the differential treatment needed. It is our intention to pay close attention to this information so that we can direct supportive efforts and provide leadership in helping the States diagnose these children carefully and provide important differential treatment.

DRUG-EXPOSED CHILDREN

Ms. CHRISTENSEN. Mr. Stokes, we also say that in the future as we identify these additional numbers, whatever they turn out to be, that they will certainly be reflected in our future budget requests under the Part B program or even Preschool.

Mr. STOKES. I appreciate that because I would think you cannot have an epidemic of this sort in our society—which has been acknowledged as such by the President of the United States—without it having an acute affect in this particular area. You would have to be looking at the long range aspects of it.

Ms. CHRISTENSEN. We will certainly keep that in mind as we enter the planning process for next year and even years after to see what we can find out.

Mr. STOKES. Thank you.

Thank you, Mr. Chairman.

DROPOUT RATES

Mr. NATCHER. The Department has testified in previous years that the dropout rate for handicapped children is very high.

What is the actual dropout rate for these children in 1990 and how does it compare to the dropout rate for the general student population?

Dr. SCHRAG. There are a number of studies that have been conducted recently regarding the dropout rate. These studies indicate that the dropout rate is just about two to one, that is twice that of the nonhandicapped student, about 24 percent compared to about 12 percent for the general population.

DROPOUT DEMONSTRATIONS

Mr. NATCHER. The Department, as you know, is requesting $45,000,000 in dropout demonstrations. Will the demonstration projects be constructed in such a way that the special problems of handicapped children are included?

Dr. DAVILA. I fully anticipate that because of the collaboration that occurs within the Department among all the offices that we will benefit from whatever funds are made available. For example, recently the Secretary appointed a new advisor to advise him and the Department on dropout problems. We expect tc work very closely with that person as well.

In addition, we will be working very closely with the Assistant Secretary for Elementary and Secondary Education to address problems that are common throughout the young school-age population.

CHAPTER 1 HANDICAPPED CONSOLIDATION

Mr. NATCHER. Should the handicapped programs operated under Chapter 1 be consolidated under the Education of the Handicapped accounts as proposed by the General Accounting Office?

How do you feel about that suggestion from the General Accounting Office?

Dr. DAVILA. The Department has made a similar proposal in the past, I understand. Both programs serve disabled children, but we need to consider that funding differs greatly between the two programs.

Chapter 1, for example, in 1989 contributed an average of $557 for each eligible child. Education for the Handicapped contributed $340. So I believe that the Department would support such a proposal, but it would need to have a corresponding increase in Education for the Handicapped as funding for Chapter 1 was gradually phased out.

Mr. NATCHER. Would this require legislation, carrying out the suggestion of the General Accounting Office?

Ms. CHRISTENSEN. Mr. Chairman, it would.

Ms. CICHOWSKI. You could, in effect, merge the programs by gradually phasing out funding for Chapter 1 and increasing funding for Education for the Handicapped programs, as Dr. Davila has just suggested.

The specific proposal discussed in the GAO report, however, would require legislation because GAO has proposed possible set-asides and other refinements to the Education for the Handicapped program, which we may or may not support. We haven't developed a position on the best way to make the transition, so although it could be done administratively, a legislative vehicle would provide a means for making a smooth transition to the consolidation.

Ms. CHRISTENSEN. As a practical matter, I think that as long as there are two authorizations on the books, there will definitely be a continual push to fund the two authorities.

MONITORING REVIEWS

Mr. NATCHER. Compliance reviews are an important part of your mission. In your opinion, how often should State and local educational agencies be visited to assure compliance with the laws and also, Dr. Davila, how often are they being visited in 1990?

Dr. DAVILA. I mentioned awhile ago some of the areas for concern contained in the GAO report, and one of the areas that I mentioned was monitoring.

One of the concerns expressed in the report related to the infrequency or inconsistency in monitoring, and we are developing a plan whereby we will be providing monitoring on a timely basis. We are looking ahead to establishing a process that will permit us to monitor on a rotating cycle every three years.

That is our goal, to monitor on a regular basis, every three years in the States.

Mr. NATCHER. The GAO report says that lack of travel funds precluded adequate monitoring and technical assistance with site visits. Is this true? And, if so, do you anticipate similar problems with the fiscal year 1991 budget request?

Dr. DAVILA. No, sir. We are getting a good increase in travel allowance for 1991, and we intend to allocate a large percentage of that amount for monitoring purposes.

I believe we will be able to carry out our monitoring responsibilities.

SPECIAL EDUCATION TEACHER SHORTAGES

Mr. NATCHER. In the 11th annual report to Congress, States reported that they needed 27,500 additional teachers to fill vacancies and replace uncertified staff for students with handicaps.

In the 12th annual report, the number was 29,774. It looks like the problem is getting worse.

What is the Department doing to reverse this trend?

Dr. DAVILA. The programs the Department supports in the personnel preparation account produce around 13,000 special education teachers annually. The gap is much larger than that. However, not all problems relating to the gap that exists are related to production.

I believe that many people are leaving special education for a number of reasons beyond our control. For example, people are retiring, making career changes, going out to higher paying jobs, burning out, and leaving for a number of reasons.

We are presently studying retention and recruitment so that we can assess how we can develop strategies for retention purposes that will help reduce the problem. It is not a problem in production alone, I believe.

Mr. NATCHER. In your opinion, are enough resources targeted to teacher training?

Dr. DAVILA. For the present, I believe there are, because, as I said, the problems are not limited to those of production. There are other factors that also influence and account for the shortage of teachers in special education. We need to study that very carefully.

Mr. NATCHER. Mr. Conte, I yield to you.

Mr. CONTE. Thank you, Mr. Chairman.

MISLABELING OF LEARNING DISABLED CHILDREN

Dr. Davila, I am concerned about slow learners. I have explored this issue with Mrs. Will and with Secretary Cavazos, and most of the problem seems to be that our highly regimented system doesn't let students learn at their own pace.

Based on your classroom experience, how many slow learners are mislabeled as learning disabled and assigned to special classrooms?

Dr. DAVILA. From my own personal experience, that has happened. However, I would not be able to venture a guess as to what the actual number really is. I am sure there is mislabeling, but I think with improvements in practices, we are minimizing that problem now.

Mr. CONTE. How big of a problem do you think it is?

Dr. DAVILA. Mislabeling children, misdiagnosing, I don't know that is really a huge problem. I will ask Dr. Schrag.

Dr. SCHRAG. This has been an area of concern within each State across the country. State legislatures have watched the incidence of learning disabilities grow. State by State they have asked their State departments to study eligibility criteria and increase interfaces between special education, Chapter 1, and some of the other programs that serve children with learning problems.

There is a lot of activity across the country regarding the identification and assessment of children with learning disabilities. As we go across the country and look at States and our interactions with States, we do not have evidence that there are large numbers of children being misclassified. In fact, the prevalence of learning disabilities has stabilized throughout the States largely because of this increased activity by each State to more carefully assess this population. This population has also stabilized, I think, because of other educational reform activities such as school restructuring, remediation programs, dropout programs, and so forth.

So there is an important need for all of these programs to work together. We believe there are exciting efforts occurring within the States in this area.

Mr. CONTE. I disagree. I think it is a real problem. I frequently go back to the district home a lot. There are many parents who talk to me about this problem. They tell me how their kids are being pushed along grade to grade when they shouldn't be moving along. Instead should be given more attention because they have learning disabilities or other problems.

GAO is currently reviewing the definition used to categorize students because the learning disabled category accounts for 49 percent of the population served under the law's basic State grant program.

What is the status of that GAO review? What kind of changes can we expect?

Dr. SCHRAG. Yes, I am very familiar, Mr. Conte, with the GAO study as their staff has been coordinating with us.

It is my understanding that they are currently visiting some sample States and territories in which the learning disability rate is high and some States and territories where the learning disability prevalence rate is low. They are noting that 48 States and territories use the same definition as in the Federal law and that 22 States and territories have varied the Federal definition. They are also looking at how the States are operationalizing their definitions with eligibility criteria. They are trying to figure out what might be some of the reasons for the differences. It is my understanding they are also looking at some of the other programs that those States with the low incidence of learning disabilities are implementing and those States with high incidence to see if there is any relationship between a high incidence of learning disabilities and the lack of other programs that you have referred to as needed.

RESTRUCTURING EDUCATION FOR SLOW LEARNERS

Mr. CONTE. Many people are calling for a restructuring of the educational system. To what extent could restructuring address the needs of the handicapped as well as the slow learner and other children not served under Public Law 94-142?

Dr. SCHRAG. I feel strongly that a great deal of restructuring needs to occur in the education system. Special education and the other special programs exist because the general education structure has not accommodated individual differences. There are significant efforts going on across the country to look at ways to restructure. The National Association of State Boards of Education has recommended developmentally-appropriate curriculum for children ages four through eight so that they can be given a better start. This recommendation is consistent with the goals of the President and State Governors.

I think you would be as excited as I am about some of the efforts that are going on. Our office, for example, has for the last four years funded a number of research projects looking at alternative strategies for students with learning problems.

You are quite right that there is an increased number of low performing students. States are working with their building principals and their general and special education staff to look at ways to restructure and find in-classroom regular education solutions for some of these children so that they are not referred to more specialized programs.

Mr. CONTE. Mr. Chairman, are they coming back this afternoon? I will yield back the balance of my time.

Mr. NATCHER. The committee will now adjourn until two o'clock this afternoon.

AFTERNOON SESSION

Mr. NATCHER. The committee will come to order.

Mr. Conte, I yield to you.

COMBINING FEDERAL PROGRAM AUTHORITIES

Mr. CONTE. Doctor, last year I was told that it was a good idea to pull together all the Federal program authorities—Chapter 1, Education for the Handicapped, Vocational Education, et cetera—to reduce the barriers and address the needs of slow learners.

Do you think that is a good idea?

Dr. DAVILA. I haven't had an opportunity to really analyze all of the possible ramifications of that approach, but I would be guided by any effort in that direction, in safeguarding the rights of children under the Education of the Handicapped Act. That is an important consideration.

We have provided rights to children who are disabled, and in any change we make, we need to ensure that we do not compromise the rights and opportunities that are provided to those children.

Mr. CONTE. What do you think, Dr. Schrag?

Dr. SCHRAG. I think rather than to combine the programs, I think our efforts should be on better ways to coordinate the programs, so that they are not separate, distinct programs, but that they are working very closely together.

And, as I mentioned this morning, some of the efforts that I noted that are going on in individual States are looking for ways to do that. For example, split funding teachers from different program accounts so that teachers can work with students eligible for different programs, children that might be learning disabled and served in special education, children that might be remedial and served by general education, and children that are disadvantaged and served by Chapter 1.

I think our efforts should be on better ways to link and to coordinate those programs.

PRIVATE SECTOR PARTICIPATION IN EDUCATION

Mr. CONTE. Many States, Massachusetts and South Carolina, for example, have sought to increase private sector participation in education so that, schools and businesses are working together as a partnership for children.

What does this budget do to encourage partnerships to benefit handicapped children? Are there any grants to encourage this sort of thing?

Dr. SCHRAG. We have, within the research authority, some school-home models that look at the business partners in the community to find ways to better interface the school and the community.

Within our other discretionary programs, we also are encouraging the involvement of business in some of the models. There are not specific competitions that are included within the budget that specifically deal with business partnerships, but there is collaboration included within a number of them particularly in the early childhood program.

ATTENTION DEFICIT DISORDERS

Mr. CONTE. I am glad my friend from Massachusetts, Mr. Early, is not here, because he is opposed against all studies.

However, as the Chairman of the subcommittee will recall, last August we directed the Secretary to conduct a study on the problem of children with attention deficit, hyperactive disorders. It is my understanding that little is known about this problem, and some changes in the law may be needed in order for these children to be served.

Can anyone of you tell me the status of that study?

Dr. DAVILA. Mrs. Schrag can respond to that.

Dr. SCHRAG. Our office is working with the National Association of State Directors of Special Education through Project Forum to conduct a study of identification and services within the States for this population.

Mr. Conte, this is a heterogeneous group of children that have physiological, neurological, and or physical concerns. There are several theories about attention deficit disorders. It is a complicated group of children with diverse needs.

Some of these children are handicapped and qualify for special education. Others have needs that can, and should, be met in general education.

SERVING ALL HANDICAPPED PRESCHOOLERS BY 1991

Mr. CONTE. How are things progressing with the preschool grant program requirement that the States have full service mandates in place by the 1991-1992 school year, and what kinds of problems are the States having? What is the Department doing about those problems?

Dr. DAVILA. We believe that our preschool program is proceeding very well. Primary activity in the States has been in the development of Statewide systems. The preschool program is proceeding well. There are a number of States that have already had preschool programs in place for some time at the beginning of the school year, and we anticipate that by 1991 all the States will be using the program.

Mr. CONTE. Are there problems with this requirement in the States?

Dr. SCHRAG. I might add to that, a number of States already have mandates in place. Thirty States have a mandate effective this school year, and all States have indicated they will be fully serving three to five year old children with disabilities by 1991.

The problems that States are encountering are in several areas. The first area is personnel. There are shortages of teachers trained to deal with this population of children, as well as school psychologists, physical therapists, and occupational therapists. They are also having difficulty with the placement of children in the least restrictive environment.

Many States do not provide programs for nonhandicapped children, ages three to five. Challenges exist to interface these programs with day care as well as Head Start to be sure that there is integration of handicapped and nonhandicapped students.

States are also having some difficulties with their data collection systems in being able to document the extent of services provided and needed.

Transition is another area that is a problem within the States. There are, I believe, approximately 30 States that have a State-funded counterpart to the Head Start program. States are trying to coordinate these State funded programs with programs for infants, toddlers, and preschool children with disabilities, and day care programs.

This coordination is necessary to make sure that there is a good, smooth transition as children move from infant programs to preschool programs and into the first grade.

PARENT TRAINING PROJECTS

Mr. CONTE. What is happening in the national parent network project? What do the evaluations of that program reveal? What are the plans for that project?

Dr. SCHRAG. We feel very strongly about that program.

Back to this area of preschool, that is one of the areas of technical assistance that they are providing to parents and their families, to help ensure a better transition.

We are in strong support of the parent training and information program. Evaluations of that program tell us that we need more projects

There are currently approximately 7 States that are not covered with a parent project. Our intentions are to expand that program as resources allow.

Mr. CONTE. For quite some time I have followed a problem that developed from the parent training set aside in the parental Development Program. Several years ago a group from Boston, that pioneered this effort, was asked by Mrs. Will to perform duties beyond the scope of their contract. They honored her request. But have been denied compensation because that request was not documented by Mrs. Will.

Does it seem fair to you that a small organization like the Federation for Children with Special Needs which undertakes additional work in good faith should be penalized for a procedural error on the part of the Department?

Dr. DAVILA. That is not a problem related to our office. I will let Ms. Cichowski answer that.

Mr. CONTE. Carol, what do you think? Should they be penalized for procedural problems?

Ms. CICHOWSKI. It does not seem fair, but my understanding is that the activities undertaken, which involved producing an additional monograph and some additional travel and hotel costs, and adding some additional conference participants, were clearly activities that were outside the scope of the contract. The Department procedures require that the contractor take responsibility for knowing what is within or outside the scope of the contract. The Department simply isn't authorized to pay for activities that are not explicitly required by the terms of the contract.

We have looked at this matter. Staff in our Office of Management have looked at it carefully, both what happened and the circumstances surrounding the facts, in response to a request from your office that we take a good, hard look at what happened here.

My understanding is that last fall, the Department's Office of Management sent a letter of final determination to the Federation for Children with Special Needs informing them that we just couldn't find a basis on which to compensate them for this cost overrun, and advised them that if they wished to pursue this to appeal to the General Service Board of Contract Appeals. Thus far, we haven't received any notification that they are pursuing it.

My sense is that as far as the Department is concerned, we did all that we could possibly do within our own laws and regulations on this matter.

Mr. CONTE. Did you look into the possibility that Mrs. Will had asked them to do things that were beyond the scope of their contract?

Ms. CICHOWSKI. What I have been told is that, whether or not that is true, it isn't relevant. It is the contractor's responsibility if they are asked to do things that go beyond the scope of their contract, to inform the contracting officer, who is a person assigned to the Office of Management. That is the only person authorized to deal with modifications in the contract. They should have known, that, if they received a request like that from the Office of Special Education and Rehabilitative Services, they should have contacted our Office of Management and advised the proper people that they needed a modification to their contract.

It is possible that the contract could have been modified to accommodate a change in the scope of work, but nothing was done formally. That is what ties the hands of the Department.

There was no change to the document that our Office of Management has to live by.

Mr. CONTE. Under contract law sometimes you can change a contract through an oral agreement.

Ms. CICHOWSKI. I understand that, and we talked about that within the Department. Our Office of Management insists that in this case there is no flexibility.

Perhaps if the Federation were to pursue this in the Court of Claims, based on contract law, there would be something to be gained. My sense is that the Department's hands are tied here. We don't have the authority to deviate from our own procedures regarding when a cost overrun can be paid.

Mr. CONTE. Okay.

REGIONAL RESOURCE CENTERS

For the record, you requested $6,200,000 for Regional Resource Centers, the roles of the centers have changed over the years. What is the current mission and how do you see this change in the years ahead, and also submit for the record a list of all resource centers and the schedule for competition and renewal of their contracts.

[The information follows:]

REGIONAL RESOURCE CENTERS MISSION

The Regional Resource Centers (RRCs) program is designed to assist State educational agencies and, through such agencies, local educational agencies and other appropriate State agencies to provide quality educational services to handicapped infants, toddlers, children, youth and their families. The Centers fulfill this mission through the following strategies:

1. Identifying and solving persistent problems in providing quality special education, related services, and early intervention services to special education students and their families.

2. Developing, identifying, and replicating successful programs and practices that will improve special education, related services, and early education programs for handicapped students and their families.

3. Gathering and disseminating information to all State educational agencies in their respective regions and coordinating their activities with other Centers as well as other appropriate projects within the Department.

4. Assisting in the improvement of training activities and information dissemination to both professionals and parents of students with handicaps.

5. Providing training to various agencies and organizations on preparing grant applications to the Department.

The strategies for improving the quality of special education services for all eligible students and their families is not expected to shift dramatically during the next several years. Program development, training, collaboration, evaluation and networking have been successfully used as tools in promoting service quality.

CURRENT REGIONAL RESOURCE CENTERS

Region 1 - Trinity College: Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, and New Jersey.

Region 2 - University of Kentucky: Maryland, Delaware, Virginia, West Virginia, Washington, D.C., Kentucky, Tennessee, North Carolina, and South Carolina.

Region 3 - Florida Atlantic University: Georgia, Alabama, Florida, Mississippi, Puerto Rico, the Virgin Islands, New Mexico, Texas, Oklahoma, Arkansas, and Louisiana.

Region 4 - Ohio State University: Illinois, Ohio, Indiana, Pennsylvania, Wisconsin, Minnesota, and Michigan.

Region 5 - Utah State University: Montana, Wyoming, North Dakota, South Dakota, Utah, Colorado, Nebraska, Kansas, Iowa, Missouri, and the Bureau of Indian Affairs.

Region 6 - University of Oregon: Oregon, Idaho, Washington, Alaska, California, Arizona, Nevada, the Republic of Palau, the Federated States of Micronesia, Guam, American Samoa, Hawaii, and the Commonwealth of the Marianas Islands.

SCHEDULE FOR REGIONAL RESOURCE CENTERS AWARDS

The current contracts with Regional Resource Centers expire on May 31, 1991. The Office of Special Education Programs is preparing the materials for a competition to be announced later this year. New awards should begin in June 1991.

SERVICES IN RURAL AREAS

Mr. **Conte**. It is frequently very difficult and expensive to provide appropriate nonrestrictive services to handicapped children in rural areas. Distance learning and technology seem to hold some promise when addressing this challenge.

What do you think about this approach and how does the Department's budget address this issue? Anyone?

Dr. **Davila**. Dr. Schrag, please.

Dr. **Schrag**. You are quite right. There are significant concerns relative to service delivery in rural school districts across the country. Technology has important service delivery applications in rural area.

Within the special purpose programs, we have the technology program that we expect in fiscal year 1991 to include competitions that will help look at the application of existing technology and explore new technology to enhance special education service delivery.

FINDINGS FROM MONITORING REVIEWS

Mr. **Conte**. Compliance reviews of the States keep turning up the same four weaknesses: (1) difficulty in monitoring educational agencies, (2) inadequate enforcement of least restrictive environment requirements, (3) procedural safeguard violations, especially in the area of the parental notification, and (4) follow through on the objectives listed on the individualized education plans.

How does the Department's budget help correct these recurring weaknesses?

Dr. **Davila**. Presently, we are addressing these problems. We are taking a look at that process, and making changes to provide for more effective, more uniform monitoring of the States. One way to do that is to establish review cycles that will be consistent and uniform in these applications. One of our projects now is the development of monitoring standards.

The approach will be consistent in order that we can alleviate some of the problems that keep coming up in the past.

Mr. **Conte**. Can you straighten that out, Doctor?

Dr. **Schrag**. Yes. As Dr. Davila indicated, a significant thrust of our office is to make considerable refinements to the current Federal monitoring system. We believe that the system needs strengthening so that we are achieving more accountability by each State educational agency. It is the State educational agency's job to do this thorough compliance monitoring of school districts. It is our job to make sure that they are doing that. We are trying to make needed changes in our monitoring procedures to make a stronger and more accountable system.

Mr. **Conte**. Thank you, Mr. Chairman.

Mr. **Natcher**. This concludes the hearing on the budget request for the fiscal year 1991 for Education for the Handicapped.

Dr. Davila, this has been a good hearing. We want you to know that we appreciate your appearance before the committee at this time. Thank you very much.

[The following questions were submitted to be answered for the record:]

DRUG-EXPOSED CHILDREN

Mr. Natcher: A recent "Newsweek" article estimated that about 11 percent of all newborns have been exposed to drugs, particularly crack cocaine, during pregnancy. That's about 375,000 new drug-exposed babies a year. Doctors who track these babies now believe that drug-related defects may contribute to major developmental difficulties. Dr. Davila, are these crack babies starting to show up in the education system?

Dr. Davila: Yes. They are now beginning to enter our school systems. These children exhibit an array of developmental and learning problems, such as hyperactivity, distractibility, speech and language delays, unprovoked aggression, motor problems, and an inability to focus on specific images or sounds.

MAGNITUDE OF THE PROBLEM OF DRUG-EXPOSED CHILDREN

Mr. Natcher: What is the magnitude of this problem now, and what are we looking at five to ten years down the road?

Dr. Davila: Estimates of the prevalence of children prenatally exposed to drugs vary substantially. Probably the best national estimate comes from a 1988 study conducted by Dr. Ira Chasnoff of Northwestern University Medical School. Based on a survey of 36 hospitals across the country, Dr. Chasnoff estimated that about 11 percent of infants born each year, or about 375,000 infants, are born to women who are drug abusers.

Based on a two-year follow-up study of 263 children who have been evaluated at a Chicago-based treatment clinic for substance abusing pregnant women, Dr. Chasnoff found that drug-exposed children scored within the normal range for cognitive development and are not brain damaged. However, many drug-exposed two-year olds scored poorest on developmental tests that measure abilities to concentrate, interact with others in groups, and cope with an unstructured environment. He concluded that, given the chaotic and transient nature of the drug environment, many drug-exposed children are at great risk of development impairment, particularly children whose mothers are not involved in a treatment program. Therefore, although current data do not indicate the extent of potential special education needs for this population, it is likely that it will be significant.

OSERS' COORDINATION WITH OTHER OFFICES

Mr. Natcher: There is also a State grant program for the handicapped in the Chapter 1 programs. How is collaboration facilitated between offices within the Department on projects of mutual interest, like education for the handicapped, the dropout problem, or drug-free schools?

Dr. Davila: Collaboration is facilitated between the Office of Special Education and Rehabilitative Services (OSERS) and other offices in the Department in a variety of ways. For example, OSERS collaborated with the Office of Vocational and Adult Education by providing funds for the National Assessment of Educational Progress transcripts for handicapped students that were used in the National Assessment of Vocational Education. I have met several times with Ms. Esquivel, Director of the Office of Bilingual Education and Minority Affairs, to discuss issues of mutual concern. The Directors of the Office of Special Education Programs and the Compensatory Education Programs meet regularly to discuss areas of potential coordination between the two programs. We are also developing, or planning to develop, coordinated activities on projects of mutual interest with the Drug-Free Schools and Dropout Prevention programs.

EDUCATION OF THE HANDICAPPED ACT REAUTHORIZATION

Mr. Natcher: The administration proposes to restructure the special purpose program through new authorizing legislation. What is the status of that legislation?

Dr. Davila: On November 16, 1989, the Senate passed S. 1824, which would reauthorize expiring programs under the Education of the Handicapped Act through fiscal year 1994. The House has developed proposed draft legislation to reauthorize the act. On February 20 and 21, the House Subcommittee on Select Education held hearings regarding this reauthorization.

NEW DEFINITIONS

Mr. Natcher: The new legislation proposes changing the definition of "children with disabilities" by adding autism and head injuries to the qualifying conditions. Will this result in an expansion in the number of eligible students?

Dr. Davila: Children with autism and many children with head injuries are now being served in special education under the category of "Other Health Impaired". In addition, those children with head injuries who meet the criteria for learning disabled are being served under that category. Thus, we would not expect that this change in definition would result in an expansion in the number of eligible students. It would, however, increase the reporting burden on States and local educational agencies, which would be required to provide child count data for an additional two categories.

REQUEST FOR DEAF-BLIND PROJECTS

Mr. Natcher: Assuming the new special purpose legislation is enacted, does the Department intend to request separate funding for deaf-blind projects?

Dr. Davila: The Department intends to request separate funding under the Deaf-Blind Projects activity and the Severely Handicapped Projects activity.

DEFINITION OF LEARNING DISABLED

Mr. Natcher: According to the Twelfth Annual Report to Congress on the Implementation of the Education of the Handicapped Act, 49 percent of the children served under the act are classified as learning disabled. I understand that each individual State determines the definition of "learning disabled". How much variation in incidence do we see among the States?

Dr. Davila: The regulations implementing the Grants to States program define "specific learning disability" as a disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, which may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations. The term includes such conditions as perceptual handicaps, brain injury, minimal brain disfunction, dyslexia, and developmental aphasia. The term does not include children who have learning problems which are primarily the result of visual, hearing, or motor handicaps, of mental retardation, of emotional disturbance, or environmental, cultural, or economic disadvantage.

The Federal regulations also specify the general criteria that States must use in determining the existence of a specific learning disability. First, a multidisciplinary team must determine that a child does not achieve commensurate with his or her age and ability levels in one or more of the following areas: oral expression, listening comprehension, written expression, basic reading skill, reading comprehension, mathematics calculation, or mathematic reasoning. Furthermore, the team must find that a child has a severe discrepancy between achievement and intellectual ability in one or more of these areas.

Although States must use definitions and criteria consistent with the Federal regulations, States have substantial flexibility in how they implement these definitions and criteria. For example, each State may establish its own basis for determining whether a child has a "severe discrepancy" between ability and achievement. As a result, there is some variation in incidence among the States. For example, Georgia, Kentucky, and Louisiana identify less than 3 percent of their children ages 3 through 17 as learning disabled, while Alaska, Delaware, and New Jersey identify over 6 percent as learning disabled.

COST OF SERVING LEARNING DISABLED STUDENTS

Mr. Natcher: Does it cost more or less to provide services to a learning disabled student as compared to the other handicapped students?

Dr. Davila: Findings from the Special Education Expenditures Study, which was completed in 1988, indicate that it costs less to serve learning disabled students as compared to students with other handicapping conditions. For example, the Study found that it cost an average of $1,643 per child to serve learning disabled students in resource rooms. The costs of serving children in resource rooms was less only for children who had been identified as speech impaired. The average cost per child for serving learning-disabled children in self-contained classrooms was $3,083, less than the costs of serving all other children with other handicapping conditions.

EFFECT OF CATEGORIZING CHILDREN AS LEARNING DISABLED

Mr. Natcher: Is it to a State's financial advantage to liberally categorize students as "learning disabled"?

Dr. Davila: No. It probably is not to a State's financial advantage to liberally categorize students as "learning disabled". The costs of providing special education and related services are in addition to the costs of providing regular education. The Federal share of the excess costs of providing special education and related services to all handicapped students is about 7 percent. The Federal contribution, therefore, represents only a small percentage of the excess costs. States and local educational agencies provide, by far, the major portion of the excess costs for educating handicapped students, including learning disabled students.

TEACHER RECRUITMENT AND RETENTION

Mr. Natcher: Are there special incentive programs to recruit and retain special education teachers?

Dr. Davila: Approximately 60 percent of training funds go directly to student support. Insofar as the fellowships supported by the Special Education Personnel Development program may induce individuals to enter special education fields who otherwise would not, one could argue that the overall program provides incentives to recruit special education teachers. Though we do not have hard data, many university programs tell us that without our fellowships, recruitment would be far more difficult.

In addition, some States have implemented their own incentive programs to recruit and retain special education teachers. For example, Florida and California have active State-funded fellowship programs for recruiting teachers in shortage areas including special education.

TEACHER SHORTAGES

Mr. Natcher: What type of longitudinal data do you have on teacher shortages in the field of special education.

Dr. Davila: The most stable and reliable source of data on teacher shortages over the years has been the periodic NCES studies of teacher supply, demand, attrition, and other factors. While these are probably the hardest data available, their usefulness has been limited to a large extent by not being sufficiently detailed to use in making specific program decisions. For example, for several years special education has been determined to be the top or second largest shortage area, but these reports have not typically broken out information by handicapping condition, grade level, or type of teaching situation.

With grant assistance from the Office of Special Education Programs, the University of Wisconsin-Whitewater has developed a model to enable State educational agencies to measure teacher supply and demand and to predict future teacher needs. Based on a sample of 13 States, this model was found to be adaptable across data systems currently in use in most States. In the States participating in the study, all showed varying but generally substantial degrees of need for special education teachers and related services personnel across several disability areas.

The Department collects annual data from the States on the need for special education personnel. States report each year on teacher demand as a function of unfilled vacancies and the number of personnel who are are not fully certified. Generally, the data have not been regarded as having great precision. However, they do provide at least a minimal basis for determining needs by State and by handicapping condition for teachers and related services personnel.

States are also required to maintain comprehensive systems of personnel development. These systems have the potential to provide substantial data related to teacher need. Unfortunately, to date, those data have proved to be very uneven, and therefore minimally useful in planning and project selection. In addition, the majority of the attention in the systems has been on inservice training needs rather than on preservice. A project supported at the University of Georgia is developing a set of very comprehensive planning, processing, and reporting guidelines which should substantially improve States' ability to economically supply better data. The Department is also planning increased technical assistance to States to improve their systems.

The National Clearinghouse on Professions in Special Education, operated by the Council for Exceptional Children and the National Association of State Directors of Special Education, also does substantial work in this area, and has done some collating and reporting of supply and demand data.

GAO REPORT ON OSERS' MANAGEMENT

Mr. Natcher: The GAO report states that staff vacancies and staff in acting management positions present serious problems within the Office of Special Education. Do you agree with this statement?

Dr. Davila: I agree that staff vacancies and the number of acting positions have presented serious problems for the efficient management of the Office of Special Education and Rehabilitative Services (OSERS). We have been working hard to solve these problems and are making good progress.

Regarding staff vacancies, OSERS has been well below its full-time equivalent (FTE) ceiling for several years. However, we are improving our record. In 1989, OSERS lost 60 employees and hired 64, resulting in an on-board FTE usage of 397. We are making every effort to hire employees at an increased rate and retain those employees, once hired. In addition, the Department is proposing an increase in the FTE ceiling for OSERS of six above the 1990 level, for a total of 416 FTE.

Of the 22 key management positions in the Office of Special Education Programs (OSEP), 8 positions were vacant or filled by people in an acting capacity as of January 1990. Recruitment actions are now in progress for all these positions. OSEP has recently filled 3 key management positions on a permanent basis, one of which is the critical position of Director, Division of Assistance to States. In addition, the Rehabilitation Services Administration has recently filled several important regional office positions.

The GAO report stated that 21 of 56 key positions were vacant or filled on an acting basis in February 1988 and that 14 of these positions were still vacant in February 1989. As of February 1990, 12 of these positions remained vacant, but personnel actions are now in progress to fill these positions.

VACANCIES IN OSERS

Mr. Natcher: Under the Department's Program Administration account, the Office of Special Education and Rehabilitative Services is allocated 410 full time equivalents (FTE) in fiscal year 1990, an increase of 13 FTE over fiscal year 1989. How many vacancies do you have and on the average, how long does it take to fill a vacancy?

Dr. Davila: Based on the 406 employees on board, as of January 1990, the Office of Special Education and Rehabilitative Services has filled 397 of the 410 FTEs allocated for 1990. Therefore, 13 FTEs remain to be filled. We have a number of personnel actions in progress to fill the remaining vacancies. On average, it takes about 3 months to fill a vacancy.

EXTENDED AVAILABILITY FOR PRESCHOOL GRANTS

Mr. Natcher: The Department is requesting extended availability of $8,000,000 appropriated in fiscal year 1989 for bonus payments in the Preschool Grant program. If the Congressional Budget Office scores this request as a fiscal year 1991 outlay, would the Department still place a priority on the funding?

Dr. Davila: The administration's request for extended availability at the State level for $8,000,000 of Preschool Grants funds assumes outlays as follows:

1990	$961,000
1991	5,439,000
1992	1,440,000
1993	160,000

We do not believe that it would be appropriate for the Congressional Budget Office to score the entire $8,000,000 as a fiscal year 1991 outlay. However, regardless of the scoring of outlays, the inclusion of appropriation language to extend availability of these funds at the State level would remain a priority of the Department.

GRANTS FOR INFANTS AND FAMILIES

Mr. Natcher: Under Part H, the Grants for Infants and Families, States are required to have fully implemented statewide systems by the fifth year of participation in order to continue to participate in the program. How many States will have fully implemented systems for early intervention by the 1991-1992 school year?

Dr. Davila: All States are participating or have stated that they would be participating in 1989, the third year of the five-year phase-in period for the Grants for Infants and Families program. Currently, we are aware that at least three States are considering not participating in the program in 1990 and that two additional States are considering not participating in the program in 1991. If all other eligible entities continue to participate in the fourth and fifth years of the phase-in period, we would expect the remaining 53 eligible entities to have their statewide systems of early intervention services fully implemented in the 1991-1992 school year. However, until we receive applications for 1991 funds, we will not know how many States, (including those States now considering not participating in the program) will have fully implemented their statewide systems of early intervention services.

ESTABLISHMENT OF OSERS' GOALS

Mr. Natcher: Did the change in Administrations result in the establishment of new goals in the Office of Special Education and Rehabilitative Services?

Dr. Davila: Yes. The Office of Special Education and Rehabilitative Services (OSERS) has recently developed a new mission statement and has advanced three new themes emphasizing potential, participation, and productivity as a basis for a coordinated direction throughout the three components. OSERS is currently developing a series of specific program objectives relating to the three themes.

TRANSITION

Mr. Natcher: Are enough resources devoted to transitional programs for the students that "age-out" of the education system?

Dr. Davila: Transitional programs are not universally available for children with disabilities before they age-out of the special education system. Likewise, there is no assurance of services after children age-out of the education system. The availability of such services is often dependent on access to nonprofit and local public agencies.

Mr. Natcher: Doesn't the proposed legislation remove the upper age restriction?

Dr. Davila: The House draft proposed legislation reviewed by the Department and S. 1824 passed by the Senate on November 16, 1989, include provisions to require funding for competitive transitional services awards in response to joint applications from State education and vocational rehabilitation agencies. These awards would support activities for some individuals who have "aged-out" of the educational system.

ADVISORY ASSISTANCE SERVICES REQUEST

Mr. Natcher: The fiscal year 1991 request for Advisory and Assistance Services for the Education for the Handicapped more than doubles over fiscal year 1990, while the request for the Rehabilitation accounts decreases by about 40 percent. What can you tell us about these shifts?

Dr. Davila: The estimate in the 1991 Congressional Justifications inadvertently excluded funding for a number of special studies from the total for Advisory and Assistance Services for 1990 and 1991 under the Education for the Handicapped account. We currently estimate $2,586,000 in 1990 and $2,497,000 in 1991 for these activities under the Education for the Handicapped account. The reduction in the Rehabilitation Services and Handicapped Research account is due to the completion in 1990 of several studies that were initiated in prior years.

DATA ON CHILDREN SERVED UNDER GRANTS FOR INFANTS AND FAMILIES

Mr. Natcher: For the third year, the data on the number of infants and toddlers with handicaps who are receiving early intervention services under the Education for the Handicapped law is very inconclusive. When will an accurate system of reporting be developed?

Dr. Davila: State lead agencies are not required to have the statutory components of an early intervention system in place until the fourth year of their participation in the Grants for Infants and Families program; that is, in 1990. A data system is one of these required components. States are currently developing their data systems and, therefore, do not yet have the capability to report accurately the number of infants and toddlers with handicaps who are receiving early intervention services. The first data to be reported after the data systems are in place will appear in the "Fourteenth Annual Report to Congress", which will be delivered to Congress in January 1992.

COLLABORATION BETWEEN OSERS' COMPONENTS

Mr. Natcher: How much collaboration is there between funding components within the Office of Special Education and Rehabilitative Services?

Dr. Davila: We are working hard to increase collaboration between the Office of Special Education (OSEP), the Rehabilitation Services Administration (RSA), and the National Institute on Disability and Rehabilitation Research (NIDRR). For example, task forces, composed of staff from each component, are collaborating on issues related to transition and technology, and a task force, composed of staff from OSEP and NIDRR, has been established to collaborate on issues related to early childhood. I hold weekly joint meetings with the heads of the three components to explore issues of mutual interest, including ways in which they can support specific initiatives. To ensure a coordinated approach to program planning, I have instituted a process by which the draft work statements for new activities developed by one of the components in OSERS is reviewed by the other two. In addition, I intend to establish a joint priority setting process that will provide for coordinated development of new program priorities. The heads of the three components have also established an informal process of regular meetings on both general issues of mutual concern and specific topics that cut across components. I have asked Deputy Assistant Secretary Vader to participate in these meetings and to bring an office-wide perspective to the issues under discussion.

PRESCHOOL GRANTS AND EARLY CHILDHOOD EDUCATION PROGRAM DIFFERENCES

Mr. Natcher: Would you clarify the difference between the types of activities funded by the State preschool program and the discretionary early childhood education programs. How do the eligibility criteria differ?

Dr. Davila: The State preschool program, entitled the Preschool Grants program, is a formula grant program which provides funds to assist States in meeting the costs of special education and related services for handicapped children aged 3 through 5 years. States receive funds for these children under both the Grants to States and the Preschool Grants programs. State educational agencies in the States and territories are the grantees. Preschool Grant awards are based on a State's December 1 child count of the handicapped three, four, and five year old children they are serving.

A minimum of 75 percent of a State's Preschool Grant award must be distributed to local educational agencies and intermediate educational units on a pro rata basis. Subgrantees must use the funds to supplement State and local funds for providing special education and related services to preschool-aged children with handicaps. Funds are used for a variety of activities, including personnel, equipment, and the provision of related services.

Early Childhood Education program funds are awarded on a competitive basis in accordance with priorities that are announced in the Federal Register. Eligible applicants are public and private nonprofit agencies and organizations. Projects include experimental projects, demonstration projects, outreach projects, research projects, research institutes, personnel training projects, and technical assistance. While the Preschool Grants program is limited to children aged 3 through 5 years, projects funded under the Handicapped Children's Early Education Program can deal with issues related to children with handicaps from birth through age eight.

DEAF-BLIND PROJECTS PROPOSED LEGISLATION

Mr. Natcher: What provisions are made for deaf-blind programs in the proposed legislation?

Dr. Davila: The Senate bill includes substantial changes to the authorization for the deaf-blind program. Included in these changes are the following:

- Early intervention services are specifically included in addition to special education services.
- Awards are authorized to assist local education agencies in addition to State education agencies.
- Technical assistance regarding transitional services that were previously limited to those attaining the age of 22 is expanded to all individuals.
- A new authority to support technical assistance, training, replication, pilot, research, development, demonstration, and parent involvement projects for deaf-blind children is added.
- Awards to single and multi-State centers to provide technical assistance and pilot projects are specifically authorized.
- An award to disseminate materials and information on effective practices is required.
- Specific authority for extended school year demonstrations for severely disabled, including deaf-blind, children is moved to section 624, Programs for Severely Handicapped Children.
- Authority to support projects for the purposes of section 624, Programs for Severely Handicapped Children, is removed.

The Department has seen only a proposed draft of the House bill. Since this draft is still being revised, it would be premature to comment on its content at this time.

GEOGRAPHIC DISTRIBUTION OF DEAF-BLIND CHILDREN

Mr. Natcher: Doesn't the relative infrequency and the geographical dispersion of deaf-blind children indicate that Federal targeted assistance may still be necessary to insure that service levels are adequate?

Dr. Davila: State and local governments spend about $50 billion per year to educate children with disabilities. The Education of the Handicapped Act requires that these funds be used to provide all children with disabilities, including those who are deaf-blind and those with other severe and low incidence conditions, with a free and appropriate public education. The fact that children with these types of conditions are disbursed geographically or have low incidence rates does not provide the States with an excuse to provide inadequate services.

The deaf-blind program predates the Education of the Handicapped Act requirements to provide free appropriate public education to all children with disabilities. It was enacted at a time when many States were providing few services to these children. However, that is no longer the case, and the Federal

Government should no longer be viewed as a source of direct services for these children.

We believe that the Federal Government has an appropriate and continuing role to provide technical assistance and training resources to the States to aid them in better addressing the needs of deaf-blind and other children with severe and low incidence conditions. We also believe that it is important to improve the systems through which the Federal Government provides these resources.

DEAF-BLIND AND OTHER SEVERELY HANDICAPPED RESEARCH AND DEMONSTRATIONS

Mr. Natcher: What are both the advantages and disadvantages of combining deaf-blind and severely handicapped research and development?

Dr. Davila: There are numerous advantages to combining deaf-blind and other severely handicapped research and development activities. These advantages generally relate to the small size and diversity of the deaf-blind population.

There are almost 6,000 deaf-blind children in the United States. These children are distributed throughout the country and range in age from new born through age 21. They also cover a wide range of severity. For example, about 13 percent of these children have only mild hearing loss while 35 percent have severe loss. Over 85 percent of deaf-blind children also have additional disabilities. Our State and multi-State projects report that 56 percent of the deaf-blind children they serve are also mentally retarded.

Joint projects would allow projects to serve deaf-blind and other severely handicapped children who are selected based on their individual needs rather than by categorization. For example, the needs of a deaf-blind child with mild visual problems and no mental impairment might be most closely aligned with those of children of similar age and ability who are deaf and orthopedically impaired.

Funding joint projects also helps avoid the segregation of deaf-blind children; instead, jointly funded projects allow deaf-blind children to relate to other children.

The primary objection to joint activities seems to be that fewer resources might be directed to deaf-blind children. Currently, the Deaf-Blind Projects program includes about the same level of funding for research and demonstrations as is available for all other severely handicapped children combined under the Severely Handicapped Projects program. Deaf-blind children also benefit from many of the projects funded under the Severely Handicapped Projects program since all deaf-blind children are considered severely handicapped.

Another objection stems from the belief that when a child has hearing and vision problems that cannot be addressed through programs solely for hearing impaired or visually impaired children, that child is so unique that his or her needs cannot be met in programs that include other severely handicapped children. Our experience shows that while deaf-blind children have some unique needs, there are many strategies and curricula that work effectively for deaf-blind and other severely handicapped children.

The Department believes that the overall impact of the combination of activities would ultimately be in the best interest of deaf-blind children. The trade-off would be fewer lower quality projects that are conducted in segregating situations, focused solely on children who are deaf-blind, against more higher quality projects that are conducted in integrating situations with children with other severe handicaps.

DESCRIPTIVE VIDEO

Mr. Natcher: Your budget materials indicate that you have concerns about the commercial viability of descriptive video. Would you tell us in more detail the basis for these concerns.

Dr. Davila: There are several issues that must be addressed before we can determine the commercial viability of descriptive video services (DVS). For example:

1. The size of the target population is not known and could range from 300,000 to 8,400,000 children.

2. If DVS is broadcast through the Separate Audio Program channel of standard stereo televisions, stations using the separate audio channel for bilingual broadcasts will face conflicting choices regarding competing uses.

3. Currently, the major commercial networks are not equipped to broadcast DVS. We do not yet know the potential financial investment that a network must make in equipment to broadcast and transmit DVS. Similarly, because with DVS each station must also invest in special equipment (unlike with closed captions), it is not clear what investment local stations must make.

4. Since alternative technical approaches are in use and being developed in addition to the Separate Audio Program channel approach, it is not clear which approach would be the most cost effective.

We anticipate that the study currently underway will provide more information on all of these issues.

LIMITED-ENGLISH-PROFICIENT CHILDREN WITH HANDICAPS

Mr. Roybal: What programs are included in your budget which address the misplacement of English deficient students into special education classes?

Dr. Davila: We have no programs that address the misplacement of limited-English-proficient (LEP) children into special education classes. We also have no way of knowing how many LEP children in special education have been misplaced. We do not believe, however, that large numbers of LEP children have been misplaced into special education classes.

The Department has estimated that as of January 1986, there were between 1.2 and 1.7 million LEP children, aged 5 through 17, in the United States, with other estimates falling within this range (from 1.3 to 1.5 million). Using the Department's estimate and based upon Census Bureau population projections, LEP children represented approximately 2.7 to 3.8 percent of the 5 through 17 population in 1986. The 1986 Elementary and Secondary Civil Rights Survey (the most recent data available) collected data on the number of LEP children in special education in the following four categories: mentally retarded, speech impaired, seriously emotionally disturbed, and specific learning disability. LEP children represented a total of 41,597, or 2.2 percent, of all children included in the sample under these four categories. They represented almost 2 percent of children categorized as mentally retarded, 2.4 percent of children categorized as speech impaired, 0.7 percent of children categorized as seriously emotionally disturbed, and 2.5 percent of children categorized as having a specific learning disability. Although some LEP children may be misplaced, the percentage of LEP children in special education does not suggest that these children are overrepresented and, therefore, being misplaced into special education.

For this reason, we are concentrating our resources on activities that will improve the quality of services that LEP children receive. For example, under the Office of Special Education's (OSEP's) Innovation and Development program, we have a new research priority for 1990 that will support three-year projects to: (1) identify the cultural and language features of classrooms and related service settings that detrimentally affect the delivery of educational services to these children; (2) develop and test strategies, including personnel training strategies, for adapting the delivery of educational services to better accommodate the cultural and language patterns of these children; and (3) develop and test strategies for enhancing the development of the language, social, and survival skills necessary for functioning and learning in special and regular educational and community settings. This priority will continue into 1991 and 1992. Under OSEP's Early Childhood Education program, we support demonstration and outreach projects dealing with children, aged birth through eight years, with handicaps who are from culturally and linguistically diverse backgrounds. Under the Special Education Personnel Development program, we support a number of grants that provide preservice training in bilingual special education.

BILINGUAL PROGRAMS FOR CHILDREN WITH HANDICAPS

Mr. Roybal: What bilingual programs are in place to address the needs of English deficient handicapped children?

Dr. Davila: The Office of Bilingual Education and Minority Languages Affairs is supporting a project for Hmong and Hispanic limited-English-proficient (LEP) children, in kindergarten through grade 6, who are having learning problems and who may need special education. One purpose of the project is to improve the assessment of LEP children for special education services. The Office of Special Education (OSEP), under its Early Childhood Education program, is supporting four demonstration and two outreach projects dealing with the needs of infants and toddlers from families with limited English proficiency and the needs of LEP preschoolers. OSEP is also supporting a number of preservice personnel preparation grants that include bilingual special education.

COORDINATION BETWEEN OSERS AND OBEMLA

Mr. Roybal: What formal coordination is there between the Office for Special Education and Rehabilitative Services and the Office for Bilingual Programs?

Dr. Davila: Since coming to the Department of Education, I have met with Ms. Esquivel, Director of the Office of Bilingual Education and Minority Language Affairs, several times to discuss issues of mutual concern and to improve coordination between our programs.

SECONDARY EDUCATION NEEDS

Mr. Roybal: Do you agree that the special education needs of students at the secondary level are not yet properly addressed? How does your office plan to deal with this problem?

Dr. Davila: Data submitted under Part B of the Education of the Handicapped Act and follow-up studies on youth who leave secondary schools indicate that many youth with disabilities leave special education programs without the skills necessary for competitive or supported employment.

The Department has continued to support numerous efforts under the Secondary and Transitional Services program and other programs to improve services to students at the secondary level. These efforts have included: improving cooperation between vocational education, special education, and vocational rehabilitation agencies; enhancing community participation through social skills training; and providing job training and placements to youth prior to leaving school to enable them to use school-based supports in making their initial transitions to the world of work.

The Department will continue to support these efforts, and identify and address emerging issues related to the transition of secondary students with disabilities.

HANDICAPPED DROPOUT RATE

Mr. Roybal: The dropout rate among handicapped students is greater than the rest of the population. What coordination is there between your office and the new drop-out prevention initiative to address this problem?

Dr. Davila: The Office of Special Education Programs has been working with the Office of Elementary and Secondary Education to ensure that youth with disabilities are considered an integral part of all activities aimed at dropout prevention. Additionally, the Office of Special Education Programs supports research and demonstration efforts to better understand the problem and develop proactive services to attempt to reduce the numbers of students with disabilities dropping out. The results of these efforts will be shared with other offices.

DROPOUT RATES FOR MAINSTREAMED AND NONMAINSTREAMED CHILDREN

Mr. Early: The Department of Education states that children with disabilities dropout at twice the rate as nonhandicapped children. Is there any difference in the dropout rate between handicapped children who are mainstreamed and children who attend schools strictly for the handicapped?

Dr. Davila: Data on disabled and nondisabled students support the statement that children with disabilities drop out at about twice the rate of nondisabled students. Cohort data from the Office of Special Education Programs' National Longitudinal Transition Study on a sample of 3,045 special education exiters, reported a dropout rate of 36 percent for school years 1985-86 and 1986-87. Cohort data from the National Center for Education Statistics' High School and Beyond Study, describing a sample of 1980 regular school students (primarily nonhandicapped students and some mildly impaired handicapped students), reported a dropout rate of 17.3 percent.

While there are no national data available, several subnational studies show that disabled students who attend separate schools have lower dropout rates than students who are mainstreamed into regular education classes.

TECHNOLOGY FOR THE DISABLED

Mr. Early: Advanced telecommunications and new technology helps bring down many of the barriers brought about by certain disabilities. How does this budget reflect the necessity to bring together the disabled with new technology other than the Special Education Technology Program?

Dr. Davila: The budget request includes an increase of $5,186,000, from $14,814,000 to $20,000,000, for the Technology Assistance program within the Rehabilitation Services and Handicapped Research account. This new program provides grants to States to assist them in developing and implementing statewide programs that facilitate the provision of assistive devices and services to persons with disabilities of all ages. Funds may be used to identify technology-related needs, coordinate resources for delivering technology-related services, provide technology-related training and technology assistance to consumers and service providers, disseminate information on technology devices, and provide assistive devices and services.

Education for the Handicapped projects which will be supported with funds under activities other than the Special Education Technology program include:

- projects that develop artificial intelligence and other computer technology that will assist children who are deaf to learn English.

- The use of interactive videodisc and associated instructional materials to teach phrases in signed English to people with hearing impairments and their hearing associates.
- The development of an integrated software system for graphics-based computer system for people with blindness.
- A project that develops a tactile signing system for deaf-blind children.

MERGER OF DEAF-BLIND AND SEVERELY HANDICAPPED ACTIVITIES

Mr. Early: Included in the administration's fiscal year 1990 appropriation request was a change in authorizing language permitting the consolidation of the deaf-blind account with the severely handicapped account. I strongly disagree with this proposal. I would like to know why the administration changed its opinion on this issue of combining the two programs.

Dr. Davila: The administration has not yet submitted a fiscal year 1991 request by budget activity due to a lack of authorizing legislation. As soon as reauthorizing legislation is enacted, a budget request by activity will be submitted to Congress. Amounts requested for specific activities will be determined at that time. The Department expects to request separate funding for the two activities because the Congress has not responded favorably to the proposal to merge the two programs.

DRUG-EXPOSED CHILDREN AND LEARNING DISABILITIES

Mr. Hoyer: The Budget Justification indicates that 49 percent of 6-21 year olds served are classified as learning disabled, and that more than half of the 102,000 increase in children served in 1989 were learning disabled.

Can you further define this category of the client population for the Committee, and to what extent does it include children affected by exposure to substance abuse?

Dr. Davila: The regulations implementing the Grants to States program define "specific learning disability" as "a disorder in one or more of the basic psychological processes involved in understanding or in using language, spoken or written, which may manifest itself in an imperfect ability to listen, think, speak, read, write, spell, or to do mathematical calculations. The term includes such conditions as perceptual handicaps, brain injury, minimal brain disfunction, dyslexia, and developmental aphasia. The term does not include children who have learning problems which are primarily the result of visual, hearing, or motor handicaps, of mental retardation, of emotional disturbance, or environmental, cultural, or economic disadvantage" (34 CFR 300.4(b)(9)). As this definition indicates, learning disabled children can exhibit a variety of impairments which require special education.

To date, we have no evidence of any relationship between substance abuse and learning disabilities. Research on the influence of prenatal exposure to substance abuse has thus far focused primarily on medical issues, and on children with severe and profound mental and physical sequelae. As this population reaches school age, it is quite likely, however, that learning disabilities may be encountered among some of the children who do not exhibit severe and profound disorders.

USES OF THE PRESCHOOL GRANTS SET-ASIDE

Mr. Hoyer: Is it the case that States may retain up to 25 percent of these funds, and do we know how they are spending it?

Dr. Davila: Under section 619(c)(2) of the Education of the Handicapped Act, as amended by P.L. 99-457, a State may retain up to 25 percent of its Preschool Grants award. Of this amount, up to 20 percent can be used for the planning and development of a comprehensive service delivery system for birth through five year old children with handicaps, and/or for direct and support services for three through five year old children with handicaps. Up to 5 percent can be used for administrative expenses related to the grant. In their applications and annual performance reports, States have indicated that they are using their set-aside funds for activities such as (1) parent training, (2) regional early childhood resource and assistance centers in the State, (3) discretionary grants to local educational agencies or intermediate units that have experienced unusual growth in numbers of preschool children with handicaps, (4) workshops and conferences for special education and related services staff, and (5) interagency coordination and planning for birth through five year old services.

COSTS OF SERVING HANDICAPPED PRESCHOOLERS

Mr. Hoyer: The request provides for a 10 percent increase in the per child expenditure bringing it up to $726 per child. Taken together with the State Grant funds, the per child expenditure provided by the Department for Handicapped children is almost $1,200.

Does the Department have any estimates of the average excess cost associated with providing these children an appropriate free public education, or a percentile breakout of these costs across the country?

Dr. Davila: The Special Education Expenditures Study, which was completed in 1988, collected data on costs for preschool programs for children from birth through age five, in a sample of districts across the United States. The average total expense of their education equalled $5,723 for the 1985-86 school year, or 2.1 times the average cost of educating regular education pupils in pre-kindergarten through 12th grade. The estimated excess cost for preschool special education for children with disabilities was $3,037 for the 1985-86 school year.

However, these data must be received cautiously. The sample was not limited to children aged three through five years, and the inclusion of infants and toddlers in the sample is likely to have affected cost findings. In addition, the survey examined practices in the 1985-86 school year, before the passage of the 1986 Amendments to the Education of the Handicapped Act (EHA), which provided incentives to encourage States to expand services to more handicapped preschoolers. As a result, the cost findings in the study may not reflect accurately the costs of educating handicapped children aged three through five years, particularly after the passage of the 1986 Amendments to the EHA.

DRUG-EXPOSED CHILDREN

Mr. Hoyer: The superintendent of the Prince George's County schools has indicated to me that in some schools, between 20 and 30 percent of the preschoolers entering kindergarten are suffering from developmental and learning problems because of parental substance abuse. This is a critical problem that will be a nightmare for our instructional system and our society if we do not mobilize and prepare.

Do you have estimates of the proportion of Federal funds in handicapped programs that are targeted to these children?

Dr. Davila: We have no estimate of the total proportion of Federal funds that are now targeted to or used for drug-exposed children under the various Federal programs that are authorized to serve handicapped children, including the programs administered by the Department of Health and Human Services. Since States are not required to provide this information, there are also no data regarding what proportion of funds States are using under the Chapter 1 Handicapped program, the Grants to States program, and the Preschool Grants program to serve these children. The Early Childhood Education program is providing about 3 percent of its 1990 funds (about $700,000) to support five demonstration and outreach projects dealing with issues related to the needs of drug-exposed handicapped children.

The Early Childhood Education program is planning to fund additional activities in 1991 and 1992. In 1991, the program will provide $800,000 for a new multi-year Research Institute to develop, field test, and disseminate new or improved interventions for children who are developmentally delayed, or at risk, because of maternal drug or alcohol abuse. The program is also developing several new initiatives for 1991 and 1992 which will deal with, or include, issues related to the needs of drug-exposed children. In its 1991 budget, the Department of Health and Human Services has requested an increase of $100,000,000 in the drug portion of the Alcohol, Drug Abuse, and Mental Health Block grant; $6,000,000 of this increase would be used for the non-medical needs of drug-exposed children.

Mr. Hoyer: What budget and program planning is the Department engaged in to help deal with this problem over the next five years?

Dr. Davila: In fiscal year 1991, we have included language in our Early Childhood Education program model demonstration and outreach priorities that particularly invites applications for

projects that will develop and disseminate model programs for children who were prenatally exposed to drugs.

Also in fiscal year 1991, we will establish a new multi-year early childhood institute that will conduct a program of research and develop and field test interventions for children, aged birth through five years, who were prenatally exposed to street drugs, such as crack cocaine, and children born with Fetal Alcohol Syndrome. We have also included language in our Early Childhood Education priorities that particularly invites applications for projects that will develop and disseminate model programs for drug-exposed children.

In fiscal year 1992, we are planning to include language in our Early Childhood Education model demonstration priority that particularly invites applications for projects that will develop programs for drug-exposed children who are three through five years of age.

CHILDREN AT RISK FOR DEVELOPMENTAL DELAY

Mr. Hoyer: Do you have any data on the extent to which States are serving children "at risk for developmental delay"?

Dr. Davila: Many States are still working on their definitions of eligible children under the Grants for Infants and Families program. Because States are not yet required to have completed their definitions or to report children served, there are not reliable data on the extent to which the States are serving at-risk children.

States are required to provide their definitions of eligible children by the fourth year of their participation in the program; that is in 1990. Therefore, a clearer picture of how many States will be serving at-risk children should emerge after the Department receives State applications for 1990 awards.

DEFINITION OF AT-RISK INFANTS AND TODDLERS

Mr. Hoyer: Can you tell us something about how States are defining "at risk for developmental delay" and how likely the children served under these programs are likely to be at risk because of parental substance abuse?

Dr. Davila: A 1988 study on the definitions of eligible children States were developing under the Grants for Infants and Families program found that approximately 28 States had developed a draft definition of eligible children, and, of those, about 14 were considering including at-risk children. The study found that States were considering both biological and environmental factors as risk criteria and that there was extraordinary variation from State to State as to how States were defining "at risk for developmental delay." Nine States included "parental substance abuse" as an environmental risk factor, while two States included "chemically dependent mother" as a biological risk factor. Thus, 11 of 28 States with a draft definition of eligible children had included children at risk because of parental substance abuse. Since the completion of that study, however, we have been informed by officials in several States that they may exclude at-risk children in their definitions of eligible children. Therefore, we do not know at this time how many States will ultimately include at-risk children in their definitions, how "at risk of developmental delay" will finally be defined by States that do include them, and to what extent drug-exposed children will be included in the definition of at-risk children.

PARENTAL SUBSTANCE ABUSE

Mr. Hoyer: To what extent do the Department's research efforts focus on identifying crack babies or other infants and toddlers who are at risk of developmental delay because of parental substance abuse?

Dr. Davila: In the past few years the Department has supported several projects that have addressed the problems of identifying and serving drug-exposed infants and toddlers. In addition to individual projects, the Department established an early childhood research institute in 1987 to study State policy development and implementation related to the Grants for Infants and Families program. This institute is studying States' policy development activities related to eligibility criteria and child-find procedures, both of which include identification issues related to drug-exposed infants and toddlers.

In fiscal year 1991, we will establish an early childhood institute that will conduct a program of research specifically related to drug-exposed children from birth through 5 years of age. This institute will develop and field test interventions for two populations: children prenatally exposed to drugs, particularly street drugs such as crack cocaine, and children born with Fetal Alcohol Syndrome. A second early childhood institute planned for fiscal year 1991 will conduct a program of research in several States on issues related to the provision of early intervention services. The institute will examine eligibility criteria, identification instruments and procedures, funding sources for service programs, interagency collaboration, and service delivery patterns. This effort should produce important information about the children, including drug-exposed children, eligible for and receiving services as States fully implement their statewide systems of early intervention services under the Grants for Infants and Families program.

USE OF ADDITIONAL RESOURCES FOR DRUG-EXPOSED CHILDREN

Mr. Hoyer: If additional resources were provided to the Department for evaluating and supporting local and State education efforts to prepare for the instructional demands and other needs of the children who have been placed at risk by their substance abusing parents, how would you recommend these funds be used most effectively?

Dr. Davila: We believe that resources could be used most effectively for additional research, demonstration, outreach, and personnel training activities, particularly to develop interventions for children aged birth through eight years old. We believe that interventions to help drug-exposed infants and toddlers could reduce their later need for special education. Drug-exposed children are now beginning to enter the educational system. Yet, little research has been done to identify the needs of these children or the approaches that can best meet their needs. In addition, few early intervention, preschool, or elementary school teachers have been trained to work with these children.

EDUCATION FOR THE HANDICAPPED

For carrying out the Education of the Handicapped Act, [$2,083,776,000] $1,955,556,000, of which [$1,564,017,000] $1,615,125,000 for section 611, [$255,000,000] $257,730,000 for section 619, and [$80,624,000] $82,701,000 for section 685 shall become available for obligation on July 1, [1990] 1991, and shall remain available until September 30, [1991] 1992: Provided, That funds appropriated under section 619 for fiscal year 1989 shall remain available for obligation by States until September 30, 1992. 1/ (Department of Education Appropriations Act, 1990.)

Explanation of Language Changes

1/ Language extending the period of availability for States to obligate 1989 funds has been added. This language would permit States that receive funds remaining from the 1989 appropriation as their 1990 allocations to obligate these funds for the same period of time as they would funds allocated from the 1990 appropriation.

Education for the Handicapped

Language Analysis

Language Provision	Explanation
...$1,955,556,000, of which [$1,564,017,000] $1,615,125,000 for section 611, [$255,000,000] $257,730,000 for section 619, and [$80,624,000] $82,701,000 for section 685 shall become available for obligation on July 1, [1990] 1991, and shall remain available until September 30, [1991] 1992...	This language specifies the amounts for the formula grants to States under the Grants to States program (section 611), the Preschool Grants program (section 619), and the Grants for Infants and Families program (section 685), and makes these funds available for the time period that encompasses the 1991-92 school year.
...Provided, That funds appropriated under section 619 for fiscal year 1989 shall remain available for obligation by States until September 30, 1992.	In 1989 Congress appropriated approximately $8,000,000 more than was needed to provide the statutory maximum of $500 per child for children served and the statutory maximum of $3,800 per child for the additional children expected to be served in the 1989-90 school year and to make adjustments based on the difference between the number of additional children States had estimated they would be serving in the 1988-89 school year and the number actually served. Since these funds remain available for obligation at the Federal level through September 30, 1990, the Department intends to use the remaining 1989 funds to make 1990 allocations. This language permits States that receive 1989 funds for their 1990 allocations to obligate these funds for the same period of time as they would funds allocated from the 1990 appropriation.

1/ Reflects enacted supplementals, rescissions, and reappropriations in amounts appropriated prior to fiscal year 1985.

2/ Includes an unspecified amount for Education Consolidation and Improvement Act, Chapter 1 Handicapped activities, which were proposed for consolidation into a block grant in the fiscal year 1983 budget request.

3/ Includes $181,865,000 for Special purpose funds that is proposed for later transmittal under proposed legislation.

Education for the Handicapped

Significant Items in Congressional Appropriations Reports

Item	Action taken or to be taken
1990 House Report	
Media and Captioning Services - Report on Descriptive Video Services	
The Committee requested the Department to provide a report prior to the 1991 hearings on the programmatic, fiscal, and regulatory issues surrounding the development of descriptive video services for the blind.	The Department is developing the report, which is expected to be completed in late spring of 1990. See Conference Report directives.
Media and Captioning Services - Recording for the Blind	
The Committee states that $500,000 of the increase provided for Media and captioning services should be used to expand current programs producing textbooks-on-tape for the blind.	The Department intends to increase funding for recording for the blind by $493,000, from $850,000 to $1,343,000, based on the funds available after sequester. See Senate Report directives.
Media and Captioning Service - Subsidy for Closed-Caption Decoder Production	
The Committee states that no funds have been provided to continue the subsidy of decoders for the hearing impaired, and that the technology is fully developed. The report indicates that the Committee believes that funds previously used for this purpose should be directed towards the development of new technologies for this same population.	No 1990 funds will be used for the subsidy or the development of decoders. Technological development of closed-caption decoders will continue in 1990 under a contract awarded in 1989. The Department plans to provide funding for the development of new technology.

Education for the Handicapped

Significant Items in Congressional Appropriations Reports — Continued

Item	Action taken or to be taken
1990 Senate Report	
Postsecondary Programs - Four Institutions Serving the Deaf	
The Committee states that, of the amount provided for Postsecondary programs, $4,000,000 will be available for continued support to four institutions serving the deaf.	See Conference Report directives.
Media and Captioning Services - Recording for the Blind	
The Committee states that the funds included for Media and captioning services provide an increase of $500,000 for recording for the blind.	The Department intends to increase funding for recording for the blind by $493,000, from $850,000 to $1,343,000, based on the funds available after sequester. See House Report directives.
Media and Captioning Services - Closed-Caption Decoder Chip Development and Other New Technologies	
The Committee states that it has provided $1,000,000 for decoder chip development and development of other new technologies.	Technological development of closed-caption decoders will continue in 1990 under a contract awarded in 1989. The Department plans to provide funding for the development of new technology.
Media and Captioning Services - Descriptive Video Services	
The Committee states that it has provided $1,000,000 for descriptive video services for the blind.	See Conference Report directives.

Education for the Handicapped

Significant Items in Congressional Appropriations Reports -- Continued

Item	Action taken or to be taken
1990 Conference Report	
Postsecondary Programs - Four Institutions Serving the Deaf	
The conferees intend that, of the total amount provided for Postsecondary programs, $2,500,000 be allocated to the four postsecondary education programs serving the deaf.	The Department intends to increase funding for the four postsecondary institutions to $2,466,000 based on the funds available after sequester.
Media and Captioning Services - Descriptive Video Services	
The conferees agreed that the Secretary may use up to $1,000,000 to support the development of descriptive video services for the blind if his study of this technology (See House Report directives.) determines that the technology is commercially viable and there is no significant opposition from the Federal Communication Commission. Should these conditions not be met, funds should be redirected toward other media and captioning activities unless a separate authorization for such a program is enacted into law.	The Department is developing the report requested in the House Report. However, the report will not be completed until late spring of 1991. Given the time needed to complete this report, the absence of current legislation authorizing descriptive video services, and the need to carefully consider various approaches to providing this service, it will not be possible to begin descriptive video services in 1990.
1989 Senate Report	
Report on Severely Emotionally Disturbed Children	
The Committee directs the Secretary of Education to examine various issues related to services to severely emotionally disturbed children and to report his findings by October 1, 1989, along with any legislative, regulatory or administrative changes that may be necessary to correct identified problems.	The Department has awarded a task order to conduct a study addressing the issues raised in the Senate report. It is expected that the Secretary's report and recommendations will be transmitted to Congress by summer 1990.

1/ Amounts for Special Purpose Funds programs in 1991 are proposed for later transmittal based on proposed legislation. The specific amounts to be requested for individual activities will be determined after reauthorizing legislation is enacted.

The purpose of the Education of the Handicapped Act (EHA) is to ensure that all children with handicaps have available to them a free appropriate public education which provides special education and related services designed to meet their unique needs, to ensure that the rights of children with handicaps and their parents or guardians are protected, to assist States and localities in providing for the education of all children with handicaps, and to assess and ensure the effectiveness of efforts to educate children with handicaps.

Education for the Handicapped

Account Summary--Continued

In the EHA Amendments of 1986, Congress revised the Preschool Grants program from an incentive to a mandated program that requires the provision of services to all three through five year old children with handicaps by 1991. In the Amendments, Congress also authorized under Part H, a new program for infants and toddlers with handicaps (from birth through age two) and their families. Funds from this program assist States in developing and implementing a statewide system to provide early intervention services to infants and toddlers and their families and in providing, expanding, and improving early intervention services for these children.

States and localities retain primary responsibility for the education of children with handicaps. Federal special education programs provide leadership and additional fiscal resources for the improvement of special education and related services for children with handicaps. The programs pursue these goals through communicating and disseminating Federal policy and information on the education of children with handicaps, administering formula grants and discretionary programs authorized by the Congress, fostering and supporting research, and sponsoring and encouraging the use of models and best practices.

A total of $1,955,556,000 is requested for the three State Grant programs in the Education for the Handicapped account, an increase of $81,916,000 over the 1990 appropriation level of $1,873,640,000. An increase of $72,515,000 is requested for the Grants to States program, and an increase of $6,220,000 is requested for the Preschool Grants program to help States cover increases in costs and expand services to additional children. The budget proposal provides a per child share of $365 for an estimated 4,425,000 children served under the Grants to States program and a per child share of $726 for an estimated 355,000 children served under the Preschool Grants program. An increase of $3,181,000 is requested for the Grants for Infants and Families program to help States cover increases in costs as they implement their statewide systems of early intervention services.

Special Purpose Funds programs include a wide variety of research, demonstration, training, technical assistance, and other activities directed toward improving services for infants, toddlers, children, and youth with handicaps. These programs are authorized under the General Education Provisions Act (GEPA) extension through September 30, 1990. There is no current authorization for fiscal year 1991. As soon as reauthorizing legislation is enacted, a budget request totaling $181,865,000 will be submitted to Congress for these programs. Amounts requested for specific activities will be determined at that time.

In 1990, approximately $849,000 appropriated for Special Purpose Funds was used to help fund the cost of using field readers to review discretionary grant applications. In 1991, $782,000 is estimated to be used for this purpose.

Education for the Handicapped

1. State grants: a. Grants to States
(Education of the Handicapped Act, Part B, Section 611)

1991 Authorization: Indefinite

Budget Authority:

1990 Appropriation	1991 Request	Increase or Decrease
$1,542,610,000	$1,615,125,000	+$72,515,000

Purpose and Method of Operation

This program awards grants to States, the District of Columbia, Puerto Rico, the Secretary of the Interior, and the Territories to assist them in providing a free appropriate public education for children with handicaps. The Education of the Handicapped Act (EHA) requires that all children aged 3 through 21 be served, except that States are not required to serve children aged 3 through 5 or 18 through 21 if such service is inconsistent with State law or practice or the order of any court. However, the 1986 amendments to the EHA require that States must serve all children with handicaps aged 3 through 5 by fiscal year 1991 in order to count these children.

Funds are distributed by formula grants. Up to 1 percent of the aggregate of the amounts available to all States may be distributed to the Territories. Upon submission of an application, the Secretary of the Interior receives 1.25 percent of the aggregate amounts available to all States. The balance of the funds appropriated is distributed to States based on the number of children with handicaps aged 3 through 21 who States report are receiving special education and related services on December 1 of the fiscal year for which funds have been appropriated. For funding purposes, the number of children counted aged 3 through 17 cannot exceed 12 percent of the total number of children aged 3 through 17 in States that serve all children with handicaps aged 3 through 5; in States that do not serve all children with handicaps aged 3 through 5, the number of children counted aged 5 through 17 cannot exceed 12 percent of the total number of children aged 5 through 17. Funding assists States in providing special education and related services to children with handicaps.

Under the statute, at least 75 percent of the funds appropriated must be distributed by the State educational agencies to local educational agencies and other agencies serving children directly. Of the total funds that a State receives, the State may retain 25 percent. Up to 20 percent may be used by the State to provide support services and direct services to children

---

Purpose and Method of Operation -- Continued

with handicaps and for the administrative costs of monitoring and complaint investigation to the extent that such costs exceed the costs incurred in fiscal year 1985; up to 5 percent, or $350,000 (whichever is greater) may be used for other administrative costs.

This is a forward-funded program for which funds are available from July 1, 1991 through September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

The major purpose of the Grants to States program is to assist States and localities in providing a free appropriate public education to all children with handicaps. This assistance is provided in three ways: 1) through financial assistance to States and local educational agencies, 2) the monitoring of State and local programs, and 3) the provision of technical assistance.

In fiscal year 1989, the Grants to States program provided funding to State educational agencies based on a child count of 4,338,000 children. The number of children States reported they were serving on December 1, 1988 increased by 102,000, or 2.4 percent, over the previous year. The number of children reported as served increased in the 3-5 (+12 percent), 6-11 (+5 percent), and 18-21 (+4 percent) age groups, but decreased slightly in the 12-17 age group (-1 percent).

The number of children, aged six through 21 years, who were reported as "learning disabled" increased by 55,356 children. These children represented more than 49 percent of all 6 through 21 year olds served, an increase of 0.71 percent over the previous year. Changes in the percentages of 6 through 21 year olds reported as served in each of the remaining categories were less than 1 percent. There were slight increases over the previous year in the number of children served who were identified as multi-handicapped (+0.03 percent) and other health impaired (+0.08 percent). There were slight decreases from the previous year in the number of children served who were identified as speech impaired (-0.06 percent), mentally retarded (-0.61 percent), and emotionally disturbed (-0.13 percent). There was no percentage change from the previous year in the number of children who were identified as hard of hearing and deaf, orthopedically impaired, visually handicapped, or deaf-blind.

The Department conducted 8 comprehensive compliance reviews during fiscal year 1989. As in 1988, problems continued to be identified in the areas of: State monitoring of local educational agencies, local educational agency applications, placement of students in the least restrictive environment, individualized education programs, and due process and procedural safeguard requirements. During 1989, the Department cleared up its backlog of overdue monitoring reports by issuing 10 final monitoring reports. The Office of

Education for the Handicapped

1. State grants: a. Grants to States

Accomplishments -- Continued

Special Education (OSEP) also initiated a review of the monitoring process to identify refinements needed to improve the process. OSEP expects this review to be completed in fiscal year 1990.

During 1989, the Department continued to emphasize: 1) the implementation of the least restrictive environment provision of the EHA for children with handicaps, including the severely handicapped, 2) the General Education Initiative that seeks to expand and improve special education and general education services in the regular classroom for children with handicaps, and 3) the improvement of transitional services for youth with handicaps. During 1989, the Department also continued to support activities that would assist States in expanding their programs for preschool children. These activities are discussed in the section on Preschool Grants.

In 1989, the Department continued to support the statutorily-mandated longitudinal study of secondary students with disabilities. This study is discussed in the section on Special Studies.

In addition, as requested by the Senate Appropriations Committee, the Department undertook a study dealing with the identification of and services to children with serious emotional disturbance. The Department expects to transmit the study findings and its recommendations to the Congress within the next few months.

1991 Budget Proposal

In fiscal year 1991, $1,615,125,000 is requested for the Grants to States program to assist States in providing a free appropriate public education to children with handicaps. This request would provide an increase of $72,515,000, or 4.7 percent, over the 1990 appropriation to assist States in expanding services to additional children and to help cover increases in costs.

The request would provide an average of $365 for each of the 4,425,000 children estimated to be counted and served in 1991. This is an increase of $13 per child over the 1990 appropriation for an estimated 44,000 additional children. The 1991 request would cover about 7 percent of the estimated $5,207 average excess cost associated with educating children with handicaps in 1991, which would maintain the 1990 Federal share of the excess cost.

Education for the Handicapped

---

1. State grants: b. Preschool grants
   (Education of the Handicapped Act, Part B, Section 619)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$251,510,000	$257,730,000	+6,220,000

Purpose and Method of Operation

To assist States in serving 3 through 5 year old children with handicaps, the program awards formula grants to States on the basis of the number of children in this age range receiving special education and related services. Each child who has received special education and related services can be counted twice, once for allocations under the Grants to States program and again for allocations under the Preschool Grants program.

The Education of the Handicapped Act Amendments of 1986 changed the Preschool Grants program from an incentive to a mandated program that requires the provision of services to all 3 through 5 year old children with handicaps after a phase-in period, which ends in 1991. For fiscal years 1987 through 1990, States can receive funds under the Preschool Grants program as long as they serve some 3 through 5 year old children with handicaps. To remain eligible for the Preschool Grants program beginning in fiscal year 1991, however, States must serve all 3 through 5 year old children with handicaps. In addition, States can count 3 through 5 year old children under the Grants to States program only if they are eligible for a Preschool Grant; therefore, States that do not serve all 3 through 5 year olds with handicaps by fiscal year 1991 will not be eligible to count these children under the Grants to States program. Furthermore, States will not be eligible to receive grants under the EHA discretionary programs for programs, projects, and activities pertaining to children aged 3 through 5 years.

For fiscal years 1987 through 1989, States received allocations for Preschool Grants based on the number of 3 through 5 year old children with handicaps reported as served on that year's December 1 child count and the number of additional children they estimated would be served by the following December 1 child count. Upward or downward adjustments to the previous year's allocations, based on the difference between the number estimated to be served and the number actually served, were made in the subsequent fiscal year.

Purpose and Method of Operation -- Continued

Adjustments to the fiscal year 1989 allocations, based on the difference between the number estimated to be served in the 1989-90 school year and the number actually served by December 1, 1989, will be made in fiscal year 1990. In fiscal year 1990 and thereafter, allocations are based only on the number of children reported as served on December 1 of the fiscal year for which allocations will be made.

At least 75 percent of the funds allocated must be passed through by the State educational agencies to local educational agencies and other agencies directly serving 3 through 5 year old children with handicaps. States can retain up to 25 percent of the funds allocated to them. They can use up to 20 percent for the planning and development of a comprehensive delivery system for handicapped children aged birth through 5 years and for direct and support services for children with handicaps aged 3 through 5 years. States can use up to 5 percent for administrative costs.

This is a forward-funded program for which funds are available from July 1, 1991 through September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

In 1989, all States and Territories applied for funds. After adjustments had been made and funds allocated at the statutory maximum for the children served and the additional children expected to be served, approximately $8,000,000 remained from the 1989 appropriation. The Department intends to use the 1989 remainder for 1990 allocations.

The number of children aged 3 through 5 years reported as served on December 1, 1988 increased by approximately 35,000, or 12 percent, over the number reported on December 1, 1987. The total number reported as served increased from 288,000 to 323,000 children. This large increase was expected. It includes 11,000 children who had been counted in 1988 for upward adjustments to the 1987 award based on the difference between the additional children States had estimated they would be serving in the 1987-88 school year and the number actually served. For calculating adjustments for 1987 in 1988, Congress authorized a one-time extension of the child count. The extension permitted States to receive bonus awards for those preschool children who, although they were not served by December 1, 1987, were receiving services by March 1, 1988. The extension did not permit States to count these children as served in 1988, and, therefore, they are included for the first time in the 1989 child count. The increase also includes the 22,000 additional children States had estimated they would be serving on December 1, 1988, for whom they had received bonus funds in 1988, as well as 2,000 additional children for whom States received upward adjustments in their 1989 awards.

Accomplishments -- Continued

In 1989, States estimated that they would be serving an additional 23,000 children by the next December 1 child count. Since 1990 is the last year in which States can receive, through upward adjustments, funds for additional children served, it is expected that the 1990 child count will grow about 5,000 above the 23,000 States have estimated. As a result, it is expected that the 1990 child count will be 351,000.

During 1989, States and Territories continued to work on legislation that would assure a free appropriate public education (FAPE) to all 3 through 5 year olds with handicaps by 1991. As of August 1989, 30 of the 57 entities eligible for Preschool Grants reported that they had mandates in place that were effective for either the 1988-89 or 1989-90 school year. Seven States reported that they have or plan to have mandates that would be effective in the 1990-91 school year. Sixteen States reported that they plan to have mandates by the 1991-92 school year. Two States and 2 Territories have not provided information regarding when their mandates would become effective.

In 1989, the Department continued to support activities that would assist States in implementing their preschool programs for children with handicaps. Activities included: continuation of grants dealing with the development of models for integrated preschool services; continuation of the National Early Childhood Technical Assistance System, which provides technical assistance to States on issues relating to children with handicaps, aged birth through 8 years; and continuation of the Early Childhood Research Institute on Transitions, which addresses issues related to transitions from home to preschool and from preschool to integrated services and classrooms. In addition, the Department funded a new five-year cooperative agreement for an Early Childhood Research Institute on Integration, which will develop, field-test, and disseminate intervention strategies that improve the integration of children with handicaps into a range of preschool, child-care, pre-kindergarten, and kindergarten programs that are available to children without handicaps in local communities.

1991 Budget Proposal

For 1991, $257,730,000 is requested, an increase of $6,220,000, or 2.5 percent, over the 1990 appropriation. This request would provide $726 per child for an estimated 355,000 children, including 4,000 additional children who are expected to be served in 1991. The request would increase the share per child served under the Preschool Grants program by $64, or almost 10 percent, over the 1990 share. It would provide a total share per child of $1,091 for each child aged 3 through 5 years served under the Education of the Handicapped Act.

Education for the Handicapped

1. State grants: b. Preschool grants

1991 Budget Proposal — Continued

The 1991 proposal includes a legislative change that would extend the period of availability at the State level for one additional year, so that States could obligate 1989 funds through September 30, 1992, the same period for which 1990 funds can be obligated. This change would enable States that receive funds remaining from the 1989 appropriation as their 1990 allocations to use these funds as they would funds allocated from the 1990 appropriation.

Education for the Handicapped

1. State grants: c. Grants for infants and families
(Education of the Handicapped Act, Part H)

1991 Authorization: Indefinite

Budget authority:

1990 Appropriation	1991 Request	Increase or Decrease
$79,520,000	$82,701,000	+$3,181,000

Purpose and Method of Operation

Grants for Infants and Families is a formula grant program that was authorized by the Education of the Handicapped Act Amendments of 1986. The purpose of the program is to assist States in developing and implementing statewide systems of coordinated, comprehensive, multi-disciplinary, interagency programs to provide early intervention services to all infants and toddlers, aged birth through two years old, with handicaps, and their families. Children served under the program are those infants and toddlers who are experiencing developmental delays in cognitive development, physical development, language and speech development, psychosocial development, or self-help skills, or who have a disagnosed physical or mental condition that has a high probability of resulting in developmental delay. At their discretion, States may also include infants and toddlers who are at risk of having substantial developmental delays if early intervention services are not provided. Within statutory limits, "developmental delay" has the meaning given the term by each State.

Funds allocated under the program can be used for the following purposes: 1) to develop and implement the statewide system described above, 2) for direct services that are not otherwise provided from other public or private sources, and 3) to expand and improve on services that are otherwise available.

Allocations are based upon the number of children in the general population aged birth through two years old, except that no State may receive less than 0.5 percent of the funds available to all States.

To be eligible for a grant, a State must establish a statewide system providing early intervention services to all handicapped children, aged birth through two, and their families, designate the lead agency that will be responsible for the coordination and administration of funds, and establish a State Interagency Coordinating Council to advise and assist the lead agency. To continue eligibility, the statewide system must be in effect no later than the beginning of the fourth year of a State's participation in the program and fully implemented by the fifth year.

Purpose and Method of Operation -- Continued

This is a forward-funded program for which funds are available from July 1, 1991 through September 30, 1992. The level of funding is dependent upon the availability of appropriations.

Accomplishments

As of December 1989, a total of 45 States and territories had applied for 1989 grants. The remaining 13 entities have indicated that they also intend to apply for 1989 grants.

In 1989, the Department continued to support a variety of activities to assist States in developing and implementing effective comprehensive interagency statewide systems of early intervention services. For example, the Department continued support for the National Early Childhood Technical Assistance System (NEC*TAS), which provides technical assistance to help States develop multi-disciplinary, coordinated, and comprehensive services for children with handicaps, aged birth through eight years, and their families. In June, NEC*TAS coordinated the third annual meeting for State personnel involved in implementing the Grants for Infants and Families program. This meeting centered on interagency development of the 14 components of the statewide system. NEC*TAS also held national meetings on the following topics: financing the statewide system, determining eligibility for early intervention services, placing handicapped infants and toddlers in the least restrictive environment, and developing the Individualized Family Service Plan. It continued to provide additional technical assistance to States through individual and regional meetings.

The Department continued its funding of the following research institutes: the Institute on Personnel, which seeks to develop materials for helping personnel deliver early intervention services to infants and toddlers with handicaps; the Institute on Effectiveness, which focuses on the long-term effectiveness of early intervention for children with handicaps; and the Institute on Transitions, which includes intervention strategies related to the transitions of infants and toddlers with handicaps. In addition, the Department funded a new Research Institute on Intervention, which focuses on developing new or improved organizational structures relating to the identification, referral, and intervention process for infants and toddlers with handicaps.

The Department also funded 14 new grants for projects that would coordinate activities with the lead agency for the Grants for Infants and Families program for project models dealing with infants and toddlers with severe disabilities, chronic health problems, and models for children with handicaps who had been previously unserved or underserved.

Education for the Handicapped

1. State grants: c. Grants for infants and families

Accomplishments -- Continued

In 1989, the Department continued to work with States to develop their data collection systems on the number of infants and toddlers with handicaps who are receiving early intervention services. In May, Department staff met with State representatives to discuss how States can resolve their data collection problems and to provide assistance to help them develop their data collection systems.

Thirty-eight States voluntarily provided data in 1989 on the number of children, aged birth through two years, whom they were serving under State programs other than the Chapter 1 State-Supported or Operated program. These data, however, must be viewed with great caution. Nineteen of the 38 States providing the data indicated that they could not assure that the data were completely accurate. Factors that could contribute to errors in these data include: double counting of a child by more than one agency (leading to an inflated count), and the inability of some agencies or regions to provide counts on the numbers served (leading to an inaccurately low count).

In 1989, the Federal Interagency Coordinating Council enlarged its membership to include three parent representatives. Two additional Federal offices -- the National Institute of Mental Health and the Health Care Financing Administration -- agreed to participate on the Council. The Memorandum of Understanding has been revised to include them. The Council worked with NEC*TAS to plan the annual meeting discussed above.

1991 Budget Proposal

For 1991, $82,701,000 is requested. This represents an increase of $3,181,000, or 4 percent, over the 1990 appropriation. The increase will assist States in meeting increases in costs as they begin to provide services to all handicapped infants and toddlers and their families in 1991.

Education for the Handicapped

1. State grants: c. Grants for infants and families

Impact Data	1989	1990	1991
Estimated age 0-2, 1/ general population	11,000,000	11,006,000	10,968,000
Age 0-2 receiving early intervention services	55,591 2/	---	---

---

1/ Bureau of Census, Projections of the Population of the United States by Age, Sex, and Race: 1988 to 2080 (middle series)(January, 1989).

2/ These data do not include 34,429 children who were receiving early intervention services under the Chapter 1 State-Supported or Operated program.

These data were provided voluntarily by 38 States. As discussed in the "Accomplishments" section, these data must be viewed cautiously. As a result, estimates for 1990 and 1991 cannot be made.

2. Special purpose funds: a. Deaf-blind projects (Education of the Handicapped Act, Part C, Section 622)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$14,555,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Deaf-Blind Projects activity is to assist States in providing special education and related services to children who are both deaf and blind.

Grants, contracts, and cooperative agreements are authorized for public and private, profit and nonprofit, organizations and institutions. Awards are made on a competitive basis in the first year and are usually renewed on a noncompetitive basis for two succeeding fiscal years. Priorities address a wide variety of areas, including validation and utilization of exemplary practices, implementing statewide systems changes, and the development of innovative interventions.

In addition, cooperative agreements are made with single and multi-State projects to provide services to children the States are not required to serve and technical assistance to States for children whom States are required to serve. Direct services to children whom the States are required to serve are also permitted when a project has met all of its other direct service and technical assistance requirements.

Cooperative agreements providing technical assistance to State and multi-State projects and technical assistance to State educational agencies regarding transitional services are also supported.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Deaf-Blind Projects program.

Purpose and Method of Operation — Continued

Significant changes included in this legislation are summarized below:

- The scope of the program would be expanded to specifically include early intervention services.
- The specific authorization for providing technical assistance regarding transitional services would no longer be limited to deaf-blind individuals who have reached age 22.
- An authority to conduct research, demonstrations, training, pilot projects, technical assistance, and other activities would be added.
- A national center on deaf-blindness would be mandated.
- Single and multi-State centers would be authorized to conduct pilot projects.
- Authority to fund projects for the purposes of section 624 of the Education of the Handicapped Act (including research, development, demonstrations, training, and dissemination activities) would be deleted.
- Authority to conduct extended school year demonstration projects for severely handicapped, including deaf-blind, children and youth, would be removed from this program and placed in the Severely Handicapped program.

Accomplishments

When the Deaf-Blind Projects program began in 1968, support was provided only for State and multi-State projects. The program was part of the response to the special needs of deaf-blind children born during the rubella epidemic of 1963-1965. At the time the program was enacted, many deaf-blind children were receiving very limited services, if any. With the enactment and implementation of the Education for All Handicapped Children Act (Public Law 94-142), States assumed responsibility for educating children with handicaps, including those who are both deaf and blind. This created an overlap of responsibilities.

A 1983 study of these deaf-blind projects by the American Institutes for Research indicated that States were capable of fulfilling their responsibilities for providing services to deaf-blind children under the Education of the Handicapped Act. Therefore, in 1983, the program emphasis and direction were shifted to serving children not required to be served by the States, and to providing technical assistance and training to the States.

The need for direct services to deaf-blind children not required to be served by the States has declined as States expand the age ranges for which they mandate services. At the present time, only about 500 of the deaf-blind children benefitting from the projects are not covered by State mandates. The Education of the Handicapped Act Amendments of 1986 have accelerated this expansion by requiring States to serve children from age three through five by 1991.

Accomplishments — Continued

Projects supported in 1989 include:

1. State and Multi-State Projects ($6,879,000; 44 new grants). Projects provide special education and related services to deaf-blind children whom States are not obligated to serve, and technical assistance to ensure that States have the expertise to serve children whom they are obligated to serve.

2. Technical Assistance to State and Multi-State Grantees ($940,000; 1 continuation cooperative agreement). This project: (1) supports model sites where deaf-blind children are being educated in least restrictive environments; (2) provides training to service providers; (3) applies research findings; and (4) replicates effective practices in educating children who are deaf-blind. The recipient is the Association for Persons with Severe Handicaps, Seattle, Washington.

3. Technical Assistance for Transitional Services for Deaf-Blind Youth ($1,195,000; 1 new cooperative agreement). This project facilitates the transition of deaf-blind youth starting at age 22 from education to employment and other services through: (1) technical assistance to providers of transitional services; (2) training paraprofessionals, professionals, and parents; and (3) assistance in developing innovative approaches for rehabilitation, semi-supervised, or independent living programs. The grantee is the Helen Keller National Center for Deaf-Blind Youth and Adults, Sands Point, New York.

4. Transition Skills Development for Severely Handicapped Youth including Deaf-Blind Youth ($310,000; 4 continuation grants). These projects focus on the development of skills in youth who are severely handicapped, including those who are deaf-blind, that facilitate their transition from education to employment and service options.

5. Inservice Training Projects ($632,000; 8 continuation grants). Projects support inservice training that addresses the need for qualified personnel to serve children who are severely handicapped, including deaf-blind.

6. Supported Employment for Deaf-Blind Youth ($152,000; 1 continuation grant). This project teaches on-the-job skills; employee-employer relations; and job acquisition, placement, and retention skills. Where appropriate, the project also provides employment support on a long-term basis. The project serves youth whose handicaps are so severe that they have not been eligible for vocational rehabilitation services. The grantee is San Diego State University, San Diego, California.

7. Non-Directed Demonstration and Research Projects for Deaf-Blind Children and Youth ($769,000; 7 continuation grants). Projects demonstrate innovative and effective approaches in such areas as curriculum design and the provision of related services for the education of deaf-blind children.

Accomplishments — Continued

8. Communication Skills Development for Deaf-Blind Children and Youth ($303,000; 3 continuation grants). These projects identify problems in developing communication skills in children who are deaf-blind and design and demonstrate innovative programs to resolve these problems. Highlights of the projects include: (1) exploration of microswitch technology to develop social awareness; (2) development of "input" and "output" communication models that can be used by children, parents, siblings, and service providers; and (3) development of communication assessment and enhancement procedures. The grantees are: Kent State University Foundation, Ohio; Oregon Research Institute; and University of Southern Mississippi.

9. Extended School Year ($70,000; 1 continuation grant). This project supports the design, implementation, and dissemination of information about innovative practices that provide extended school year activities for children who are severely handicapped. The grantee is Focus, Inc., Jonesboro, Arkansas.

10. Statewide Systems Change ($1,491,000; 4 new cooperative agreements and 3 continuation cooperative agreements). Projects develop, in conjunction with the Education of the Handicapped, Part B State plan, activities to improve the quality of special education and related services in the State for severely handicapped children and youth, including those who are deaf-blind, and to change the delivery of these services from segregated to integrated environments.

11. Innovations for Meeting Special Problems of Children with Deaf-Blindness in the Context of Regular Education Settings ($147,000; 1 new grant). This project is establishing a model that facilitates the movement of learners with dual sensory handicaps into regular education classrooms. The project focuses on the unique needs of students at all functional levels, and emphasizes transdisciplinary efforts in seeking to accomplish goals of individual education programs. The grantee is the University of Washington, Seattle, Washington.

12. Validated Practices: Children with Deaf-Blindness ($775,000; 6 new grants). These projects validate findings regarding the relative effectiveness of different solutions to problems in serving deaf-blind children. Examples of activities validated include: (1) procedures used to facilitate routine family interactions with deaf-blind infants; (2) practices for improving social interaction skills of youth with deaf-blindness in supported employment settings; (3) inservice training procedures for teachers; and (4) the use of tactile devices with infants and preschoolers.

13. Utilization of Innovative Practices for Children with Deaf-Blindness ($515,000; 4 new grants). These projects develop procedures and materials to teach service providers to recognize communication opportunities for children with deaf-blindness and promote the

---

Accomplishments -- Continued

acquisition of communication skills; facilitate community-based instruction and integration with nonhandicapped peers; and develop procedures for planning and implementing transition services.

A contract was awarded to the COSMOS Corporation late in 1985 to conduct evaluations of five programs in the Special Purpose Funds area including the demonstration projects under Deaf-Blind Projects and Severely Handicapped Projects. In response to this evaluation the Department:

- Intends to revise the program selection criteria to facilitate the incorporation of validated practices.
- Is considering the establishment of a program component responsible for dissemination of the best incorporated practices as part of its initiative to ensure that service providers have access to valid and useful information.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Education for the Handicapped

2. Special purpose funds: b. Severely handicapped projects (Education of the Handicapped Act, Part C, Section 624)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$5,819,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Severely Handicapped Projects activity is to address the special needs of severely handicapped children and youth.

Grants, contracts, and cooperative agreements are authorized for public and private, profit and nonprofit, organizations and institutions. Awards are authorized for a wide range of activities including research, development, demonstrations, training, and dissemination. Awards are made competitively in the first year, and are usually renewed on a noncompetitive basis for two succeeding fiscal years.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend the authorization for the Severely Handicapped Projects program, and amend it to specifically authorize extended school year demonstrations.

Accomplishments

Projects were originally funded primarily to address popular misconceptions about the learning limitations of children with severe handicaps. With the passage of the Education for All Handicapped Children Act, the emphasis of these projects shifted to improving and expanding the types of services available. More recently, an emphasis has been placed on assisting in the placement of children with severe handicaps in the least restrictive environments.

Projects supported in 1989 included:

1. Education of Severely Handicapped in the Least Restrictive Environment ($300,000; 3 continuation grants). Projects develop models for delivering

---

Accomplishments — Continued

integrated services to severely disabled children currently in segregated environments; facilitate placement of these children in appropriate, regular school settings; train personnel in local educational agencies who will serve these children; and promote the acceptance of these children by administrators, teachers, parents, and other children.

2. Non-Directed Demonstration and Research Projects: Severely Handicapped Children and Youth ($997,000; 9 continuation grants). These projects develop or demonstrate approaches that will contribute to the adjustment and education of severely handicapped children; and conduct research to identify and meet specific educational or related needs of these children.

3. Statewide Systems Change ($1,120,000; 5 continuation cooperative agreements). See the Deaf-Blind Projects narrative for a description of these projects.

4. Most Severely Handicapped Children and Youth Model Projects ($375,000; 3 continuation grants). These projects design, implement, and evaluate innovative approaches for educating the most severely handicapped children and youth, including those who are traumatically head injured, medically dependent, multi-sensory impaired, or severely behaviorally disordered. Projects include ongoing coordinated planning among providers of health and educational services and emphasize the active integration of the participating children with nonhandicapped peers.

5. Inservice Training Projects ($755,000; 9 continuation grants). See the Deaf-Blind Projects narrative for a description of these projects.

6. Utilization of Innovative Practices for Children with Severe Handicaps ($541,000; 5 new grants). Projects promote the adoption and use of innovative practices for the education of students with severe handicaps. Two projects provide inservice training to teachers, related service personnel, and administrators to improve their knowledge base and skill levels. Two projects provide inservice training to local and State educational agencies to improve the quality of integrated education for students with severe handicaps. The fifth project is adapting an innovative communication skills model designed for children who are deaf-blind for use in training other children with multiple handicaps.

7. Validated Practices: Children with Severe Handicaps ($462,000; 4 new grants). Projects test solutions to specific problems in the delivery of special education and related services to students with severe handicaps.

8. Innovations for Meeting Special Problems of Children with Severe Handicaps in the Context of Regular Education Settings ($583,000; 5 new grants). These projects promote the utilization, validation, and replication of strategies to ensure full participation and effective education of severely handicapped students in regular education settings.

9. Evaluation Project ($106,000; 1 new contract). The COSMOS Corporation is conducting an evaluation of selected discretionary programs over a

Accomplishments — Continued

five year period. The primary objective of this project is to provide information related to the achievement of program goals and to enhance program planning, design, implementation, and performance.

10. Study on Services to Severely Emotionally Disturbed Students ($55,000; 1 new contract). This study, which was directed in the fiscal year 1989 Senate appropriations committee report, will examine the issue of services to children who are emotionally disturbed. Included in the topics addressed are: (1) whether significant numbers of children with serious emotional disturbance are not receiving a free appropriate public education; (2) whether problems in appropriately serving such children are affected by inconsistencies in terminology, definitions, and criteria across agencies and States; and (3) whether inconsistencies in Federal policies relating to terminology, definitions, and criteria across agencies impedes the identification and effective delivery of services to such children and their families.

A contract was awarded to the COSMOS Corporation late in 1985 to conduct evaluations of five programs in the Special Purpose Funds area including the demonstration projects under Deaf-Blind Projects and Severely Handicapped Projects. See the Deaf-Blind Programs narrative for a description of the Department's actions in response to this evaluation.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

2. Special purpose funds: c. Early childhood education (Education of the Handicapped Act, Part C, Section 623)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$23,766,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Early Childhood Education program is to improve special education and early intervention services for infants, toddlers, and children with handicaps birth through eight years of age through research, demonstration, training, technical assistance, and dissemination activities. Grants, contracts, and cooperative agreements are authorized to public agencies and private nonprofit organizations.

The primary use of funds in this activity is for demonstration and outreach grants. Awards are made on a competitive basis in the first year, and are usually renewed on a noncompetitive basis for two succeeding fiscal years. Outreach projects support the dissemination and adoption of successful early childhood interventions. Demonstration and outreach awards may generally not exceed 90 percent of the total cost of a project.

Other activities supported under the program include:

- technical assistance to State agencies and to recipients of demonstration and outreach awards;
- experimental and research projects including research institutes; and
- special projects such as evaluations and conferences.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Early Childhood Education program.

Purpose and Method of Operation -- Continued

Significant changes included in this legislation are summarized below:

- Projects dealing with early identification, transition, assistive technology, prenatal substance abuse, and research synthesis would be specifically authorized.

- Projects would be required to include activities and services designed to facilitate the speech or other communication mode of children with disabilities.

Accomplishments

The 1986 amendments to the Education of the Handicapped Act created the Grants for Infants and Families program for children with handicaps birth through age 2 and provided a deadline by which States must provide special education services to all children with handicaps ages 3 through 5. In response to this new legislation, additional emphasis in the Early Childhood Education program was placed on assisting the States to serve these children.

A contract was awarded to the COSMOS Corporation late in 1985 to conduct goal and strategy evaluations of five programs in the Special Purpose Funds area including the Early Childhood Education program. The results of the goal and strategy evaluations of the Early Childhood Education program were summarized in the Congressional Justification for the 1990 request.

Projects supported in 1989 included:

1. Infants with Severe Disabilities ($524,000; 4 continuation grants). Projects focus on integrating hospital and community-based programs, follow-along and transition services, family day care providers, and culturally relevant services (e.g., Native American).

2. Multi-disciplinary Training Programs for Child Care Personnel ($1,250,000; 10 new grants and 8 continuation grants forward funded in prior year). These projects develop and evaluate inservice training models for preparing personnel to serve infants, toddlers, and preschool children with handicaps. Grantees provide both multidisciplinary training and ongoing technical assistance to child care personnel.

3. Nondirected Demonstration Projects ($2,009,000; 6 new grants and 11 continuation grants). Projects develop and demonstrate new approaches to serving children with handicaps ages birth through eight and their families. Projects support a range of activities such as serving infants in hospital neonatal intensive care units, preparing day care providers and settings to accommodate young children with disabilities, developing service delivery strategies in rural areas, and utilizing technology.

4. Nondirected Experimental Projects ($1,123,000; 3 new grants and 4 continuation grants forward funded for 3 years). Projects investigate alternate interventions for serving infants, toddlers, or preschool-aged children with handicaps. New projects are investigating enhancing

Accomplishments — Continued

mastery behaviors in young children with severe cognitive delays, the effectiveness of various types of assistance to families of children with handicaps, and developmental intervention with very low birth weight infants in a neonatal intensive care unit.

5. Outreach State and Multi-State Projects ($8,984,000; 14 new grants and 23 continuation grants). These projects implement proven infant, toddler, or early childhood models in single or multiple States. These projects coordinate activities with the lead agency for the Infants and Toddlers program (Part H of the Education of the Handicapped Act) or the State Educational Agency for Special Education and Related Services.

6. Early Childhood Technical Assistance Center ($2,568,000; 1 continuation contract). The center provides technical assistance (TA) to State agencies to promote the development of Statewide comprehensive services for children with handicaps, aged birth through eight, and their families. Some of the major on going activities include operating a clearinghouse of information and materials, conducting needs assessments and obtaining annual TA agreements with each State agency and other appropriate entities, and planning and conducting special topical meetings. The center also provides technical assistance to other Early Childhood Education projects. The contractor is the University of North Carolina, Chapel Hill, North Carolina.

7. Research on Early Childhood Program Features ($195,000; 3 continuation cooperative agreements). These projects conduct research on the relative effects of language interventions or social skills interventions on children with handicaps ages birth through five years, and provide professionals replicable components that can be incorporated in infant, toddler, or preschool programs. One project compares the effectiveness of various teaching methods in different environments. Two of the projects focus on the social development of children with handicaps. The recipients are Vanderbilt University (2 projects), Nashville, Tennessee, and the University of Pittsburgh, Pittsburgh, Pennsylvania.

8. Early Childhood Research Institute - Personnel ($675,000; 1 continuation cooperative agreement). This institute develops, evaluates, and disseminates curricula and materials for training special education and related services personnel. The institute focuses on materials and curricula related to working with families, interacting with professionals from other disciplines, determining when other specialists must be consulted, developing an individualized family service plan, and accessing emerging information and research findings. The recipient is the University of North Carolina, Chapel Hill, North Carolina.

9. Early Intervention Effectiveness Institute ($1,000,000; 1 continuation contract). The goal of the institutes is to determine the long-term effectiveness of early intervention on children with disabilities. The institute is investigating the intensity of services, age at start of services, and variations in type of services. The contractor is Utah State University, Development Center for Handicapped Persons, Logan, Utah.

Accomplishments -- Continued

10. Early Childhood Research Institute - Transitions ($720,000; 1 continuation cooperative agreement). This institute develops, field tests, and disseminates strategies to improve the early childhood transitions of children with handicaps and their families. Areas covered include the transitions from hospital to home and infant services, from home to preschool, and from specialized to integrated services. The recipient is the University of Kansas, Lawrence, Kansas.

11. Early Childhood Research - Integration ($746,000; 1 new cooperative agreement). This institute develops field tests, and disseminates intervention strategies that improve the integration of children with handicaps into preschool, child care, pre-kindergarten, and kindergarten programs that are available to nonhandicapped children. Emphasis is on four areas: (1) curriculum modification and validation; (2) friendship and parent concerns; (3) longitudinal outcomes; and (4) policy development and implementation. The recipient is the University of Pittsburgh, Pittsburgh, Pennsylvania.

12. Early Childhood Research Institute - Intervention ($700,000; 1 new cooperative agreement). This institute conducts research on interventions for infants and toddlers to develop new organizational structures relating to the identification, referral, and intervention process. The recipient is Children's Hospital Corporation, Boston, Massachusetts.

13. Small Business Innovative Research (SBIR) Projects ($697,000; 8 new contracts). The Department of Education reserves a statutory percentage of extramural research and development budgets to be awarded to small business concerns for research or research and development conducted through a uniform three-phase process. In fiscal year 1989, 171 proposals were received in response to the Department of Education's SBIR solicitation. A total of 25 new Phase 1 projects were funded in this program. Topics included the following: (1) Development or Adaptation of Devices, Mechanisms, or Techniques for Disabled Individuals; (2) Reducing or Elimination of Environmental Barriers for Disabled Students; (3) Innovative Technologies to Enhance Job Development, Job Modifications, or Job Opportunities for Disabled Individuals; (4) Development of Management Information System Software Concerned with the Needs of Disabled Individuals and Their Families; and (5) Development or Adaptation of Innovative Technologies to Enhance Learning and Development of Young Disabled Children.

14. Evaluation Project ($186,000; 1 new contract). See the Severely Handicapped Projects narrative for a description of this project.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

2. Special purpose funds: d. Secondary and transitional services (Education of the Handicapped Act, Part C, Section 626)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$7,989,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current Secondary and Transitional Services program has three purposes:

- to strengthen and coordinate education, training, and related services for handicapped youth in order to assist them in the transition to postsecondary education, vocational training, competitive employment, supported employment, continuing education, or adult services;
- to stimulate the improvement and development of programs for secondary special education; and
- to stimulate the improvement of the vocational and life skills of handicapped students to better prepare them for transition to adult life and services.

Awards are authorized to institutions of higher education, State educational agencies, local educational agencies, and other appropriate public and private nonprofit institutions and agencies.

Projects assisted may include demonstrations, evaluations, studies, and research and development activities in a wide variety of areas related to secondary and transitional services. However, the primary use of funds in this activity is for demonstration grants. Awards are made on a competitive basis in the first year, and are usually renewed on a noncompetitive basis for two succeeding fiscal years. Direct participation of handicapped students and the parents of handicapped students in the planning, development, and implementation of projects is encouraged to the extent appropriate.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

Purpose and Method of Operation -- Continued

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Secondary and Transitional Services program. Significant changes included in this legislation are summarized below:

- The scope of the program would be expanded to include such transitions as those from medical care to special education and from residential placement to community-based special education services.
- The program would be expanded to include children below age 12 or seventh grade.
- At least 5 awards would be required to be made based on joint applications from State educational agencies and State vocational rehabilitation agencies.
- Awards dealing with the transition to independent living; the use of assistive technology; training of nurses, educators, and other personnel; a census of health care needs; and other activities would be specifically authorized.

Accomplishments

The Secondary and Transitional Services program was authorized by the Education of the Handicapped Act Amendments of 1983, and funded for the first time in fiscal year 1984. Since that time, awards have been made for research into transitional strategies, secondary education, and cooperative planning, and for service demonstration models. In addition, two institutes have been funded.

Projects supported in 1989 include:

1. Cooperative Models for Planning and Developing Transitional Services ($1,153,793; 11 continuation grants). Projects improve or expand transitional services. Several projects concentrate on the transitional problems of students who have recently left school. The majority of the projects develop State and local interagency networks, and linkages among community agencies, local educational agencies, and colleges.

2. Models for Providing Secondary Mainstreamed Learning Disabled and Other Mildly Handicapped Students with Job-Related Training ($1,024,764; 10 continuation grants). Projects focus on youth with learning disabilities or mild handicaps in mainstream secondary programs who have not participated in a program which leads directly to employment. Most projects provide pre-transitional services, transitional services, career education, inservice training for teaching staff, community vocational training, social skills training, and career counseling.

Accomplishments -- Continued

3. Social Skills Research ($1,016,409; 8 continuation grants). Projects examine the influence of personal and environmental variables on the adjustment to school, work, and the community. Projects stress the importance of social networks in reducing social isolation and provided support in overcoming problems in integration. Projects cover a range of disabilities from mild to severe.

4. Training and Employment ($919,994; 9 new grants and 10 continuation grants). Projects prepare and place youth with severe handicaps in supported work prior to leaving school. They emphasize collaboration with employers; measurement of employer and youth satisfaction; program evaluation including continuing employment status; interagency collaboration; and working partnerships with families.

5. Follow-up/Follow-Along Projects ($1,796,510; 7 new grants and 7 continuation grants). These awards support school and community-based model projects to improve tracking systems for youth with handicaps who complete or leave secondary education. The purpose of the projects is to document the impact of transition services on students completing or leaving secondary programs and to improve services leading to improved participation in community life. Projects enhance existing follow-up/follow-along procedures and revise existing curriculum and/or program options to improve outcomes.

6. Family Network Projects ($293,750; 3 new grants). These model projects build on existing transition planning processes to assist youth with handicaps and their families in identifying, accessing, and using networks to obtain support and services to maximize independence. Barriers to obtaining support and services are also identified and strategies developed and tested for overcoming them.

7. Institute in Intervention Effectiveness ($735,000; 1 continuation contract). The institute's objectives are to conduct research on the efficacy of interventions in assisting students to make the transition from school to work, and to provide technical assistance on program evaluation to other Special Purpose Funds projects. The contractor is the University of Illinois, Urbana, Illinois.

8. Small Business Innovative Research Projects ($25,000; 1 new contract). See the narrative for the Early Childhood Education program for a description of this project.

9. Evaluation Project ($74,000; 1 new contract). See the narrative for the Early Childhood Education program for a description of this project.

A contract was awarded to the COSMOS Corporation late in 1985 to conduct evaluations of five programs in the Special Purpose Funds area including the Secondary and Transitional Services program. In response to this evaluation the Department is studying the possibility of initiating a regional outreach competition in 1991.

2/ Includes continuation projects funded for more than one year from prior year appropriations.

2. Special purpose funds: e. Postsecondary programs
(Education of the Handicapped Act, Part C, Section 625)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$6,510,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Postsecondary Programs activity is to provide assistance for the development, operation, and dissemination of model programs of postsecondary, vocational, technical, continuing, and adult education for handicapped individuals. Awards are authorized to State educational agencies, institutions of higher education, junior and community colleges, vocational and technical institutions, and other nonprofit educational agencies.

The primary use of funds in this activity is for demonstration grants. Awards are made on a competitive basis in the first year, and are usually renewed on a noncompetitive basis for two succeeding fiscal years.

The current Act also requires that at least $2,000,000 of the funds available under this program be awarded to four institutions serving deaf students. New awards were made to four institutions for a five-year period in 1989.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend the authorization for Postsecondary Programs, and amend it to increase the required funding for four institutions serving deaf students from $2,000,000 to $4,000,000.

Accomplishments

Postsecondary schools providing services to deaf students have been continuously supported since 1975. The demonstration component of Postsecondary Programs was begun in 1976 with awards to three colleges for the purpose of integrating handicapped students into both the academic and

---

Accomplishments — Continued

social environments at the institutions. Objectives of these projects were to locate handicapped students, identify their needs, and provide support services. More recently, the projects have been focused on specific needs such as education in the least restrictive environment and employment-related training.

Projects supported in 1989 included:

1. Regional Programs for the Deaf ($2,029,000; 4 new grants). These centers provided specially designed or modified model programs of support services. The centers must also stimulate and develop model statewide, regional, and national programs to improve access to postsecondary education for deaf students, including the fostering of cooperative and consortia arrangements. Grantees are the University of Tennessee, California State University/Northridge, St. Paul Technical Vocational Institute, and Seattle Community College.

2. Postsecondary Opportunities ($1,586,000; 14 continuation grants). Projects focus on services for individuals with specific learning disabilities, particularly in regular postsecondary and vocational educational settings. These model demonstration projects adapt or design programs that coordinate, facilitate, and encourage the education of individuals who are handicapped with their nonhandicapped peers. The projects' activities include: (1) single-campus based demonstration activities; (2) collaborative and inter-institutional efforts that expanded options and placements for students; (3) transition projects that began while students were in secondary programs; (4) multi-state and statewide efforts at networking, using a trainer-of-trainers model in some projects; and (5) curriculum enhancements designed to facilitate training for entry into occupational areas.

3. Vocational Outcome Demonstrations ($1,974,000; 9 new grants and 11 continuation grants). These projects focus on vocational outcomes for youth who have recently completed or left secondary educational programs, and on short-term educational interventions necessary to assist youth to secure competitive employment. Some of the projects' activities include services to: (1) persons with learning disabilities and mild mental retardation; (2) recently arrested, incarcerated youth with learning disabilities or mild mental retardation; (3) persons with visual impairments, emotional disorders, and mental retardation; and (4) persons with less severe handicapping conditions in an adult education program.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1/ Not available due to pending legislation.

2/ Includes continuation projects funded for more than one year from prior year appropriations.

2. Special purpose funds: f. Innovation and development (Education of the Handicapped Act, Part E)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$19,825,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purposes of the Innovation and Development program are to:

- support research and related activities to assist special education, related service, early intervention, and other appropriate personnel, including parents, in improving services to children with handicaps; and
- conduct research, surveys, and demonstrations related to the provision of services to children with handicaps.

In general, awards may be made to State and local educational agencies, institutions of higher education, and nonprofit private organizations. Awards may be made to profit-making organizations only for contracts dealing with physical education or recreation-related research.

Most awards are grants made on a competitive basis in the first year, and renewed on a noncompetitive basis for the two succeeding fiscal years.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for this program. In addition to authorizing new activities under the Innovation and Development program, this legislation would shift a number of activities currently authorized under section 618 of the Education of the Handicapped Act for the Special Studies program to the Innovation and Development program. Significant changes included in this legislation are summarized below:

- Numerous examples of authorized activities would be included.
- Awards to improve program management, administration, delivery, and effectiveness would be required. These awards would have to address, at a

---

Purpose and Method of Operation -- Continued

minimum, nine specified areas. Awards would also have to address the information needs of State and local educational agencies. At least 30 percent of the funds appropriated for Innovation and Development would be required to be spent in this area.

- The Secretary would be required to develop and implement a process for the ongoing identification of national program information needs for improving the management, administration, delivery, and effectiveness of programs and services provided under the EHA.
- Studies to assess progress in the implementation of the EHA previously authorized under section 618 for Special Studies would be authorized under the Innovation and Development program.
- Three new studies would be required dealing with related services, disparity among States regarding the placement in various educational settings, and the decline in the number of children classified as having a specific disability.
- The Secretary would be required to make awards to organize, synthesize, interpret, and integrate information gathered in program management studies and in studies to assess progress in the implementation of the EHA.
- Cooperative agreements with State agencies to assess the impact of the EHA, previously authorized under section 618 for Special Studies, would be authorized under the Innovation and Development program.
- Coordination would be required with research priorities established by the National Institute for Disability and Rehabilitation Research and other agencies, and information on priorities would be required to be provided to the National Council on Disability and to the Bureau of Indian Affairs Advisory Committee for Exceptional Children.

Accomplishments

This program is one of the oldest continuous sources of Federal funding for studies in the field of special education.

Projects supported in 1989 included:

1. Field Initiated Research ($7,238,000; 15 new grants and 45 continuation grants). Projects support a broad range of field-initiated activities focusing on special education, related services, and early intervention services. Areas covered include math and science instruction, social skills, training special education teachers to be coaches of regular education teachers, and using incentives to encourage low-income parents to use intervention services. In addition, two longitudinal studies identify urban learning disabled students at risk of dropping out while another study follows preschool children receiving two different intervention treatments as they moved into elementary schools.

Accomplishments — Continued

2. Student Initiated Research ($180,000; 20 new grants). These projects support student researchers in special education and early intervention. Projects provide new knowledge and understanding, verify the effectiveness of current practices, and develop refined approaches to educating children and youth in a number of settings, of different ages, and with various handicapping conditions.

3. Research for Educating Seriously Emotionally Disturbed (SED) Students ($1,165,000; 5 continuation grants). Projects develop and test interventions for educating students who are seriously emotionally disturbed in regular education settings at the upper elementary and secondary level. By the final year of the projects, students will be appropriately integrated within general education programs.

4. Early Childhood Research Institute - Policy ($665,000; 1 continuation cooperative agreement). This institute conducts research on early intervention service policy for infants and toddlers and their families. Policy analyses, case studies, surveys, interviews, literature syntheses, and cost studies are used to carry out the research. Emphasis is placed on strategies to overcome implementation barriers. State-by-State information is developed on funding patterns, numbers and kinds of service personnel, and the status of personnel preparation. The awardee is the University of North Carolina, Chapel Hill, North Carolina.

5. School Building Models for Educating Students with Handicaps in General Education Settings ($1,016,000; 6 continuation grants). These projects develop, implement, and evaluate school building models for educating students with handicaps in elementary, middle, and high school general education settings.

6. Home and School Cooperation in Social and Motivational Development ($473,000; 3 continuation grants). Projects are field testing approaches to increasing home, school, and community cooperation in promoting social and motivational development in general elementary classrooms.

7. Research Institute on Placement and Integration of Children with Severe Handicaps ($641,000; 1 continuation cooperative agreement). The institute is studying best educational practices for students with severe multiple disabilities in integrated placements. Technical assistance is also provided to States on the best integrated programming practices. San Francisco State University (SFSU) collaborates with the Association for Persons with Severe Handicaps (TASH) on the project, with SFSU providing research and TASH providing technical assistance.

8. Educating Learning Disabled and Mildly Handicapped Students in General Education Classrooms ($1,363,000; 9 continuation grants). Projects support research on the effect of modified classroom and management practices on educating students who are mildly handicapped and learning disabled in general education classrooms. Projects translate research findings into practices, develop strategies to modify practices, and identify the types of students for whom the practices are effective.

Accomplishments -- Continued

9. Research Implementation and Demonstrations ($2,221,000; 13 continuation grants). Projects support collaboration between local educational agencies and researchers in translating validated research findings into new or improved approaches for educating children with handicaps. Several projects concentrate on teaching students strategies to improve their own performance. Others focus on improving teaching in specific content areas through computer assisted instruction, reciprocal teaching, dialogue journals, and cooperative learning.

10. Research on General Education Teacher Planning and Adaptation for Students with Handicaps ($1,079,000; 4 new grants). These projects support research to improve teacher planning, individualization, and adaptation of curricula and instruction in general education classrooms.

11. Research on General Education - Science or Math Curricula ($550,000; 1 new grant forward funded). This project will analyze general education mathematics curricula for kindergarten through grade 8 and develop alternative curricular approaches for mainstreamed students. The grantee is the University of Oregon, Eugene, Oregon.

12. ERIC Clearinghouse on the Handicapped and Gifted and Talented Children ($160,000; 1 continuation contract). The clearinghouse is disseminating information on special education research in progress; establishing an ongoing collaborative mechanism to provide products and services related to special education research; and developing a collaborative mechanism for reviewing research results and responding to emerging issues. The contractor is the Council for Exceptional Children, Reston, Virginia.

13. Organization for Economic Cooperation and Development (OECD) ($155,000; 1 new contract). This study of OECD member countries is determining successful regular school approaches in educating children. The Department and OECD are examining policies and practices in member countries and determining methods of disseminating information to developing nations. Additional funding is provided by OECD.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1/ Not available due to pending legislation.

2/ Includes continuation projects funded for more than one year from prior year appropriations.

2. Special purpose funds: g. Media and captioning services (Education of the Handicapped Act, Part F)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$15,192,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Media and Captioning Services program is to promote the use of various media by handicapped individuals. In 1958, the Congress authorized a program to produce and lend captioned films to deaf persons. This law was later expanded to include the provision of media services for all handicapped persons. The primary focus of the current program is on captioning of films and closed captioning of television. In addition, funds are awarded to the National Theater of the Deaf and Recording for the Blind, Inc.

Projects are generally awarded for a period of one to three years. Profit and nonprofit, public and private agencies, organizations, and institutions are eligible for awards. Prior to the Education of the Handicapped Act Amendments of 1986, these projects and those supported by the Special Education Technology program were funded under the Media Services and Captioned Films program.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Media and Captioning Services program. Significant changes included in this legislation are summarized below:

- Specific authority would be included to support audio description and distribution of video materials and films for blind and visually impaired individuals.
- An authority to support awards to nonprofit organizations for the purpose of providing cultural experiences to deaf and hard of hearing individuals would be added.

Education for the Handicapped

2. Special purpose funds: g. Media and captioning services

Accomplishments

Examples of program accomplishments are summarized below:

- A system for captioning and distributing commercial films has been developed and expanded. In 1988, captioning of these films was extended to video cassettes.

- Support from this program was instrumental in the development of the closed-captioned television system, which enables deaf and hearing impaired persons to use special decoders to read television program captions that are not visible to other viewers.

- Activities related to the design, production, and distribution of closed caption decoder units have been supported. Since their introduction in 1980, over 200,000 decoders have been sold.

- Closed captioning of television programs has been expanded significantly.

Projects supported in 1989 included:

1. Captioned Films for the Deaf ($1,585,000; 32 new educational film contracts)($1,550,000; 20 new theatrical film contracts). Educational and theatrical films were purchased and leased for inclusion in the films distribution system. Ninety-nine educational titles are being captioned based on recommendations by teachers and administrators. Forty-seven theatrical titles are being captioned based on recommendations by screening groups representing a cross section of persons who are deaf.

2. Screening of Films ($63,000; 1 continuation contract). This project screens and evaluates theatrical films, and promotes participation in the Captioned Films for the Deaf program. The contractor is the National Association of the Deaf, Silver Spring, Maryland.

3. Captioning Process ($504,000; 1 continuation contract). This project supports the evaluation and selection activity for educational films. The Contractor is Modern Talking Picture Service, Washington, D.C.

4. Distribution System for Captioned Films ($1,000,000; 1 new contract). This contract supports a distribution system for captioned educational and theatrical films to qualified persons with hearing impairments. The system circulates captioned educational films to schools, and theatrical and adult educational films to groups of hearing impaired persons. The contractor is Modern Talking Picture Service, Washington, D.C.

5. Closed Captioned Movies, Mini-Series, and Specials for TV ($750,000; 1 new contract). This contract makes available 500 hours of closed captioned television programs. Programs include movies, mini-series, specials, regular season series, and day-time dramas. The contractor is the National Captioning Institute, Falls Church, Virginia.

6. Closed Captioned Real-Time News ($2,000,000; 1 continuation cooperative agreement). This award provides real-time captioning of national news

---

Accomplishments -- Continued

and other public information programs. The recipient is the National Captioning Institute, Falls Church, Virginia.

7. Closed Captioned National Television Programming ($950,000; 1 continuation cooperative agreement). This project supports closed captioning of syndicated programs. The project is intended to leverage funds for captioning from the syndication industry, thereby increasing the total number of hours captioned. The awardee is WGBH Educational Foundation, the Caption Center, Boston, Massachusetts.

8. Closed Captioned Local and Regional News ($785,000; 7 new grants and 9 continuation grants). These projects support the development of closed captioned news services for local television stations.

9. Closed Captioned Children's Television Programming ($1,000,000; 1 continuation cooperative agreement). This project supports closed captioned national, syndicated, and public broadcasting programs for children who are hearing impaired. The recipient is the National Captioning Institute, Falls Church, Virginia.

10. Closed Captioned Sports Programs ($500,000; 1 continuation cooperative agreement). This project provides closed captioning of sports programs. The grantee is the National Captioning Institute, Falls, Church, Virginia.

11. Manufacture and Distribution of a Closed-Captioned Line-21 Decoder ($1,000,000; 1 new cooperative agreement). Under this project the price of over 33,000 TC4000 line-21 closed-caption decoders has been reduced by $20, from about $180 to about $160. The project also supports public awareness activities designed to stimulate decoder sales. The awardee is the National Captioning Institute, Falls Church, Virginia.

12. Recording for the Blind, Inc., Princeton, New Jersey ($850,000; 1 continuation contract). These funds continue support for tape-recording textbooks for learners who are visually impaired and print-handicapped.

13. National Theatre of the Deaf, Inc., Washington, D.C. ($500,000; 1 new grant). This project conducted a five-week training school for actors with hearing impairments who, in turn, are conducting national tours through which role models are provided for children with disabilities.

14. Evaluation Project ($39,000; 1 new contract). See the Severely Handicapped Projects narrative for a description of this project.

15. Small Business Innovative Research Projects ($262,000; 3 continuation contracts jointly funded with other Special Purpose Funds programs). See the narrative for the Early Childhood Education program for a description of this project.

Education for the Handicapped

2. Special purpose funds: g. Media and captioning services

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Impact Data	1989	1990	1991 1/
Program Funding			
Captioning - Films	$4,702,000	2/	
Captioning - Television

1/ Not available due to pending legislation.

2/ Estimate unavailable at this time.

2. Special purpose funds: h. Special education technology (Education of the Handicapped Act, Part G)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$5,425,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Special Education Technology program is to advance the use of new technology, media, and materials in providing special education, related services, and early intervention services to children with handicaps. Grants, contracts, and cooperative agreements are authorized to institutions of higher education, State and local educational agencies, and other appropriate agencies and organizations.

The program supports a variety of research, dissemination, and technical assistance activities related to the development, production, and marketing of technology for use in serving children with handicaps. Most awards are made through grants. Awards are made on a competitive basis in the first year, and are usually renewed on a noncompetitive basis for two succeeding fiscal years.

Prior to the Education of the Handicapped Act Amendments of 1986, these projects and those funded under the Media and Captioning Services program were funded under the Media Services and Captioned Films program in Part F of the Act.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Special Education Technology program. Significant changes included in this legislation are summarized below:

- Assistive technology activities and other activities authorized under the Technology-Related Assistance for Individuals With Disabilities Act of 1988 would be specifically authorized when they are related to the education of children with handicaps.

Purpose and Method of Operation -- Continued

o The program would no longer be limited to the use of "new" technology.

Accomplishments

Technology development projects have provided a variety of new and improved approaches to educating children with handicaps through the application of new technology. Projects supported in 1989 included:

1. Information Center for Special Education Media and Materials ($474,000; 1 continuation contract). This center provides information to increase the availability, quality, and appropriate use of special education media and materials. Developers receive information to assist them in designing and developing media and materials, publishers receive information on the viability of the special education market, and educators receive information on how media and materials can best be used. The contractor is LINC Services, Inc., Columbus, Ohio.

2. Information Center for Special Education Technology ($449,000; 1 continuation contract). This center provides for a national information exchange to increase the availability, quality, and appropriate use of instructional technology in special education. The two primary target groups of the center are those who provide information, training, and technical assistance to technology users, and those who research, develop, produce, and distribute technology products. The contractor is the Council for Exceptional Children, Reston, Virginia.

3. Using Technology to Improve Assessment of Children with Handicaps ($779,000; 4 new grants). Projects use innovative technologies to advance assessment theory and practice by developing and evaluating technology applications in educational, home, community, or training settings.

4. Compensatory Technology Applications ($1,072,000; 8 new grants and 1 continuation grant). These projects support the innovative development of hardware and software technology prototypes that have market potential and will alleviate mobility, manipulation, communication, or instructional barriers to providing educational opportunities to learners who are handicapped.

5. Exploring Technology Advances to Benefit Children and Youth Who are Handicapped ($160,000; 1 new contract). This contract analyzes potential educational applications for advances in technology in other sectors, especially business and the military. The contractor is SRI International, Menlo Park, California.

6. Administration and Management ($452,000; 5 continuation grants). Projects examine the use of technology in the administration and management of special education.

7. Innovative Cooperative Models to Expand Technology Benefits ($618,000; 6 continuation grants). These projects develop models demonstrating how

---

Accomplishments -- Continued

cooperative efforts among agencies will improve access to technology by individuals who are handicapped. The projects increase awareness of the benefits of technology, provide training in the use of technology, bring together representatives from State and other agencies to plan for the use of technology, and provide technical assistance in technology use.

8. Integration of Technology ($524,000; 3 continuation grants). These research projects integrate technology into instructional programs as an integral component rather than an add-on learning opportunity.

9. Small Business Innovative Research Projects (SBIR) ($102,000; 1 new contract). See the narrative for the Early Childhood Education program for a description of this project.

10. Evaluation Project ($100,000; 1 new contract). See the Severely Handicapped Projects narrative for a description of this project.

A contract was awarded to the COSMOS Corporation late in 1985 to conduct evaluations of five programs in the Special Purpose Funds area including the Special Education Technology program. Based on this evaluation the Department is broadening the range of outcomes and target populations in priority notices.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1/ Not available due to pending legislation.

2/ Includes continuation projects funded for more than one year from prior year appropriations.

2. Special purpose funds: i. Special studies
(Education of the Handicapped Act, Part B, Section 618)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$3,545,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

Special studies currently authorizes grants, contracts, and cooperative agreements to undertake studies and assist in the development of the annual report to Congress on the implementation of the Education of the Handicapped Act (EHA). Studies are conducted to assess progress in implementing the EHA and the impact and effectiveness of State, local, and Department of the Interior efforts to provide free appropriate education and early intervention services. They are also intended to provide Congress with information relevant to policymaking and to provide Federal, State, and local agencies with information relevant to program management, administration, and effectiveness.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Special Studies program. This proposed legislation would shift a number of activities currently authorized under section 618 of the EHA, which authorizes the Special Studies program, to Part E, which authorizes the Innovation and Development program. Significant changes included in this legislation are summarized below:

- o Data on Federal, State, and local funds expended in each State for special education, related services, and early intervention services would no longer be required under section 618.
- o An annual description of services needed to fully implement the EHA in each State would no longer be required.

Purpose and Method of Operation — Continued

- A requirement to collect data on the service needs of children leaving the educational system would be replaced by a triennial report on the services needed by these children.

- Data developed by States for their comprehensive systems of personnel development would be required to be reported.

- The results of research under Part E of the EHA would be included in the annual report when considered relevant to the effective implementation of the Act.

- Technical assistance to States would be authorized with regard to data collected by the States and reported to the Department.

- Studies to assess progress in the implementation of the EHA previously authorized under section 618 for Special Studies would be authorized under Part E for the Innovation and Development program.

- The requirement to conduct a longitudinal study of child progress would be moved to the Innovation and Development program.

- Cooperative agreements with State agencies to assess the impact of the EHA previously authorized under section 618 for Special Studies would be authorized under Part E for the Innovation and Development program.

- The requirement to include analyses on vocational education programs and least restrictive environments, an index of studies under the Special Studies program, and recommendations for changes in the EHA would be deleted.

Accomplishments

In 1989, a study of special education expenditures was completed. This mandated study produced average per pupil expenditure data for special education and related services for the Nation. In addition, costs for particular services and placements were calculated.

A study of day and residential facilities for children with handicaps will be completed in 1990. This study will report data on programs of instruction for children with handicaps at day and residential facilities. State efforts to improve these programs will also be included.

Projects supported in 1989 include:

1. Technical Assistance in Data Analysis ($2,526,000; 1 continuation contract covering 1989 and 1990). This contract provides data analysis and other support for the preparation of the Annual Report to Congress. The contractor is Decision Resources Corporation, Washington, D.C.

Accomplishments -- Continued

2. State Agency/Federal Evaluation Studies ($760,000; 5 new cooperative agreements). These projects support evaluation studies to assess the impact and effectiveness of special education and related services for children and youth with handicaps and early intervention services to infants and toddlers with handicaps. Studies are: (1) evaluating the effectiveness of the screening and diagnostic procedures presently used to identify and address the educational needs of ethnic-linguistically diverse problem learners prior to referral to special education; (2) assessing the program effectiveness and impact of cross categorical grouping for service delivery for students with moderate and severe handicaps through the use of student indicators and other variables; (3) determining the educational outcomes of students with disabilities receiving special education and services in areas related to absence, suspension, and dropout rates; (4) developing and collecting exit performance assessment test data on students who are educable mentally impaired and emotionally impaired; and (5) evaluating the implementation of the pre-referral and referral processes in local educational agencies.

3. Longitudinal Study on Child Progress ($114,000; 1 continuation contract). The award provides continuing support for a longitudinal study to examine the educational progress of youths with handicaps while in special education, and their occupational, educational, and independent living status after graduating from secondary school or otherwise leaving special education. The nationwide sample includes the full range of handicapping conditions. This study is currently mandated under section 618 of EHA. The contractor is Stanford Research Institute, Menlo Park, California.

4. Small Business Innovative Research Projects ($64,000; 1 new contract jointly funded with other Special Purpose Funds programs). See the narrative for the Early Childhood Education program for a description of this project.

5. Evaluation Project ($98,000; 1 new contract jointly funded with other EHA programs). The COSMOS Corporation is conducting an evaluation of selected discretionary programs over a five year period. The primary objective of this project is to provide information related to the achievement of program goals and to enhance program planning, design, implementation, and performance.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1/ Not available due to pending legislation.

2/ Includes continuation projects funded for more than one year from prior year appropriations.

2. Special purpose funds: j. Special education personnel development (Education of the Handicapped Act, Part D, Sections 631, 632, and 634)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$71,000,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Special Education Personnel Development program is to increase the quality and reduce shortages of personnel providing special education, related services, and early intervention services to infants, toddlers, children, and youth with handicaps. Grants are awarded to institutions of higher education, State educational agencies, and other appropriate nonprofit agencies.

Applications for grants are usually solicited based on priorities included in regulations governing this activity. Projects are funded for up to three years. Although most grantees are State educational agencies, colleges, and universities, individuals may receive financial aid indirectly through grant recipients.

Currently, at least 65 percent of the funds appropriated under Part D of the Education of the Handicapped Act (Special Education Personnel Development and Recruitment and Information Clearinghouses) must be awarded under section 631(a) to institutions of higher education and other appropriate nonprofit agencies to assist them in training personnel for careers in special education and early intervention services. Most of these awards are made to institutions of higher education.

At least 10 percent of the funds appropriated under Part D must also be awarded to private nonprofit organizations for training parents and volunteers who work with parents to help them participate more effectively with professionals in meeting the educational needs of children with handicaps.

Remaining funds may be used for special projects under section 631(b) to develop and demonstrate new teaching approaches, and for grants to State educational agencies under section 632.

Purpose and Method of Operation — Continued

Each State educational agency is authorized to receive an award under section 632 to address needs identified through its Comprehensive System of Personnel Development. In addition, State educational agencies may also receive competitive grant awards. However, the amount spent on these competitive awards may not exceed 10 percent of the total funding under section 632 in the previous year.

Contracts are also authorized to prepare personnel in areas where shortages exist when a response to that need has not been adequately addressed by the grant process. Up to 5 percent of the funds appropriated for Special Education Personnel Development may be used for such contracts.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Special Education Personnel Development program. Significant changes included in this legislation are summarized below:

- Regular and special education personnel would not be prevented from benefiting from or participating in section 631 training activities conducted on a preservice or inservice basis.
- The Secretary would be required to establish priorities for:
  - the recruitment and preparation of individuals from diverse racial, ethnic, and linguistic backgrounds, and individuals with disabilities, for careers in special education, related services, and early intervention, including special education leadership; and
  - the preservice preparation of special education, related services, and early intervention personnel to serve individuals from diverse racial, ethnic, and linguistic backgrounds.
- Special projects under section 631(b) would be authorized relating to the recruitment and retention of special education, related services, and early intervention personnel.
- Grants to State educational agencies under section 632 would include support to assist States in developing and maintaining their Comprehensive Systems of Personnel Development (CSPDs) and conducting personnel recruitment and retention activities.
- The Secretary would be authorized to provide technical assistance to State educational agencies on matters pertaining to the effective implementation of their CSPDs.

Education for the Handicapped

2. Special purpose funds: j. Special education personnel development

---

Accomplishments

Since its inception in 1966, over $1 billion has been appropriated for this program for the purpose of improving the quality and increasing the quantity of special education and support personnel. In 1989 alone, 804 awards were made covering a wide variety of special education, related services, and early intervention areas. Awards are made annually in each State, Puerto Rico, the District of Columbia, and several Outlying Areas.

Projects supported in 1989 included:

1. Preparation of Personnel in Special Education and Early Intervention ($24,084,000; 118 new grants and 196 continuation grants). Projects provide preservice training of personnel for careers in special education and early intervention, or supervisors of those personnel. Awards include training for a wide range of personnel including special education administrators and supervisors, speech-language pathologists, audiologists, adaptive physical educators, vocational educators, and infant intervention specialists.

2. Preparation of Related Services Personnel ($5,603,000; 31 new grants and 50 continuation grants). Projects support preservice training for individuals who provide developmental, corrective, and other supportive services that may be required to assist a child or youth with a disability to benefit from special education. Personnel trained include resource teachers, counseling specialists, education consultants, educational aides, and physical therapists.

3. Preparation of Leadership Personnel ($5,935,000; 29 new grants and 39 continuation grants). Projects provide preservice doctoral and post-doctoral preparation of professional personnel such as administrators, supervisors, researchers, and teacher trainers.

4. Preparation of Personnel to Provide Early Intervention Services to Infants and Toddlers with Handicaps ($3,731,000; 24 new grants and 26 continuation grants). Projects support preservice training for personnel who serve infants and toddlers who are either handicapped or at high risk of being handicapped. Most projects prepare personnel from a variety of professions for working in programs characterized by strong interaction with medical, educational, and related services communities.

5. Preparation of Personnel to Work in Rural Areas ($2,279,000; 11 new grants and 20 continuation grants). These projects provide preservice training to personnel who will work in rural areas and include training related to the special problems in working in these areas.

6. Preparation of Personnel for Special Populations of Infants, Toddlers, Children and Youth with Handicaps ($3,451,000; 24 new grants and 24 continuation grants). This priority supports preservice training for personnel who will serve children who, because of special characteristics, require professional competencies in addition to those needed for children with similar disabilities. This competition was first established in 1985 as the Minority Competition. The current

Accomplishments -- Continued

priority continues to support projects that recruit minorities into professional training programs.

7. Preparation of Personnel for Low Incidence Handicapped Students ($776,000; 11 new grants). Projects support training for personnel to serve children with low incidence handicapping conditions. These conditions include intense physical or mental handicaps; deaf-blindness and other multiple handicaps; deafness; blindness; serious emotional disturbance; and other health impairments including autism and chronic or acute health problems.

8. Preparation of Transition Personnel ($2,224,000; 7 new grants and 19 continuation grants). These projects support the preservice training for individuals who assist youth with handicaps in their transition from school to adult roles.

9. Special Projects ($4,821,000; 22 new grants and 35 continuation grants). Projects support preservice and inservice activities for the development, evaluation, and distribution of innovative approaches to personnel preparation.

10. Parent Organization Projects ($6,219,000; 36 new grants and 15 continuation grants). These projects support parent organizations that provide training and information to parents of children with handicaps and to persons who work with parents, to enable parents to participate more fully and effectively with professionals in meeting their children's educational needs.

11. Technical Assistance to Parent Organizations ($935,000; 1 continuation contract). This contract provides technical assistance in establishing, developing, and coordinating parent training and information programs. The contractor is the Federation for Children with Special Needs, Boston, Massachusetts.

12. State Educational Agencies Program ($5,846,000; 32 new grants and 24 continuation grants). This priority supports awards to State educational agencies to assist in addressing needs identified in the States' Comprehensive Systems of Personnel Development.

13. State Educational Agency/Institutions of Higher Education ($724,000; 10 continuation grants). This priority supports awards to State educational agencies and institutions of higher education to assist in addressing needs identified in the States' Comprehensive Systems of Personnel Development.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

2. Special purpose funds: k. Recruitment and information clearinghouses (Education of the Handicapped Act, Part D, Section 633)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$1,479,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Recruitment and Information Clearinghouses program is to improve the recruitment of educational personnel and dissemination of information concerning educational programs and opportunities for people with handicaps through support of three clearinghouses mandated by the Education of the Handicapped Act. These clearinghouses include a national clearinghouse on education of the handicapped, a national clearinghouse on postsecondary education, and a national clearinghouse on personnel recruitment. Eligible applicants for awards include public agencies and nonprofit private organizations and institutions.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Recruitment and Information Clearinghouses program. Significant changes included in this proposed legislation are summarized below:

- Specific responsibilities of the national clearinghouse on the education of persons with disabilities would include:
  - collecting, synthesizing, developing, and disseminating information concerning programs and services related to the education of individuals with disabilities;
  - participating in programs related to disability issues in order to provide outreach, technical assistance, information collection and dissemination, and referral of individuals to appropriate national, State, and local agencies and organizations;

Purpose and Method of Operation -- Continued

- coordinating outreach activities with relevant Federal, State, and local organizations and other sources of information, programs, and services;

- providing technical assistance to establish information and referral services for individuals with disabilities and their families;

- participating in the dissemination of the results of research, demonstration, and model projects funded under other sections of the Education of the Handicapped Act;

- collecting and providing the Secretary with data on the information needs of parents, professionals, individuals with disabilities, and others regarding the provision of special education, related services, and early intervention.

o Specific responsibilities of the national clearinghouse on postsecondary education would include:

- collecting, developing, synthesizing, and disseminating information on available services, characteristics of the postsecondary population, laws affecting postsecondary education, sources of financial aid, and resources to facilitate the education, rehabilitation, and retraining of adults with disabilities.

- identifying areas of need for additional information regarding postsecondary education for individuals with disabilities; and

- coordinating with other entities in disseminating information on, and promoting awareness of, issues relevant to the postsecondary education of individuals with disabilities.

o Specific responsibilities of the national clearinghouse on personnel recruitment would be expanded to include assisting States and institutions of higher education in the recruitment of personnel for professional careers in special education, related services, and early intervention.

o In making awards, the Secretary would be required to give particular attention to demonstrated experience in providing information services to racially, ethnically, and linguistically diverse consumers, rural and urban consumers, and organizations that serve infants, toddlers, children, and youth with disabilities, their families, and professionals.

Accomplishments

This program began in fiscal year 1969 with an appropriation of $250,000 to support information clearinghouse activities and public information features on television concerning services available to individuals with handicaps. In order to specifically address the needs of increasing numbers of children with handicaps who were exiting special education programs at the secondary

Accomplishments -- Continued

level, the Education of the Handicapped Act Amendments of 1983 created a second clearinghouse to provide information on postsecondary programs for handicapped persons. A new clearinghouse dealing only with the recruitment of personnel was added by the Education of the Handicapped Act Amendments of 1986.

In 1989, new awards were made to the three clearinghouses. These awards are summarized below:

1. National Clearinghouse on the Education of the Handicapped ($615,000; 1 continuation cooperative agreement). This project provides parents, teachers, and others with information on issues pertaining to the education of children and youth with disabilities. The project disseminates information on a wide range of topics including: education, job training, financial assistance, rehabilitation, recreation, and independent living. The clearinghouse is operated by Interstate Research Associates, McLean, Virginia.

2. National Clearinghouse on Postsecondary Education of Handicapped Individuals ($283,000; 1 continuation cooperative agreement). The clearinghouse provides information about opportunities at colleges, universities, vocational technical schools, adult education programs, independent living centers, and other training entities after high school. The clearinghouse responds to inquiries from individuals and organizations regarding such topics as financial aid, choices after high school, career development, and vocational training. The clearinghouse is operated by the American Council on Education, Higher Education and the Handicapped (HEATH), Washington, D.C.

3. National Clearinghouse on Careers and Employment in Special Education ($237,000; 1 continuation cooperative agreement). This clearinghouse collects and disseminates information on current and future needs for special education and related services personnel; disseminates information concerning career opportunities in special education, location of programs, and various forms of financial assistance; identifies training programs available around the country; and provides technical assistance to institutions seeking to meet State and professionally recognized standards. The clearinghouse is operated by the National Association of State Directors of Special Education, (NASDSE), Washington, D.C.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

Education for the Handicapped

2. Special purpose funds: k. Recruitment and information clearinghouses

2/ Not available due to pending legislation.

Competitions were held for the clearinghouses in fiscal year 1989. They will be funded as continuations in fiscal years 1990 through 1993.

2. Special purpose funds: 1. Regional resource centers (Education of the Handicapped Act, Part C, Section 621)

1991 Authorization: To be determined 1/

Budget Authority:

1990 Appropriation	1991 2/ Request	Increase or 2/ Decrease
$6,510,000	---	---

1/ The GEPA extension expires September 30, 1990. Reauthorizing legislation is pending.

2/ The specific amounts requested for individual activities will be determined after reauthorizing legislation is enacted.

Purpose and Method of Operation

The current purpose of the Regional Resource Centers program is to provide consultation, technical assistance, and training to State educational agencies and, through these agencies, to local educational agencies and other appropriate public agencies providing special education and early intervention services to infants, toddlers, children, and youth with handicaps. Grants, contracts, and cooperative agreements are authorized to institutions of higher education, public agencies, private nonprofit organizations, and State educational agencies.

The services provided by the regional resource centers are consistent with the priority needs identified by the States served and the findings of the Secretary in monitoring reports.

A national coordinating technical assistance center is also authorized. This center focuses on assisting the regional centers in the delivery of technical assistance in areas of national priority established by the Secretary.

This is a current-funded program for which funds are available from October 1 to September 30. The level of funding is dependent upon the availability of appropriations.

The Senate has passed S. 1824, the Education of Individuals with Disabilities Act of 1989, which would extend and amend the authorization for the Regional Resource Centers program. Significant changes included in this legislation are summarized below:

- The specified focus of the centers would include special education, related services, and early intervention services.
- A number of activities of the national coordinating center would be specifically authorized. These include:

Purpose and Method of Operation — Continued

- providing assistance regarding techniques and approaches for submitting award applications for discretionary programs funded under the Education of the Handicapped Act;
- technical assistance concerning the education of children with disabilities from diverse racial, ethnic, and linguistic backgrounds;
- exchanging information with, and, where appropriate, cooperating with, other centers addressing the needs of children with disabilities from diverse racial, ethnic, and linguistic backgrounds; and
- providing assistance to State educational agencies, through the regional resource centers, for the training of hearing officers.

Accomplishments

The Regional Resource Centers program began in 1969 with support provided to four centers. The original mission of the Regional Resource Centers was to develop and apply best methods for appraising special education needs and designing programs for children with handicaps referred to them. With the passage of the Education for All Handicapped Children Act, the mission of the Regional Resource Centers was modified to that of aiding State and local educational agencies, through the delivery of training and technical assistance, to carry out directly a number of State and local functions. Included in these functions were appraisal of handicapping conditions; child placement; the development, implementation, and review of individual education programs (IEPs); and the evaluation of child progress. Starting in 1980, the Regional Resource Centers expanded their operations to include a system for developing and sharing expertise with each other and with State and local educational agencies. Awards have continued to emphasize the provision of technical assistance to States to improve their capacities to better serve children with handicaps.

The 1989 awards are summarized below:

1. Regional Resource Centers (RRCs) ($6,139,000; 6 continuation contracts). The RRCs assist State educational agencies, and through these agencies, local educational agencies, other public agencies, and parents, by providing consultation, technical assistance, and training activities regarding quality special education programs. The RRCs assist States through problem-solving activities to identify approaches for providing services, assist in replicating successful educational programs and practices, gather and disseminate educational program information to State educational agencies, and coordinate activities with other centers and relevant Department projects. In addition, the RRCs disseminate information and train professionals and families regarding special education services for infants, toddlers, children, and youth with handicaps and provide support to agencies submitting applications for grants under certain sections of the Education of the Handicapped Act.

Accomplishments -- Continued

2. Federal Regional Resource Center (FRRC) ($199,000; 1 continuation contract). The FRRC designs and provides technical assistance and consultation to the RRCs and the Office of Special Education Programs; identifies and analyzes significant emerging issues related to technical assistance in priority areas identified by the Secretary; and projects long term technical assistance needs. Through a variety of activities, the FRRC ensures the consistency of technical assistance content strategies in the national priority areas designated by the Secretary. The current contractor is the University of Kentucky.

1991 Budget Proposal

As soon as reauthorizing legislation is enacted, a budget request in the amount of $181,865,000 for Education for the Handicapped, Special Purpose Funds, will be submitted to Congress. Amounts requested for specific activities will be determined at that time.

1/ Distribution is based on the formula of multiplying the number of handicapped children receiving special education in each State by 40 percent of the national average per pupil expenditure, and ratably reducing this share based on the appropriation available for distribution. No State may receive less than it received in 1977. Allocations to the Secretary of the Interior are based on 1.25 percent of the aggregate amount available to all States. The Outlying Areas can receive up to one percent of the aggregate of the amounts available to all States. Allocations for the Outlying Areas in the tables are based on .80 percent of the aggregate amounts available to all States.

2/ The Marshall Islands and the Federated States of Micronesia elected not to participate in the program in 1989. They are not eligible to participate in 1990 and thereafter.

Republic of Palau	69,000	25,188	27,920
Undistributed	8,169,925 3/	19,000,000 4/	---

1/ Allocations were based on $500 per child for 323,169 children counted as served on December 1, 1988, plus $3,800 for 23,274 additional children States estimated they would be serving in the 1989-90 school year, and adjustments based on the difference between the additional number of children States had estimated they would be serving in the 1988-89 school year and the actual number reported as served by December 1, 1988.

2/ The Marshall Islands and the Federated States of Micronesia (FSM) elected not to participate in the program in 1989. They are not eligible to participate in 1990 and thereafter.

3/ Of the funds appropriated, $8,169,925 remained after adjustments had been made and funds had been provided at the statutory maximums of $500 for each child served and $3,800 for each additional child States had estimated they would be serving in the 1989-90 school year.

4/ The Department expects $19,000,000 of the funds appropriated to be used for upward adjustments of $3,800 each for 5,000 additional children beyond the 23,274 States had estimated they would be serving in the 1989-90 school year. Distribution is based on $251,510,000 less $19,000,000, or $232,510,000.

Secretary of the Interior	853,490	971,911	1,010,790

1/ Distribution is based on the most recent population data available for children aged birth through two years. The Outlying Areas receive one percent of the total appropriation. The Secretary of the Interior receives 1.25 percent of the aggregate amount available to all States. No State receives less than 0.5 percent of the aggregate amount available to all States.

THURSDAY, FEBRUARY 22, 1990.

REHABILITATION SERVICES AND HANDICAPPED RESEARCH

WITNESSES

ROBERT R. DAVILA, ASSISTANT SECRETARY FOR SPECIAL EDUCATION AND REHABILITATIVE SERVICES

NELL CARNEY, COMMISSIONER, REHABILITATION SERVICES ADMINISTRATION

JAMES B. RESWICK, ACTING DIRECTOR, NATIONAL INSTITUTE ON DISABILITY AND REHABILITATION RESEARCH

SALLY H. CHRISTENSEN, DIRECTOR, BUDGET SERVICE, OFFICE OF PLANNING, BUDGET AND EVALUATION

CAROL A. CICHOWSKI, DIRECTOR, DIVISION OF SPECIAL EDUCATION, REHABILITATION AND RESEARCH ANALYSIS, OFFICE OF PLANNING, BUDGET AND EVALUATION

OPENING REMARKS

Mr. NATCHER. Now, we take up the budget request for Rehabilitation Services and Handicapped Research. We have before the committee Dr. Robert R. Davila.

And who do you have with you now at the table, Dr. Davila, on this request?

Dr. DAVILA. To my extreme left, Dr. James Reswick, who is Acting Director, National Institute on Disability and Rehabilitation Research, and on my immediate left, I have Commissioner Nell Carney, Rehabilitation Services Administration, and on my right, Carol Cichowski, Director, Division of Special Education, Rehabilitation and Research Analysis, Office of Planning, Budget and Evaluation, and on my extreme right, Sally Christensen, Director of the Budget Service in the same office.

OPENING STATEMENT

Mr. NATCHER. Thank you, Dr. Davila.

Now, we will be pleased to hear from you at this time.

Dr. DAVILA. Thank you, sir.

I appreciate this opportunity to appear before you to present the fiscal year 1991 budget for the Rehabilitation Services and Handicapped Research account.

The 1991 budget includes a total of $1,800,000,000 for vocational rehabilitation and handicapped research, an increase of $59,000,000 over the 1990 appropriation level. This funding level will allow for inflation increases in the four State grant programs. The State grant programs provide the majority of direct services to persons with disabilities funded through this account. We are also proposing a 35 percent increase in the Technology Assistance program.

The 1991 budget includes $1,600,000,000 for Basic State Grants, an increase of $68,800,000 over the fiscal year 1990 appropriation. The 1991 level would enable States to maintain their ongoing programs of rehabilitation services to disabled persons and to continue to give priority to severely disabled individuals. Approximately the same number of disabled persons are expected to be served and rehabilitated in fiscal year 1991 as in fiscal year 1990.

We are proposing $28,800,000 for the Supported Employment formula grant program, an increase of $1,200,000 over the fiscal year 1990 level. Our request reflects the high priority we place on State-operated programs that provide opportunities to severely disabled persons.

The 1991 budget includes $8,200,000 for the Client Assistance program, an increase of $332,000 over the fiscal year 1990 appropriation. These funds should enable agencies to continue to provide the full range of protective and assistive services specified by the law.

The budget includes $17,500,000 for Special Demonstration programs. This is the same level as the fiscal year 1990 appropriation, excluding the 1990 one-time appropriation of $14,800,000 for establishing four head injury centers. Supported Employment Projects, Projects with Industry and Migratory Worker Projects are also proposed at the fiscal year 1990 appropriation level.

We are requesting $5,200,000 for the Helen Keller National Center, an increase of $260,000.

The fiscal year 1991 budget for Independent Living programs would continue funding for Centers for Independent Living at the 1990 level. We continue to emphasize the importance of statewide coverage and statewide coordination of services. Therefore, the budget includes $13,500,000, an increase of $543,000, for the Comprehensive Services for Independent Living program.

The budget includes $31,100,000 for Training, the same as the fiscal year 1990 appropriation. Funds would be directed toward manpower needs identified by the Department's analysis of shortage areas.

We are proposing $54,300,000 for the National Institute on Disability and Rehabilitation Research, the same as the 1990 appropriation. The budget will provide support for 40 rehabilitation research and training centers and 19 rehabilitation engineering centers.

The budget includes $20,000,000 for the Technology Assistance program, an increase of $5,200,000 over the 1990 appropriation.

The Department recognizes the major contribution that assistive technology devices and services can make to improving the quality of life, enlarging opportunities for education and employment, and reducing communication barriers for disabled persons of all ages. This increase reflects the priority the Department has placed on the development and implementation of comprehensive statewide programs of technology assistance.

My colleagues and I will be pleased to respond to any questions you may have. Thank you.

DEPARTMENT OF EDUCATION

Statement by

Robert R. Davilla
Assistant Secretary for
Special Education and Rehabilitative Services

on

Rehabilitation Services and Handicapped Research

Mr. Chairman and Members of the Committee:

I appreciate this opportunity to appear before you to present the fiscal year 1991 budget for the Rehabilitation Services and Handicapped Research account.

The 1991 budget includes a total of $1.8 billion for this account, an increase of $59 million over the 1990 appropriation level. This funding level will allow for inflation increases in the four State grant programs. The State grant programs provide the majority of direct services to persons with disabilities funded through this account. Our request reflects the Administration's commitment to programs that provide opportunities to severely disabled persons. In keeping with this commitment, we are also proposing a 35 percent increase in the Technology Assistance program.

Basic State Grants

The 1991 budget includes $1.6 billion for Basic State Grants, an increase of $68.8 million over the fiscal year 1990 appropriation. The 1991 level would enable States to maintain their ongoing programs of rehabilitation services to disabled persons and to continue giving priority to severely disabled individuals. In addition, the increase satisfies the statutory requirement to increase program funding by at least the percentage change in the Consumer Price Index for Urban Consumers for the 12-month period completed in October 1989. Approximately the same number of disabled persons are expected to be served and rehabilitated in fiscal year 1991 as in fiscal year 1990.

The Indian program is funded from a set-aside from the Basic State Grant program. The budget includes an increase of $172,000 over the fiscal year 1990 appropriated level, for a total of $4.0 million. This level would allow for the funding of about 15 projects including 12 continuations and new projects.

Supported Employment State Grants

We are proposing $28.8 million for the Supported Employment formula grant program, an increase of $1.2 million over the fiscal year 1990 level. Our request reflects the high priority we place on State-operated programs that provide opportunities to severely disabled persons.

Client Assistance Program

The 1991 budget includes $8.2 million for the Client Assistance Program, an increase of $332,000 over the fiscal year 1990 appropriation. These funds should enable agencies to continue to provide the full range of protective and assistive services specified by the law.

Service and Demonstration Projects

The budget includes $17.5 million for Special Demonstration programs. This is the same level as the fiscal year 1990 appropriation, excluding the 1990 one-time appropriation of $14.8 million for establishing four head injury centers. Supported Employment Projects, Projects with Industry and Migratory Worker Projects are also proposed at the fiscal year 1990 appropriation levels of $9.9 million, $18.8 million and $1.1 million respectively. No funds are requested for Recreational programs in 1991. Recreation is an activity more appropriately funded by private charities, local organizations, and other non-Federal sources.

Helen Keller National Center

We are requesting $5.2 million for the Helen Keller National Center, an increase of $260,000. This level will offset the effect of inflation and compensate for salary and benefit increases at the Helen Keller headquarters facility and 10 regional offices. It will also provide funds for an expansion of the community work experience program.

Independent Living Programs

The fiscal year 1991 budget for Independent Living programs would continue funding for Centers for Independent Living at the 1990 level of $26.7 million and provide $5.8 million for Independent Living Services for Older Blind Individuals, the same level as the fiscal year 1990 appropriation. We continue to emphasize the importance of statewide coverage and statewide coordination of services. Therefore, the budget includes $13.5 million, an increase of $543,000, for the Comprehensive Services for Independent Living Program.

Training

The budget includes $31.1 million for Training, the same as the fiscal year 1990 appropriation. Funds requested for 1991 will be used to cover continuation costs and new projects in most long-term training categories, and to continue support for experimental and innovative training, regional continuing education, State inservice training, and training programs for interpreters for persons who are deaf. Over one-third of the funds would be available for new awards. Funds would be directed toward manpower needs identified by the Department's analysis of shortage areas.

National Institute on Disability and Rehabilitation Research

We are proposing $54.3 million for the National Institute on Disability and Rehabilitation Research, the same as the 1990 appropriation. The budget will provide support for 40 rehabilitation research and training centers and 19 rehabilitation engineering centers. In addition, it will support a wide range of discretionary research, demonstration, dissemination, and training activities including funds for continuation grants and approximately 70 new awards. Field-initiated research has grown substantially during the past few years. The budget would allow NIDRR to support approximately 16 more field-initiated research projects than it expects to support in 1990.

Technology Assistance

The Department recognizes the major contribution that assistive technology devices and services can make to improving the quality of life, enlarging opportunities for education and employment, and reducing communication barriers for disabled persons of all ages. The budget includes $20 million, an increase of $5.2 million, for the Technology Assistance program, which is administered by NIDRR. This increase reflects the priority the Department has placed on the development and implementation of comprehensive statewide programs of technology assistance. The budget will support 12 new and 22 continuation grants to assist States in developing statewide programs of technology-related assistance. In addition, it will provide $500,000 for technical assistance to States and will provide funds to complete the national evaluation of the State grant program. An estimated $1 million will provide for the continuation of 10 model projects expected to be funded under Title II of the Act in fiscal year 1990.

Evaluation

The 1991 budget requests $1 million for Evaluation, the same as the 1990 appropriation level. Studies on State vocational rehabilitation program quality assurance systems and the recruitment and retention of rehabilitation personnel to be initiated in 1990 will be continued. Our request would also allow for the initiation of one or two new evaluations. The Department has a strong interest in ensuring the accountability and effectiveness of rehabilitation programs.

My colleagues and I will be pleased to respond to any questions you may have.

DEPARTMENT OF EDUCATION

Office of Special Education and Rehabilitative Services

Biographical Sketch

NAME : Robert R. Davila

POSITION : Assistant Secretary for Special Education and Rehabilitative Services

BIRTHPLACE AND DATE : San Diego, California, July 19, 1932

EDUCATION : Gallaudet University, 1953, B.A.
Hunter College, 1963, M.A.
Syracuse University, 1972, Ph.D.

EXPERIENCE

1989 - PRESENT : Assistant Secretary for Special Education and Rehabilitative Services

1978 - 1989 : Vice President for Pre-College Programs, Gallaudet University

1980 - 1989 : Professor of Education, Gallaudet University

1974 - 1980 : Associate Professor, (Part time), Department of Education, Gallaudet University

1974 - 1978 : Director, Kendall Demonstration Elementary School, Gallaudet University

1972 - 1974 : Instructor, Department of Education, Gallaudet University

1968 - 1970 : Supervisor, Elementary Department, New York School for the Deaf

1953 - 1968 : Teacher, New York School for the Deaf

HONORS AND AWARDS

Daniel T. Cloud Leadership Award, California State University, Northridge, 1988.

Inducted to Alumni Hall of Fame, Hunter College, 1988.

Inducted to National Hall of Fame for Persons with Disabilities, Columbus, Ohio, 1987.

Alumnus of the Year, School of Education, Syracuse University, Syracuse, New York, 1986.

"Ang Puso" Award, Southeast Asian Institute for the Deaf, Philippine Islands, for long time service to programs for the deaf in the Philippines, 1985.

Member of Honor (first foreigner and first deaf person ever inducted), La Asociacion Espanola de Educadores de Sordos (A.E.E.S., Spanish Association of Educators of the Deaf), Spain, 1985.

Elizabeth E. Jackson Leadership Award, Metropolitan Chapter, Gallaudet University Alumni Association, 1983.

Man of the Year Award, Delta Epsilon Sorority, 1982.

Distinguished Foreign Lecturer, Annual Conference of Australian Teachers of the Deaf, Melbourne, Victoria, Australia, 1979.

Past President's Award, Convention of American Instructors of the Deaf, 1978.

Fellowship for Doctoral Studies, Bureau of Education for the Handicapped, 1970.

Teacher of the Year, New York School for the Deaf, 1968.

VOCATIONAL REHABILITATION PROGRAM

Mr. NATCHER. Dr. Davila, what portion of the costs of State rehabilitation programs is financed with the Federal funds, and what portion is financed directly by the State?

Dr. DAVILA. The division is 80/20; 80 percent Federal, 20 percent State up to the 1988 funding level. However, because of recent changes in the Act, the States must increase their matching contribution, beginning in 1989, by one percent each year for funds received in excess of the 1988 level. Currently, Federal expenditures constitute approximately 77 percent of total VR program expenditures due to over matching.

Mr. NATCHER. Do States have waiting lists of clients for vocational rehabilitation services funding by this account?

Dr. DAVILA. States are required to justify an order of selection if they cannot serve all eligible applicants. Of eighty-three State agencies about 19 are now under order of selection, which means that higher priority is given to those more severely disabled.

These States are required to describe and justify priorities for services. I would assume that there are some individuals who are on a waiting list.

Mr. NATCHER. According to the 1986 amendments to the basic law, States are required to focus their resources on the most severely handicapped. Does this explain why the number of persons vocationally rehabilitated in fiscal year 1988 declined from fiscal year 1987, even though the actual number of clients served increased slightly?

Dr. DAVILA. I would not attribute the slight decline to that reason alone. Information for 1989 indicates that there was actually a small increase in the number of persons rehabilitated over the 1987 and 1988 levels.

The number of individuals rehabilitated increased by 1 percent over the 1988 level to approximately 220,500. I believe that we are making good progress in increasing services, and are achieving a good number of rehabilitations.

Mr. NATCHER. What happens, Dr. Davila, to the clients that are not rehabilitated, and placed? Do they simply drop out of the system after a specified period of time? Just what happens?

Dr. DAVILA. I will ask Commissioner Carney to respond to that question.

Mr. CARNEY. Mr. Chairman, some of the individuals drop out and are picked up by other agencies; some return to State Vocational rehabilitation programs at a later time, and some enter rehabilitation programs, specifically designed for the more severely disabled, such as Supported Employment Projects with Industry, and Independent Living.

TRAINING OF REHABILITATION PERSONNEL

Mr. NATCHER. What can you tell us about the supply and demand for rehabilitation personnel? What about this, supply and demand of rehabilitation personnel?

Dr. DAVILA. Information that we have from the 1987 and 1989 National Surveys of Personnel Shortages and Training Needs in Vocational Rehabilitation did indicate that there were shortages of personnel with adequate training in a number of areas. Funding priorities have shifted to address these training needs. Commissioner Carney is also looking into conducting a more intensive assessment of needs. She has formed a group to advise the Department on how best to gather information and data to help in developing priorities.

Mr. NATCHER. The fiscal year 1991 budget request for training is level. I think it was about $31,000,000. Is that adequate, given the demand for these services? How do you feel about it, Dr. Davila?

Mrs. CARNEY. Mr. Chairman, the information that we have to this point does not indicate a need for an increase in this budget activity, based on the information that we gathered in 1987 through 1989.

Mr. NATCHER. You get the transcript back now, take a look at it and give us a little more detail, if you will, please, in answer to that question.

[The information follows:]

TRAINING REQUEST JUSTIFICATION

In accordance with a congressional mandate, the Department conducted a survey in 1986 through an external contractor to collect data to use in directing rehabilitation training program funds to areas of identified personnel shortages. The Department conducted a follow-up survey in 1989 to update data collected in the previous survey. Comparison of data collected in the two surveys did not indicate any significant changes in the demand for rehabilitation personnel. The FY 1991 budget request for training is, therefore, level.

FEDERAL SPENDING ON REHABILITATION SERVICES

Mr. NATCHER. There are many other agencies of the government concerned with rehabilitation, as you know. Can you tell us how much the Federal Government spends in total on rehabilitation services? Can you give us some idea?

Ms. CICHOWSKI. I think we are going to have to provide that for the record, Mr. Chairman.

[The information follows:]

TOTAL FEDERAL EXPENDITURES ON REHABILITATION SERVICES

Dr. DAVILA. According to a 1986 report to the President and Congress entitled *Toward Independence: An Assessment of Federal Laws and Programs Affecting Persons with Disabilities,* prepared by the National Council on the Handicapped, the Nation's annual Federal expenditure on disability benefits and programs exceeds $60 billion. The report lists 45 Federal programs affecting persons with disabilities and their estimated 1986 expenditures. Types of services provided by these programs include: employment/vocational rehabilitation, independent living, health and medical rehabilitation services, education, income maintenance, housing and transportation, information and advocacy, and research and demonstration projects.

Federal support for rehabilitation services, which include vocational rehabilitation, independent living, and medical rehabilitation services, is provided primarily by the Department of Education, the Department of Health and Human Services, the Department of Labor, and the Department of Veterans Affairs. Federal agencies providing the majority of direct vocational rehabilitation services (training and employment) and independent living services to persons with disabilities include the Department of Education, the Department of Labor, the Department of Veterans Affairs, and the Department of Health and Human Services. Federal support for medical rehabilitation is provided through programs administered primarily by the Department of Health and Human Services and the Department of Veterans Affairs.

In 1990, the Department of Education's Rehabilitation Services Administration will provide approximately $1.7 billion for support of vocational rehabilitation and independent living services to persons with disabilities. The Department of Labor, through the Job Training Partnership Program (JPTA), provides approximately $1.8 billion in funds for training and employment services to prepare unskilled individuals facing serious barriers to employment for entry in the labor force. Persons with disabilities who meet JPTA's eligibility criteria are served under this program. In JPTA's 1988 program year, approximately 12 percent of program terminees under Title II A, Training Services for Disabled Youth and Adults, were handicapped.

The Department of Health and Human Services is the major source of Federal expenditures for medical rehabilitation services, primarily through Medicare and Medicaid funding. Medicare and Medicaid spending on disabled persons, which consists of expenditures for basic health care and rehabilitation services, will be approximately $25 billion in 1990. In addition, the Department of Health and Human Services through the Administration on Developmental Disabilities funds special projects, basic support, and advocacy services in order to integrate developmentally disabled persons into the community. Estimated 1990 funding for these programs is $86 million.

The Social Security Administration (SSA) does not provide direct rehabilitation services to disabled beneficiaries. However, it refers applicants to State VR agencies and reimburses VR agencies, in a case-by-case basis, for a portion of the costs of rehabilitating disabled beneficiaries when the VR services provided contribute to their performance of substantial gainful employment for a period of 9 continuous months. In fiscal year 1987, SSA's Office of Disability reported that it reimbursed VR for claims at a total cost of about $28 million.

The Department of Veterans Affairs (VA) provides approximately $129 million for support of vocational rehabilitation and independent living services and $35 million for special assistance in adapting housing and motor vehicles. The VA also provides medical rehabilitation services to disabled veterans.

NATIONAL CENTER FOR MEDICAL REHABILITATION RESEARCH

Mr. NATCHER. As you know, Senator Kennedy and Representative Walgren have each introduced bills that if passed would establish within the National Institute of Health a National Center for Medical Rehabilitation Research. What does the Department think about this idea?

Dr. DAVILA. We have not been requested by OMB to comment, so we have taken no position; however, we continue to maintain ongoing contact with appropriate NIH institutes because of our own involvement and interest in rehabilitation research.

Mr. NATCHER. Dr. Davila, how do you personally feel about it? Is this a good idea? Should this take place?

Dr. DAVILA. Yes I, believe that we need to maintain communication with other facilities providing services to the same population, but the approach that we are taking with our resources, is somewhat different than the position that will be taken by an NIH center.

I will ask Dr. Reswick to comment on that.

Mr. NATCHER. If approved, if this legislation is enacted, signed into law, what will that give us, 17 institutes and centers; is that about right? Wouldn't that be about 17 institute centers out there?

You can place that in the record for us, Dr. Davila.

[The information follows:]

NUMBER OF INSTITUTES AND CENTERS AT NIH

There are 13 separate Institutes in the National Institutes of Health. There are also three Centers which are operated independently of any of the Institutes. The recommendation under discussion is to create an additional Center.

NATIONAL CENTER FOR MEDICAL REHABILITATION RESEARCH

Mr. Natcher. Would such a center duplicate the mandate of the National Institute on Disability and Rehabilitation Research? Would there be a duplication?

Go right ahead, Mr. Reswick.

Dr. Reswick. Thank you, Mr. Chairman.

It is very difficult not to be in favor and strongly support increased activities in medical rehabilitation. I would say that such a center is not likely to duplicate completely the mission of NIDRR.

In NIDRR, we are much more focused on the service needs of persons with disabilities throughout the nation. It means that our peer review panels are often comprised of persons with disabilities, with consumers, and our finding priorities reflect this.

Our priorities often cover the issues of effective delivery of services. These are the kind of activities that the NIH has not traditionally been heavily involved with. We do think, however, that the establishment of such a center at NIH is likely to result in some duplication of effort, particularly in priority setting, applied research activities, training, and dissemination activities. We understand that NIH thinks that it would be useful to improve coordination of the medical rehabilitation research in the NIH categorical institutes, but we are not certain that a new center is needed to accomplish this.

FRAGMENTATION OF REHABILITATION EFFORTS

Mr. Natcher. The National Institutes of Health convened an ad hoc advisory group to examine the issue of an independent center, and related concerns. One problem indicated in their December 1989 report was that fragmentation of the rehabilitation effort among many agencies leads to failure to collaborate on related research.

Is this a valid concern to you? How do you feel about it?

Dr. Davila. Fragmentation is always a concern when it happens. We make continuing efforts to maintain and improve coordination, particularly through the Interagency Committee Disability Research, which Dr. Reswick chairs. Nevertheless, let me ask Commissioner Carney to comment on this.

Mrs. Carney. Although research isn't the main function of the Rehabilitation Services Administration, I think fragmentation of services generally creates conflict and is not good for recipients of services who are the disabled individuals in the country.

I want to note that this Administration is seeking to improve collaboration and cooperation with other agencies.

TECHNOLOGY ASSISTANCE PROGRAM

Mr. Natcher. The budget request for fiscal 1991 for Technology Assistance is $20,000,000, an increase of 35 percent. Why are you proposing such a large increase in this particular category? Why such a large increase?

Dr. Davila. We hold the opinion that technology has had a tremendously beneficial impact on the lives of people with disabilities, and we were highly encouraged by the quality and number of the proposals we received during the first competition. We received 50 proposals for 9 awards, so that is why we want to continue to expand this program.

In the coming year we will be responding to the mandate that we evaluate the programs that we are supporting, but thus far we are encouraged that the States have been very responsive.

Mr. NATCHER. How are these funds distributed, and what types of projects are being financed with these grants?

Dr. DAVILA. I will ask Dr. Reswick to comment on that.

Mr. NATCHER. Yes, go right ahead, Mr. Reswick.

Dr. RESWICK. Thank you, sir.

The average grant is about $500,000 to each State. The kinds of projects are very broad ranging, as set forth in the original law. Some projects involve demonstrations for delivering technology assistance more effectively to persons with handicaps. There are other projects that are studying payment systems. There are other projects that are dealing with developing information bases, and more effectively making the information available, both to the prescribers of equipment, and to the consumers who need the equipment.

Mr. NATCHER. Mr. Conte, I yield to you.

SIGN LANGUAGE INSTRUCTION

Mr. CONTE. I understand, doctor, that you are trying to teach your staff how to use sign language. How are you doing?

Dr. DAVILA. We are placing a new emphasis on staff development, and sign language classes are part of that program. Individuals who have expressed an interest in learning to sign can take classes during the work hours by making arrangements with their superiors. We are providing these classes free of charge. Because of my own personal needs, I provide more intensive training to my immediate staff.

Mr. CONTE. How you are doing.

Dr. DAVILA. Well, it is going well. I am communicating well.

PROGRAM ACCOUNTABILITY

Mr. CONTE. In your general statement you mentioned the Department's strong interest in ensuring that rehabilitation programs are accountable and effective. What specific areas need to be more effective? How do you plan to hold them accountable?

Dr. DAVILA. Commissioner Carney has been addressing the question of evaluation, so I will ask her to respond to this.

Mrs. CARNEY. I believe, sir, we can improve in all of the programs, including the State grant programs, the discretionary grant programs, and the rehabilitation training program. Even though I think our programs basically are very good, I believe there is always room for improvement.

In regard to accountability, we worked closely with the Department's Office of Planning, Budget and Evaluation in developing a 1990 evaluation plan, which I believe specifically addresses some areas of accountability.

One project is an evaluation of quality assurance systems in State agencies; another is a look at the recruitment and retention of personnel in rehabilitation agencies, and the third evaluation initiative for this year will be identifying best practices in the delivery of rehabilitation services to the traumatically brain injured. We go beyond that, however, in our accountability initative and we have developed a three year strategic evaluation plan which we have shared with the Department's Office of Planning, Budget and Evaluation. It is our hope to implement that plan in the coming years.

AMERICANS WITH DISABILITIES ACT

Mr. CONTE. We will be watching to see how you do. As you know, I am the original co-sponsor of the American Disability Act.

Doctor Davila, How do you see the enactment of the ADA impacting upon the mission and the function of your agency and of the persons it is intended to serve?

Dr. DAVILA. I believe it will be a wonderful thing. It will be what people have called the last piece in the puzzle, something that has been needed and now it will soon be real life. But I also believe that in as far as all of us in education are concerned, we always need to increase our own accountability, because all the opportunities are going to be just that. The ADA will provide an opportunity to people who are otherwise qualified. So, we will need to increase our own accountability to make sure that young people with disabilities can enter into the community with the skills, knowledge, and abilities to permit them to capitalize on all the wonderful opportunities that the bill will provide.

I think that it is very relevant to what we are doing. I see ourselves becoming more responsible, more accountable.

MANDATORY FUNDING INCREASE

Mr. CONTE. The budget requested an increase of $68,600,000, or 4.5 percent from vocational rehabilitation State grants. The intention is to keep up with inflation. The justification indicates that this increase satisfies the statutory requirement of increased funding at least by the increases in the consumer price index. Does this mean that the department fully accepts the State grant program is a mandatory program, and that the Department must automatically propose an increase for inflation annually?

Ms. CICHOWSKI. Yes, sir.

Mr. CONTE. Does that make it an entitlement program?

Ms. CICHOWSKI. Yes, sir, it is an entitlement for participating States. However, we do not consider it an entitlement for clients.

BENEFITS/COST OF THE VOCATIONAL REHABILITATION PROGRAM

Mr. CONTE. Your justification indicates that a 1989 study funded by the Department, substantially lowers the estimated benefits of rehabilitation from $9.30 per dollar spent, to $5.55 per dollar spent. Please tell us what is going on here? That is a fairly substantial revision of the data used for years to justify investment in rehabilitation.

Ms. CICHOWSKI. Mr. Conte, what is going on here is an attempt to more accurately estimate both earnings prior to rehabilitation, and after rehabilitation. The model that RSA used in the past used earnings reported at the time of application as an approximation for the potential of the client to earn, and they used earnings reported at the time of rehabilitation as an estimate of what the client could be expected to earn in the future, and they projected future earnings on that basis.

What the more recent study does is rely on longitudinal data that was collected by the Social Security Administration on actual earnings of clients over an eight-year period. This information gives us a much better sense of the client's potential prior to rehabilitation by looking at the client's actual earnings experience a year prior to entry into the VR system. Perhaps even more importantly, instead of projecting what the client could be expected to earn over time by simply extrapolating the earnings at the time of rehabilitation on forward, we looked at actual data. Because the actual data isn't as encouraging as the projections that RSA previously was making, there are different cost benefit ratios.

We evidently were underestimating client potential and over estimating client earnings after rehabilitation. I think the important thing to note here is although you see a reduction in the benefit to cost ratio, the more recent model is a very conservative model; it excludes non-monetary benefits to the clients, and yet it shows a very positive return for a dollar investment. A $5.55 return is very good. So although $5.55 represents a substantial reduction from our previous estimates, it still basically says that this program is a good investment.

Mr. CONTE. Every year that I have been on this committee a new catch word comes up. This year it is longitudinal—longitudinal data, longitudinal studies. Is that the catch word this year?

Ms. CICHOWSKI. Longitudinal studies are very popular for a good reason. It is very important, particularly in a program like vocational rehabilitation, where you are trying to achieve benefits that the recipient will enjoy throughout his or her lifetime, that we look at the longitudinal data so we not only know what happens to the person right after the case is closed, but where they are two years, five years, ten years down the road.

Mr. CONTE. I suppose longitudinal studies are very cheap. Can you can buy them by the gross?

Ms. CICHOWSKI. Longitudinal data is not cheap unfortunately.

SERVICES TO SUBSTANCE ABUSERS

Mr. CONTE. I was interested to read that one of the groups that has increasingly been served by the vocational rehabilitation program is substance abusers. I am trying to look at the overall picture for how much the Federal Government spends to combat drugs. At my request the drug czar this year did a full scale interagency budget. I checked to see whether that budget took into account the amount spent on vocational rehabilitation for drug abusers. Sure enough, it did.

It states that 1.5 percent, or $23,000,000 of the Vocational Rehabilitation block grant is to be used for individuals disabled due to drugs. Is that a fair statement of the resources devoted to the drug problem and rehabilitation services.

Ms. CICHOWSKI. Yes, it is, sir.

Mr. CONTE. Good, hard figures.

Ms. **Cichowski**. We coordinated with Mr. Bennett's office in preparing those documents, and it is our best estimate of what is being used in our vocational rehabilitation program to address this problem.

Mr. **Conte**. Off the record.

[Off the record discussion.]

DRUG-EXPOSED CHILDREN

Mr. **Conte**. What about those individuals whose disability is not drug abuse itself, but disability that results from drug abuse like the wave of cocaine babies that we are facing? Has anyone ever estimated how much rehabilitation funding or even P.L. 94-142 funding is provided or will be needed for individuals suffering from the long-term organic effects of drug abuse?

Dr. **Davila**. We are funding demonstration programs, specifically, models for infants who were prenatally exposed to drugs, and we will be continuing those projects in 1991.

In 1992 we will also be adding projects to provide for model demonstration programs for the 3 to 5 age group, so we are going to be able to assess the extent to which they may become a national problem in the future.

FETAL ALCOHOL SYNDROME

Mr. **Conte**. How about alcohol, the same question for organic effects of alcohol—like fetal alcohol syndrome. Shouldn't those be considered as part of true costs of the substance abuse problem in our country?

Dr. **Davila**. Yes, I agree they should.

SERVICES TO INDIVIDUALS WITH LEARNING DISABILITIES

Mr. **Conte**. Last November the Department came up with the first ever evaluation of the rehabilitation services provided to individuals with learning disabilities. One of the recommendations for this was that RSA and State agencies should enhance existing services by providing additional support for training in LD to all types of service providers.

Is the Rehabilitation Services Administration planning to follow-up on the recommendation of this report?

Mrs. **Carney**. Yes, sir. We have currently organized a work group within RSA to coordinate with the Office of Special Education Programs, and the purpose for that work group is not just to create more paper but to come up with policies on services and give directions to States in serving the severely learning disabled population. I believe it is an underserved population.

TECHNOLOGY ASSISTANCE PROGRAM

Mr. **Conte**. Last November 1st awards were made in nine states of the new Technology Assistance Program. Thirteen more are anticipated in 1990, 12 in 1991. Is the plan to work up to a program that will provide funds to all 50 states? If so, how quickly can we get there?

Dr. **Davila**. Dr. Reswick?

Dr. **Reswick**. Well, sir, as far as I know, we are thinking only in terms of the first three years at this point, which would account for the numbers that you have stated. There is no question that in the first year we received 50 proposals. And many were very good, so the potential for every State to be in the program strongly exists. It seems to me that it would be the intent of Congress to support all States.

Mr. **Conte**. So you don't expect it to get into all 50 States?

Dr. **Reswick**. As you can see, in the first three years, we expect 34 States would receive assistance and anticipate other States would receive grants after that.

Mr. **Conte**. What is the relation of the State development grants and the model projects?

Mrs. **Carney**. If you mean the Supported Employment Statewide Demonstration grants to effect systems change, that is RSA's program. The State projects that we have had for the last two years have been effective and those States that have the Title VI, Part C supported employment activities are far ahead of those States which have not had the projects.

TECHNOLOGY ASSISTANCE MODEL PROJECTS

Mr. **Conte**. For technology assistance, in your justification you show 10 model projects for 1990.

Dr. **Reswick**. You are referring to Title II, which is going to be implemented this year for the first time. Title II authorizes model demonstration projects that will be competitive grants run much as our other R&D projects are run.

TECHNOLOGY ASSISTANCE STATE GRANT AWARDS

Ms. **Christensen**. Mr. Conte, for the Technology Assistance Program, we do have 12 additional States in our budget for fiscal year 1991. Our outyear projections do show level funding, but we are going to take a close look at that, and if we think more States are ready, we will be addressing that as we develop our budget for the next year.

SUPPORTED EMPLOYMENT

Mr. **Conte**. I see. With respect to the supported work program, the most pressing unresolved issue seems to be what happens to the individual, after 18 months. I believe Federal funding for supported work is now phased out. Has anyone taken a look at that to try to figure out what the next step should be to assure that supported work keeps going after 18 months?

Dr. **Davila**. We are encouraged actually by the fact that in the 27 change grant projects in the States, they have indicated willingness to consider extending support to provide long-term services. In addition, 20 States providing mental health services have also expressed an interest in providing long-term service.

That continues to be our number one concern, continuation of the program beyond that period. Ms. Carney, do you want to add to this?

Mrs. **Carney**. In the States where we have had the systems change grants, in some cases developmental disabilities agencies have provided extended services and in other cases mental health programs have become involved in the funding, but we readily admit that we don't have a long-term answer yet.

Mr. CONTE. The Secretary has proposed several changes in the supported work program to make it more flexible and easier for people to take part in the program. If the requested changes are made, how many more persons could be served, and is there enough money in the budget request to support that change?

Mrs. CARNEY. We don't know at this point how many other people could be served. We believe that the requested amount of money in the budget is adequate, sir.

LOW FUNCTIONING DEAF PERSONS

Mr. CONTE. The National Institute on Disability Rehabilitation Research plans to support a new center to deal with the needs of low functioning deaf persons. This center has been raised as one of the reasons why there is no need to fund a consortium of Gallaudet, NTID and other institutions for the deaf to address those needs.

Doctor, what is your view on this? Should there only be one program to address these needs or is there room or a need for multiple programs?

Dr. DAVILA. This was one of the strongest recommendations that came from the Commission on Education of the Deaf, a need to attend to the needs of individuals who are deaf and low functioning, and there are activities that will occur. We will be setting up a new Research and Training Group Center, through NIDRR to look at the problems of deaf people who are low functioning. We hope it will provide the research and development necessary to provide for improvements in other programs for the low-functioning population. The consortium that you mention is a one-time demonstration program that will be competitively awarded sometime later this year. We do not know who the recipient of this award will be.

The new NIDRR center will focus on the needs of low functioning deaf people and evaluate the results of the demonstration project you mentioned.

Ms. CICHOWSKI. Mr. Conte, one of the concerns we have had about the consortium is that the number of programs already in place are potentially better mechanisms for serving the low-functioning deaf, such as the VR system and the Regional Post-Secondary Education Programs for the Deaf. We are concerned about proceeding with yet another separate service delivery system. We need to take a good, hard look at the systems in place and look at ways for improving services to the low functioning deaf within those systems. That is one of the most important activities that the new R&T center is going to undertake. The evalvation proposed under the Special Institutions for the Handicapped account to assess the postsecondary education needs of persons who are deaf would also look at existing services and barriers that exist in using these systems to serve the low-functioning deaf.

The center is also going to be looking at developing some research-based models that would assist service providers in meeting the needs of this population.

Mr. **Conte**. At this point you are saying that there is no need for the consortium?

Ms. **Cichowski**. Yes, we are.

Mr. **Conte**. Oh, you are saying that?

Ms. **Cichowski**. We are not proposing to resind the funds provided in 1990. However, we haven't requested any funds for this purpose in 1991. We have developed a priority notice to implement this project as Congress has directed us to do, in 1990. We are trying to put together as effective a program as we can, but our feeling is that we need to learn more about this issue, and, in particular, how to make the most out of the existing service delivery mechanisms for serving this population, rather than creating yet another vehicle.

Mr. **Conte**. I have quite a few more questions, Mr. Chairman.

TECHNOLOGY ASSISTANCE TITLE II FUNDING

Mr. **Natcher**. Now, Dr. Davila, an appropriation language change is requested, as you know, in the budget justification that would allow the department to fund activities authorized by Title II of P.L. 100-407. Only Title I activities are currently funded.

If you will, now, tell the committee what new activities do you plan? Go right ahead, Dr. Reswick.

Dr. **Reswick**. Thank you, sir. Title II will involve three different activities. The first will be a study by the National Council on Disability that will be funded through NIDRR on the financing of assistive technology devices and services.

The second activity is a feasibility study of the potential for a national information and program referral network. There are a number of systems now in place, and this would look at the best way to utilize the strengths that already exist, where those are and what needs to be done.

The third is a program of model projects, demonstration projects, research and development projects, and income-contingent direct loan demonstration projects to determine the feasibility of a direct loan program for technology assistance.

Mr. **Natcher**. Mr. Reswick, how much do you plan to spend on Title II programs?

Dr. **Reswick**. About $2,000,000, sir.

SUPPORTED EMPLOYMENT

Mr. **Natcher**. The justification indicates wide variations among the States and the average per-client cost of providing supported employment. Why do we see such differences?

Dr. **Davila**. There are at least two reasons for the variations: One reason is the characteristics of the clients served and, second, there are differences in accompanying costs for programs.

Sometimes cost estimates are made at different stages of development of the programs. Also, when there is mostly agency support for a program, it is sometimes difficult to separate all the costs, so that is why there is difficulty in determining costs where there is a wide variation.

RESEARCH ON PROSTHETIC AND ORTHOTIC DEVICES

Mr. **Natcher**. The conference report last fall directed that a portion of the increase for the National Institute on Disability and Rehabilitation Research be used for research into state-of-the-art prosthetic and orthotic devices. How much does the Department expect to spend in this area in fiscal year 1990 and how much is projected for fiscal year 1991?

Dr. **Reswick**. A new competition has just been completed for a center, a rehabilitation engineering center, on children's orthopedics. That will be about a half million dollars. We have a second activity in cooperation with the Strategic Defense Initiative that has to do with applying highly exotic fiber composite materials in orthotics and prosthetics. These activities, plus related activities in our medical programs, would probably come to about a million and a half dollars. This is an estimate.

Mr. **Natcher**. Tell us how much you plan to spend in this area in fiscal year 1990 and also in 1991. Place that in the record for us.

[The information follows:]

CENTER FOR RESEARCH ON PROSTHETIC AND ORTHOTIC DEVICES

In fiscal year 1989, the Department funded seven different projects or Centers dealing with prosthetic and orthotic devices through the National Institute on Disability and Rehabilitation Research (NIDRR). A total of $1,250,000 was spent on these projects.

In 1990, the Department, through NIDRR, will continue to support these projects. It will also provide about $500,000 for a new Research Engineering Center dealing with prosthetic and orthotic devices for children with orthopedic disabilities. It is probable that some new projects dealing with prosthetic and orthotic devices will be funded through NIDRR's Field-Initiated Research and Innovation Grants programs, but, at this time, we cannot predict the number or dollar amount. In addition, through the new model projects program under the Technology Assistance program, the Department intends to announce a priority for research and development in prosthetic and orthotic devices. We do not know at this time how many projects will be funded under this priority. The Department expects to provide at least $2,000,000 in 1990 to support activities dealing with prosthetic and orthotic devices.

In 1991, the Department will continue to support the activities supported in 1990. In addition, the Department expects to fund additional projects under NIDRR's Field-Initiated Research and Innovation Grants programs and the model projects program under the Technology Assistance program. The Department expects to provide more than $2,000,000 in 1991 to support activities dealing with prosthetic and orthotic devices.

LONGITUDINAL STUDY

Mr. **Natcher**. Last year the Department requested $500,000 to initiate a longitudinal study of the rehabilitation program. What is the status of that project and does the fiscal 1991 budget request continuation funding? Is there continuation funding in the bill before us?

Dr. **Davila**. Ms. Cichowski?

Ms. **Cichowski**. Mr. Natcher, we have decided not to initiate that study in 1990. What has happened in the meantime is we received the results of a much smaller longitudinal study that we undertook that used data on earnings that is collected by the Social Security Administration.

The study is referred to as the RSA-Social Security data link study. This study includes about eight years of data on employment participation and earnings of VR clients, and the results were very interesting. It wasn't a large investment, so what we have decided to do is to undertake an update of this joint RSA-SSA study, perhaps using 1991 funds, and postpone the initiation of a much larger longitudinal study until sometime in the future.

COMPREHENSIVE HEAD INJURY CENTERS

Mr. NATCHER. In fiscal year 1990 the Department received, as you know, $15,000,000 for one time start-up grants to establish a system of regional comprehensive head injury prevention and rehabilitation centers. How many awards are planned and what is the status of the awards? Where are we with this $15,000,000?

Dr. DAVILA. We published a notice for this competition and there is a closing date of March 12th. We expect to make four awards of about $3,700,000 each.

Mr. NATCHER. When do you expect to make these awards, Dr. Davila?

Dr. DAVILA. Later in fiscal year 1990. The closing date for applications is March 12th, so I think sometime late in the year.

Mrs. CARNEY. It will be in the last quarter of this fiscal year.

Mr. NATCHER. Last quarter of this fiscal year?

Mrs. CARNEY. Yes, sir.

Mr. NATCHER. This concludes the hearings on the budget requests for Rehabilitation Services and Handicapped Research.

Dr. Davila, this has been a good hearing. We appreciate your appearance before the committee, and I want to commend you for the way you handled your section. You are doing all right, Dr. Davila. You are doing all right.

Dr. DAVILA. Thank you, sir. Thank you.

Mr. NATCHER. You are doing good.

The committee will now adjourn until 2 o'clock Monday.

[The following questions were submitted to be answered for the record:]

SERVICES FOR LESS SEVERELY HANDICAPPED PERSONS
